This story opens with an encounter on the 29th of September between the Ute Indians and Major Thornburgh's command, which had been ordered to the relief of Indian Agent Meeker. The field of battle was admirably chosen for defense by the Indians, and had it not been for Major Thornburgh's advance guard, commanded by Lieutenant Cherry, discovering the ambuscade, the entire command would have been annihilated. He saw a small party of Indians disappear over a hill half a mile in front, and at once divided his party to reconnoitre, and only discovered the Indians when he had flanked their position by about 200 yards. Lieutenant Cherry rode back at full speed with one or two men who were with him, and notified Major Thornburgh, who had already begun the descent into the deep ravine which was intended to engulf the command. The Indians were dismounted and lying down along the crest of the high, steep ridge for a hundred yards from the point where the deadly assault would have commenced. The troops were withdrawn a short distance, dismounted, and deployed in line of battle, with orders to await the attack of the Indians. Lieutenant Cherry was here ordered by Thornburgh to take a detachment of fifteen picked men and make a reconnoissance and communicate if possible with the Indians, as it was thought that they only desired to oppose his approach to their agency, and would parley or have a big talk if they could be communicated with. Cherry moved out at a gallop with his men from the right flank, and noticed a like movement of about twenty Indians from the left of the Indian position. He approached to within a couple of hundred yards of the Indians, and took off his hat and waved it, but the response was a shot fired at him, wounding a man of his party, and killing his horse. This was the first shot, and was instantly followed by a volley from the Indians.

The work had now begun in real earnest, and seeing the advantage of the position he held, Lieutenant Cherry dismounted his detachment and deployed along the crest of the hills to prevent the Indians flanking his position, or to cover the retreat, if it was found necessary to retire upon the wagon train, which was then coming up slowly, guarded by Lieutenant Paddock, Company D, Fifth Cavalry. Orders were sent to park the wagons and cover them with the company guarding them. The two companies in the advance were Captain Payne's, Company F, Fifth Cavalry, and Captain Lawson's, Company E, Third Cavalry, which were dismounted and deployed as skirmishers, Captain Payne on the left and Captain Lawson on the right. From Lieutenant Cherry's position he could see the Indians were trying to cut him off from the wagons, and at once sent word to Major Thornburgh, who then withdrew the line slowly, keeping the Indians in check until opposite the point which his men held, when, seeing that the Indians were concentrating to cut off his retreat, Captain Payne, with Company F, Fifth Cavalry, was ordered to charge the hill, which he did in gallant style, his horse being shot under him and several of his men wounded. The Indians having been driven from this point, the company was rallied on the wagon-train. Major Thornburgh then gave orders to Lieutenant Cherry to hold

Digitized by Google

his position and cover Captain Lawson's retreat, who was ordered to fall back slowly with the horses of his company. Cherry called for volunteers of twenty men, who responded promptly and fought with desperation. Their names were given in a later dispatch, as nearly every man was wounded before he reached the camp. Two men were killed. Cherry brought every wounded man in with him. Captain Lawson, the brave old veteran, displayed the greatest coolness and courage during this retreat, sending up ammunition to Cherry's men when, once, they were nearly without it. Major Thornburgh started back to the wagon-train after giving his final orders to Captain Payne to charge the hill and to Captain Lawson and Lieutenant Cherry to cover the retreat. He was shot dead when barely half way there, as his body was seen by one of Captain Lawson's men, life extinct, lying on his face.

Captain Payne, then in command, at once set about having the wounded horses shot, to be used for breastworks, dismantling the wagons of boxes and bundles of bedding, corn and flour-sacks, which were quickly piled up for fortifications. Picks and shovels were used vigorously for digging intrenchments. Meantime, a galling fire was concentrated upon the command from all the surrounding bluffs which commanded the position. Not an Indian could be seen, but the incessant cracks of their Sharp and Winchester rifles dealt fearful destruction among the horses and men.

On Wednesday, October 1st, the besieged men were suddenly alarmed by heavy and responsive firing, but approaching their position. Sharper and nearer came the rattling, desultory discharges, and soon afterwards, dismounted and leading their horses, which fell fast under the Ute rifles, they saw a colored troop of cavalry approach and force its way into the barricade. It proved to be Captain Dodge's company, numbering forty-five men, of the Ninth (colored) Cavalry. Their approach had been most dangerous and difficult, but hearing of the situation they had persisted without halting and without fear. During the remainder of the six days' siege, they had shared the miserable perils and discomforts with patience that cannot be too highly praised.

At five o'clock on the morning of the 5th, General Merritt relieved the command, having marched his men about 170 miles over "the worst road ever traveled" in a little more than forty-eight hours. He found the command much as reported in the original dispatches. The casualties were twelve killed and forty-three wounded. All the animals of the command were killed, except twelve mules and three horses of the four companies of cavalry.

The funeral of Major Thornburgh took place at Omaha on October 22d, under masonic management. A halt has been ordered in the march of the troops after the fugitive Utes, confidence being placed in the ability of General Adams, the special agent, to effect a peace with the tribe. A courier from General Merritt's camp, on White River, reports that General Charles Adams came into General Merritt's camp on the morning of the 24th with the women and children of the Meeker and Price families. The captives were unharmed, not having been subjected to any insult or injury. Terms of surrender have been forwarded to Washington.

THE ANNIVERSARY OF YORKTOWN.

THE ninety-eighth anniversary of the surrender of the British Army under Lord Cornwallis to General Washington, at Yorktown, Va., was celebrated on Thursday, October 23rd, with exercises which gave a foretaste of what the centennial observances will be. A national salute was fired from the flag-ship *Powhatan* at noon, and a few minutes later the steam-yacht *Ocoma Gen* moved up to the wharf, having on board Governor Halliday and staff, of Virginia; Adjutant-General Latta, of Pennsylvania; the Hon. W. L. Lincoln, of Massachusetts; General Cameron, of Connecticut, and others. There were present five companies of artillery from Fortress Monroe, under command of General Getty, and accompanied by the post band; a battalion of marines; three companies from the North Atlantic Squadron; the Old Dominion Guards, of Portsmouth; Norfolk Light Artillery Blues and Norfolk City Guards; Richmond Light Artillery Blues and Company C, First Virginia Regiment, of Richmond; Wise Light Infantry, of Williamsburg; the Peninsula Guards, of Hampton, Va., and the Webster Guards—youths of the Webster Institute—of Norfolk. Upon landing, the Governor was met by Dr. Power, President of the Centennial Commission, and presented to Admiral Wyman, General Getty, and the officers present, when the line of march was taken up for the speakers' stand. The stand, which had been erected in a vacant field near the village, was decorated with flags and flowers, and was occupied by the Governor and the prominent visitors. The troops were marshaled in front of the stand, and visitors to the number of 5,000 or 6,000 gathered about to hear the addresses.

After prayer Governor Halliday welcomed the visitors to the State, and then General Tallaferro, the orator of the day, spoke for nearly two hours. He was followed by Captain James B. Hope, Congressman Goode, and representatives of the States of Massachusetts, Pennsylvania and North Carolina, of the French residents of New York, and of the British army, each in brief addresses. Resolutions were adopted asking the Hon. John Goode to urge upon Congress to have a monument erected on the site of the surrender to commemorate the event. Then, under the auspices of the celebration committee, the military and invited guests repaired to the lawn in front of the Nelson House, where several hours were passed in the enjoyment of a huge barbecue. During the day the vessels of the North Atlantic Squadron rode at anchor off the town, handsomely decked out with national colors.

THREE STARS IN FRENCH OPERA.

THE season of French opera inaugurated by Mr. Maurice Grau at the Fifth Avenue Theatre, three weeks ago, has proven thus far very successful in every particular. That such artists as Capoul, Paola Marié, and Mlle. Angèle should attract audiences on the first night out of mere curiosity was to have been expected, but nothing short of absolute excellence in every detail of the management and every feature of the cast can account for the well-maintained and still growing interest of the public in their representations. The third week of this grand organization in this country opened with a repetition, for two nights, of "La Péichole," which was such a great success in the four performances allotted to it on the second week of the season. On Wednesday night, in obedience to strenuous demand, "Mme. Angot's Daughter" will be given, and on Thursday night "Giroflé-Girofla" has a magnificent reversal, with all of Mr. Grau's star artists engaged, supported by the best members of his old troupe in the interior cities. Several new operas which are counted in the repertoire of this famous organization are in rehearsal, among them the Parisian sensations "Babiole" and "La Camargo."

The three operatic stars, Capoul, Paola Marié and Mlle. Angèle, have fully justified their artistic reputations. Since they have become familiar to a New York audience, it is easy to understand how and why they won their Parisian fame. Capoul, before his great success in opera-bouffe, was a favorite with New Yorkers. He was known here as a distinguished star of the Nilsson season of grand Italian opera, and in that legitimate repertoire made such marked "hits" that the announcement that he had decided to take to the opera-comique school made a great sensation. His triumph in his new field has been quite as great as in the more stately and romantic phase of operatic representation. He has developed qualities as a comedian that no one thought him possessed of, and has dignified the school which he has adopted with every touch of his consummate art.

Paola Marié has become a favorite of New York from the first night, as she was already of Paris. Her singing and acting of opera-bouffe rôles are agreed on all hands to be revelations of wonders and novel effects in dramatic and lyric elaboration.

Mlle. Angèle, who came to this country famed as the first beauty of the Parisian stage, has justified the praises awarded her, and as well won commendation for her true artistic methods.

The three stars have made the greatest possible success, and have been received with more favor than was shown by the public to any of the artists in French opera who have preceded them in previous seasons. The company which Mr. Grau has organized to support them is far beyond any combination of French artists that has ever made an effort on the American stage, and the organization gives so complete a representation of each of the works presented, that it has much to do in maintaining public interest at its early pitch of enthusiasm. The secret of the continued success of Mr. Grau in his present season may be said to lie in the perfection of the details of the performances he gives quite as much as in the superexcellence of his famous stars.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The Duke of Brunswick's Monument at Geneva.

The Duke of Brunswick, whose monument was recently uncovered on one of the public places of Geneva, was an eccentric person. The good town of Geneva, which sheltered the noble Duke during the siege of Paris, had done nothing to merit his good will, and nothing could equal the surprise of the municipality when they heard that the Duke had left his entire fortune to the town. This fortune amounted to thirty-three millions of francs. He directed that a mausoleum should be built to a conspicuous and becoming part of the town, that it should be surmounted by an equestrian statue of himself and surrounded by statues of his father and grandfather, in imitation of the tomb of the Scaglars at Verona. This monument was to be constructed in bronze and marble by the most renowned artists of the day. The monument has taken five years to finish. Besides his equestrian statue, the Duke has a recumbent statue and statues of six of his ancestors placed on columns of red marble. At the same time the town of Geneva built an opera house which is equaled only by the Opera House of Paris.

The Technical High School in Hanover.

This school was opened October 6th. The building, formerly the "Welfenschloss," was built during the reign of the last King of Hanover, George V., who intended to make it his and his successors' residence. It is situated on the slide between Hanover proper and the royal château "Herrenhausen," and is surrounded by beautiful gardens and grounds. The "Polytechnicum," as the school is called, is the largest one of its character in Germany, and the board of professors and teachers is composed of the most learned men in their profession.

The German-Norwegian Cable.

On July 29th, the end of the first section of this cable was laid at Arendal, on the south coast of Norway, and on August 21st the shore-end was sunk at the island of Sylt, near the western coast of Schleswig. The cable was made by the Telegraph Construction and Maintenance Company, in London, and the English steamer, *John Pender*, Captain Hawkes, was chartered by the said company for the laying of the cable. The first section of the cable (130 miles) was laid on the 18th of August; the second section (120 miles) on the 21st; and on the 30th the line was in complete order. The King of Sweden sent the first telegram over it to the German Emperor, in Berlin.

Fall Review of the French Army.

The Fall manœuvres of the German, Italian and French troops this year were on a much vaster scale than heretofore, although each of these countries is supposed to be maintaining its armies on a peace-footing at present. While the reviews before the rulers were all very grand, it is noticed that in each case an unusual amount of attention was paid to the details of field movements, and hence it may be inferred that the exhibitions of discipline were as perfect as is possible. Our last issue contained views of the troops manœuvring before the Emperor of Germany and the King of Italy; this week, in dealing with the French Army, we show the movements of the cavalry branch in full charge upon an imaginary foe, before the General Director of this arm of the service. An interesting feature of the French Autumn manœuvres was the distribution of the newly designed flags to the regiments, brigades, divisions and corps.

Closing Scenes in the Zulu War.

Soon after Sir Garnet had pitched his camp at Ulundi, the report reached him that the Zulu King had a large store of powder concealed somewhere near his kraal at Amayakanzie. On the following day he started in search of the magazine, accompanied by his staff and six of the Natal police, John Dunn, and some of his natives, who acted as guides, and at a distance of about eleven miles from their starting-point, and about a mile from the King's kraal at Amayakanzie, they came upon a deep cave, extending under huge ledges of overhanging rocks, below one of the rugged mountain spurs of this wild country. This cave was found to contain 500 wooden five pound kegs, supposed to be of Portuguese importation from Delagoa Bay—in other words, upwards of a ton of gunpowder. Sir Garnet decided that it should be destroyed at once; but to avoid the tremendous noise which an explosion in the cave would produce, and perhaps create alarm in the neighborhood, the powder was removed to the summit of the hill and there exploded. Just as the men were about to enter the cave they were startled by the sudden appearance of a huge snake, which raised itself in a threatening attitude, and which the natives declared to be the spirit of the late King Panda keeping guard over his son's hidden treasure. On October 2d, the *Egypt* transport arrived at Portsmouth from South Africa with the first battalion of the Twenty-fourth Regiment and a number of officers of various corps, including Major Chard, V.C., and Surgeon-Major Reynolds, V.C., of Rorke's Drift fame. The battalion in that which was cut up at Isandula, and which has since been re-formed by volunteers from various regiments. Soon after the *Egypt* entered the harbor, His Royal Highness the Duke of Cambridge and Prince Edward of Saxe-Weimar went on board to see the sick and wounded, and the Commander-in-Chief greeted Major Chard in the most cordial manner, and complimented him on the gallantry which he had displayed. Subsequently the troops were paraded on the jetty for inspection, and much interest was displayed by those assembled on the untoring of the tattered and faded colors of the Twenty-fourth, in the defense of which the brave Melville and Coghill lost their lives. The Duke of Cambridge, after inspecting the colors, addressed the regiment through Colonel Glyns, heartily congratulating them on their return, but expressing his sorrow at seeing so few of the old soldiers. The other illustration shows a bit of the battle-field of Ulundi a few hours after the fight. The dead bodies of Zulu warriors, contorted into strange attitudes by the agony of death, lay scattered about in all directions, being most numerous in the neighborhood of bushes, where the fugitives had endeavored to hide. In one place the artist saw twenty-two bodies lying within an area of twenty square yards, killed by the bullets of the Martini-Henri rifle.

FANCIES OF THE DAY.

THE cradle which the King of Burmah has just had manufactured for his child is so magnificent as to cost the State $100,000.

WITHIN the last few weeks no less than thirteen bailiffs have found their way into the counting-house of one of the wealthiest men in England. It was not that his lordship could not pay, but that he would not.

A NEW use has been found for the telephone in the hospitals of London in maintaining communication with the fever wards, thus greatly diminishing the risk of conveying infection in the clothing of messengers and nurses.

THE Supreme Court of Indiana has affirmed a principle in respect to the computation of time which is likely to prove of serious trouble to bankers and others. It is that the 29th day of February and the 28th day of February are to be computed as one day.

A PORTLAND (Me.) man, sixty years old, has just had removed from the lower part of his face three excrescences similar to short horns found on sheep. One was nearly three inches long. Another man has just had two superfluous noses removed from either side of the natural organ.

AGAINST the common supposition that gimlet pointed screws were of modern invention, stands the fact that several have been taken from a piano at Worcester, Mass., made in 1755, which bear unmistakable evidences of age and of having been made before screws were turned out by machinery.

A CURIOSITY among recent inventions of the month is the process of an Englishman, by which not only Gobelin and Aubusson tapestries are imitated to perfection and by a single impression of the printing-block, but chromos that require from thirty to sixty stones each can be printed with a single block.

IT is not generally known that in Russia and Hungary there are many large colonies of Jews, farming successfully and contentedly, the men tilling the soil and raising the crops, and the women taking care of the cattle. The people are said to be quite wealthy, very religious, orderly and prompt in the payment of taxes.

THE Danville (Va.) *Post* narrates a most singular occurrence in railway history, the route being the Piedmont Air Line. "The freight train going east, when near the ticket-office in this city, came in collision with a cow, which precipitated two of the coaches from the rails. There two coaches ran on the ties nearly two hundred yards, and when near the mouth of the bridge, remounted the rails and thus prevented a fearful wreck."

THE Rev. Albert Whiting, an American missionary in China, died of famine fever while ministering to the starving natives. The Governor of the province offered to defray the expense of sending the body home, and, when it was explained to him that Americans did not share in the Chinese horror of being buried in a foreign country, he gave a plot of ground in which to make a grave, and deputed twelve Chinamen to worship the dead clergyman's spirit.

IT is a matter of general conversation in St. Petersburg that the Czar is so sensitive on the question of capital punishment that he will sign none of the death-warrants of the Nihilists, deputing the legal duty to Generals Gourko and Todleben, the great engineer, neither of whom hesitate a moment. On the other hand, Generals Dolgorouski, of Moscow, and Loris Melikoff, of Kharkoff, have repeatedly refused to order the execution of the revolutionists in their districts.

JUST as Professor Peninger offers to restore Mozart's grave, in Vienna, which has been utterly demolished by sight-seeing vandals, the question is raised, Does any one know the precise spot where the composer was buried? As Mozart left but fifteen English shillings at death, it is thought he was buried in the "poor section." The death of the grave-digger two days after burying the remains, and the absence of any record of the exact locality, place Professor Peninger's offer in a doubly interesting light.

THE discussion of the subject of left-handedness has advanced from the country debating society to the stolid British Association, before which body Dr. Muirhead has read a paper in which he declares that the handiness of the hands depends upon which half of the brain controls the action of the body, or is most used. He states that left handedness once begun in a family is likely to run in it for generations, and notes as a curious fact that left-handed people generally have the left foot one-third to one eighth of an inch longer than the right.

A PERSON in Illinois recently applied to the Treasury for the redemption of five coupons representing several thousand dollars. For safekeeping they had been placed in a tin box and deposited in a stovepipe. A fire being built in the stove, the coupons were destroyed. The ashes, however, were retained in the box, and were presented with the application for redemption. A scientific examination satisfactorily proves that the contents of the box are the remains of the coupons as alleged. They cannot be redeemed, however, the coupons having been detached from the bonds.

A DRESDEN German doctor has discovered a means of dyeing the eyes of animals in general and of men in particular any color he pleases. He is accompanied on his travels of propagation by a dog with a rose-colored eye, a cat with an orange-red eye, and a monkey with a chrome-yellow eye. But the most curious specimens of his art are a negro with one black eye and the other blue, and a negress with one eye gold-colored and the other silver-white. The doctor says the process of ocular transformation, far from injuring the sight, strengthens and improves it.

A STUDY of biography reveals marked instances of heredity in manner, looks, peculiarities and genius, more or less pleasing to the subjects. Cases of this character are often sought for the purpose of strengthening an argument. Let us look at the other side. Elias Phillips, of Freetown, Mass., who turned State's evidence in a recent burglary trial, is a great grandson of Malbone Briggs, a notorious criminal, who was in State Prison with seven of his sons at one time. Briggs's ancestry is traced back to a noted pirate in the time of Earl Bellamont, and his branch of the family has for over a century furnished noted criminals in every generation.

IN his recent tour of the United States the Duke of Argyll learned a suggestive lesson which he recited upon his return to England. He had asked an old farmer at a Yankee agricultural fair why it was that farmers in the United States made no outcry about hard times, as English farmers do. The reply was that in America the farmers owned their farms, and, being ready to sell at any time, were not so foolish as to depreciate their own property. In England, on the other hand, the farmers hired their land, and it was to their interest to cry down the value. The Duke thought this view a shrewd one, and intimated that there was much truth in it.

AT HOME AND ABROAD.

—THE official returns of the California election show that the vote on Chinese immigration was, in favor of it 883, and against it 154,638.

—WE have all read much of paper car-wheels and paper wood, but now comes a new paper production, that of paper bricks, now made in Wisconsin—a sort of compressed *papier maché*.

—THE total shipments of ore from the Lake Superior district this season, up to and including October 1st, were 989,524 tons, as against 833,338 tons in 1878, showing an increase of 156,186 gross tons.

—THE Chinese Envoy in London has forwarded to his Government the representations of the Anglo-American Society for the Suppression of the Opium Trade, deprecating the barbarous sentences passed upon the innocent children of Yacoob Beg.

—IF figures are anything, they are vastly in favor of the women at London University this Fall. Of 856 male students who were examined for admission, nearly half failed. Of sixty-three women students attempting the same examination, fifty-one passed.

—ALL of the important railroads of Colorado, Utah, Nevada and California have recently given orders for paper wheels. The most important roads in the "far Northwest," the Northern Pacific, and St. Paul, Minneapolis and Manitoba, are also to be added to the list.

—THE number of acres under cultivation in Kansas has increased since the close of the war from 273,903 to 7,769,926; the annual production of wheat from 191,519 to more than 32,000,000 bushels, and the annual production of corn from 6,700,000 to more than 100,000,000.

—THE Hall of the House of Representatives has been put in order for the meeting of Congress. Large windows and passageways have been cut in the south wall to improve the ventilation. The air-holes in the floor are also increased in number and size, so that more air can be forced up from below.

—THE total arrivals of coin and bullion from abroad at New York from January 1st to October 18th, 1879, were $49,530,486, of which $4,800,000 were in American gold coin, $38,262,234 in foreign gold coin and bullion, $4,365,869 in American silver coin, and $2,338,402 in foreign silver coin and bullion.

—AT Kennebec, Me., considerable treasure has been discovered buried on the shores of the river. The man who is supposed to have a right to the money says that his grandfather, named Granger, was a crony of Captain Kidd and that he had possession of papers and maps showing where millions of money are buried.

—IT is mentioned as a result of the agricultural depression in England that 830 acres of freehold land were recently sold in Berkshire for £6,705. The rent of the farm was formerly £550, out of which £190 had to be paid in tithes and land-tax. For the last three years the rent has been only £250, leaving the landlord only £70 over tithes and tax.

—TRICHINOPOLY, in Turkey, sends annually to England $100,000 worth of hazelnuts. A large trade in walnuts is also carried on by the people of that district, who have a double object in view in cultivating the walnut-trees. The wood is valuable, especially the "knobs," which find a good market in France, where they are used in ornamental woodwork.

—FROM four to five car-loads per day of black walnut logs are brought to Chicago. These logs come East by rail and water to the seaboard, whence they are shipped to Europe—Germany being one of the largest consumers. The logs on reaching their destination are sawed to the sizes and shapes demanded by the market. The trade of this nature passing through Chicago is estimated at from 8,000,000 to 10,000,000 feet per year.

—CONGRESS called upon the Treasury Department some time ago for information as to the amount of money that had been expended for the Indian service since the beginning of the Government. The work was perfected by the Treasury officials, and the footings show that to the first of last July, the end of the fiscal year 1879, the Government has expended on account of the Indians $181,000,000. The estimated number of Indians now living is 200,000.

—THE value of the exports from the United States of live animals of all kinds increased from $5,844,653 during the fiscal year of 1878, to $12,487,754 during 1879. Of the total exports of live animals during the last fiscal year, 71 per cent. were sent to Great Britain. The value of the exports of cattle increased from $3,896,818 during 1878, to $8,379,200 in 1879. Of the total exports of cattle during the last fiscal year 79 per cent. were shipped to Great Britain.

—E. H. WALKER, statistician of the New York Produce Exchange, states in his weekly report that "the wheat crop in nearly all European countries is deficient, and the wants of the importing countries, provided they have the ability to pay for it, will be about 300,000,000 bushels, of which France and the United Kingdom will require from 211,000,000 to 216,000,000 bushels; and other importing countries of Europe from about 85,000,000 to 90,000,000 bushels."

—ONE of the longest railway bridges in Germany is now on the point of completion. It crosses the river Vistula near Graudenz, and rests upon twelve piers. The length from the commencement of the first to the end of the last pier is 1,443 metres, or nearly a mile. It is considerably longer than the other chief bridges over the Vistula, at Dirschau and Thorn, and is likewise lighter and more elegant than the Dirschau Bridge, though the cost of its construction was not half as much. It will connect the Earl Prussian with the Thorn and Insterburg railways, and bring the province of West Prussia into direct connection with the main lines of international traffic.

—THE newest service rendered by monkeys to mankind was recently illustrated in London. In one of the school districts too many parents reported no children in their families, and in order to ascertain the real number of children in the district the school officers resorted to an ingenious measure. Two monkeys were gayly dressed, put in a wagon, and, accompanied by a brass band, were carried through the streets of the district. At once crowds of children made their appearance. The procession was stopped in a park, and the school officers began their work; distributing candies to the youngsters, they took their names and addresses. They found out that over sixty parents kept their children from school. The ingenious measure brought to the schools about 200 boys and girls.

GRAVES.

GOD'S-ACRE smiles in bland, recurrent beauty;
Green peace grows over care and wrong suppressed.
No din of foul invaders, no call of duty,
But only dreamless sleep and endless rest—
The night's evangel in the day confessed.

One hears no moan and sees no sign of anguish,
The flowers bloom lightly and the blithe birds sing:
Why should they lull their melody or languish,
Seeing they crowd the courtyard of a King,
Whose victory is peace and balm his sting?

Not here, oh, fools! not here the charnel traces
Of life's decay, disaster and despair;
No sad ghosts haunt these calm, memorial places;
No ghouls pollute this pure, caressing air;
Here Golgotha no ghastly skulls lays bare.

Within our breasts our lost, our loved lie buried;
Beside us walk the ghosts no spells can lay;
We hear low groans and nightly we are hurried
Through sleep's most drear and dread dream-haunted way
Beyond the very thought or name of day.

So living, secret graves are ever round us:
As whited sepulchres men walk abroad;
While dead dreams rise to ask what faith has found us;
And we can point to no green, flowerful sod
That looks its calm rejoinder up to God.

JOHN MORAN.

"WE PARTED BY THE RIVER-SIDE."

CHAPTER I.—BARBRA SPEAKS.

I AM Barbra—Barbra North, and very much at your service, if you please. I have something to say, and, being a woman, of course, I'm bound to say it, if the heavens tumble down about my ears in consequence. Such, I believe, is said to be the peculiar peculiarity of my slandered sex. Danger is simply *nothing*, so long as they are at liberty to let their tongues run madly on. Well, I could defend them, but I'll not trouble myself, for "Here's mettle more attractive."

I am seated at my desk, and for the past hour have been scrawling away at a furious rate. (Be it known, before I proceed further, that I am a *blue-stocking*, and of the deepest dye, too.) At present, however, I am doing absolutely nothing. Am only leaning restfully back in my chair, my hands locked behind my head supporting it, my pen between my teeth, and my tired eyes gazing out at the open window, beyond the garden, the roses and the great tall trees, to where a beautiful silver-and-blue patch of dazzling sea is shimmering through. And I am trying, with all my might and main, while I admire it all, to think of a word. If I'm not mistaken, that most amusing of all writers, Mark Twain, tells of a saint (*pictured* saint, understand) who used to sit round, looking tranquilly up to heaven, trying to think of a word, too. Unfortunately, he does not disclose the fact of whether the unhappy saint ever overtook his word or not, and this grieves me greatly. I presume I may consider myself as a favored blue-stocking, in as much as I *have* overtaken mine, and now——

My sister has lifted up her voice and is calling me.

"Barbra," she says, softly—"Barbra."

I scramble up from my desk in hot haste, scattering paper as I go, and run into the hall, and look down.

Yes, there she stands, like a picture, on the threshold of the door, the slanting rays of the afternoon sun making her copper-gold hair seem a shining glory about her Clytie-like head. She lifts her eyes, such wonderful eyes, to my face, as I lean down, and speaks to me.

"Barbra, I'm going down to sit under the willows a little. This heat is intolerable" (passing her hand wearily across the wavy hair), "I cannot endure it another instant," she says, fretfully, and then turns to go down the broad steps.

"Wait a moment," I call down to her, "wait a moment and I'll go, too. I shall enjoy nothing more than to sit by the river for a time and get cool. It is most cruelly hot, isn't it?" I pant joining her, and trying not to see the look of disappointment on her white face.

"But—but—the doctor, Barbra, and the gentleman who is coming with him. What of them?" she asks, impatiently, holding her black fan up to avoid the sun's hot kisses, and looking through dense, long lashes at me.

"Oh, yes, to be sure. He was to come today, wasn't he? And the other gentleman, also. Well, no matter; I can easily fix that," I remark, cheerfully, fully bent upon not allowing her to go alone, to sit under the willows and brood over her grief. "Just wait one second and I'll run and tell Maggie to come for us if the gentlemen call."

She makes no reply whatever. She only turns away with a little quivering sigh, and stands still as a statue.

In one moment I have given Maggie her order, in another I am back at her side again, and we saunter down the pebbly path together, in utter silence. Presently the willows are reached, and we sit down on a little rustic bench under their lovely trailing branches, and fan ourselves with a great deal of energy.

Still utter silence, save the low, sweet, liquid laughter the river makes as it ripples to the waiting sea.

"Annah!" I say, suddenly, breaking the dreamy stillness.

"Well," she says, laconically, without turning her head or showing one faint sign of interest.

"*Well*," I repeat, with some little impatience. "Don't be so chary with your words, please, and, would you mind turning your head? The back of your neck is very pretty indeed, but I don't feel like addressing my remarks to it, you know."

At that she turns slowly round and looks at me, and a sort of an amused smile dawns on her colorless face for an instant. Only for an instant, then it is gone as swiftly as it came.

"Barbra, writing as constantly as you do, in this trying weather, is not agreeing with you. It makes you rather caustic, I fancy. What did you want to say? Anything I haven't heard of before?" and, speaking, she bends down and picks up my fan, which this instant slid to the ground, and lays it in my lap.

I catch it up and use it for a few seconds rather fiercely; then, with fear and trembling, I break forth:

"I—I was going to speak to you about Doctor Dean. I was going to say——"

She turns her back suddenly upon me, and makes a most impatient movement with her head and shoulders.

"But that is something *I have* heard before, *repeatedly*," she exclaims, petulantly. "The subject is threadbare. Try a new one," and she slaps her pink little palm with her fan in a way that should prove a warning. But it has no effect on me at present.

"I wish, with all my soul, that you'd give up this plan of yours, Annah. What is the reason you cannot be contented to remain as you are? Why not——"

"I wish with all my soul," she cries out, passionately, "that you'd cease talking about my plan. I am utterly sick of it. I am indeed! Where is the use of multiplying words about it? Barbra" (turning quickly towards me again), "Barbra, I have told you over and over again, that I cannot go on living like this. I *cannot!* It will kill me. To—to try to go on again, in the same old groove, after having lost my baby. Ah, I cannot do it. It is too much—too much, Barbra," she wails, the swift tears crowding into her lovely eyes, and her fair bosom heaving painfully under her thin, black gown.

It is my turn to look away, and I do so, and make no reply for the simple reason that I cannot. My own eyes are filled with tears and my tongue is unmanageable, so for a moment the drowsy hum of the golden-bodied bee among the flowers, and the rippling music of the river at our feet, are all the sounds that are heard.

Presently she lays her slim, hot hand upon my arm. "Barbra," she falters, struggling with her tears, "Barbra, you have been ever and ever so kind to me, and I want you to know how grateful I am and how much I thank you. And you must not think that I want to go to get away from you, because indeed, indeed I do not. It's the *place*, you see, and the surroundings. *Everything* reminds me of—of my baby, you know, and I cannot bear it. And—and so for a little time I want to leave here. I want to go off somewhere, where I shall have something to occupy all my time, and keep me so busy from morning till night, that I shall not have a single opportunity to think. Do you understand, Barbra?" she asks, taking her hand from my arm, and lacing and unlacing her slender fingers nervously.

"Yes, I do, and I must admit that you are right about wanting to go away for a time. But, Annah, why couldn't you and I go away somewhere together, to some springs? That, I'm sure, would be a change, and you could find plenty to amuse," I urge, eagerly.

"Perhaps I might; I do not know. But I have no heart to go, Barbra. I could not be happy, and I should only be a burden to myself and every one else—a sort of a death's-head, don't you know, at every feast. And besides, you remember how strongly Doctor Dean urged me to go to these people. He thinks it will be far better for me, mentally and physically, to have a child to nurse. I—I think so, too. Oh, my God! If I could only have kept my own darling, what a different woman I should have been!" she cries out, sharply, covering her face with her trembling, snowy hands, and sobbing aloud.

I sit and look at her in pained silence, trying bravely to think of something gentle and consoling to say to her. But—but what can I possibly say to one so utterly miserable? It is quite beyond me. Her grief is too deep for words of mine to comfort her, so I remain stupidly silent. Just when I am beginning to feel very uncomfortable, indeed, she removes her hands from her face, and, looking at me through long, wet lashes, begins the conversation again:

"And you know, Barbara, the doctor asked me to do it as a favor to himself; and since he has been so extremely kind to me, why shouldn't I do a favor for him, if I can?"

"Of course, I do not blame you for being ready and willing to do a favor for him, but I hate the idea of your going among strangers to hold such a position. If you were poor and obliged to accept such a situation it would be different."

"Ah, yes, it *would* be different, I grant you, but not in the way that you mean. Then I could not accept such a position; now I can. There is no compulsion in the matter, you see. And then the doctor says they are very nice people, indeed. They move in quite the best society, belong to the Upper Tens, I fancy, and he has explained to them who I am, and that it is not necessity that——"

"Yes, yes; I know all that," I say, crossly, frowning; "and perhaps they do belong to the Upper Tens, as you fancy, and perhaps they don't. It's my private opinion that they are shoddy—Upper Tens of a mushroom growth, if you like. Just remember what a commotion they have kept up ever since that child has been born. Why, they've actually almost driven poor Doctor Dean wild. And only see what a piece of perfection they requested him to find to play the mother to their son and heir, forsooth! Bah! It makes me ill-natured to think of it. As if some stout, wholesome German woman would not have answered their purpose. But oh, dear me, bless you, no, that would not do at all. They would have been supremely insulted if any one had had the audacity to mention such a thing. On the contrary, they must have a lady, bred and born, if you please, and she must be educated and accomplished, and strong and healthy and cheerful, of good address, and, in fact, like Cæsar's wife, 'beyond reproach,' and all because she is to have the honor (?) of being nurse to their most wonderful child. I wonder Doctor Dean ever undertook to supply them such a marvel of a nurse," I end, sarcastically, opening and shutting my fan with force enough to shatter it to pieces.

My sister looks at me, and puckers her red mouth into a grimace. "You may not have been aware of it, and I'm sure you did not intend it, but you and the doctor together have been burying me in compliments, and I doubt whether I can survive them," she says, smiling a little, tired, wan smile; "and I do not see as there is any need of our talking more about it. My mind is quite made up. If the gentleman is pleased with me—if he considers me enough of a lady to 'play mother to his boy'—then I shall certainly undertake the responsibility."

"Oh, very well. Being so very willful, you must go; but, mark my words, you'll regret it," I prophesy, angrily, not in the least because I think she is likely to, but simply because I am so excessively annoyed with her.

After that I turned my back on her, and sit regarding the toe of my slipper, moodily, while I fight a deadly battle with my pride and my heartaches. There is only one thing that comforts me in the least, and that is the undeniable fact that the change will be of benefit to her. That is my one poor shred of consolation. Having been soothed a little by this thought, I turn to Annah and am on the point of making—or rather trying to make—some very brilliant remark, to show that I bear no ill feeling, when she quite startles me by jumping up suddenly from the bench and bending her supple, beautiful body surprisingly far forward, to peep through the trailing branches.

"Barbra," she says, hurriedly, with much more excitement than I deem called for, "Barbra, here are two gentlemen coming down the walk. It—it is the doctor, of course, and the gentleman who has—whose wife has had a son. How handsome he is!" she exclaims, under her breath, and then drops back on the bench again, and begins playing rather nervously with the fan in her lap.

When I glance at her face, I am amazed at the cloud of red that has, all in an instant, dawned in either downy cheek. What has caused it, I wonder? I am exceedingly puzzled. When, before, have her cheeks clothed themselves in a mantle rivaling the rose's rich bloom? Not in many and many a long day. Just at this moment the gentlemen enter my mind again, and, like my sister, I bend forward and peep out. Yes, there they are, to be sure, striding along towards our bower; and, as I catch sight of the second gentleman, I come very nearly imitating Annah's example, and exclaiming, too, "How handsome he is!" But I recollect myself in time, and do nothing quite so stupid. I stand and look at him, though. That is one of my privileges, being a woman of five-and-thirty, and unmarried. Always, all my life, I have had the greatest admiration for handsome men, and, as they do not usually favor me with more than two good looks, I generally do the rest of the looking myself.

"For mercy sake, Barbra, sit down, why don't you? I hope you are not, *à la* Lot's wife, suddenly turned into a pillar of salt. Sit down, do, or the doctor will think you've taken leave of your senses," cries my sister, in a voice that, somehow, soft as it is, brings me down from the clouds with a wild sort of haste.

I sit down. When I have done so, Annah treats me to another surprise. She gets up quickly from the rustic seat and goes over to the river's flower-bordered bank, and stands with her back to me. What possesses her I cannot think. She is not usually so rude.

The sound of coming footsteps has ceased. The doctor parts the tasseled branches and beams in upon me.

"Bless my soul, what a cool, green, handsome, enchanted grotto it is, to be sure! Are mortals permitted to enter? If not, I'll make myself conspicuous by my absence in about three seconds."

"You need not make yourself conspicuous in any way, doctor," I say, rising; "come in, and we'll share our 'enchanted grotto' with you."

"I dare not venture to do so unless both parties are willing. It is as much as my life is worth. Truth, I assure you. Miss Annah, will you kindly give your permission?" he asks, laughing and looking across at her, and still remaining on the outside, thereby effectually screening the stranger from our gaze.

At sound of her name, my sister turns and comes back to the bench again, with something in her face and eyes, a sort of uneasy excitement, that is new to both.

"Do not be so frivolous, doctor. Do not act so like a demented being. You may enter, of course," she says, in her pretty, bewitching way, with a wave of her white, small hand.

Somehow, no matter how perfectly light and trivial her words are, they always seem to go for so much more than other people's. They always seem to mean something.

At that the doctor pushes nature's green, beautiful curtain aside and steps into our cool, sweet retreat. The gentleman enters also, hat in hand, and pauses with one of the trailing branches laying across his shoulder, and another mingling its emerald perfection with the leaf-brown beauty of his hair.

"Mr. Chesterleigh, permit me to introduce to you Miss Barbra North, and her sister, Mrs. Waters."

Thus we are introduced. Thus the innocent, unconscious, kind hearted doctor weaves in the first bright color of the romance of these two young lives.

I take a step forward and bow low. He bows also, with the inimitable grace of a man who has lived hand in glove with royalty. Annah inclines her head with a pretty, graceful movement, and then, after one quick, shy glance, her long bronze lashes sweep downward against the hot-red of her cheeks.

I do not know whether it is my imagination or not, but, somehow, I fancy that when first he looks at my sister, at her flushed, dainty face, at the great, shining, bewildering eyes, and scarlet, vivid mouth, a swift peculiar light—some intense bitter-sweet emotion dawns upon his dark, thoroughbred face and alters it strangely.

For a moment there is an awkward silence. Annah says nothing. Her lips are mute. Her bronze lashes are down-dropped still against the poppy-red of her cheeks.

The doctor glances from one to the other of us, smiling at first, then the smile gradually disappears, and his look is grave.

Mr. Chesterleigh is silent also. His handsome haughty face is turned aside a little. The full under lip is held in by the strong white teeth, and there is a sort of half smile about his mouth, as if something pleased and yet troubled him.

The silence is becoming painful to me, so I open my lips to say something, but just as I am about to do so, Mr. Chesterleigh opens *his* for the same purpose. He turns and looks at us both.

"Ladies, I am greatly pleased to have met you. Mrs. Waters" (she lifts her white lids, and her blue, dazzling eyes look into his, and, under that look his dark face flushes swiftly), "Mrs. Waters, I—I presume the doctor here has told you of my errand—why I have come? My wife is an invalid. She has always been delicate all her life, but since the birth of her baby" (how fondly he says the word) "she has been more weak and helpless than ever before. So ill, indeed, that doctor said it was impossible for her to nurse her child. It was a bitter blow, but for the boy's sake she yielded. She implored him, though, to find some one who was a lady to love her baby and nurse it—and—and so he brought me here to you. I feel certain that my wife will—that you will suit my wife, and so, will you come at once? Pardon me, I do not wish to give you trouble. But there is need of haste. My boy is so small and young, he must have some one's care at once. If I will come down this evening, when it is cool, may I take you back with me?" he asks, in a voice that has a sound almost of pleading in it.

Of course, he is anxious for his child, I think.

For an instant my sister hesitates, the color drifting in and out of her face, making it one moment like a red rose newly blown, and the next like a lily of the field.

In that instant he speaks again, going a little nearer her.

"I—I hope you have not changed your mind. I understood from the doctor that you had quite decided to come. Was he mistaken?" he questions, looking down into her face with an expression in his wide brown eyes that startles me. It fills me with a vague unreasoning sort of dread! Why, I wonder?

"No, the doctor was not mistaken," she answers, softly, a slow, sweet smile dimpling about her mouth. "He was not mistaken; and if you come this evening I will go back with you."

"Thank you," he says, stretching a long, slender, brown hand towards her. To my utter amazement she does not offer to touch it. On the contrary, she folds her small white hands behind her back, and looks into his face and smiles her soft, tender, dimpling smile once more. But it is gone in an instant.

"There is no need of thanks. I go because I wish to," she says, briefly.

Over his face a shadow falls. He turns from her hastily.

"Doctor, had we not better be going? Ladies, I wish you good-afternoon. I shall call this evening at seven o'clock, Mrs. Waters, if that hour will suit you. It will? Very well, I shall come. Good-afternoon, ladies," and bowing and smiling, they go out from our cool retreat and saunter down the path together, the doctor with his head bent forward, his hat tilted over his eyes, and his hands thrust deep in his pockets. Evidently some thought troubles him.

The young man steps along beside him, tall and graceful and comely as some prince, whistling as he goes—whistling an air from "La Perichole." The sweet, tender, pathetic letter-song it is. "I love thee, and yet I must leave thee." Ah, who does not know the intense, yearning beauty of it? How strange it is, though, that he should be whistling one of Annah's favorites.

At sound of it she springs up from the seat that she took only a second ago, and, pushing the waving branches aside, she leans forward and gazes after them, until both have disappeared. Afterwards she turns back to me again.

"Well, Barbra, you have seen the gentleman, what is your verdict? Is he shoddy? Do you think that he belongs to the 'Upper Tens of mushroom growth'? What a stupid notion, to be sure!" she exclaims, fanning herself slowly, with the incomparable grace of some Spanish beauty.

"It may have been stupid, and it may not," I say, doubtfully. "What does it matter whether he does or does not? Annah, I beg of you once again to think better of it. Do not go, dear; do not. It will make you trouble if you do," I prophesy again, and this time remembering how eager he was only to touch her hand and the look that fell across his face when first he glanced at hers, it is no idle prophecy. I believe what I am saying.

"Barbra, how foolishly you do talk. As if I could think better of it now. I have given my word, I have promised him to go. What would he say this evening? What would he think when he came, and I should refuse him? It is impossible. It cannot be done now—I could not meet him, even."

Digitized by Google

"You need not meet him. I will do so, and make all the apologies that are necessary. Will not that do?"

She shakes her shining head slowly.

"No, it will not do. There is no apology that you could make. I must keep my promise," she says, and somehow it seems to me that there is a ring of triumph in her voice, though why there should be I cannot tell.

"Very well; being so very willful, you must go," I say, impatiently. Then I get up and leave her alone in the enchanted grotto.

(To be continued.)

ACQUITTAL OF JOSEPH A. BLAIR.

AFTER a continuous seclusion of four days the jury in the case of Joseph A. Blair, of Montclair, N. J., charged with the murder, in his stable, on June 26th last, of his coachman, John Armstrong, brought in a verdict of "Not Guilty" on Wednesday morning, October 22d. Intense excitement had prevailed in Newark during the whole of the trial and the long period occupied by the jury in considering the evidence. The court-room was densely crowded on Wednesday when the announcement was made that the jury were ready to come in. Mr. Blair, accompanied by his wife and ex-Judge Titsworth, one of his counsel, entered the room a moment before the jury appeared. When the foreman answered the formal question as to the finding, "Not Guilty," Mr. Blair appeared utterly dazed for a moment. In the next he fell over upon the pile of law-books on the table and sobbed loudly. Then, falling upon his knees, he buried his face in his hands upon his counsel's lap. It was with difficulty Judge Depue repressed the applause that arose from the crowd. William A. Torry, Blair's landlord and former bondsman, rushed forward and was the first to lean over him and congratulate him on the verdict. Mrs. Blair removed the handkerchief from her tearful but smiling face, to be kissed again and again by her lady friends, who had waited in the court patiently every day, and all day long, since the jury went out, for this moment.

The motion to discharge from custody was made and granted, and in a few moments the last legal scene in the absorbing case had been enacted. Soon after one o'clock, accompanied by his wife, ex-Judge Titsworth, and a friend, Blair got into his carriage and was driven to Montclair. A constable mounted the driver's box to protect Blair. A vast crowd of persons stood by the carriage-door to see him go, but no one offered to molest him. Upon his arrival at his home in Montclair he found dinner prepared and a party of friends awaiting to congratulate him. During the rest of the day he was besieged by villagers calling to express their happiness at his restoration to his home and family. His little children awaited him at the gate and welcomed him with childish glee. He took each in his arms by turn and folded them to his breast, kissing them warmly, while his tears fell on their joyous faces. In the evening he had a perfect ovation.

EXPERIENCES OF A BRIDAL PARTY AT NIAGARA.

NIAGARA is the great honeymoon centre of this vast continent. Not a day passes but brand-new brides with brand-new bridegrooms, in brand-new clothes, and with brand-new *impedimenta*, arrive by late trains and early trains, and every hotel register is filled up by the triumphant husbands of a few hours with the Mr. and Mrs., the latter in bold round hand in order to denote his supremacy, and his signal, and glorious victory. The artist and I got a dose of gush on our recent trip to the Falls. It met us everywhere, from the Rapids to Goat Island, from the Shadow of the Rock to the Cave of the Winds. Never did we behold so much spooning. Never so much brand-new raiment; never were our ears assailed by such creaking of brand-new boots. We put up at the Spencer House, and were not permitted to register until four exulting youthful husbands had boldly entered their names, belongings, and addresses in the well-thumbed book which the smiling clerk officiously placed at their disposal. The day subsequent to our arrival a nor'easter had the presumption to whistle along the corridors. Fires were instantly lighted in order to neutralize the effects of this too audacious intruder; but of what avail were these comforters to us? Around the fireplaces, confronting the blazing logs, the brides and bridegrooms sat in couples, taking up the room of two, whereas one chair would have amply provided for the accommodation of both Edwin and Angelina.

It was simply delicious to behold the newly-married couples falling victims to the seductive blandishments of the open air photographer at Prospect Park.

"Have yer photograph done, sir, and your beautiful lady. Wot a handsome couple you'll make with the great waters of the Horse Shoe Falls as a background, and the American Fall as a come in. Have it done, madam, in remembrance of the Falls; yer'll never get such another chance. One dollar for two sumptuous likenesses, with the whole of Niagara Falls thrown in for nawthin'."

This artistic and artful spider gets many a honeymooner into his web, and the bilotic expressions of the recently united, whilst under fire of the camera, would prove a study for Lavater himself.

In the dressing-rooms and corridors beneath the Shadow of the Rock, we encountered Edwins and Angelinas by the score. Some of them spooned all the time; others less romantic had eyes for the wonders of nature; and two couples started a waltz en costume, which, despite their flannel shoes and the rough uneaven floor, passed off with considerable eclat.

The artist and I found ourselves outnumbered at dinner, and forced to take back seats at a back table. Edwin and Angelina held the menu close to their noses, their heads touching, and eyes looking love to—but I won't. Suffice it to say that the waiters had a busy time of it, and that every dish, from the soup, to the filberts, was conscientiously tested. "Dey talk ob de appetites ob brides," observed a colored waiter, a new hand, to his comrade; "dey eats twict more nor eder folk. Yes, sah." In the Indian stores—save the mark! the goods are manufactured in New York—the brides "tear round." What useless nick-nacks they buy—Lacrosse bats, moccasins, snowshoes, feather-fans!—while their miserable husbands seek the fresh air of the street and whistle "Little Buttercup," in order to drown the financial sense of the situation.

The rainbow is a great source of comfort to Edwin and Angelina. It enables Edwin to utter some fragments of verses learned at school, and Angelina to exclaim, in the cooing of the turtle-dove, "Oh, my! ain't it quite too lovely for anything!" or, if she be of a refined turn of mind, to compare its blue to her husband's eyes, its red to the hot blood that beats in his heart for her, and generally to dispose of its colors after an æsthetic and rhapsodical fashion. One bride we beheld; it was beneath the Shadow of the Rock. She was slim and thirty. She wore a horse girth round her waist, and her new boots already betrayed symptoms of both corns and bunions. *He* was fifty, but a giddy youth. His coat was made out in the West, and was as square across the shoulders as though it was hanging upon a walking-cane. *His* boots were new, and creaked like an oaken-paneled door in a haunted house on a gusty night. She was a gay, frivolous young thing. She loved flowers. She espied a worthless yellow fungus high up on the rocks. She expressed a giggling wish for it. *He* could refuse her nothing; and, stumbling over stones, slipping over rocks, and climbing hand-over-hand to where the "floweret"—she called it "floweret"—grew, plucked it and returned to her with the flush of victory on his fifty-year-old cheek. She rewarded him with a kiss. *She* didn't mind us! Why should she? It was simple, natural and touching—very!

Where the bridal element came out strongest was beneath the Falls. Here it mustered in immense strength. Many Edwins and Angelinas mocking the trying ordeal of costume, cautiously stopped short on the rocks beneath the American Falls. What a sight that is! Up, up, touching the sky-line, the water frosted with diamond foam, glistening in the sunlight; green in some places, horribly green—a green never yet seen before; white in some places—a dreamy white. It seems to rest for a while, then to glide into a bridal-vail, then to pause again, and then—to dash down with terrific velocity into the clouds of white spray that jealously conceal it from human eye. Here Edwin places his arm round Angelina's waist as he whispers, "How grand!"

We encountered honeymoons on our home journey. The palatial cars of the New York Central Railroad were crowded with them—Angelina having the Hudson River side of the car Edwin leaning fondly over her as he expatiated on the beauties of the glorious river—and what a panorama of beauty that ride from Albany to New York, or vice versa, unfolds. We lost sight of the "spoons" at the Grand Central Depot, and if these dainty dames managed to catch cold, it was not from want of being tenderly wrapped up by their adoring and gushing husbands.

The Foreign Trade of September.

THE month of September, 1879, furnishes renewed encouragement in respect of our foreign trade. In no month before in the history of the country was the import of specie and bullion so large. Twenty-seven million, four hundred and eighty-two thousand dollars, plus, received at New York, was an import which means relief to many a mortgagor in the West, added comforts to thousands of households. The total imports of the month were nearly fifty-eight millions of dollars. For the first nine months of the present year the imports have been, in round numbers, two hundred and seventy-eight millions, as against three hundred and fifty millions in 1872. But in 1872 we were, practically speaking, importing no specie; this year we have received over sixty-seven millions, while the increase in imports of the year, as against the first nine months of 1878, has been more than half of it in specie and bullion. On the export side the statement is still more interesting. The exports from New York for September were in value nearly thirty-seven millions of dollars, with only, say, half a million of specie. The balance of trade for the country for the preceding nine months is estimated at one hundred and forty millions. If we are a little behind the balance of 1878 at the same period, there are yet three months of what promise to be extraordinary months for export of grain and provisions. Whether we fall short a little or exceed a little the exports of last year, the general result is to be satisfactory.

Scotch Universities.

THE percentage of university students to the population is larger in Scotland than elsewhere, being 1 in 700, or, more strictly speaking—if we deduct the imported students who come from England, Ireland, India, and the colonies to study medicine in the Scotch university schools—1 in 800. In the German Empire the proportion of university students to population is 1 to 1,600; in England, 1 to about 4,500. Clearly, then, the Scotch universities are popular institutions. Like the Kirk of Scotland, they are characterized by severe simplicity. They got no spoils out of the sack of the Romish Church at the Reformation; and during the greater part of their career the motto which was suggested for the *Edinburgh Review*, might have been applied to them—"*Musas tenui meditamur avena.*" ("We cultivate literature and science on a little oatmeal.") Of late, private munificence has begun to be directed toward the universities, especially of Glasgow and Edinburgh. By means of splendid private subscriptions (eked out with Parliamentary grants), the Glasgow has obtained a complete set of fine new class-rooms, laboratories, libraries and museums, with moderate residences attached for the Professors; and the Edinburgh has, for the scientific teaching of its great medical school, in course of erection buildings which promise to be of their kind nearly perfect. But the endowments of all offices attached to the universities are moderate and generally meagre; and it is only owing to the large attendance of students, and after much hard work consequent thereon, that some of the Professors have of late years realized handsome incomes. The fees charged to students have been extremely moderate, and it has always remained possible to follow a liberal course of study in arts or a complete professional course in medicine, law, or divinity, at a Scotch university for very small cost. Originally the students were quartered in collegiate domiciles, with a common table, under academical discipline: but during the last two centuries the collegiate system has been gradually and entirely abandoned in Scotland, and now the students (excepting the small minority who can live at home or are placed to board in private families) fight the battle of life for themselves, and acquire the art of making both ends meet, unchecked and unaided, in independent and often solitary lodges. Such circumstances are doubtless trying; they are very different from those in which a youth entering a college at Oxford or Cambridge, and surrounded by all the apparatus of gyps (or scouts), battels, hall dinners, tutors and proctors, finds himself placed. But the Scotch students, as a rule, show themselves quite strong enough for their position. They resist temptation, and keep their heads straight, and their university life is a stern reality for them, and not a mere idle playtime.

SCIENTIFIC INTELLIGENCE.

M. Amyot, Professor of Physics to the Lycée Fontanes, has been appointed meteorologist to the Central Bureau of Paris.

The Russian Expedition to explore the ancient bed of the Oxus River, with a view to connecting it with the Caspian Sea has been abandoned, the difficulties in the way of such connection being found practically insurmountable.

The French Northern Railway Company posts up daily at its principal stations the warnings and weather-maps issued by the Central Bureau of Paris. The meteorological news of the principal seaports on the railway system of the company are also noted.

Professor Foerster, of Berlin, announces the discovery by Palisa, on the 17th of October, 1879, of a planet of the twelfth magnitude in two hours fifty-two minutes right ascension, and 14 degrees 13 minutes north declination, with a daily motion of 5 minutes south.

The St. Petersburg Society of Naturalists has undertaken the publication of a complete ornithology of Northern Russia. All who possess any data on that subject, or collections of birds, are requested to communicate them to the St. Petersburg Society of Naturalists at the University of St. Petersburg.

Dr. Bessels, of the *Polaris* expedition, has received a letter from Captain Markham announcing his return to England from his last Arctic cruise. The captain says that on September 12th he reached latitude 76 degrees 34 minutes north in longitude 47 east. He was not able to penetrate to Francis Joseph Land, which was reached by the Dutch expedition.

In the Paris International Exhibition of Sciences applied to Industry luminous dials for clocks are now sold, on which the hour can be read during the whole of the night without the help of any light whatever. Although fading gradually, the phosphorescence is sufficient to serve till daylight. Barometers and thermometers are said to be prepared on this principal for night balloon-ascents when no moon is visible.

A Dispatch was received at the New York Signal Office on October 20th from Fort Elliott, Texas, announcing the completion of the military telegraph line to that place from Fort Sill, via Forts Reno and Supply, Indian Territory. This completes the military line in the Southwest and places every military post there in communication with the War Department. The part of the line recently put up is 275 miles long.

M. Turpin has recently presented to the Academy of Medicine in Paris a memoir on colors which can be made from perfectly innocuous substances. He prepared a veritable palette containing 1,440 shades according to the chromatic scale of Chevreul, and sent seventy two tubes with as many colors. These colors were carefully examined and found to contain no poisonous matter whatever, and a suitable prize was awarded to the inventor. When we consider how frequently toys, bon-bons, wall-paper and book covers are colored with arsenic dyes, the value of innocuous pigments becomes more apparent.

General John Newton, in the interest of the United States, has petitioned Judge Donohue, in Supreme Court, Chambers, that Commissioners be appointed to appraise the value of lands for the Harlem River improvements, under the Acts of 1876 and 1878. The latter Act provides that instead of constructing a canal or channel necessary to connect the East and North Rivers by the widening and dredging of the Harlem River and Spuyten Duyvil Creek, the channel shall run through the northern end of Manhattan Island. There are almost two hundred persons who claim interest in the lands registered, and it was found impossible to settle all the claims without the appointment of commissioners.

M. Adam has just laid before the Academy of Sciences a method he has discovered for determining the quantity of butter contained in milk. The instrument is termed by him a lacto-butyrometer. Of the milk to be analyzed, 10 cubic centimetres are placed in a glass tube, one or two drops of caustic soda being added, according to the acidity; then 10 cubic centimetres of ether at 62 degrees, and as much of alcohol at 19 degrees. Very soon the liquid column is covered with an oleaginous layer equivalent to the richness of the milk in butter-making material. A simple formula permits that richness to be decided without having recourse to a preparatory evaporation or weighing. The whole process can be effected in ten minutes, but, however convenient it may be for chemists or medical men, we greatly doubt whether it can ever be of much utility to the public.

Progress of Steel-making.—At the time of Bessemer's invention, only about 50,000 tons of steel were made in Great Britain annually, and its price ranged from $250 to $300 per ton. In the year 1877 the Bessemer steel produced in Great Britain alone amounted to 750,000 tons, or fifteen times the total of the former method of manufacture, while the selling price averaged only $50 per ton, and the coal consumed in producing it was less by 3,500,000 tons than would have been required in order to make the same quantity of steel by the old Sheffield process. The total reduction of cost is equal to about $150,000,000 upon the quantity manufactured in England during the year. During the same year (1877) the Bessemer steel manufactured in the United States, Belgium, Germany, France and Sweden raised the total to 1,874,276 tons, with a net selling value of about $100,000,000.

A Fossil Reptile-bird.—At a recent meeting of Swiss naturalists, Professor Carl Vogt, of Geneva, gave a lecture on the archæopteryx, the interesting reptile bird which has provoked so animated a discussion among anatomists, and of which we possess only two specimens—that of the British Museum and that newly discovered at Solenhofen, Germany. According to the first, which was very incomplete, this Jurassic animal was considered as a bird, having a beak, nails and feathers; while the Solenhofen specimen, quite complete, and of which Professor Vogt exhibited very good photographs, proves undoubtedly that we have to do with a bird-like reptile of the size of a pigeon, which had both scales and feathers, a beak provided with teeth, armed wings, bird-like feet with nails, and a reptile tail consisting of twenty vertebræ. This discovery gave to Professor Vogt the occasion to make a brilliant address on the origin of species, the adaptation of organisms to the medium they inhabit, and the way in which this adaptation goes on from the periphery to the centre.

The Lombardi Art Company of London have applied with novel care and skill a method of reproducing colors which is called peikilography. A photograph in monochrome is enlarged from a negative in the usual way and transferred to thin paper or canvas. Colors are laid on by the hand on the reverse side and show through. The colors may be roughly applied above without shading. The most delicate shades are supplied by the photograph. The effect of paintings by Rubens, Holbein and other able masters is admirably reproduced. The time, perhaps, will come when photographs in colors will be produced wholly by natural means, but until that period arrives the pictures by the method described above must be pronounced to be very satisfactory. The process of enlarging photographs may also be counted as one of the most important of modern improvements. Small pictures can be taken rapidly and are generally sharper and better defined, and the enlargement can be accomplished at leisure. The use of artificial light is becoming more general and facilitates the prompt execution of an order.

PERSONAL GOSSIP.

THE Duke of Cumberland contemplates definitely renouncing his claims to the throne of Hanover.

IT is understood that Prince Lobanoff will go to London in November to assume the post of Russian Ambassador.

MADAME ANNETTE ESSIPOFF is about to be married to her early master and adviser, the pianist-composer, Leschetitzky.

PRESIDENT HAYES and his family have returned to the White House, which has been cleaned, newly carpeted and newly upholstered in their absence.

WILLIAM HARBON, who came near being hanged for a murder committed by the notorious Peace, has just been awarded $5,000 by the British Government.

THE mother of Major Cavagnari, who lost his life at Cabul, is to be pensioned by the English Government, as her son's death leaves her without means of support.

JENNIE COLLINS, of Boston, the "working-girls' friend," fears that immorality among shop-girls is increasing. She declares it to be on account of starvation wages.

MR. T. EDISON, a nephew of the celebrate American inventor, has died of consumption in Paris, where he recently arrived to superintend his uncle's patent affairs.

IT is asserted that the ex-Empress Eugénie, notwithstanding all efforts to dissuade her, will embark next February for Zululand to pray on the spot where her son was killed.

MRS. TIBURTIUS, wife of the Surgeon-General of Germany, is the leading dentist of Berlin, and attends the royal family. Her sister-in-law, Dr. Franziska Tiburtius, is an eminent physician.

THE first woman lay delegate has at length been admitted to a General Conference of the Methodist Episcopal Church. It happened out in Oregon, and the lady's name was Mrs. H. H. Hixon.

THE Prince of Orange, it is reported, is to be married to Wjera Constantinowna, Grand-Duchess of Russia, and widow of Duke Eugene of Würtemberg. The Duchess is twenty-five years old.

A BERLIN dispatch says: Herr Kurd von Schlözer, the present Minister of Germany at Washington, will probably succeed the late Herr von Bülow as Secretary of State for Foreign Affairs.

A RICH Englishman, Thomas Holloway, is erecting at his own expense an institution for the higher education of girls. The building alone, which has been begun, is to cost $1,285,000, and is 410 feet in length.

REV. O. B. FROTHINGHAM, it is stated, is already much improved in health by his European tour, and it is anticipated by his friends that he will return during the Winter to resume his ministerial work in New York City.

PRINCE BISMARCK will spend the next three months between Varzin and his estate in Lauenburg. He will not return to Berlin till January, and it is most unlikely that any interview will take place between him and Prince Gortschakoff.

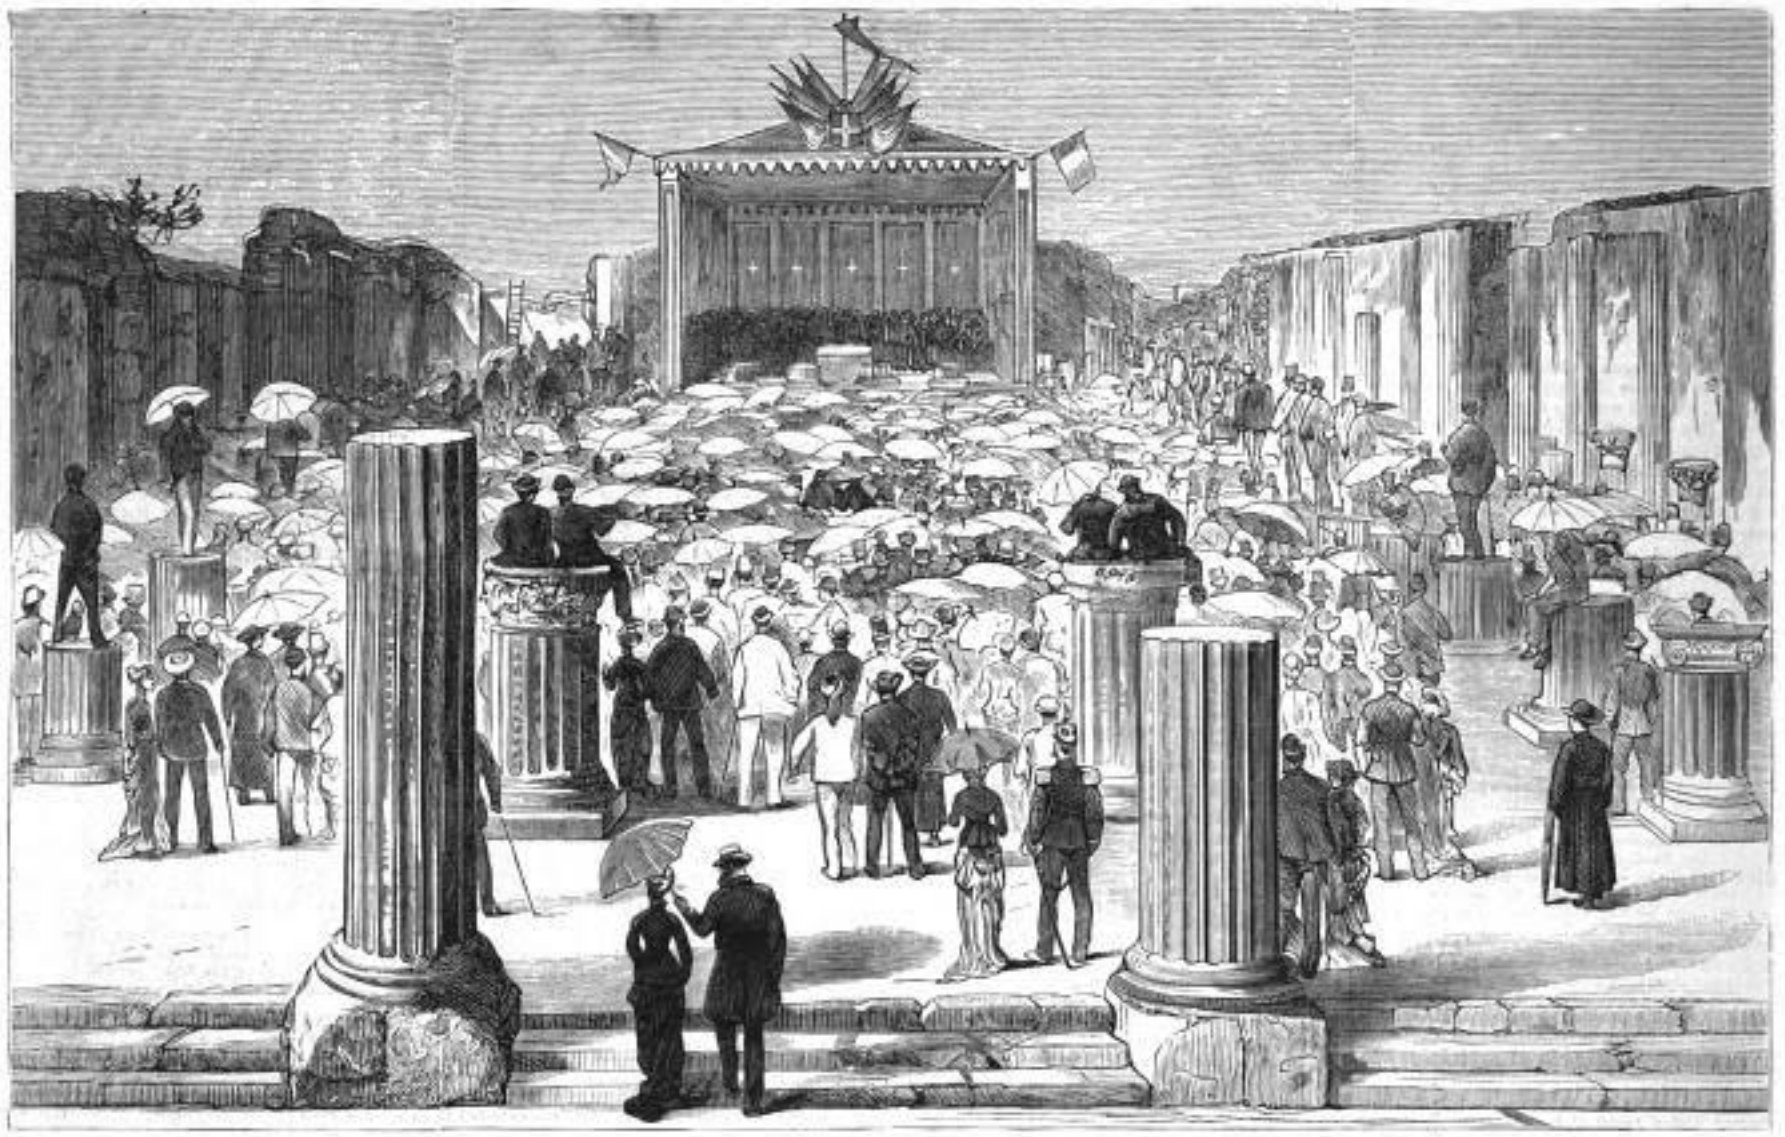
THE Queen of the Belgians is to give the point-lace bridal veil to the Archduchess Christina of Austria, prospective bride of King Alfonso of Spain. Into it will be worked the arms of the various kingdoms into which Spain was formerly divided.

DR. HANS VON BÜLOW is about to become chief Professor of the Pianoforte at the Brussels Conservatoire, and Herr Johann Becker, leader of the well known "Florentine Quartet," will take the place of M. Henri Vieuxtemps as head of the violin class.

THYRA, Duchess of Cumberland, has received a wedding gift from the Danish people of a beautiful oaken bookcase in the Gothic style, richly ornamented with sculptures of the old Danish authors and poets. It is filled with 600 volumes of Danish literature, art and music.

DR. LEMOYNE, whose remains were cremated near Washington, Pa., the other day, left a will disinheriting every heir to his large property who refused to be burned after death. Yet a son and a daughter were so far from sympathizing with the eccentricities of their father that they refused the condition, and the son declares his purpose to destroy the crematory built by his father.

A FORTNIGHT ago, while General Sickles was spending a few days with the officers of the Third Army Corps of France, in Normandy, he received from the President of the French Republic the appointment of Commander of the Legion of Honor. In subsequently thanking the President of the French Republic for the honor conferred on him, General Sickles made a speech in French.



LIEUTENANT-COMMANDER H. H. GORRINGE has just been presented to the Khédive of Egypt as authorized by the State Department of the United States to receive and remove to America the obelisk of Alexandria, known as Cleopatra's Needle, which was presented to the City of New York through the Department of State by the late Khédive, Ismail Pasha. His Highness received him with great courtesy, expressed his pleasure at the acceptance of the gift, and has authorized him to commence the work of removal at once.

THE little difficulty about the reception of M. Henri Martin into the French Academy has been settled. That gentleman will be inducted on the 20th of November next, and M. Marmier will make the address of welcome, in place of M. Emile Ollivier, who was originally appointed for that duty, but whose speech, prepared for the occasion, was for political reasons not acceptable to the committee of the Academy, to whom it had been submitted in advance. M. Ollivier, however, it will be remembered, has already printed the document.

THE will of the late Henry C. Carey makes his adopted daughter, Miss Virginia C. Haven, his principal legatee, and gives to the Pennsylvania Academy of Fine Arts the works of his uncle, William Carey, and all the pictures, statuary and bronzes as enumerated in the catalogue of the Carey collection, except the bronze figures upon the mantelpieces in his library, upon the conditions that the said corporation pay to his executors the sum of $13,000 for the benefit of his estate, and that the whole collection be kept together and exhibited as the Carey collection.

AT a meeting of the Yale Corporation on October 22d, Dr. Edward A. Dana, for five years a tutor in the college, was elected Assistant Professor of Natural Philosophy. Dr. William H. Carmalt, for several years a lecturer in the Medical School, was appointed a full Professor of Ophthalmology and Otology. Dr. Francis Bacon was invited to resume duty as Professor of Surgery, and the following lecturers were appointed: Dr. W. O. Ayres, of New Haven, on "Diseases of the Nervous System;" Dr. S. H. Chapin, of this city, on "Diseases of the Throat;" and Dr. Matthew D. Mann, of Hartford, Clinical Lecturer in Gynecology.

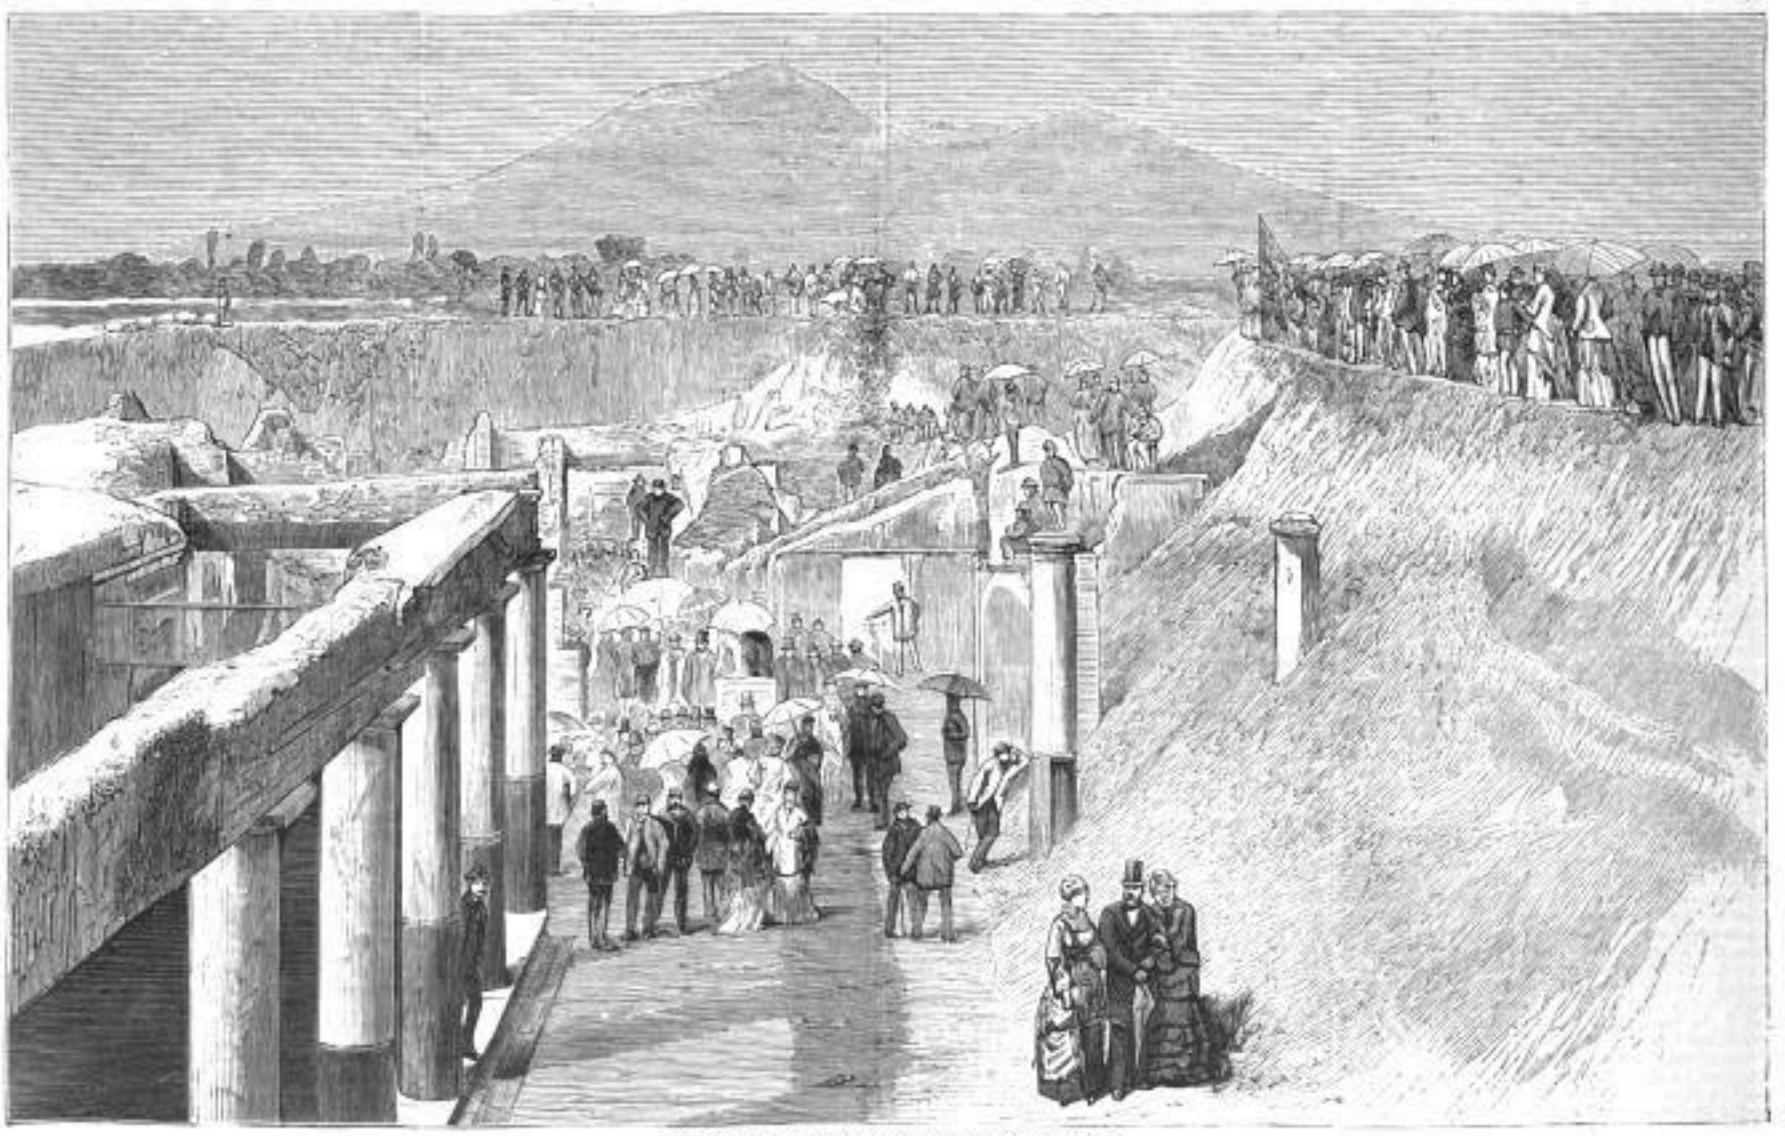
THE FORMAL EXERCISES IN THE GREAT BASILICA.

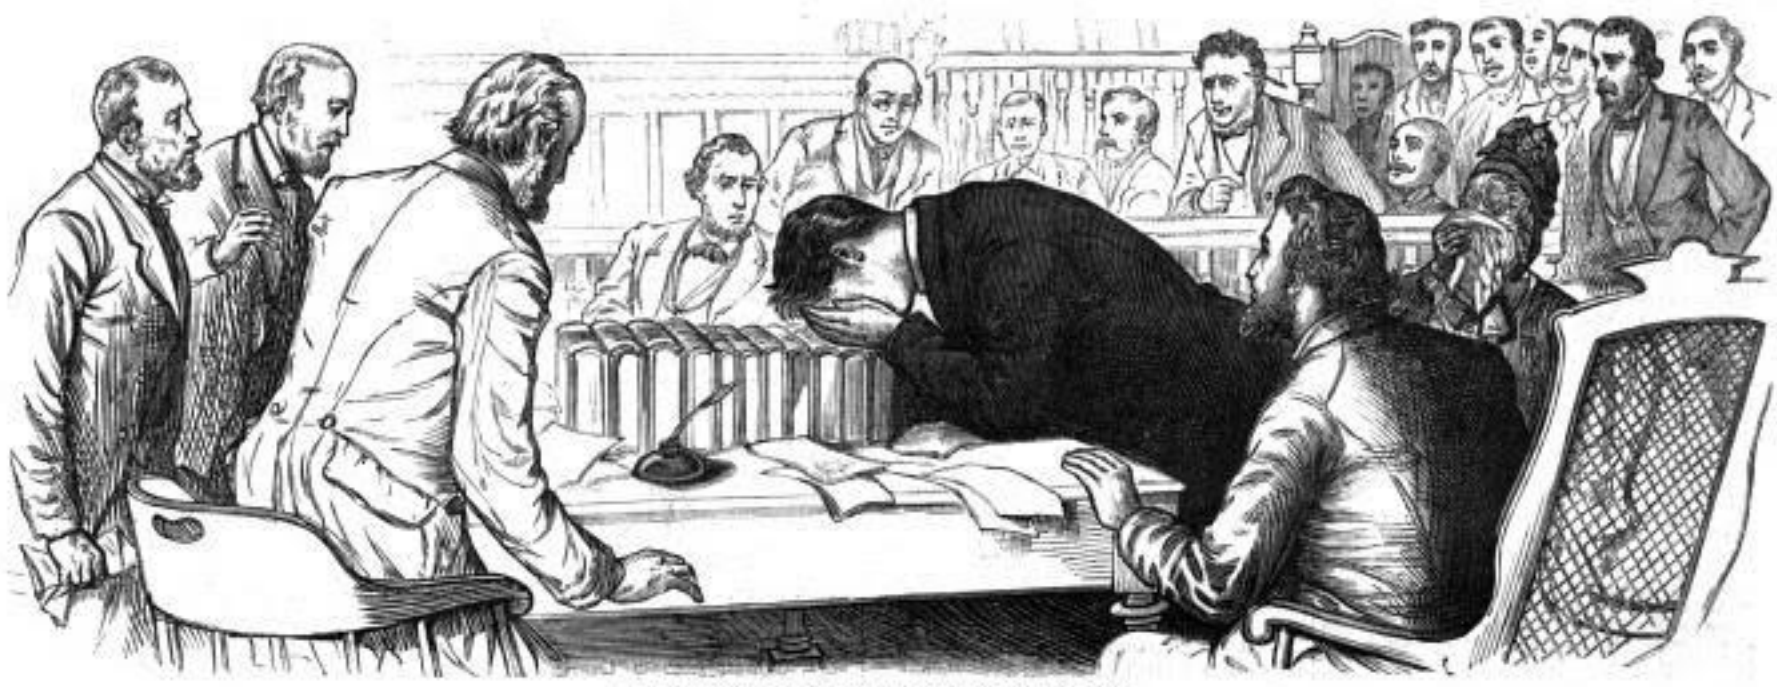


THE POMPEIAN COMMEMORATION

NEVER since that dread August day of 79 A.D., when Vesuvius suddenly opened her abysses and overwhelmed the smiling towns at her foot, have the streets of Pompeii witnessed such a festal day as the celebration, on the 25th of September last, of the eighteenth centenary of her destruction. Great preparations had been made to keep the day with all due honor, invitations had been addressed to members of home and foreign scientific bodies, and whispers went abroad of some marvelous discoveries which, before the assemblage, were to be brought to light for the first time. The Great Basilica—that semi-court of justice, semi-market and lounging-place, where merchants and idle gossips of the day; pleaders learned in the law, and radical stump orators, were alike wont to meet and discuss the "new thing" of the hour—was appropriately chosen as the trysting-place, and there, on a tribune erected for the occasion, Signor Ruggiero, the chief director of the excavations, inaugurated the proceedings by reading an historical report of the excavations, which, begun in 1748 by Charles III., have been carried on more or less continually to the present day, when fully half the city has been unearthed. Still, however, much remains to be done, and, according to the estimates of the superintendent of the works, the complete excavation of the city will not be accomplished for seventy years. At present the State furnishes a yearly subvention of $7,000 towards the work, while a further sum of $3,500 is realized by the tariff for admission tickets.

Signor Ruggiero was followed by Professors Quinto Guasciali, and Antonio Mirabelli, who recited Latin poems in honor of the day, and then the crowd, which numbered some eight thousand, dispersed to visit the city, and above all to inspect the excavations which were being carried on for the visitors' benefit. These were watched with the most intense interest, and in one case the lookers-on were amply rewarded for their pains, a house being speedily unearthed by the picks of the workmen, and numerous household vessels—amongst which was a handsome bronze candelabra—were brought to the surface; while, lower down, stores of hemp and millet-seed, together with the skeletons of small singing-birds, proved the former owner of the house to have been a bird-seller. In another house a skeleton was discovered; while, in the smallest chamber excavated, four were found huddled together. Fragments of sculpture in bronze and marble, lamps, vases, brooches, and other ornaments, a mirror of metal, and sundry articles of furniture, were also found. It is hoped that more important discoveries will soon be made under the stimulus of the Government subvention.

The mode of excavation is most simple, as Pompeii, not having been in the course of the lava, was simply buried in ashes, which can easily be removed with pick and spade. With Herculaneum it is different. Having been overwhelmed with lava, the substance has to be chiseled away as though it were solid rock. The Basilica at Pompeii is the most perfect example extant. It is situated—as indeed was almost invariably the case—adjoining the Forum, while on another side it is bounded by the Temple of Venus.



As a memento of the *festa*, the Italian Government has issued a most interesting volume, in which not only are the excavations fully treated, but the public and private life of the Pompeians are dealt with in all aspects; while Professor Palmieri gives a scientific history of Vesuvius, and Signor Ruggiero gives a stirring description of the eruption itself.

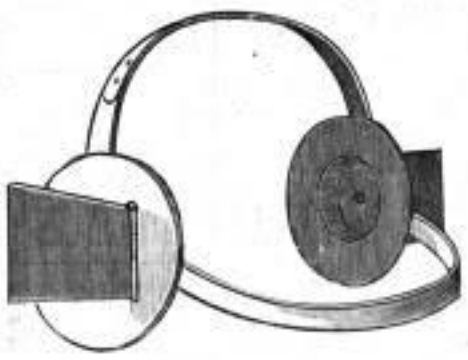
THE ACCUSED OVERCOME BY THE VERDICT OF "NOT GUILTY!"

MR. AND MRS. BLAIR LEAVING THE COURT-HOUSE AFTER THE ACQUITTAL.

FRIENDS OF THE FAMILY CONGRATULATING MRS. BLAIR ON THE RESULT.



NEW JERSEY.—THE ACQUITTAL, AT NEWARK, OCTOBER 22D, OF JOSEPH A. BLAIR, CHARGED WITH THE MURDER OF HIS COACHMAN.—SEE PAGE 163.

SEÑOR ALBERTINI.

RAFAEL DIAZ ALBERTINI has a splendid future. Already has his career been lighted by the undying lustre of fame, and to-day this youthful violinist is a recognized power in the divine world of Melody. Rafael was born at Havana in 1857. At an early age, when his equals in years were following the joyous sports of childhood, the boy musician was engaged, as a labor of love, in studying the works of Gottschalk, Espadero, Aristi, Desversine, and others. At the age of four years he executed fragments of Mozart, Beethoven and Haydn—four years!—upon a toy fiddle, and without being able to read a note of music. Gottschalk was pre-eminently proud when upon one occasion, to his accompaniment, the little Rafael played the Sonata Beethoven, F; and when the *maestro* was leaving Havana, he sent to the boy's father a letter, of which the following is a copy, this accompanied by a small violin: "I send you a little violin for Rafael, because it is time for him to commence serious study. He is a born musician. In spite of my predisposition against infant prodigies, I assure you he has a grand future, if one only knows how to direct the great disposition to which so much has been given by Nature." How prophetic Gottschalk's words! Rafael commenced severe study in 1865 with Anselmo Lopez, and in 1868 played first violin in the quartet for Ile. No. 15, at a special reunion of artists. His marvelous execution called forth a spontaneous recognition. "This extraordinary deed was executed by a boy ten years of age, and the work was the most difficult in the classical *repertoire*, but it was executed with the perfection of a master." In 1869, Rafael repaired to Paris, and as the result of a performance at the *fête* of the Spanish Minister, Señor Olozaga, the boy, who was then but thirteen years of age, was decorated with the Cross of Isabella the Catholic. During the Franco-German war he studied in London, where he met Vieuxtemps and Sivori. The former on many occasions accompanied Rafael on the piano; while the latter, whose style Rafael possesses, initiated him into the subtleties and traditions of the school of Paganini. October, 1871, found Rafael again in Paris at the Conservatoire, under the ægis of M. Alard. In three successive *concours* Rafael won first accessit, then the second prize, and finally—in 1875—the Medal of Honor. Gounod presented Rafael with his (Gounod's) portrait, with the inscription: "To Rafael Diaz Albertini. The future promised by the brightness of the present." Spain was visited in 1878, where the youthful violinist created quite a *furore*. At Madrid he was presented, by the artists, with a superb crown, and he was decorated, by the King, with the Cross of Charles III. Returning to Havana after an absence of ten years, Rafael was received with affectionate enthusiasm, his brows being encircled with a magnificent golden crown. Rafael Diaz Albertini is now but two-and-twenty, and his exquisitely handsome face scarcely boasts the dawning down of a silken beard. He is of medium height and of distinguished appearance. He is modest, retiring, and utterly free from affectation. When wooing his beloved mistress he is all on fire, and the artist reveals himself the instant he takes the bow in his hand. To miss hearing him during his forthcoming concerts will prove to the lovers of classical music a misfortune not easily repaired.

RAFAEL DIAZ ALBERTINI, VIOLINIST.

THE PSEUDOPHONE.

THE PSEUDOPHONE.

AT the recent meeting of the British Association, Professor Thompson read a paper upon a new instrument which he has invented, and which he calls the Pseudophone. It has been devised for studying illusions connected with the sense of hearing, and its nature can be readily understood by reference to the above cut. It consists of two little circular boxes which can be fitted to the ears by two adjustable metal bands which pass over and behind the head. Each of these boxes has a shade or flap on a hinge, which permits it to be placed at any required angle. These flaps can also be turned round upon their circular supports, so that they can reflect sounds into the ears from any direction. And as each is independent of the other, they can be so turned as to reflect into each ear sounds from different sources. It is said that the deceptions induced by this instrument as to the source of a given sound are most perplexing and amusing. If not of much practical scientific value, this contrivance is interesting as calling attention to a class of phenomena little understood.

THE LATE "CHAM."

THIS clever French caricaturist, who had long suffered from a pulmonary complaint, died on September 6th. His pseudonym—which is the French equivalent for Ham—was adopted in consequence of his father being the Count de Noé, whose name in English would read Noah. His mother was an Englishwoman, and he was brought up by a nurse and governess both English; so that, although there was not a man whose humor and conversation were more essentially French, he retained to the day of his death an accent which often caused him to be mistaken for a Londoner. His appearance was also rather English than French. A tall, carefully-dressed and serious man, with a long fair mustache and an erect carriage, he had much the look of a British cavalry officer. He was born in 1819. He first studied under Paul Delaroche, and next under Charlet, with whom his vein for the grotesque developed itself, and from 1842 to his death he furnished the *Charivari*, and other comic publications, with an inexhaustible succession of satirical sketches. Like Gavarni, he supplied the letter-press as well as the drawings. His portraits of public men were excellent. Whether in big cartoons

THE LATE VICOMTE DE NOÉ ("CHAM").

Digitized by Google

or in tiny vignettes, he never failed to convey the exactest and funniest image of the things and persons he intended to portray. He could draw inspiration from the commonest topics. On a hot day he sketched a party of Grenadiers having their bearskins clipped for coolness; on a cold day he drew a veteran swathing up his wooden leg in flannel. A year or two ago he received the Legion of Honor, being the first French caricaturist to gain a decoration.

The Jews in Palestine.

THE land of their promised inheritance is rapidly becoming their own in fee. If we compare the present time with eighty-three years ago, when the Sublime Porte permitted only three hundred to live within the walls of the Holy City, the change is remarkable. Forty years since the Porte modified this original order, so that a larger number could abide there; but they were shut up in narrow and filthy quarters, next to the dog and leper quarters, the objects of contempt and cruel oppressions. But even this quarter restriction was removed ten years ago. And now the ruling power is in the hand of Great Britain, and the sceptre itself is in the hand of an Israelite, and Baron Rothschild holds a mortgage on Palestine as security for 200,000,000 francs loaned to the Sultan of Turkey. It looks very much as if accomplished fact had put itself in the place of prophecy.

The Jews, after the quarter restrictions were removed, bought all the land which could be obtained within the gates, and have built entire streets of houses without the gates. With the improvements inevitable from liberty and the possession of homes have come kindred progressions in provisions of charity for the destitute and afflicted. The German Jews have sixteen of these. Two journals have been started, and in the Rothschild and other Jewish hospitals 6,000 patients are under constant treatment. The Venetian Jews have given 60,000 francs to found a school of agriculture; and, in evidence of a progress that shows divine care and intervention, the number of Jews has doubled in about ten years. In 1869 there were not more than seven thousand Jews shut up in their quarters, and though a vast improvement on the past, still they appear to us wretched enough to make the most careless sigh over the mighty fallen. But in the five succeeding years they increased to more than 13,000.

FUN.

CHARITY covereth a multitude of church lotteries.

IT'S a wise railroad stock that knows its own par nowadays.

THE worst comb and brush in Christendom can be found in the average photograph gallery, and the worst pen in a telegraph office.

A SAILOR is not a sailor when he is a-board; a sailor is not a sailor when he is a-shore; but he must be either ashore or aboard; therefore a sailor is not a sailor.

THE barber's razor took hold of his beard with a vengeance, when he looked up and said, apologetically: "My dear sir, I came in to get shaved—not to get a tooth pulled!"

RURAL ETIQUETTE.—*Guest:* "Don't you know any better than to walk into my room without rapping? You see I am all undressed!" *Servant:* "Oh! you needn't excuse yourself, mum; I don't mind."

ARABELLA (on her toes in a chair, clutching convulsively at her skirts). "Oh, Bridget! a mouse! a mouse! Come and catch it, quick!" *Bridget:* "Sure, mum, there's no hurry. If this one gets away, I can catch plenty more for yer, mum."

"WELL, my man," said a military doctor to a patient who had been on "low diet" for a long time, "how are you?" "Much better, sir." "Could you eat a small chicken to-day?" "That I could, sir." "What would you like it stuffed with?" "Please your honor," replied the hungry patient, "I would like it stuffed with another."

AN AFFECTING SENTENCE.—Judge X. of Arkansas had brought before him a convicted felon to be sentenced. The opportunity to "improve" the occasion was not to be lost; and so, after the usual demand for reason why sentence should not be pronounced, his Honor slowly, and with genuine feeling, addressed the prisoner: "My poor fellow, you are about to go to the penitentiary. You are required to give up, for a long term, everything which the great world values—your family, and, instead, to take for your associates only felons like yourself; your home, and to take instead what can never have the semblance of a home; your will, and so to be subject to the order of men who have no sympathy with you. Even your ordinary clothing you exchange for"—here his Honor, raising his left arm, pointed to it with the index finger of his right hand—"striped clothes, the stripes running not lengthwise, like these, but so—round and round, like a coon's tail."

PILGRIMAGES TO BUFFALO, N. Y.,

are made by thousands of invalids annually to consult with the medical and surgical staff of the World's Dispensary and Invalids' Hotel, the largest private sanitarium in the world. All chronic diseases are treated by scientific methods. The practice is divided among nine eminent specialists. Among the most popular domestic medicines in the land are those manufactured by this Association, among which are Dr. Pierce's Golden Medical Discovery, the greatest of alteratives or blood-cleansers, and Dr. Pierce's Pellets (little pills) that have largely superseded the old-fashioned coarse pills. Compound Extract of Smart-Weed is deservedly popular as a remedy for diarrhœa, dysentery, flux, and kindred diseases; also as a pain-killer and remedy for colds. Dr. Pierce's Favorite Prescription is the great remedy for female weakness and associated derangements. Dr. Sage's Catarrh Remedy is the "Old Reliable." Invalid's Guide-Book—10 cents, post paid. Address World's Dispensary Medical Association, Buffalo, N. Y., or London, England.

MONEY MAKING.

MONEY.—For simplicity in money-making in Wall Street, write CHAS. FOXWELL & CO., Bankers and Brokers, 115 BROADWAY, NEW YORK. By their new system it gives the $10 to $100 operator the same advantages as heretofore the $1,000 or $10,000 purchaser enjoyed.

THE MANIGRAPH.

EVERY business man *needs* one. Its value is indisputable and it is indorsed by the highest officials. See testimonials from State Capitol and Mayor's office. It is the greatest invention of the age, and its claims are undisputable.

THE only safe and sure cure for Gravel or Urinary troubles is Hop Bitters. Prove it.

FAIRBANKS' SCALES.

DURING the week ending 18th of October, 1,635 scales were shipped from the factory at St. Johnsbury, Vt., leaving then unfilled orders for nearly 3,000 scales. The MESSRS. FAIRBANKS are running their immense factory evenings, and are melting twenty-two tons of iron daily.

SALT RHEUM.

HELPLESS for eight years. Unable to walk. Got about on hands and knees. A wonderful cure.

MESSRS. WEEKS & POTTER: *Gentlemen*—I have had a most wonderful cure of Salt Rheum. For seventeen years I suffered with Salt Rheum; I had it on my head, face, neck, arms, and legs. I was not able to walk, only on my hands and knees, for one year. I have not been able to help myself for eight years. I tried hundreds of remedies; not one had the least effect. The doctors said my case was incurable. So my parents tried everything that came along. I saw your advertisement and concluded to try Cuticura Remedies. The first box of Cuticura brought the Humor to the surface of my skin. It would drop off as it came out, until now I am entirely cured. All I can say is, I thank you most heartily for my cure. Any person who thinks this letter a fraud, let them write or come and see me and find out for themselves.

Yours truly, WILL MCDONALD.
1315 BUTTERFIELD ST.,
CHICAGO, ILL., March 4th, 1879.

BURNETT'S COCOAINE.—A perfect dressing for the hair. The COCOAINE holds in a liquid form a large proportion of deodorized Cocoanut Oil, prepared expressly for this purpose.

PHILADELPHIA, May 28th, 1877.

Gentlemen—Having used your COCOAINE for the past ten or twelve years, I take pleasure in giving as my opinion that no preparation made in this country will keep the hair so soft and glossy, and, at the same time, allay all irritation of the scalp. It will most effectually remove dandruff, and prevent the hair from falling out. THOMAS ROBERTS,
Wholesale Grocer, 30 South Front Street.

EVERY modern convenience characterizes the ST. NICHOLAS HOTEL, and the artistic *cuisinière* gratifies the palate of the most refined epicure. An elevator makes every part of the house easy of access, and every effort is exhausted to add to the comfort and luxury of the guests. Commercial men find this house specially convenient on account of the location, alike agreeable to the demands of business and pleasure.

EXTRACT FROM COPY.

POST OFFICE DEPARTMENT,
Office of the 1st Asst. P. M. General,
WASHINGTON, D. C., October 21st, 1879.

POSTMASTER,
Rahway, N. J.,

SIR:

Complaint has been made that you are withholding letters addressed to M. A. Dauphin.

The simple fact that a letter is addressed to M. A. Dauphin does not, under the present ruling of the Department, warrant its detention at the mailing office.

Very Respectfully,
(Signed) JAMES H. MARR,
1st Asst. P. M. General.

THE great advantage of the genuine ASBESTOS COVERINGS for Steam Pipes, Boilers, etc., over any other forms of non-conducting coverings, aside from their superior effectiveness and fire-proof qualities, is that they are manufactured in convenient form ready for use, and can be easily applied without the aid of skilled labor. The H. W. JOHNS M'F'G CO., 87 Maiden Lane, N. Y., are the sole manufacturers.

A LITTLE Hop Bitters saves big doctor-bills, long sickness, suffering, and perhaps death.

EVERYBODY will do well to read the advertisement of MESSRS. G. W. TURNER & SONS. The CIGAR HEADPIECE is a veritable bargain.

HALFORD SAUCE, unrivaled by any relish, intended for family use, recommended by the best families.

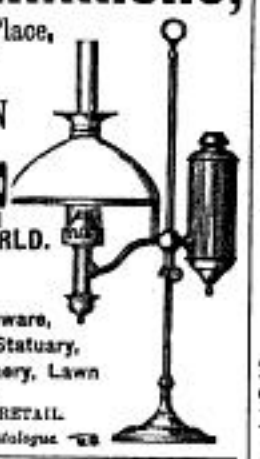
PRESTONS' ink can be used with great advantage and at very small cost, by doing your own printing on one of the celebrated Model Printing Presses. It is cheap, easily managed, and in every way reliable. The attention of business men is particularly called, in this connection, to the advertisement of this well-known press in another column.

"ACCIDENTS will happen," and wise is he who, when they happen, is insured in THE TRAVELERS.

A SCIENTIFIC gentleman of Cincinnati has invented an instrument by which the Deaf can hear through the Medium of the Teeth. The principle of the invention seems to be that the sound vibrations which constitute spoken language, music, etc., etc., are caught on a delicate vibrating diaphragm, are from this communicated to the teeth, and thence through the bones of the head to the nerves of hearing. THE AUDIPHONE, as it is called, is, in shape, very much like an old-fashioned silver watch, and weighs about an ounce and a half, and from its convenience and efficacy will no doubt displace entirely the clumsy, old-fashioned ear-trumpet.

NO SAFER REMEDY can be had for Coughs and Colds, or any trouble of the throat, than "*Brown's Bronchial Troches.*" Imitations are offered for sale, many of which are injurious. The genuine Bronchial Troches are sold *only in boxes.*

BILIOUS PERSONS should avoid the use of coffee, and nervous persons the use of tea. An agreeable and healthful substitute is found in Cocoa. Walter Baker & Co.'s CHOCOLATE and COCOA preparations are highly recommended by the medical faculty, and are sold by all grocers.



THE ASBESTOS ROOFING (with white or gray fire-proof coating) now in use in all parts of the world, is the only reliable substitute for tin. It is adapted for steep or flat roofs in all climates. It costs only half as much as tin, and can be applied by any one. Samples and descriptive price-lists free. H. W. JOHNS M'F'G CO., 87 Maiden Lane, N. Y.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

J. W. HANCOX, U. S. Sole Agent, 51 Broadway, New York. P. O. Box 2,613, New York.

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 9, 1879.
Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals; *16 kr. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, ductility and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*. (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.
Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 6th St., Cincinnati.*

Science Outdone, and the Printing Press Surpassed!

WRITTEN CIRCULARS OR REPORTS,

Which have a thousand times the convincing force of printed ones, produced with the speed of the printing press.

Manuscripts and Drawings of any kind

Duplicated innumerable times, on ANY SORT of paper. **No pads, no roller, no press, no prepared paper, no special pens, no aquarium-aces, no machinery;** *simplicity personified, and the greatest invention of any age.*

A child can operate it as readily as an expert, and anything that can be written, printed, or drawn, can be duplicated to an almost infinite extent. **The Magnetic Manigraph** is the greatest of all testimonials to modern scientific research. It consists solely and entirely of the three articles shown in the picture: an ordinary pen, a bottle of writing ink, and a simple metal tray or pan with hinged cover, which contains the reproductive substance, **magnetized gelatine.** The manner of operating it is so simple that it cannot be called a process; anything that can be written, printed, or drawn (circulars, reports, plans, notices, price lists, bulletins, &c., &c., &c.) with any steel quill or draughtsman's pen, stencil, or similar article, can be reproduced to any extent with the speed of a printing press, and without the use of any machinery whatever. You simply write (or draw) that which you wish to duplicate with a common pen on any kind of paper, and allow it to dry, making the "ORIGINAL," and the original can be used months after just as well; when dry the original is placed in the tray, written surface down on the magnetized gelatine, and in one minute the writing is transferred to the gelatine, making the "STENCIL," and from this stencil exact duplicates of the original can be taken at the rate of 75 per minute. The paper on which you desire to print has only to be laid in the tray and the magnetic principles possessed by the gelatine cause it to adhere, and at the same time the writing is *instantly* transferred; *and while the printing is* INDELIBLE, *the stencil can be washed out of the gelatine in a* MINUTE *with cold water and a sponge, then is it ready for another stencil.* It will be seen that the lengthy preparations necessary with the "Electric Pen," "Paprograph," and **all other** similar contrivances are entirely dispensed with. You write or draw with no extra care, with your regular pen, on any kind of paper, and no premeditated intention of duplicating it is necessary, and in five minutes after it is written you can have 50 duplicates all printed, ready for distribution, **quicker a hundred times** than any printer could set up the job and print it.

For draughtsmen it is invaluable—copies of every thing they do can be preserved. **For ministers** it is most desirable—copies of their sermons can be struck off in a few minutes, and MAILED AT ONE CENT, to absent friends. **For storekeepers** it is absolutely necessary—bulletins or price lists of their stock, or notices of redemptions can be printed every week at absolutely no cost whatever, except for paper, and distributed among the customers, going by mail for one cent, making an invaluable mode of advertising. For lawyers, bankers, newspapers, and official purposes, its value cannot be overestimated. The most tasty and original designs in cards, billheads, &c., &c., are produced as readily as ordinary writing, their elaborateness depending solely on the ability of the draughtsman, and a saving of thousands of dollars upon lithographing or engraving can be effected. It works on paper, wood, or linen, and takes up no more room than an ordinary letter book. To anyone sending circulars it is worth a thousand times its price. The superiority of anything written over printed matter is indisputable; printed circulars go into the waste-basket—written ones *ARE READ.* The Magnetic Manigraph is superior to anything in the world intended to produce the same results, as we dispense with all complicated preparation. In two minutes from the time the copy is made you can be printing duplicates, at the rate of 75 per minute. **To agents and the trade** it is the biggest selling article that the world has ever seen. Every minister, merchant, banker, lawyer, and professional man will BUY AT SIGHT. To those desiring to act as agents we assign *exclusive territory,* and send a complete agent's outfit, circulars, &c., with his name printed thereon as sole agent. Those wishing to act as agents must *distinctly state* so in their letter, and must order a sample at the regular price, and we will include **free** the agent's outfit, with our terms by the dozen, and they are **very favorable.** As we include the agent's outfit free to those wishing the agency, we can make no discount on sample orders; but with their sample they can make, in any good-sized town, **$50** a day; agents in Boston have done much better. It requires **no talking**—it tells its own story. The operation of showing it is INTERESTING to EVERYONE, and once seen a sale is effected. Any man will buy that which bears on its face the ability to **reduce his expenses** and **INCREASE HIS INCOME,** as the Manigraph will in a hundred different ways. The composition of which it is made is **indestructible,** and every one is warranted for 10 years, in any climate. **CAUTION.—Beware of imitations.** This is the only genuine "MAGNETIC MANIGRAPH" and the only duplicator of manuscripts possessing magnetic adhesive properties. **GET THE BEST.** A recent article at a less price would not be worth the room it took up in comparison with the **Manigraph,** which is *better, cheaper,* and in every way SUPERIOR to any other similar *first-class* device in the world.

PRICES, WHICH INCLUDE A SET OF GUIDE BLOCKS, A GREAT HELP WHEN NECESSARY TO PRINT IN SAME POSITION ON EACH SHEET. **No. 1 Style,** the POSTAL NOTE or CORRESPONDENCE size, 7 x 10½ inches, **$3.00; No. 2,** the COMMERCIAL size, 10½ x 12 inches, **$5; No. 3,** the LEGAL or BULLETIN size, **12 x 18** inches, **$7.50.** We greatly recommend the purchase of the largest style, the size of which enables the largest as well as the smallest work to be done, and it is the most convenient to operate. Every one is put up in a neat case, secure from accident, with complete directions, ready for immediate use, and sent to any part of the United States or Canada, on receipt of price, and satisfaction guaranteed in every instance or MONEY REFUNDED. Address all orders to **The Turner Manufacturing Co., Sole Proprietors, 7 Dock Square, Boston, Mass.** We are prepared to back up every statement made regarding the wonderful instrument by unimpeachable references. Read these.

HEATH CAPITOL, BOSTON, Oct. 21, 1879. GENTS.—*The "Manigraph" I purchased of you some time since has been in daily use, and is a perfect success. Any department having an extensive correspondence will find it of inestimable value in the saving of time and labor. The work of days can be accomplished in minutes. Yours, very truly,* BENJ. C. PIPER. BOSTON, MASS., Oct. 21st, 1879. *Gentlemen,—I have tried the "Manigraph" which you sent me, and found that it did all that was claimed for it would do, giving correct impressions of the original writing. Yours, very truly,* JAS. SIGLERSON, *Superintendent American Express Company.* MAYOR'S OFFICE, CITY HALL, BOSTON, Oct. 23, 1879. *Dear Sirs,—The "Manigraph" is received. It is all that is claimed for it.—Agree rapidly and correctly,—and I do not think its value or convenience can be overestimated. Yours, very truly,* F. E. GOODRICH.

CATARRH

If neglected, may rapidly develop into quick consumption. Ordinary treatments will not cure it. Its effects are nervous weakness, loss of smell, taste, hearing, and voice, weak eyes, dizziness, faint feelings, matter dropping into the throat, disgusting odors, and *finally consumption and premature death.* For

CONSUMPTION ASTHMA, HAY FEVER

Catarrh, Bronchitis, Coughs, Nervous and Catarrhal Headaches, Deafness, Sore Throat, and all diseases of the air-passages and lungs there is no treatment so pleasing, thorough, and certain to cure and give instant relief as

DEVONE'S INHALER.

DE VONE'S "63 Trade Mark." INHALENE

A compound of the most healing balsams known to medical science, with

CARBOLATED PINE TREE TAR which, by simply breathing or inhaling from DeVone's Inhaler, is converted into a cleansing, invigorating, and healing vapor, and taken direct to the diseased cavities of the head, and into all the air-passages and the lungs, where it acts as a local application to the diseased surfaces, and its health-giving power is felt at once. The only method by which these diseases can be permanently cured.

HOME TREATMENT Sent to any part of the United States or Canada, to be returned if not satisfactory. Send for Circular giving full information, terms, etc. *Name this paper.* **Trial at office FREE.**

A TEN DOLLAR GOLD-MOUNTED REVOLVER FOR $2.75

READ THIS!

G. W. TURNER & ROSS:—*Dear Sirs,—I write you concerning the Czar Revolver I ordered of you. It is all and more than you claim for it; I have tried almost all kinds, but the Czar is far superior to them all in every respect. I can put a "daddy shooter" one hundred yards with it, and shoot as deep in wood as a rifle will. I am more than satisfied.* S. E. SEARS, Salina, O.

Over 4,000 testimonials rec'd.

HEAD THIS.

G. W. TURNER & ROSS:

GENS.—*The Czar is here all right; many thanks. I have tested it thoroughly, and if it can be beat, I would like to know by whom and by what. I have tried many pattern and it is equal to the very best. I have seldom, if at all, made better shots at 200 yards with my best rifle.* Respectfully yours, A. E. MAY, Ravenna, Mich.

The Czar Revolver is accurately represented by this picture, which is just about one-half the length of the Revolver itself. It is the most beautiful and accurate weapon and the biggest bargain ever produced in this country, and is warranted equal in every way to any $20 Revolver. **Caution.**—Several unprincipled dealers have copied our former advertisement, and offer a cast-iron imitation of the Czar (with a few gilt eyeleaves), for a less price. Beware of them; the genuine article of the Czar tempted the rapidity of the finest adjustable. **Prices.**—In treble nickel-silver plate, gold mounted, hand engraved, rubber stock, 6inch barrel, **$2.75;** In ivory stock, **$3.75;** in Pearl stock, **$4.50.** Sent by express to any address on receipt of price, or by registered mail prepaid for 25 cts. extra. For **$1 extra** we will furnish an extra **8 inch** Target Barrel elegantly rifled; the barrels can be instantly changed, and the Czar with 8inch barrel will shoot equal to a rifle at 300 yards. For **$2 extra** we furnish the extra 8inch barrel and an adjustable **Rifle Sight,** which makes the Czar the equal in every respect of any $15 Pocket Rifle. NEW JUVENILE UPRIGHT PIANO,—THE "GEM."

PRICE, $5.

The latest addition to the many instruments of the mechanical ability of the age, and the only perfect miniature Piano in the world. Finely finished in imitation of rosewood, handsomely proportioned and decorated, well made, and in perfect order.

It is the invention of a well-known and well-known Swiss musical Instrument maker, and has new and valuable improvements not to be found elsewhere. It has black and white keys (sharps and flats), same size and proportion as a regular Piano, **and is full chromatic scale.** *The action is exactly the same as in a regular Piano, and anyone who can play the Piano can play on the GEM. For beginners it is exactly as good as a $350 Piano. The notes or music producers are* **insulated steel bars,** *which give the same tone as a tuning-fork, the most certain note known; and being of metal* **never gets out of order, and never requires tuning!** *and the music produced is very melodious and pleasing. Everyone is surprised at the remarkable sweetness and purity of tone and the beautiful action which the GEM possesses. It is powerful enough to be heard throughout any room, and is an admirable substitute for a Grand Piano. The top of the Piano lifts up, and a beautiful scroll is out in the front. The GEM has received the warmest praise from fathers, mothers, and children, and also from the leading musicians in Boston.* Address **The Massachusetts Organ Co., 423 Washington St., Boston, Mass., Sole Agents.** *Sent by express or freight to any address, on receipt of price, $5; extra heavy boxing, for distant shipments, 75 cents extra.* ☞ *The engraving exactly represents it. Every one is carefully tested before shipping, and warranted perfect.*

THE GENUINE GAFF, FLEISCHMANN & CO.'S Compressed Yeast

Bears the following Label, which is printed on Yellow Paper.

THE merits of the *Genuine "Compressed Yeast"* are undeniable. As proof of it, we refer to the host of imitations which have been offered to the public, hoping that the stolen name of

"COMPRESSED YEAST"

(which is secured TO US alone by letters patent of U. S. dated December 5th and 19th, 1876, January 9th and 16th, 1877, and March 6th, 1877,) would sell their goods by deceiving the public.

The housekeeper who once uses GAFF, FLEISCHMANN & CO.'S COMPRESSED YEAST, cannot be induced to abandon our pure extract of grain, which is a natural leaven, for a counterfeit article or a chemical compound, both of which are to be avoided if good health is a first consideration with the consumer.

TALKS ON TIMELY TOPICS.

ILLUSTRATED INTERVIEWS WITH EMINENT PUBLIC MEN.

—No. 2.—

The Office of Secretary of the Treasury.

MR. SHERMAN ON THE FINANCIAL SITUATION.

What he Says of Resumption.

He Thinks it has "Come to Stay."

THE NATIONAL CREDIT AND OUR BUSINESS FUTURE.

THE United States Treasury is a most imposing and graceful building, of the pure Grecian Ionic order. The Treasury Building was originally constructed between 1794-99, and in 1801 a fire swept it off. The British burned it in 1814, and it again began to rise three years later, but was not finished until 1832. Two years subsequently—1834—it was destroyed by fire, and now its architectural history, as we see it, really began.

In 1835 Robert Mullins, of South Carolina, was appointed to supervise it, and in four years he raised the façade of columns which was the glory of the period. The structure was completed in 1860, and is the most costly of our public buildings, considering its extent. Its cost, $6,000,000, was more than half that of the far nobler Capitol.

The general plan of the building measures 468 feet from north to south, and 264 feet from east to west, or, inclusive of portico and steps, 582 by 300 feet. It contains 195 apartments. The sky-line of the entire building is surmounted by a stone balustrade. The structure has four fronts. The west, which faces the city, consists of a colonnade 336 feet long and 30 Ionic columns, flanked on either side by a recessed portico. The colonnade and corresponding portion are of Virginia freestone, while the remainder of the entire building is granite from Dix Island, on the coast of Maine. The east front, facing the White House, is broken by a grand central portico, consisting of eight monolithic pillars front, two in the recess in the centre, and the same in the recesses on either side. This portico is reached by a broad flight of steps. The north and south fronts are the same, consisting of a central portico with eight columns front, and two in the recess. Steps descend to a broad tessellated platform, bounded on either side by a balustrade. The monolithic columns are each thirty-one and a half feet high, four feet in diameter, and weigh thirty-three tons. The colonnade is after the style of the Temple of Minerva Pallas, at Athens. On the east, north, and south, on either side of the steps and platforms, are parterres devoted to ribbon borders and the kaleidoscopic gardening now so much in vogue. The building has four principal entrances, and selecting that giving on the south, I ascended the massive steps en route to pay my respects to the Secretary, Mr. John Sherman, in his "bright particular" sanctum.

The "Department of the Treasury" was organized under Act of Congress of September 2d, 1789, with a Secretary of the Treasury as chief officer, who is also ex-officio a member of the President's cabinet. It was the duty of the Secretary to manage the business pertaining to the revenue and the support of the public credit; to make estimates of revenues and expenditures; to collect the revenue; to decide the form of keeping and stating accounts and making returns; to grant warrants for moneys authorized by law; to execute such services relative to the sale of public lands as were required of him by law; to communicate information to Congress, and generally to perform all services relative to finances. In 1800 the Secretary was required to submit at the commencement of every session a report on the finances of the Government, with estimates of revenues and expenditures. Under the Act of 1789 it was the duty of the Treasurer of the United States to receive and keep the moneys of the United States, and disburse the same upon warrants drawn by the Secretary of the Treasury, countersigned by the Comptroller, and recorded by the Register.

I was about to enter the gold-laden cave, but Alas, without the cabalistic words necessary to cause the treasure chambers to fly open at my bidding. I had no lamp to rub, and no talisman save the piece of pasteboard which I presented to the Cerberus on the threshold, with a request to be permitted audience of the genii of this abode of Plutus. I was ushered into a gloomy corridor, broken by iron pilasters, the capitals, cornices and ceiling being ornamented with emblematical designs. As I awaited the return of the messenger, I bethought me that beneath where I stood were the vaults of steel and chilled iron, twenty by fifteen feet, in which lay $10,000,000, the amount usually "on hand" in the Treasury. This money is kept in packages or bags in wooden cases, and as much as $5,000,000 have been shipped per elevator to the different sub-treasuries during the day.

My golden reverie was broken in upon by the attendant's exclaiming, "The Secretary will see you now, sir;" and following my guide along the corridor, he flung open a door to the right, and I was at once admitted into a flood of brilliant light—the distant Potomac lending a silvern reflection—and into the presence of the Secretary.

Two gentlemen were engaged in eagerly congratulating Mr. Sherman upon the recent result in Ohio, and while they wrung hands and expressed their satisfaction in cheery pantomime, I flung my glances around the apartment.

The room is lofty, and charmingly proportioned. It contains seven windows, two of which give upon the Potomac, and one on Pennsylvania Avenue, disclosing its entire length with the Capitol for a background. The floor is matted and overlaid with Brussels rugs. The furniture is of black walnut, upholstered in claret-colored leather. On the western wall hangs a half-length life size portrait in oil of Secretary Chase, beneath it an enlarged photo of Mr. Sherman. On the wall are hung the photographs of the chief officers of the Department, and a frame containing steel-engraved likenesses of the members of the Cabinet. On the eastern wall is a portrait of Grant; and, elegantly framed, the resolution adopted by the New York Chamber of Commerce congratulating Mr. Sherman on the resumption of specie. A superb mirror surmounts the mantel-piece, which is also ornamented by a clock. There are a couple of standing desks, a bookcase, a square swivel-case containing volumes of everyday reference, while piles of official reports, telling their own dry tales, stand in every available space. At a very formidable desk at the south end of the apartment sits the Secretary, behind him a pier-glass, in front of him his stenographer, Mr. Babcock. This vast tableland is covered with papers, which are in turn covered by statistics. The eyes of the uninitiated become dazzled by the array of figures which confront them right, left, and centre from the Secretary's desk, and until one is led to imagine that the table is some mysterious calculating-machine, warranted to throw off so much statistical copy per minute. The Secretary, having bowed out his enthusiastic admirers, turned to the writer and, motioning him to an easy chair, reseated himself.

Mr. John Sherman is tall, slightly made, and graceful. His manner denotes a calm intelligence. It is earnest, yet controlled, and unemotional without being icy. He looks you straight in the eyes with a calmly penetrating glance—a glance which says, "Two and two make four; you can't make the result five." This without argumentativeness or aggressiveness. His "rough hewn" hair is streaked with gray, while his closely-cut beard is white, the mustache being still "in the browns." Of complexion he has none. There is no color in his face, and not much blue or gray in his eyes. His hands are delicate as those of a woman and as white. He was attired in a faultlessly jetty-black frock, a white waistcoat, and black trousers. His necktie was black, and he wore no ornament.

"This is the cash in the strong-box to day," he laughed, as he handed me a slip of white paper, two inches by an inch and a half. "I receive this return every morning, so that I know the exact condition of affairs."

The slip contained the following:

From Customs	$858,000
" Internal Revenue	350,000
Miscellaneous	20,000
Repayments	5,000
Total	$1,054,000

"How do you stand on the Resumption, Mr. Secretary?"

"I will tell you. The total amount of bonds called in to this date is $708,126,500; and of these we have redeemed $684,553,400. That leaves outstanding bonds to the value of $23,573,100."

"Do you pay interest on these?"

"No."

"I presume, Mr. Secretary, that you must necessarily attend very much to the details of your vast and important Department."

"I do; and in this I differ from the British Chancellor of the Exchequer, as his time is of necessity too much taken up in parliamentary debate."

"Then you do not approve of a financial minister's being in Parliament?"

"I do not. I consider that it is his duty to see that the details of his department are carried out according to the letter of the law."

"But must he not depend upon his assistants?"

"Most decidedly; but there is an enormous amount of work for the chief to do, and which should be executed by him alone."

"I presume the work of your immense department is classified and allocated to sub-departments."

"It is. The organization stands thus: There are two Assistant Secretaries, a Chief Clerk, and nine Chiefs of important Divisions."

The Secretary here asked Mr. Babcock for his circular on the "Organization of the office of the Secretary of the Treasury."

"The Assistant Secretary has the general supervision of the work assigned to the divisions of appointments, public moneys, revenue marine, stationery, printing and blanks, loans and currency, bureau of engraving and printing, and office of the Director of the Mint."

"The duties of the Second Assistant?"

"The general supervision of all the work assigned to the divisions of customs, special agents, internal revenue and navigation, warrants, estimates and appropriations, and to the offices of Supervising Architect, Supervising Surgeon-General of Marine Hospitals, Bureau of Statistics, and Supervising Inspector-General of Steamboats. He has also the signing of all letters and papers as Assistant Secretary, or 'by order of the Secretary,' relating to the business of the foregoing divisions that do not by law require the signature of the Secretary of the Treasury, and the signing, instead of the Secretary, of certain warrants, under section 246 of the Revised Statutes. He has also to perform such other duties as may be prescribed by the Secretary or by law."

"Next in order come the duties of a Chief Clerk?"

"He has the supervision, under the immediate direction of the Secretary and Assistant Secretaries, of the duties of the clerks and employés connected with the Department. The superintendence and custody of all buildings or parts of buildings occupied by the Treasury Department in Washington, and supervision over the force which is in any way connected with the care of them; the expenditure of the appropriations for contingent expenses of the Treasury Department; the compilation and publication of the monthly digest of circulars and decisions of the Secretary, also the supervision of all the official correspondence of the Secretary's office, so far as to see that it is expressed in correct and official form; the enforcement of the general regulations of the Department, and the charge of all business of the Secretary's office not assigned to some one of the divisions or bureaus attached to the office."

"As regards the Division of Appointments?"

"There is a chief who has the supervision of all matters relating to the appointment, removal, promotion or suspension of the officers, clerks, messengers, etc., under the control of the Treasury Department; the examination and investigation of all complaints and charges against officials or employés, except when such investigation is otherwise specially directed; the preparation of reports required by law to be laid before Congress by the Secretary of the Treasury, relative to the employment and compensation of persons in various branches of the public service, and the preparation and publication of the 'United States Register.' The chief has likewise the verification of all payrolls of the Department, and all vouchers for salaries of steamboat inspectors, custodians, and janitors, and is charged with the performance of other minor duties.

The Division of Warrants, Estimates, and Appropriations come next in order, and the chief of this department has no sinecure.

"To him is intrusted the issue of all the warrants for the receipt and payment of public moneys, and of appropriations and surplus fund warrants; the preparation and keeping of all appropriations, sinking fund, public debt and Pacific Railroad accounts; the compilation and publication, for the use of Congress, of the annual estimates of appropriations required for the service of all departments of the Government, and of the digest of appropriations made at each session of Congress, with the designations of tables under which funds may be drawn from appropriations," etc.

The Division of Public Moneys is also under the control of a chief, and his duties are thus alloted by the Secretary:

"The supervision of the several independent Treasury officers, the designation of national banks and other depositories, and the obtaining from them of proper securities; the keeping of a general account of receipts into the Treasury, the classification of such receipts, and the preparation of lists thereof on which to issue coming warrants," etc.

The Customs come under the control of Mr. Sherman.

"The Chief has the examination of all questions arising under the tariff laws, upon appeals from decisions of collectors of customs involving the rates and amount of duties on imports, the consideration of cases involving errors in invoices and entries, refusal and abatement of duties, drawback of customs duties on articles manufactured in the United States out of imported material and establishing the rates of drawbacks. He also has the consideration of all questions arising upon the construction of the customs laws, and the general regulations thereunder in regard to the entry, appraisal and delivery of merchandise and payment of duties thereon."

The Chief of the Division of the Internal Revenue and Navigation has his hands pretty full under Mr. Sherman's admirable organization.

"He has the examination of petitions for the remission of fines, penalties and forfeitures under the customs, internal revenue, navigation and steamboat inspection laws, and applications for compromise of claims in favor of the United States, except customs cases; all internal revenue business coming before this officer except such as relates to appointments; the examination of questions relating to the marine documents, entry, clearance, hypothecation and admeasurement and tonnage of vessels, tax or tonnage fees for the service of revenue officers, and the transportation of merchandise in vessels."

The Chief of the Division of Loans and Currency plays a very important rôle in the Treasury Building, and one that demands a "level head."

"He has the supervision of the details of all matters pertaining to loans, and the issue and redemption of United States bonds, including the details of negotiating United States interest-bearing securities; the preparation of orders for engraving and printing United States bonds; the original issue and delivery of bonds; the preparation and distribution of circulars designating bonds of redemption. He likewise has the supervision of all matters under the immediate charge of the Secretary of the Treasury relating to the counting, cancellation, record and destruction of all redeemed and mutilated United States notes and fractional currency, and internal revenue stamps redeemed, or mutilated in printing. He has charge of the distinctive paper of the United States notes, bonds and currency."

The next division in order being that of the Revenue Marine, the Secretary allotted the duties of the chief of this all-important department.

"He has the management of the Revenue Marine Service—including the supervision of the building and equipment of revenue vessels, their repair, purchase and sale; the assignment of cruising grounds, the assignment of officers to vessels, the purchase of outfits and supplies, the regulation of the complements of crews and their wages, the examination and certification of revenue-vessels' pay-rolls, and accounts of the disbursements on account of the service by collectors of customs; the examination of property accounts of officers, the preparation and enforcement of regulations for the examination, admission and government of Revenue-Marine Cadets; the preparation and enforcement of general regulations for the government of the service, etc.; the examination of all matters pertaining to the lighthouse establishment, placed by law in charge of the Secretary of the Treasury, the examination of all matters relating to the United States coast survey coming before the Secretary; the charge of all matters relating to weights and measures upon which the Secretary is required by law to act. He has the general superintendence also of the life-saving service."

Touching upon the Division of Stationery Printing, and Blanks.

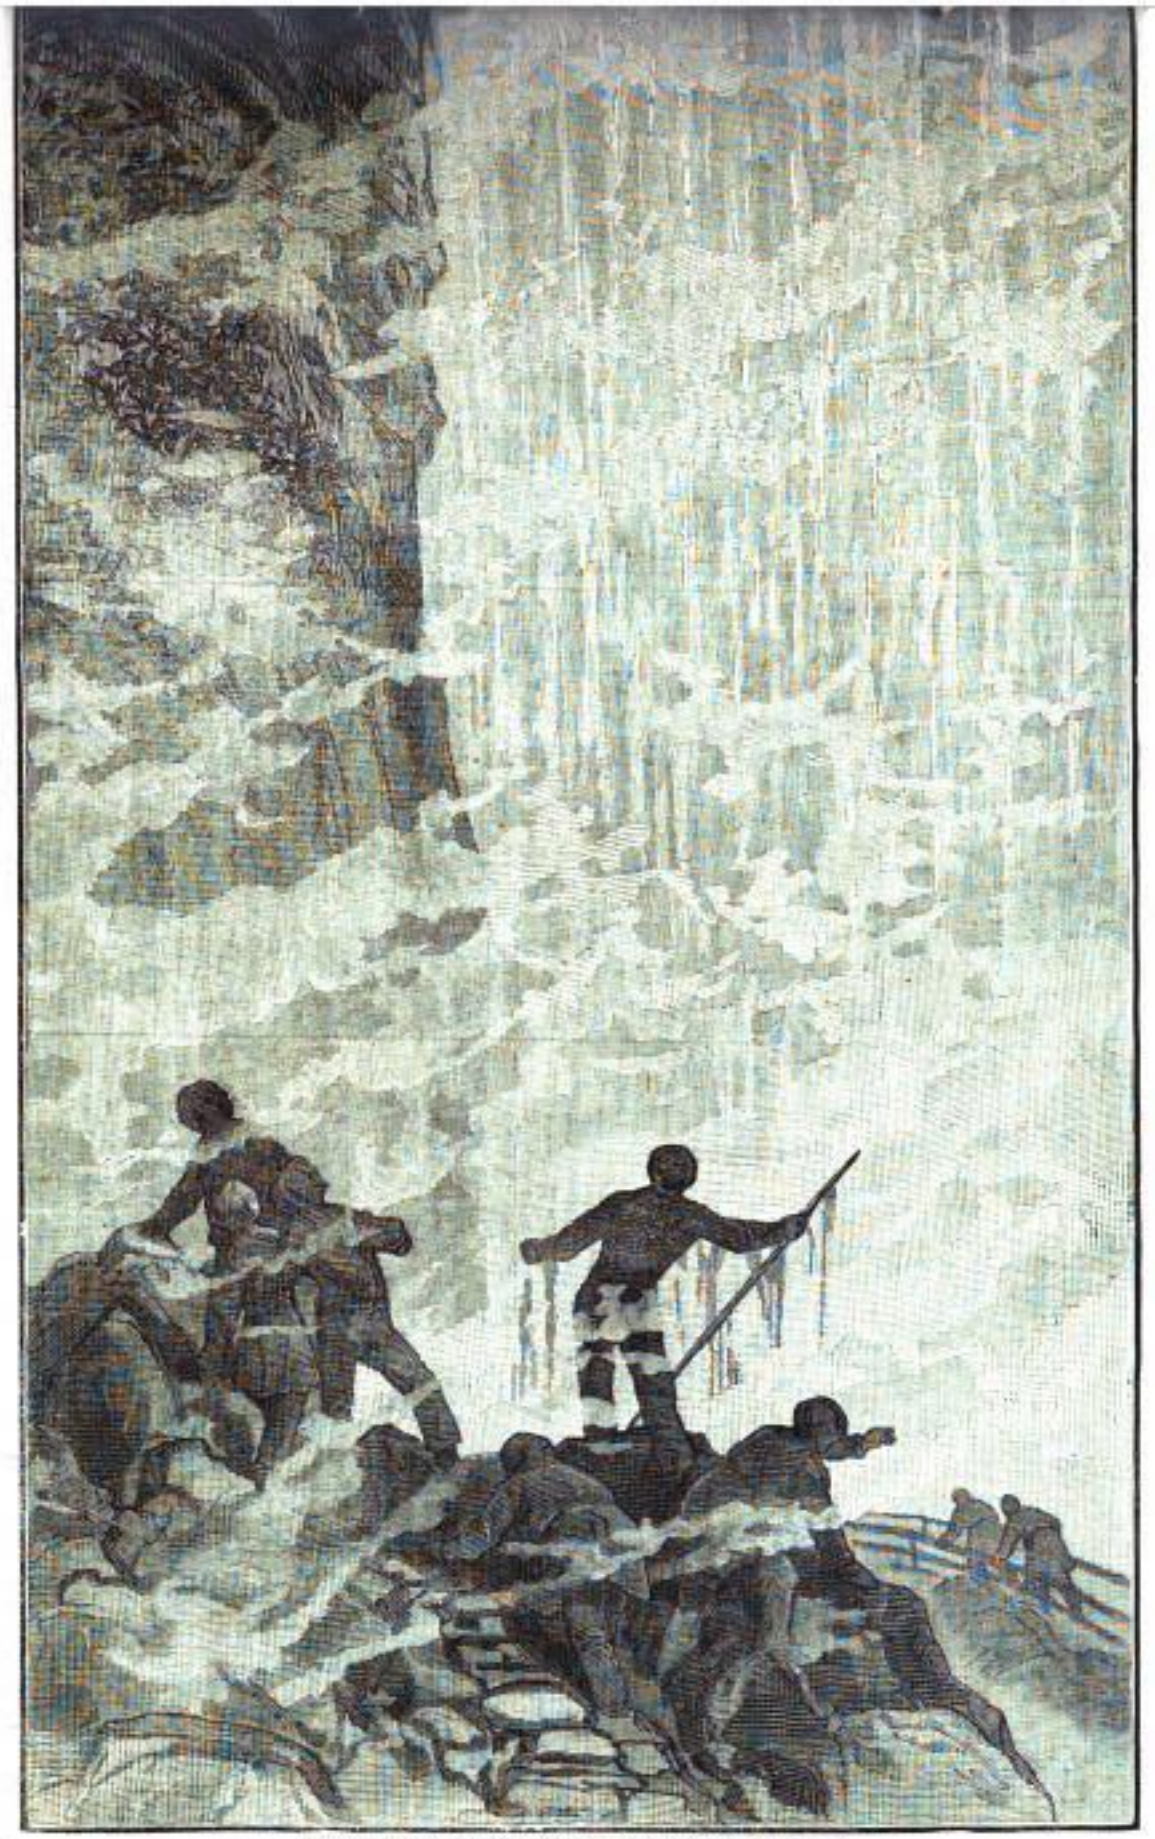
"The Chief has the purchase and supply of stationery for the departments, sub-treasuries, depositories, United States mints, custom houses, revenue vessels, steamboat-inspection service, life-saving stations, marine hospitals, light-houses, and internal revenue offices, and blanks and blank-books for the same."

With reference to the last division, that of Special Agents.

"The Chief has the assignment and detail of special agents, and the examination of their accounts for compensation and traveling expenses, and the examination and reference of their reports; the supervision and enforcement of measures for the prevention of smuggling and frauds on the customs revenues; supervision over the customs districts, the acts of custom house officers, and the examination of their books, papers, and accounts."

Mr. Sherman has issued in his organization the following instructions:

"Each Chief of Division will be expected to attend strictly to the business of the division of which he has charge, and to abstain from any interference with that assigned to other divisions. All questions relating to business belonging to two or more divisions will be settled by consultation and arrangement between the Chief of the Divisions interested, and in case of disagreement, the matter in dispute will be submitted to the Chief Clerk.



"All matters of business relating to the offices of the Director of the Mint, the Supervising Inspector-General of Steam-Vessels, the Supervising Architect, the Supervising Surgeon-General of Marine Hospitals, the Bureau of Engraving and Printing, and the Bureau of Statistics, requiring the attention of the Secretary of the Treasury, and all letters for his signature, or that of either of the Assistant Secretaries, relating thereto, will be prepared in the offices to which they respectively pertain.

"The Chief Clerk will superintend the changes made necessary by this order, and will see

that its provisions are carried into effect; and he will call the attention of the Secretary to any defects observed in the arrangement, assignment, or performance of the duties herein imposed, with a view to their correction.

"Any officer or employé attached to the Secretary's office must feel at liberty to call on the Secretary and state to him any event, or well-grounded belief on his part, that affects the integrity of the service, or the official conduct of any one employed in it."

Having disposed of the duties of the chiefs of the United States Treasury, I referred to the question of Resumption.

"Oh," exclaimed Mr. Sherman, "I have said so much on that subject already that I fear I could say nothing new. The credit of Resumption does not all belong to me; it is due to many others besides myself." On other occasions Mr. Sherman stated that "Resumption has come to stay. Experience has shown that the Resumption Act has not produced any distress, but its execution has been accompanied by an increasing prosperity from the day in May, 1877, on which coin commenced to flow into the Treasury. By the refunding process the people of the United States will be saved, from and after the 21st of July, 1879, the sum of $14,297,177 annually as long as the debt remains unpaid. This is the interest at four per cent. on a capital sum of $357,429,425, which measures the aggregate of the savings of these operations; and, if invested annually as a sinking-fund at four per cent., would pay the present interest-bearing debt in less than forty-six years."

On the subject of double interest in bonds, Mr. Sherman disposed of the question: "Congress expressly provided by law that before the bonds could be paid off three months' notice should be given to the holders, thus requiring the payment of interest on both bonds for three months, and this would amount to $8,628,970. To save as much of this as possible, the Department took the risk in the Summer of 1877 of calling in six per cent. bonds before the four per cents. were sold, and by this saved to the people of the United States over a million dollars. But General Ewing and his associates on the meeting of Congress in 1877, by their wild raid against the Resumption Act, frightened the public from buying our four per cent. bonds, and compelled us temporarily to pay called bonds from the resumption fund; but the failure of their raid enabled the Department to resume their operations. In December, 1878, these refunding operations increased in magnitude. In the annual report of the Treasury Department, I called the attention of Congress to this loss of interest, and earnestly recommended them to shorten the notice to the holders of called bonds, stating the great saving it would make. General Ewing was a member of the Banking and Currency Committee, and neither he nor his associates paid any attention to my request, though it was repeated more than once. The Department sold after December 1st, 1878, $554,847,500 of four per cent. bonds, and the interest lost by the failure to amend the law was more than $4,000,000."

On the revival of industry the Secretary bases his views on a solid foundation, contrasting the present condition of the country with that of January, 1875, when the Resumption Act was passed, and May, 1877, when preparations to resume were commenced: "Between these dates the general rate of interest on public and private indebtedness has been reduced 25 per cent. The value of exports of merchandise during the year ended June 30th, 1875, was $513,442,711; during the year ended June 30th, 1877, it was $602,475,220, and during the year ended June 30th, 1879, it was $710,433,285, showing an increase over 1875 of $196,990,574, and over 1877 of $107,958,065, or 17.92 per cent. The exports of merchandise during the latter year were larger than during any previous year in the history of our foreign commerce. The excess of imports over exports of merchandise during the year ended June, 1875, amounted to $19,562,725; during the year ended June 30th, 1877, the excess of exports over imports amounted to $151,152,094, and during the year ended June 30th, 1879, it rose to $264,656,810, showing an increase in such excess of $113,504,716, or more than 75 per cent. in two years. The imports of merchandise during the year ended June 30th, 1877, amounted to $451,323,126, and during the year ended June 30th, 1879, amounted to $445,776,475, a decrease of $5,546,651, or 1.23 per cent.

And in reference to specie:

"The excess of exports of specie over imports of specie during the year ended June 30th, 1877, was $15,387,813; but during the year ended June 30th, 1879, the excess of the exports of specie was only $4,701,441. The exchange in the Clearing House in New York City and in twenty one other principal cities in the United States for the seven months ended July 31st, 1878, amounted to $16,618,983,738, and for the same period of 1879, $20,029,648,955, an increase of 20.5 per cent."

On the revival of cotton and iron, the Secretary is also possessed of strongly riveted facts:

"In the production and manufacture of cotton the progress during the past four years has been unexampled, showing an increase of 30 per cent. The increase in the number of bales taken within the last two years over the two preceding years is 417,517, or more than 14 per cent. The present cotton year will show a more rapid rate of increase. The number of spindles has increased from 7,114,000 in 1870 to 10,500,000 in 1878, an increase of over 47 per cent. The woolen manufacturing industry has recently received a strong impetus, which in a few weeks sent up the price of wool 20 per cent. The net increase in pork-packing is 38 per cent. The increase in beef production has been constant and progressive. There has been a marked revival in the iron trade within the last two years. In 1873 the production of pig iron in this country reached its maximum, amounting to 2,868,278 tons. Under the influence of the panic it fell off to 2,093,236 tons in 1876. In 1877 it increased to 2,314,585 tons, and in 1878 to 2,577,361 tons. This year it is believed the production of iron will be as great as that of the most prosperous year in the history of this product."

Referring to the national bank and silver questions, the utterances of Mr. Sherman are worthy of earnest attention, an issue having been taken with the Republican Party on the question of the substitution of greenbacks for national bank notes:

"Two thousand banks are scattered throughout the United States as convenient agencies for commercial exchanges, and for the loan and transfer of money. They are authorized to issue circulating notes upon conditions that make them all absolutely secure. Over $320,000,000 of such notes are in active circulation, every dollar of which is secured by a greater amount of United States bonds deposited with the Treasurer of the United States. Not a dollar has been lost on these notes by any one. They are perfectly guarded against counterfeiting. They are good everywhere in the United States. These banks have loaned to the people, mostly for commercial and manufacturing purposes, $832,335,824. They are chartered for twenty years, and none will expire until 1883. And now it is proposed to abolish these banks; to compel the collection of all their loans; to withdraw all their circulating notes, with the certainty that their overthrow will be followed with the brood of State banks governed by local laws as diverse as the whims and necessities of local legislation. Is this wise? Is it even excusable? What reason is given for a measure so destructive to the business interests of our country? The only reason I know of that is even plausible is that the Government of the United States might issue its notes or greenbacks in the place of the bank-notes, and thus save interest. Suppose this were done, and United States notes issued, the utmost saving is $12,800,000 at four per cent. But if these notes are issued they must be redeemed unless you wish again to embark upon a wild scheme of irredeemable paper money. If you maintain a coin reserve, of even twenty-five per cent., the coin must be purchased and remain idle in your vaults. Here is a loss of one fourth of your imaginary saving, reducing it to $9,000,000. But what do you lose by wiping out the banks? The United States, and the States now collect taxes from the banks amounting to $16,908,181 a year. They enjoy no privilege from you except the power to issue circulating notes, and for this you make them pay more than five per cent. of their entire circulation. Do you not see that by this operation you lose money? You lose nearly seventeen millions revenue to save possibly nine millions of interest. You kill the goose that lays the golden eggs."

As a pendant to my interview with the High Priest of Finance, it may be interesting to mention, on a recent statement of the Director of the Mint, that we have at this time in the country almost ten dollars per capita of coin and bullion—a larger amount than we have ever had before—ten dollars for every man woman and child of our population, and that forty millions of gold have been imported within the last three months. This tribute has been paid by all the nations of the earth, as shown by the following official table, which accounts for $34,312,745 of the forty millions:

Great Britain sent	$10,363,650
France sent	8,216,173
Germany sent	11,084,312
Mexico sent	906,330
Central America sent	237,186
The West Indies sent	3,450,738
South America sent	54,356

A recent bulletin of the Bureau of Statistics announced that 95¼ per cent. was gold and 4¾ per cent. silver. Of the silver that was received only $24,630 was in bullion; $311,917 was in trade-dollars; $628,763 was in foreign coin; $227,321 was in standard dollars, and $359,625 was United States fractional currency. The total amount of silver received was $1,552,356. Of the gold imported, $3,619,418 was in American dollars; $20,540,598 was in foreign coin; $33,598 was in gold dust; $8,564,562 was in bars. The total amount of gold received was $32,760,598.

I may mention that the Secretary informed me that the solid work of the Department commences when the doors of the Treasury are closed against the public — namely, at 2 o'clock P. M.

NEW YORK DINNERS.

WHAT THEY ARE AND WHAT THEY SHOULD BE.

THERE are few more sumptuously luxurious dinners given in any city of the world than in New York. In this respect, however, the dinners of the nobility of England are superior. There are more servants in attendance, and they belong to the family. There is a greater display of gold and silver plate and gay livery in England than on our republican tables. One citizen of the United States, the late Mr. Prayn, of Albany, had a collection of gold cups of exquisite workmanship, and of vases and utensils for the table, of solid gold and silver, which would have been notable anywhere; but his case was exceptional. Even our people of immense fortune have not yet garnished their tables with jeweled cups, the extremely rich and noble services of plate, seen everywhere in old English mansions, although there is, of course, a great deal of this splendor now amongst our wealthy people. It takes years to acquire such services of plate as those which, in decal families, are handed down from one generation to another.

But in napery (that delightful luxury) and in wines, in viands and cookery, in flowers and the lighter graces of "favors" and confectionary, ices, and dessert, and in a certain light grace and beauty of the banquet, New York dinners stand a very good comparison with those of even the Rothschilds. The china and glass services have become very elegant; the plates are each one a study, and the china mania finds fit expression in the beauty of the pottery and porcelain.

To make three hours of the day tributary to every one of the senses—to appeal to palate, to eye, to ear, and to the higher attributes of the brain; to make the dinner-hour one of intense enjoyment—has been the study of every civilized people. Apicius has come down to us, merely as a dinner-giver, and it would be easy to fill a page with the names of the great dinner-givers of Rome, of Athens, of France and of England. In our own country, where much must be borrowed from older ones, we have an opportunity for a new departure, in which, whilst possessing all the traditions that are worthy, we may drop some that are unworthy. One of these English habits, that of sitting three hours at table, may well be altered. We are all lovers of change, and the time spent thus in one attitude is apt to be tiresome. Those American dinner-givers, therefore, who limit their dinners to one hour, are vastly to be commended.

Especially fortunate are those few who have a second room in which the dessert can be spread, and the company removed after the game to the second room. This is a great luxury; and the fresh air of the second room, the change of postures and the novelty of the surroundings, make this change quite enchanting. But as this is a very rare possibility, it is not well to insist upon it.

Quite enough for the ordinary dinner is the following bill of fare, which, at a February dinner, proves what a market New York enjoys. How it pat-under contribution every climate, every river, every mountain district, every Southern everglade almost in the world.

OYSTERS.

Two Soups.—Purée of Cauliflower, Clams, Ravioli à la Génoise.

FISH.

Turbot à la crême with cucumbers, Shad with Lobster.

ENTRÉES.

Bouchées à la Reine, Timbales de Maccaroni.

PIÈCES DE RÉSISTANCE.

Filet Chateaubriand à la Parisienne, Green Peas, Supreme de Volaille, Fresh Tomatoes from Nassau, Artichoke from Algiers, Salade de légumes, Asparagus, Mushrooms (from Georgia).

Roman Punch.

Canvas Back Ducks, Prairie Chicken, English Snipe, Pheasants.

DESSERT.

Cabinet Pudding, Bavarroise au Meringue, Ices in Fruit, in skins of Peaches, Oranges, Bananas, Pears, Apples and Grapes. Strawberries from Florida, Pears from California, Bananas from Havana.

The table was covered with *Gloire de Dijon* roses, which filled the room with the atmosphere of June. Every dish was a *chef-d'œuvre*. For *somebody* has sent cooks to America.

The wines, such as claret, champagne and chateau-yquem, are within the reach of all people who have money; but the old Madeira, the rare sherries, are the accumulations of the few. Those happy men who have inherited cellars alone can offer you old "Wanderer" or "Juno" Madeira, and the clarets of the Comet years, with rare vintages of Johannisberger, etc.

Is there not just a little too much talk about wine? It seems to ladies as if there were, and perhaps some men could and would talk of some other subject, if it were broached. How weary some of them look as they take up the subject, and the only very witty thing said about wine and age, was said so long ago!

Is there variety enough in the *menu*, speaking from a literary point of view? That is a clever idea of the Philadelphia Shakespeare Club to have their yearly dinners illustrated by texts of Shakespeare, as thus—Lobster Salad:

"Who hath created this indigest?"—*Cymbeline.*

or of the Madeira:

"What is three ago?"—*Romeo and Juliet.*

or of the champagne:

"Enter Froth."—*Midsummer's Night Dream.*

What a rare occasion would such a dinner afford for beautiful quotations. Artichokes from Algiers! Let us have Ouida's description of Algiers from "Under Two Flags," to accompany them. Tomatoes from Nassau, with a picture of that island. Mushrooms with the fine old classic warning, "Distrust the Greeks when they come bearing gifts." Strawberries from Florida, with a sketch of Ponce de Leon and the Fountain of Youth. The fruit ices, with a picture of the Veiled Priestess of Isis. Sugar plums of wit, confections of quotation. What a dinner-card could a witty woman compose during afternoon tea. Quote Caliban over the nuts, "I'll take thee where the clustering filberts grow."

And yet who does? Do we not rather stupidly take all the good things of this life, and eat and drink and not be merry? Certainly not always.

The dinner is the flower of modern civilization; treat it with respect. Invite no more than your dining-hall will comfortably sit, and then not alone those to whom you wish to pay a debt, but those who are congenial to each other. Seat your guests with care and discrimination. They are worthy of this attention, if they are worth inviting at all. And ye who are invited! Remember that all animosities cease at the dinner-table. If you meet your deadliest enemy in your friend's parlor speak to him, be gracious to him, be as agreeable to him as if he had never offended you. And thus you save your hostess's feelings. Cut him the next day if you please, but be agreeable there; it is one of the canons of good-breeding.

Then, having accepted an invitation to dinner, never suffer yourself to break the engagement if you can help it. Sickness and death are the only things which should intervene.

The old superstition about thirteen at table seems to have little force here. We have not the French institution of the *quatorzième*. We are not a superstitious people, and yet some people are so afflicted about this unlucky number that they are silent and unhappy. If that is the case, bring down one of the children for the vacant chair, lest any one should be uncomfortable.

Light, music, propinquity, good food and flowers, a well-selected company, and there should be—happiness.

But sometimes over this very combination hangs a pall. The sudden silences, the dullness, the heaviness of the whole matter is surprising. What can it be? asks the hostess.

Ten to one it is the heat! In our furnace-heated houses there is no such enemy to vivacity as the burned-up air which even the most hospitable hostesses give their guests to breathe. The flowers wither; the whole jollity of the occasion goes up the chimney. Alas, frequently in these hermetically-sealed rooms there is no chimney for it to go up! It condenses, and hangs like a San Benito (that horrid garment with which the Jesuits stifled their victims) over the well-dressed guests. To have fresh air and plenty of it is indispensable to the gayety of a dinner-party. Perhaps it was one reason why the dinners in dear old shabby Washington before the war were so delightful. No one owned an air-tight house in Washington. The blessed air of heaven was a little apt to visit the back of your neck too roughly. But that was better than no zephyr at all.

Conversation at a dinner is apt to be very agreeable in New York, it is becoming such a cosmopolitan city—surely one agreeable foreigner at every table, and none of those old-time monotonous talkers. There are very few human beings who, under happy conditions, cannot say *something* good, if one person has not the overwhelming power of doing all the talking. Music, the drama, the last head-dress, the new singer, the last work of Edmund About, or your trip in Europe, the memory of other dinners, the hope of dinners to come—nay, everything but our illnesses, our grievances, and our wrongs. Let us not bring them to table with us.

Sometimes a local subject, like the Tichborne question in England, becomes a very great bone of contention, and brings about a want of harmony at the dinner-table. The dangerous prominence of the cipher-dispatches began to trouble the dinner-givers of this gay Winter of 1878-9, when came the *World* questions and saved us. One hostess declared herself frightened to death, however, as a gentleman looked suspiciously at her sweetbreads, and said: "What is a horticultural cat?" That being one of the *World* questions, she feared that he remembered Sam Weller's story about the sausages.

It is *déshabillé* (and New York women avail themselves of it) to dress admirably at a dinner. Worth has introduced the fashion, formerly thought monstrous, of high dresses at dinner. The *corsage montant* was not worn at dinner in England before ten years ago. It is doubtful if it is often seen at court now. The *décolletées* dresses are certainly more befitting the hour of full dress, and they are more comfortable. But on this point fashion and individual taste must, of course, decide. To the looker-on, the low-cut corsage with necklace is far more elegant, particularly when he sees the white shoulders and well-formed necks of American women. How many a rather plain face is made beautiful by the adjacent whiteness of a fair neck. A corsage, not too low, is a very becoming style of dress.

As for men, the nineteenth century has hopelessly reduced them to the black and white of their own butlers and footmen. They are thrown back on their agreeability most entirely. No ruffles of rare lace, no velvet coats, no long curls, no jewels! The man of the nineteenth century has really reached the ultimatum of plainness. But if he be a good talker and a moderate *gourmet* he can be a very agreeable creature at a dinner. How many original and good things he can say! How much wit he can be the cause of in others!

There have been many good things said about the number of persons at a dinner. Not more than the Muses or less than the Graces is, however, an exploded idea. Twenty-five, if your dining-room is large enough; sixteen, if it is not; eight, if you prefer—all, all are good numbers. The scene increases in magnificence with numbers. Have plenty of servants, so that no thirsty gentleman may be sighing for his champagne, no lady dying for a glass of water. Have every dish presented to the lady of the house for inspection, and then carved off the table.

The Russian fashion of having dishes handed to the guests has entirely, in grand dinners, superseded the placing of them on the table.

But yet in a few fine houses, and especially for family dinners, it is not impossible to see a gentleman carve his own turkey, but it begins to be a lost art, and the crowded luxury of flowers and china make the presence of so large an object almost too heavy. It is a pity, for there was something personal still pleasant in the relation of carver and guest.

Cotton in Central Asia.

THE cotton-spinning industry on a large scale, apart from the extensive household production, is spreading considerably in European Russia, though the attempts to establish the industry in the Caucasus have not been so successful as was expected. Recent statistics, however, show that cotton-growing is assuming large dimensions in the Central Asiatic provinces of Russia, reaching yearly at present more than 50,000,000 kilogrammes, which is partly utilized in local industries and partly finds its way to Russia, which again returns a considerable proportion in the shape of cotton fabrics. To such an extent has the import of cotton from Central Asia to Russia increased in the last ten years that now the Bokharan cotton has become absolutely indispensable to several branches of Russian cotton manufacture. Only the long and expensive land carriage necessary to bring Central Asian cotton to the places where it can be utilized prevents a sudden expansion of this branch of industry, which, however must occur as soon as St. Petersburg is placed in railway communication with Central Asiatic Russia.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, NOVEMBER 15, 1879.

A NEW STORY.

In our next number we shall commence the publication of a powerful serial story, entitled, "The Hidden Witness," written by the author of "That Husband of Mine" expressly for FRANK LESLIE'S ILLUSTRATED NEWSPAPER.

We give in the present issue the third of a series of illustrated interviews with our eminent public men, which it is proposed to continue as a special feature of FRANK LESLIE'S ILLUSTRATED NEWSPAPER. *These interviews will in all cases relate to topics of immediate public interest, and will constitute a really valuable contribution to the current history of the times. The present interview, with General Sherman, refers to the late Indian troubles and the Indian service of the Army, and embodies also his views as to the management of the Zulu War. Possibly his opinions as to the Interior Department may find fuller expression in his annual report, which he is now preparing.*

THE FINANCIAL HALT.

SEVERAL weeks ago, in the admirable speech which he delivered at Cincinnati on the current politics of the day, Mr. Secretary Schurz expressed the hope that the constant and mischievous agitation of the Ohio school of Democrats for the destruction of the national bank currency and the substitution of greenbacks in its stead would, at least, serve one good purpose. He thought it would at least convince "every sensible man that, as long as such a Government paper exists, the agitation for an expansion of that currency would never cease to disturb the public mind, to threaten the maintenance of specie payments, to endanger the public credit, and to undermine that foundation upon which alone the business of the country can safely stand—a sound monetary system." As this was precisely the view which we have consistently taken in the present aspects of the currency issue, it gave us pleasure to express our entire concurrence in the opinion of the Secretary under this head, and hence, when we were recently called to chronicle the result and point the moral of the late Ohio election, we expressed the hope that, with the prestige of their victory behind their backs, the Republican leaders would henceforth have the courage to advance to that higher ground on which alone they can maintain their position at the head of the sound-money column. The Secretary of the Interior, as a member of the present Administration, has already planted his feet on that higher ground, and he has planted them there with so little of hesitation and reserve that he makes bold to say that "every sensible man" ought to learn from the Ohio agitators how to find the ground of safety from their assaults on the public credit, the stability of specie payments, and the healthful conditions of trade. He lamented that, in the present phases of our politics, "a class of well-meaning men, although in favor of honest money, had been affected by that sentimental idolatry of the greenback which has confused so many minds"; but he cherished the hope that even this class would now be convinced that, under our Constitution, as under every other Government in the world, "it is not a legitimate function of the Treasury Department to be a bank of issue."

The clearness and the emphasis with which the Secretary of the Interior has avowed his opinions under this head serve to set in only a clearer light the wide divergence from them seen in the language held again and again by the Secretary of the Treasury, to whom the people of the country are entitled to look as the exemplar and defender of the monetary opinions espoused by the Administration. As in Maine and in Ohio, so also in New York, when recently speaking to the merchants and businessmen of the commercial metropolis, Mr. Sherman declares that he is in favor of retaining the legal tender notes as a permanent part of our paper circulation. His language on this point is as follows:

"The present volume of United States notes was issued during the war, and their issue and reissue has been upheld by the Supreme Court. We have had a weary struggle to bring them to the standard of coin. There let us rest. I, for one, am in favor of maintaining them in circulation, supported by an ample reserve in coin, but am equally in favor of allowing all other paper money to be issued by corporations under a law free and open to all, so that the business of banking will be like any other business of private life."

We have no further animadversions to offer on what seems to us the inadequacy of the Secretary's logic and the untenability of his position. We have so repeatedly avowed our convictions on this topic that our readers do not need to be informed of the grounds on which we dissent from Mr. Sherman's views, and on which we concur with those of Mr. Schurz. So far as it is a question of financial prudence, looking to the future, every consideration of political duty and of public safety seems to us to point in the direction indicated by the latter.

It remains for us, however, to repeat that the Republican party is also pledged by considerations of political consistency and of good faith to set its face in the same direction, which is prescribed for it and for the country by the exigencies of a future that is close at hand. When it initiated and adopted the legal tender policy in 1862, it distinctly announced that the policy was to be a temporary expedient, and that the greenbacks should be withdrawn and cancelled at the earliest practicable day. Mr. Secretary Chase, in his Report of December, 1862, while then renewing his recommendation of a system of national bank circulation, was careful to premise, with reference to the legal tender notes in which that circulation was redeemable, that he did not propose any mere "paper-money scheme, but, on the contrary, a series of measures looking to a safe and gradual return to gold and silver, *as the only permanent basis, standard and measure of value recognized by the Constitution.*" Mr. E. G. Spaulding, of this State, who championed the legal tender policy in the House of Representatives in 1862, was emphatic to disclaim its lawfulness or expediency except as a "war measure." Eminent Republican leaders in the Senate refused to accept it even as a "war measure." Mr. Morrill, of Vermont, denounced it as "a measure not blessed by one sound precedent and damned by all." Eminent Republican leaders in the House of Representatives were equally frank in their declarations against it. Mr. Roscoe Conkling, then a member of that branch of the National Legislature, protested against it as destined to "proclaim throughout the country a saturnalia of fraud and a carnival of rogues." Mr. Sumner, speaking as a representative man of his party in both Houses of Congress, did not hesitate to say in the course of the legal tender debate, "We must all set our faces against any proposition like the present, except as a temporary expedient, rendered imperative by the exigency of the hour."

It is in such a policy—a policy initiated under such omens and with such protestations—that Mr. Secretary Sherman would fain persuade us to "rest." If no dangers lay in the way along which the country is moving, shall it be said that no respect is due to the sacred promises and solemn engagements which were made when the policy was adopted? But the dangers incident to the permanent retention of the legal tender currency are staring us in the face. Nothing but the veriest political optimism can hide them from the view of an intelligent observer. The fact that the greenbacks are to-day brought to a parity with coin does not neutralize their power to work mischief in the business and politics of the country—in the business of the country by helping to swell a needless inflation of the currency, in the politics of the country by offering a perpetual lure to new and boundless spawns of paper money and of paper-money fanatics.

And never will there be a juncture more propitious for the retirement of the greenbacks than that with which the country is now favored by its abundant crops, and by the balance of trade which is pouring a steady stream of European gold into our laps. With this gold it would be easy to replace the legal-tender currency. And it is utterly idle and irrelevant to say that the Supreme Court may rid us of the legal-tender incubus in their forthcoming decision of the Butler-Chittenden case, when they will be called to pronounce on the constitutionality or unconstitutionality of legal-tender notes issued in time of peace, without any exigency to be pleaded for their necessity. The question in its present aspect is one of public policy, and should be adjudicated by the people through the normal working of our political institutions. To subject the Supreme Court to the strain and tension of issues which can be better adjusted by the ballot-box is to trifle with the public faith in the judicial impartiality of that tribunal, and is to suspend on the hazards of the technical legal mind a judgment which is fraught with inconceivable possibilities of evil if there should be a majority of one in the court favorable to the pretensions of the paper-money fanatics.

THE INDIAN TROUBLES.

THERE seems to be no doubt that the women and children at White River Agency were saved from death, at the time of the massacre of the agent and his assistants, by the intervention of a squaw named Susan, wife of Chief Johnson and a sister of Ouray. The captives state that she protected them at all times, even going into the Ute council—an unprecedented act for an Indian woman—and using her influence to secure their release. Subsequently, when the captives had been surrendered to Commissioner Adams, and transferred to the home of Chief Ouray, near Los Pinos, they were again indebted to a squaw for friendly and kind-hearted services. Miss Meeker, in her account, says they found the chief's home a most delightful refuge—"carpets on the floor and curtains on the windows, lamps on the tables and stoves in the rooms, with fires burning." The party, in reaching Alamosa, a railroad point, traveled 500 miles on stages and Indian ponies, over mountains covered with snow and alkali deserts, some of the women being only partially clad, and all being obliged at times to sleep on the bare ground, without shawls or blankets. The story of the captivity and rescue of the three women and their two children is one of the most thrilling of modern times, and is all the more so because of the touches of womanly heroism and sympathy and the stray glimpses of the better side of Indian life which illuminate it.

As to the outcome of the Ute disturbances, it is understood that, in the event of the non-surrender of the Indians who are responsible for the murders committed at White River, the troops will be ordered to proceed in the matter. It is hoped, however, that hostilities may be avoided. In his annual report, just forwarded to Washington, Lieutenant-general Sheridan expresses the conviction that Indian troubles that may hereafter occur will be due to a want of food or attempts to reduce the number and size of the reservations. He says that the beef ration now allowed the Indians is insufficient, owing to the inadequate appropriations made by Congress for this purpose, and he adds:

"It should be borne in mind that the vast country lying between the Missouri River and the Rocky Mountains, including Colorado and a portion of New Mexico, has been wrested from the Indians, and that the immense herds of game upon which these Indians formerly subsisted have, to a great extent, disappeared, and that nearly all the country mentioned is now given up to mining interests, cattle ranches and general agriculture, and that the annual market value of the mineral and food supplies of this region aggregates hundreds of millions of dollars. It seems to me that such beneficial results as these should induce Congress to furnish the poor people from whom this country has been taken with sufficient food to enable them to live without suffering the pangs of hunger. It should also be remembered that the Indian possesses a nomadic stomach; and heretofore, simply by the pleasures of the chase, he was unabled to put his family beyond the possibility of a want of food; and one can easily imagine how exasperating it must be to a warrior to find himself limited to a meagre ration of Texas beef, and to see his women and children suffering for food before his eyes."

General Sheridan also refers to the frequent removals of the Indians from the localities in which they were born and raised as another source of trouble. He has no doubt that the groundwork of the present Colorado trouble arises from a suspicion on the part of the Indians that they are to be deprived of their homes by a concentration in order to make fewer agencies. There can be no doubt as to the essential correctness of these views, and it would seem that there should be no difficulty in so shaping the Government policy as to avoid in future all these causes of contention and bloodshed.

FACTS OF POSTAL PROGRESS.

THE reduction of the rates of postage, first adopted by the efforts of Rowland Hill in England against all the opposition of prescriptive prejudice and the solemn warnings of the profoundest financiers, marked an epoch in the march of civilization. A moment's reflection will show what enormous benefits it conferred. It reduced a luxury of the rich to an every-day comfort of the multitude. It made a cheap necessity of what had been a rare privilege. It shortened absence, it conferred the happiness of frequent communion upon a myriad of homes; it quickened business in its every vein and artery; it caused *intelligence* to speed faster and more often, a hundred-fold, from place to place; it brought the all-educating press within universal reach; it carried knowledge to the humblest door; it made closer every tie between man and man, family and family, and nation and nation. On the other hand, penny postage in its results, far from being an additional burden to governments, proved a pecuniary boon, and returned generous surpluses to the public coffers. The loss on carrying a letter for a penny, which had been carried for a shilling, was far more than made up by the immense increase of correspondence; and as Hill proved that the cost of carrying a letter from end to end of the British Isle was only one-eighth of a penny, it only needed a certain increase to set the balance on the profitable side.

When statistics mark a dramatic advance in human progress they cease to be dry. There is a romance about the figures of the post-office which is so charged with significance that even the veriest cynic might well be thrilled. In the United States the postal progress of the past ninety years is full of meaning. Under Washington there were seventy-five post offices, a departmental revenue of $37,000, and postmasters salaried in aggregate by $8,000. Under Jackson the number of post-offices had increased to ten thousand, the revenue to two and a half millions, and the salaries to $800,000. Under Hayes we find that there are in existence no less than forty thousand post-offices; the Post Office Department's receipts are about $30,000,000, and its expenditures about $34,000,000. It is here to be observed that, as yet, our own post-office does not quite pay its way. The reason, however, is obvious. The long mail-routes, extending through vast and sparsely-settled districts, the immensity of the territory to be supplied with the mail, render the expense of conducting the post-office enormous. Every year, however, reduces this disadvantage to less proportions; and long before the continent is entirely settled the postal revenue will surely exceed the expenditure. In "right little, tight little" England, every square mile of which is populated, the Government already receives a large surplus revenue from its post-office. The latest report gives the total expenditure of the English post office at about $20,000,000, and the total revenue at over $31,000,000, affording the Treasury a clear net income of over $11,000,000 a year. In every thickly-settled European country, where cheap postage has been adopted, the same result of an excess of revenue over expenditure has been obtained. The financial wisdom of cheap postage has thus been amply established.

But this is by no means the whole story of postal progress. Having been found a cheap and ready medium of letter and paper communication, the post-office has gradually added other precious conveniences to its original service, until it has become, to a large extent in this country and to a still larger in England, an invaluable machine in many branches of the business of life. It not only transmits money in cash with the safety that an insurance backed by the national treasury confers, but the post-offices honor drafts on each other by means of post-office orders; and post-office orders have not only become national, but international. It faithfully carries through its mails parcels of almost every description, from braces of pistols to the rural-patched quilt. Indeed, rabbits, rats and bees, eggs, pies and artificial teeth, tobacco and China ornaments have been known to be sent by post, and safely delivered. In England, the telegraph companies have been absorbed by the post-office, and telegraphic messages are sent at extremely cheap rates, while the revenue still exceeds the expenditure. The post-office rents private wires to individuals, and receives an income of $350,000 from this source alone. To the English post-office, also, have been attached savings banks for the benefit of the masses, and a most solid benefit it is. The money of the poor is absolutely safe in the postal banks, and the interest as sure as anything human can be. It is not unlikely that, in due time, the United States will follow the English example in the purchase of telegraphs and the establishment of postal savings banks, as we did in adopting cheap postage. As it is, our post-office has made wonderful progress in its efficiency, the extent and variety of its operations, and the benefits it has conferred on the whole people.

EVENTS ABROAD.

THE drift of British policy as to Afghanistan is indicated in the statement of a Simla correspondent of a London journal: "The idea must be abandoned that we intend to stand aloof from the internal affairs of Afghanistan. It cannot be too soon published that we mean to remain in the country." As no intelligent observer ever suspected that the British had any other purpose than to "remain in the country," this injunction would seem to be unnecessary; but it is notable as confirming the expectation that Beaconsfield would not stop short of the disintegration or the annexation of the subjugated country. A positive step in the direction of a continuous occupation has been taken by General Roberts, who, in a proclamation, announces that Cabul and other parts of the country will be subjected to a permanent British administration, and that while the "people of the occupied districts will be treated with justice and benevolence," all offenders against that administration will be punished. One account says that, in pursuance of their new policy, the British will probably take possession of Herat. So far the population of Cabul has made no outward sign, but the calm is thought to be ominous, there being a deep secret hatred of British domination. There has been further fighting in some of the mountain passes; but, militarily, the British are masters of the situation.

The English Parliament has been further prorogued until the 19th of December, but there are those who still believe that an early dissolution cannot be avoided. Rumors, indeed, prevailed last week that important changes in the Ministry are

Digitized by Google

probable, but these are without any apparent justification in existing facts.

The Egyptian question comes to the front again in a way that promises to seriously compromise the action of France and England in undertaking to settle the destinies of that misgoverned country independently of the other Powers. Austria, in response to an application of the English and French commissioners, has refused the proffered control of the Egyptian finances, and insists that the commissioners' operations must be subordinated to the prior claims of creditors who hold mortgages on the estates surrendered by the Khédive's family to guarantee the recent Rothschild loan. As the Rothschild loan was negotiated with the aid of the French and English Governments, Austria's opposition on this point really affects the whole question of European interference in Egypt. It is suspected that Germany coincides with the Austrian view, and if such shall prove to be the fact, the French and English Premiers will find themselves in a decidedly unpleasant "fix," and one which it will be difficult for them to explain satisfactorily to the masses of their countrymen.

The speech of Emperor William at the opening of the Prussian Diet was notably free from political allusions. Indeed, it referred almost entirely to financial affairs and questions of internal improvement. The scheme for the purchase and administration of the railways by the State is to be carried out; the income tax will be reduced and an impost placed upon the retail brandy trade, and in order to cover the deficit which, in spite of proposed reforms, is regarded as inevitable, a loan will be effected. A Bill will be introduced extending the jurisdiction and augmenting the powers of the Superior Department of the Administration, in order to enable it to deal more thoroughly with the communistic and revolutionary elements which are still at work in the Empire. There are intimations that England has become a party to the arrangement between Germany and Austria, as against Russia, but there is no really authentic evidence that such is the fact. The circumstance that Emperor William last week entertained the Russian Grand Dukes Alexis and Paul at dinner is quoted as indicating that the Emperor personally does not share the hostile feeling towards the Government of the Czar.

While Germany and the Vatican have failed to arrive at any satisfactory arrangement, the latter is not idle in other directions. It is now seeking to effect an adjustment with the French Government by which the operation of Clause Seven of the Ferry Bill will be restricted to the Jesuits. It is expected that the differences between the French Cabinet and the Senatorial Committee as to this Bill will be satisfatorily adjusted. There are hints that the Waddington Ministry is not likely to survive coming agitations, and it is significant that Gambetta is quoted as hostile to its continuance. M. Humbert, the returned communist, has accepted a candidature for the Chamber of Deputies. Twenty-six additional mayors have been dismissed by official decrees for participation in factious manifestations. It is announced that the entire Ministry will oppose plenary amnesty.

There seems to be a possibility that the project for the abolition of slavery in Cuba will command the approval of the Spanish Cortes. The Ministry will propose the plan of the Minister of the Colonies at the coming session, and half of the Conservative party are already pledged to its support.

The land agitation in Ireland continues. Mr. Parnell, before coming to this country, will seek to interest some of the large English constituencies in an Irish National Land League, which is to be formed, with a central committee in London. Resolutions adopted at a large meeting of the Corporation of Dublin, asking the Government to alleviate the distress in Ireland and praying for the establishment of a peasant proprietary, will be forwarded to Lord Beaconsfield.

M. de Lesseps does not abandon his canal project. In a recent lecture he announced that he would start for Panama early in December. Cardinal Manning proposes to make another effort to secure the assent of the Vatican to his favorite scheme for effecting certain changes in the external organization of the Catholic Church in England, which, as he believes, would "facilitate the return to Catholicism of an important group of English Protestants." Austria, being unable to cover her financial deficit of $12,700,000 florins by increasing taxes, has been compelled to resort to secret loans. It is definitely announced that unless the relations between England and Russia should become more delicate, Count Schouvaloff will quit his post at London at the end of November, and retire for a time into private life. There have been further floods in Spain, in which many lives were lost and great damage done to property. The official statistics of the inundations in Murcia show that four-fifths of the arable land is ruined and 3,000 persons are missing. It is said that Mr. Langtry, the husband of "the Jersey Lily," is considering the propriety of prosecuting other London society journals for publications affecting his wife.

A DECIDED movement in favor of the nomination of Senator Bayard as the Democratic candidate for President has set in among Southern and Western Democrats since the Ohio election. Many of the leading Democratic journals favor the movement, declaring Mr. Bayard to be the most available candidate, both in point of character and ability and the soundness of his political opinions, who can possibly be named in the present crisis of the party history. Mr. Bayard's disadvantage lies in the fact that he comes from a State whose vote counts practically nothing in the Electoral College; and, eminent as he deservedly is among our latter-day statesmen, it may be doubted whether he will be able to overcome this serious objection to his nomination in the minds of the party managers.

A CORRESPONDENT of the San Francisco *Bulletin*, in a letter from Saratoga, refers somewhat unfairly to Mr. Frank Leslie's Summer residence at that place, alleging that it is in the hands of a receiver, etc., and that it has met this fate because Mr. Leslie has indulged in a private race-course, expensive stables, and similar luxuries. It is only necessary to say as to this that Mr. Leslie never owned a race-horse in his life, never had or aspired to have a racecourse; that Interlaken, his Summer home on Saratoga Lake, was occupied by him during the season just closed, and is not now or likely to be, in the hands of a receiver; and that if the grounds look, as represented, "lonely and woebegone" without, the *Bulletin* correspondent would have found them bright with the glories of Autumn within, had he chosen to pull the latch-string and enter their precincts.

THE English author and advocate of trade co-operation, Mr. George J. Holyoake, has suggested to Secretary Evarts that great good would result from the publication by the Government of a blue-book giving to Europeans contemplating immigration to the United States trustworthy information regarding the quality, price and accessibility of the public lands. A great many publications of this sort are now issued, but the information they furnish is frequently incorrect, and they do not command that degree of confidence which a Government publication would enjoy. The suggestion is certainly a timely one, and Mr. Evarts will, no doubt, give it the consideration to which it is entitled. The benefits which would result from giving an intelligent direction to incoming immigration of the better class are so obvious that it is surprising the Government has not long since assumed an active official supervision of the whole subject.

IT is said that, with a view of opening direct commercial intercourse with the Sandwich Islands, the Chinese Merchants' Steamship Company, composed of merchants and mandarins, is about to place a line of steamers on the route from China to Hawaii, to be followed by others to ply between those islands and San Francisco. The corporation named possesses great wealth, and would prove a formidable competitor for the carrying-trade between the points in question. The projectors of the line allege that the only way to secure good treatment of emigrants *en route* to this country is to transport them in Chinese steamers, but they insist that emigration should be absolutely free, and not forced, and that their main object in the proposed enterprise is to promote commercial intercourse. The undertaking is significant as illustrating the extent to which contact with the outside world has already broken down Chinese exclusiveness and introduced the spirit of enterprise.

THE constitutionality of the Thurman Act having been affirmed by the Supreme Court, the railway corporations affected by it will not be able to postpone much longer an honest compliance with its provisions. Up to this time neither the Union nor the Central Pacific companies has paid anything into the Treasury under the requirements of this Act, but it is stated that the Central will shortly pay over about one million of dollars on account of the sinking fund, and that the accounts of the Union Pacific will also be speedily adjusted. The latter company will not be required to make any cash payment of its proportionate share of net earnings to the Government at this time, there being enough money now due that company for Government transportation to meet the first installment, which would otherwise have to be paid under the provisions of the Thurman Act. It is a point gained to have secured a settlement of any sort with these great corporations.

IT is said that Secretary Sherman will recommend, in his annual report, the passage of a law enabling him to continue his refunding operations, by authorizing him to exchange four per cent. bonds for five or six per cent. bonds before their maturity. On the 31st of December, 1880, there will mature $18,415,000 six per cent. bonds, and in 1881 five and six per cents, amounting to $773,706,700. This includes the entire amount of the public debt which has not been refunded into four and four and one-half per cent. bonds. As these securities are now very nearly down to par in the market, it is believed that the passage of a Bill authorizing their redemption with four per cents. before their maturity would bring to the Treasury a large amount of them, with a corresponding saving in interest. Of course, this exchange could only be made at the option of the holders, as the Government cannot compel them to surrender their bonds until they mature, but a Bill can be drawn so as to make it equally advantageous to the Government and its bondholders to exchange the sixes and fives for four per cents.

THE annual report of Dr. W. W. Strew, the Medical Superintendent of the City Lunatic Asylum at Blackwell's Island, presents an interesting and valuable exposition of the work of this important public charity. During the last year, the total number of patients under treatment in the Asylum was 1,797, of whom 201 were discharged either entirely or partially recovered. The death-rate among the inmates was extraordinarily low, and the sanitary condition of the institution appears to have been admirable throughout. Dr. Strew, in his report, calls especial attention to the fact that a benevolent lady of this city has interested herself in procuring employment for cured and discharged patients who, after recovery, usually find it difficult to obtain situations, and expresses the hope that other friends of these unfortunate people will follow this laudable example. The city is to be felicitated upon having at the head of this great institution a gentleman so admirably qualified for the superintendency and so thoroughly in sympathy with its objects as Dr. Strew.

THE grain shipments from this port are truly enormous. For the five weeks ending October 25th, the shipments amounted to 14,500,000 bushels of wheat, 10,800,000 bushels of corn, and 4,500,000 bushels of oats, barley and rye. Mr. R. H. Walker, the Statistician of the New York Produce Exchange shows by official figures that from the 1st of July to October 15th there were exported from the Atlantic shores 75,693,917 bushels of wheat; from San Francisco, 6,748,888 bushels, and from Portland, in Oregon, 197,964 bushels, making a total of 82,580,769 bushels. Mr. Walker, by way of illustrating the magnitude of the export, says that loading 400 bushels in a freight-car sixty feet long, the amount of wheat exported up to the time mentioned would require for its transportation 256,452 cars, which, if made up in one continuous train, would extend 2,346 miles. If loaded in ships of 3,000 tons burden, it would require a fleet of 825 ships to convey the wheat alone across the ocean. He estimates also that this export of wheat has brought into this country in exchange for it, in gold or its equivalent, more than $100,000,000. He places the wheat crop of the country for 1879 at 425,000,000 bushels, of which 250,000,000 will be needed for home purposes.

ONE of the most elaborate and just reports of the Centennial Exhibition made by foreigners was that of Mr. George Collins Levey, who was Secretary of the Victoria (South Australia) Commission to Philadelphia. Mr. Levey has just completed his report of the Paris Exposition of 1878, at which he appeared in the same capacity, and a copy of this work lies before us. It is a monument to Mr. Levey's experience, taste and industry. A volume of more than five hundred pages, handsomely illustrated, it is chiefly devoted to the consideration of labor-saving machinery and processes of importance to Australia. The colony of Victoria received from the Paris Exposition ten gold, thirty-six silver, and forty-two bronze medals, besides thirty-four honorary mentions, in all 122 marks of distinction, excelling in this respect every other British colony except Canada. Mr. Levey is now in this country *en route* to England, where, and in the European countries, he is commissioned to arrange for exhibits at the International Exhibition to be held at Melbourne next year. Mr. Levey reports, as a result of the acquaintance formed with our antipodean relatives, that business relations have largely increased between Australia and the United States.

THE work on the Tehuantepec Railway across the isthmus of that name, by which a direct communication will be established between the Pacific Ocean and the Gulf of Mexico, is reported to be making such satisfactory progress that its completion within three years is now assured. The route, which is 150 miles in length, runs through a healthy and fertile country, being lined on both sides with coffee plantations. The company engaged in the construction of the road receives a subsidy of $12,000 a mile from the State and a liberal grant of lands, besides ample land for wharves, docks, depots, etc., at each terminus. The cost of construction and equipment being $5,500,000, the direct outlay, less the cost subsidy, will be $3,750,000, which, with the road once in operation, will be fully covered by the cash value of the subsidies in land. There can be no doubt that the opening of this new route for commerce and travel between the Pacific and Atlantic, when accomplished, will be followed by important changes in the currents of trade, and a vast increase in the volume of interchanges. The road debouches into the Bay of Campeachy, about 110 miles below Vera Cruz, and will thus open a central avenue for the distribution of traffic through the most populous Mexican districts, covering an area of 84,307 square miles, while it will place the coffee and other products of the country within easy reach of American enterprise and capital. As compared with the present ocean route by way of Panama, the distance will be shortened by 3,000 miles, equal to twelve days, and should the Florida ship-canal be built, two days more will be gained between the two oceans. The enterprise will owe its success to Boston capital, and it is likely to justify in its result all the confident anticipations of its promoters.

NEWS OF THE WEEK.

Domestic.

THE price of coal has been again advanced by the large operators.

IT is denied that General Paine will retire from the office of Commissioner of Patents.

THE President has fixed upon the 27th of November as National Thanksgiving Day.

FIVE men were killed by a fire-damp explosion at Mill Creek colliery, at Mill Creek, Pa., November 24.

A. H. STROUSE, a drygoods merchant of St. Paul, Minn., has failed, owing about $60,000 in New York.

ALL quarantine regulations at Memphis have been abolished, and the Committee of Safety has disbanded.

THE corner-stone of the new Chamber of Commerce at Milwaukee was laid, October 30th, by the Masonic fraternity.

ONE hundred buildings in the business part of the town of Parker, Pa., were destroyed by fire October 30th; loss $300,000.

THE wind attained a velocity of 132 miles an hour on Mount Washington, October 29th, being accompanied by a heavy fall of snow.

THE National Academy of Sciences held its semi-annual meeting in this city last week. A large number of interesting papers were read.

THE Secretary of the Treasury has advertised for the Government for $10,602,000 worth of six per cent. interest-bearing United States bonds.

COMPTROLLER KNOX proposes to enforce the law which forbids banks to certify checks when the money for the checks is not actually on deposit.

CHIEF OURAY has consented to the punishment of the offending Utes, and the appointment of a commission of investigation has been recommended.

THE Rev. Dr. T. A. Starkey, of St. Paul's Church, Paterson, was, on October 30th, elected Bishop of the Protestant Episcopal Diocese of Northern New Jersey.

THE public-debt statement shows a decrease of $10,252,506 during October. The Treasury now holds $263,097,450 in United States bonds to secure bank circulation.

THE San Francisco Grand Jury have found a true bill of assault with intent to murder against Charles De Young, of the *Chronicle*, based on his assault on Rev. I. S. Kalloch.

A CONFEDERATE monument was unveiled at Macon, Ga., October 29th, in the presence of 25,000 persons. There was a fine military pageant in connection with the unveiling.

THE National Fair at Washington was opened October 25th with a procession four miles long. The art and mechanical displays are excellent, and the attendance has been large.

MRS. LOUNSBURY, of Bridgeport, Conn., has been acquitted on the charge of murdering her husband, a clergyman, on account of insanity, and she will be sent to the State Asylum at Middletown.

UNITED STATES COMMISSIONER S. D. MATHER, who has been prominent in the suppression of illicit distilleries, has been indicted at Nashville for presenting fraudulent accounts for payment by the Government.

CAPTAIN WILLIAMS was arraigned before the Police Board last week on the charge of clubbing Charles W. Smith, in Madison Square. The case is not yet concluded. An indictment was also found against him by the Grand Jury.

FIVE counterfeiters, who had been sentenced by the United States Courts for passing bogus money, escaped from Ludlow Street Jail, in this city, on the night of October 31st, by making ropes of blankets and letting themselves down from the windows of their cells.

GENERAL GRANT arrived at Omaha November 1st, on his way East, having last week visited the sunny regions of Montana and Colorado. He was everywhere received with enthusiasm. President Hayes has invited General Grant to be his guest when he visits Washington.

SECRETARY EVARTS last week visited the birthplace of Washington on Bridges Creek, Westmoreland County, Virginia, for the purpose of looking over the grounds with a view of selecting a suitable spot for a monument. An old-fashioned brick chimney is all that is left to mark the house in which Washington outgrew pinafores.

THE report of the Auditor of the Treasury for the Post Office Department shows that the actual cost of the postal service to the general treasury for the fiscal year was only $3,051,455, nearly $1,600,000 less than the preceding year. The total revenues of the department were $30,041,982, an increase of $764,465, and the total expenses $33,073,437, a decrease of $1,091,647.

OUR foreign trade continues to show a heavy balance in favor of the United States. During September our exports exceeded the imports by $20,630,087, this being also almost the identical figure for the month of September a year ago. For the whole year ending September 30th, the United States shipped to foreign countries $256,846,277 worth of produce in excess of the value of goods imported. For the previous year the difference was a little larger, the excess of exports being $294,913,307.

Foreign.

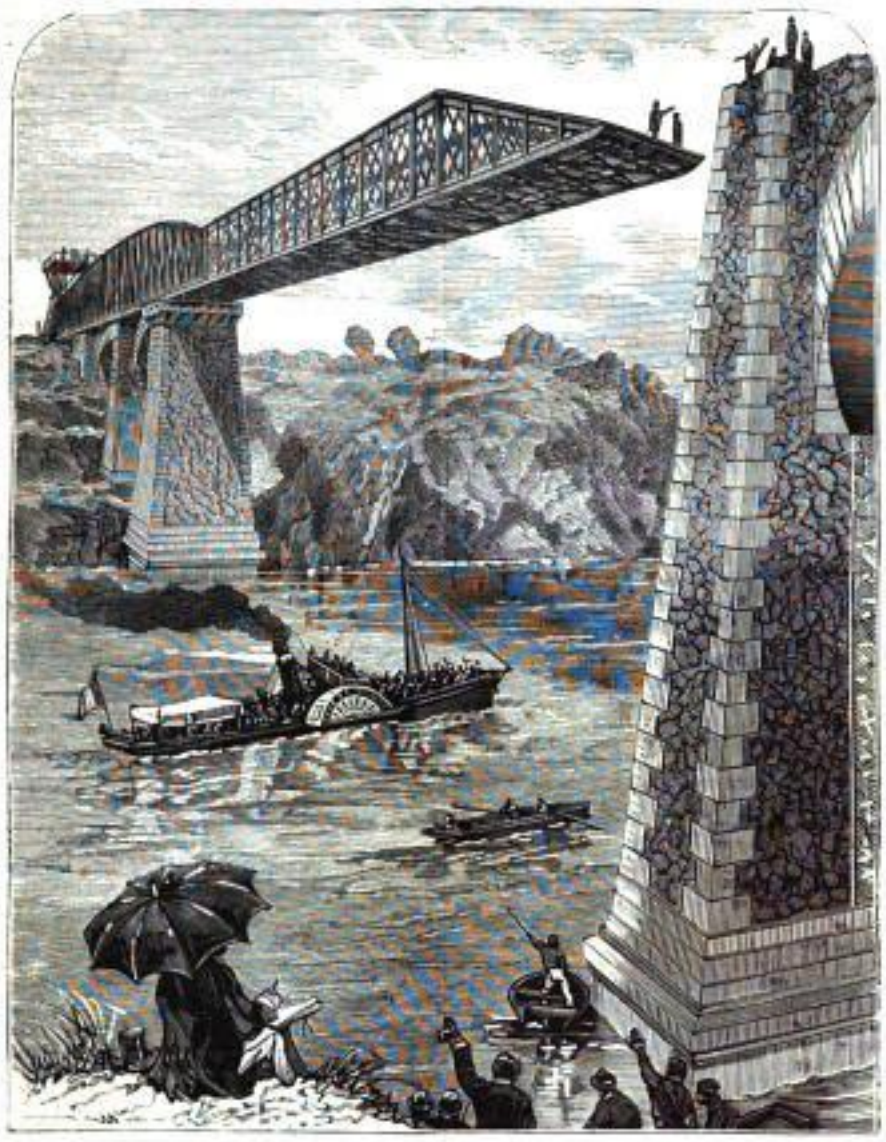
THE Princess Louise will sail for Quebec, after concluding her English visit, on January 24.

DR. FRIEDBERG, Imperial Secretary of State for Justice, has been appointed Prussian Minister of Justice.

THE Peace Congress at Naples broke up in confusion owing to the opposition of a section to the object of the congress.

SIR AUSTEN LAYARD, the British Ambassador, will shortly send a note to the Porte insisting on reforms in Asiatic Turkey.

ELEVEN prisoners have been executed for participation in the massacre of the British Embassy at Cabul, and sixty persons have been examined since the trials began.



KING GEORGE, of Greece, in a speech to the Chamber of Deputies last week, said that the negotiations between Greece and Turkey were progressing to a favorable conclusion.

THE Dominion Government has received a petition from the British Columbians praying that a clause be inserted in Government contracts for the construction of railways in British Columbia prohibiting the employment of Chinese labor.

MR. MACDONALD, Special Agent of the United States Post Office Department, now in Paris, has agreed with the French Ministry upon the principal basis of an understanding for the exchange of postal money orders between France and the United States.

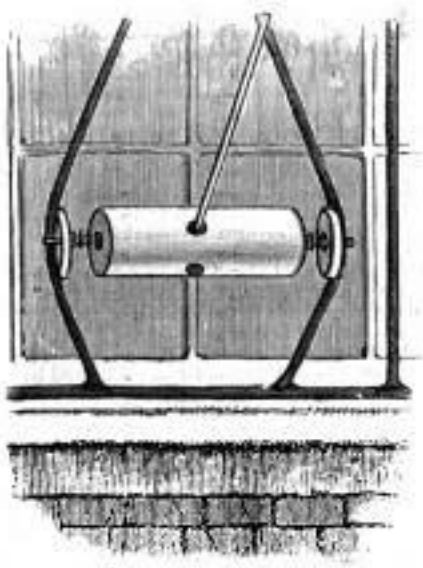
EXPLOSION ON A TUGBOAT.

THE boiler of the tug-boat *Daniel Brown*, a vessel so old that there is no record of the date or place of launching in the Custom House, exploded on Wednesday morning, October 29th, at Pier 49, East River. Her captain was employed to tow the German bark *Augustine Kobbe* to the Clinton Street dry-dock for repairs. The tug and the bark reached Pier No. 49, East River, safely, and the tug, moored alongside the larger vessel, was slowly rounding the pier head, when an explosion occurred that demolished the tug, the bow of which was lifted upward by the tremendous force, and when it was possible to see the remainder of her, she was swept clean to the keel and was settling forward. She sank in five minutes. A number of boatmen put out, and Coon, the engineer, and Stewart, the cook, were picked up. Stewart was uninjured, and Coon had his face lacerated. His legs were bruised, and he was taken to the Chambers Street Hospital. Search was made for Van Alkin and Haviland, a deckhand, and the fireman, but no trace of them was found. The explosion threw about 150 feet of hose used to wash down the decks of the tug on to the topgallant yard of the bark, and on her decks and on the pier were picked up four iron flues, a cut-off, a brass steam-whistle, and fragments of iron.



In the judgment of an expert the flues were badly put in, only a thin ridge holding them in the base and cap of the boiler. The same authority gave as the cause of the explosion the giving way of the cap of the boiler.

NEW YORK CITY.—EXPLOSION OF THE BOILER OF THE TUG-BOAT "DANIEL BROWN" AT PIER 49, EAST RIVER, OCTOBER 29TH.

A NEW BURGLAR'S IMPLEMENT.

IN several burglaries recently committed in this city, all the houses were entered in exactly the same manner, viz., by prying off the bars in front of the rear basement-windows. One of the burglars

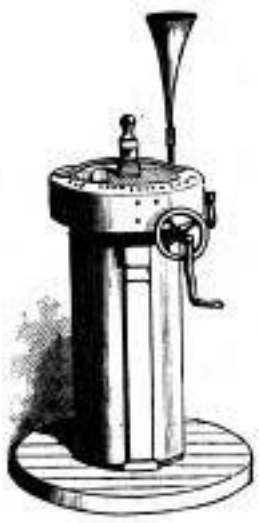
NEW BURGLAR'S LEVER FOR FORCING WINDOW-BARS.

when arrested had in his possession an instrument for rendering ordinary window-bars utterly vain protections. This is something new to the police. It consists of a hollow bar of steel about five inches long, in the ends of which are fitted screws working in opposite directions, with a groove in each head to fit a window-bar. Around the circumference of the hollow bar and in its middle are four holes, into each of which fits a lever a foot long. When the lever turns the hollow cylinder the screws press outwards with tremendous force and pry the bars from their sockets.

THE MONSTER—FOSSIL SHARK (CARCHARODON)

OF TERTIARY PERIOD OF SOUTH CAROLINA.

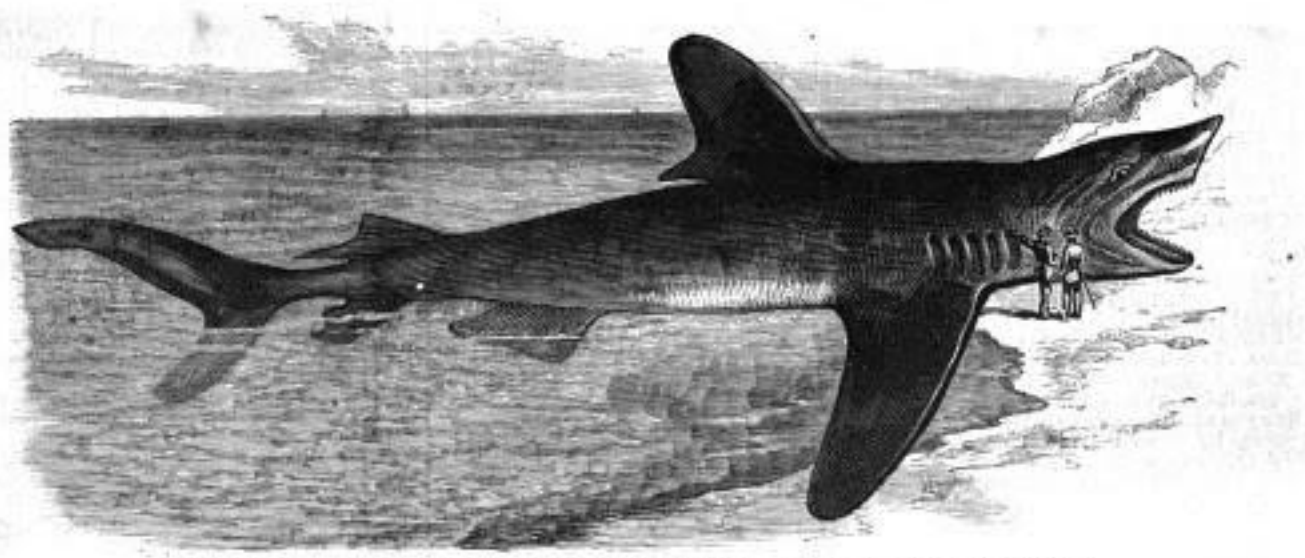
THE sketch of a monster fossil shark on this page is a restoration of the white shark of the South Carolina tertiary period, and is restored as accurately as possible from the existing genus, *Carcharias lamia*. The fossil specimen belonged to the sub-genus *Carcharodon*. In 1876, Mr. C. Fred. Holder, in charge of an expedition from the New York Aquarium, captured a large white shark near Pilottown, St. Johns River, Florida. Every attempt was made to bring it to New York, without success, owing to the lateness of the season. It was over seventeen feet long and of this same genus and could easily have held a horse and cart in their capacious maws. Dr. Sir John Hunter, of the College of Physicians and Surgeons, London, in describing a specimen of medium size, says, "The length of the base of this tooth, from the *Carcharodon* (*Carcharias*), and a distant relative, as it were, of our subject. The jaw was preserved, and as the dentition was the same, the comparison as to size was made from this, and by placing the fossil teeth in the same relative position as those in the jaw of the existing *Carcharias*, we have a monster nearly one hundred feet long. To give a clearer idea, some of them may have reached a length of over 150 feet, megalodon (Agassiz), is four inches eight lines, that of the longest of its sides, five inches ten lines; with it is placed a tooth of an unusually large specimen of the largest known living species of *Carcharias* (or Florida specimen), the length of the base of which is one inch eight lines, and that of the longest of its sides two inches three lines. This tooth is from a shark about twenty feet long." Sir John Hunter adds: "The fossil shark, if bearing the same proportion to the teeth, must have been over sixty feet long." The fossil tooth used in Sir John's comparison was from the miocene tertiary formations of Malta, and was a third smaller than the largest found in America. Professor Agassiz made similar comparisons with like results. The teeth, although having lain untold ages under ground, still in many cases retain their beautiful polish, and the fine serrations of the trenchant edges are as perfect as when first deposited. If a longitudinal section is removed from one of the basal angles, the thin layer of enamelled dentine will be found intact. In the fossil shark's tooth, or *glosso petra*, this enamel is composed of animal substance and calcareous earth, and is nearly in the same quantity as the recent, but the *central* part of the tooth has its animal substance in a state of mucus interspersed in the calcareous matter. The teeth were formerly found in great numbers by Professor Holms near Charleston, S. C., and a fine collection of them, showing the different species, can be seen in the Geological Hall of the Museum of Natural History, Central Park.



VIRGINIA.—THE TOMB OF MAJOR WILLIAM GOOCH AT YORKTOWN.—SEE PAGE 179.

A MARINE SAFETY SIGNAL.

CAPTAIN BARKER, a well-known navigator of New York, has perfected a system by which signals may be made in foggy weather and at night with certainty, and by which two vessels meeting each other on the high seas might not only learn of each other's presence, but be apprised of the course each was steering, and thus be enabled to avoid collision. His machine, as at present arranged, makes eight signals, giving a separate signal for every four points of the compass. On the top of the machine is a circular dial-plate divided into eighths; each division represents four points of the compass; that is, beginning at north, the first division to the right represents any course from north to northeast; the next one any course from northeast to east—these courses being plainly lettered on the dial-plate. An arrow indicator revolves around the plate, and when the point of the arrow is placed, say at the north point of the compass, the machine is then ready to signal that the vessel is steering on some course between north and northeast, and so for the other courses. The indicator is easily and swiftly changed at will to any new course desired.



The signals on steamers will be given by the

AN IMPROVED FOG-HORN.

SOUTH CAROLINA.—MONSTER FOSSIL SHARK OF THE TERTIARY PERIOD.—FROM A SKETCH BY C. FRED. HOLDER.

Digitized by Google

al an whistle; on sailing-vessels by a fog-horn attached to the machine. The signals are as follows, viz.: For any course between north and northeast, one long sound and two short ones; northeast to east, one long sound and three short; east to southeast, one long sound, followed by a short one and another long one; southeast to south, one long sound, two short ones and another long one; south to southwest, two short sounds and one long; southwest to west, three short sounds and one long; west to northwest, one short sound, followed by a long one and another short one; northwest to north, four short sounds. Thus every course signaled from north to south and having any easting in it begins with a long blast, and every signal from north to south having any westing in it begins with a short blast. Since in every course there is either easting or westing, excepting due north and south, the master of a ship may know at once which side of the polar line a ship is approaching, and the subsequent sounds tell him almost her exact course.

A GENTEEL COMEDY.

IT was a warm and sunny afternoon, early in a certain September, that the subject of this memoir, with admiration in his eyes and adoration in his heart, sat upon the deck of an outward bound ocean steamer, watching a group of three persons who stood near the port railing. The group consisted of a young girl, an elderly gentleman, evidently her father, and a bushy bearded, low-browed younger man, whose attentions to the young lady, and his generally idiotic behavior, declared him to be her lover. In five minutes I had learned to hate him with all the ferocity of which my nature was capable.

The girl—how shall I describe her—her deep, brown, lustrous eyes, her soft, rippling hair, her white teeth, her peachy tints, her red, ripe, sensuous lips, her clear, sweet exhilarating laugh? Before we had reached the Narrows, I had become fascinated in a manner that I cannot describe. We had not passed Sandy Hook before I knew that, though I had not exchanged a word with her, I was madly, hopelessly, irresponsibly in love.

I was then a steady-going bachelor of thirty-two, not much given to romance or to undue admiration of the gentler sex. In fact, I had rather prided myself upon my callosity in that respect. Love, I had argued, was a plant of slow growth, requiring to be well watered and carefully nurtured, and when full grown was not half so vigorous an affair as poets and sentimental novelists would have us believe. As for love at first sight, it was an impossibility. If I ever fell in love, I would do so calmly and deliberately, and after the most mature consideration. Such were the theories with which I had set foot upon that fateful steamer, and now, before I had lost sight of my native shores, I had bundled them all together and pitched them overboard without hesitation or regret.

The lady seemed by intuition to know that my steadfast gaze was fixed upon her, for she suddenly turned her head and bent her brown eyes upon mine. For one brief second I looked into their beautiful liquid depths. Then she turned quickly away, and a vivid blush mantled her cheek, as though she had almost read my thoughts. I felt my blood leap and my heart beat faster.

It was not the last time that her eyes met mine, for, as I sat there, again and again she glanced at me, and once eyed me for several seconds curiously, until my veins seemed filled with wine and my very soul all aglow.

"Cost what it will, I will speak to her," I thought; and I had not long to wait for an opportunity, for scarcely had I formed the resolution before her handkerchief, which had lain idly in her lap, was caught by a sudden puff of wind, and blown straight towards me. With a spring I caught it as it was flying over the starboard rail.

"Oh, thank you!" she said, as I returned it to her.

That was all, but it was enough. I had touched her hand; she had spoken to me; she had even smiled upon me, and I walked away with a happiness in my heart that made me feel as if treading on air.

A new delight awaited me when I found that evening that her seat at table was to be next to mine. The elderly father sat upon her right and I upon her left, but, somewhat to my surprise, the low-browed young gentleman was several seats removed, and occupied a place nearly opposite mine, whence he glowered at me in the most truculent manner. She floated into the dining-saloon in a cloudy dress of dark and diaphanous material, through which the perfect contour of her arms and the marble loveliness of her shoulders were well, though modestly, displayed.

My attentions that evening were chiefly confined to passing the salt and the butter, but the next morning my opportunity arrived. An easterly wind had set in during the night, and the ship was tolerably steady, but neither of the two gentlemen I have mentioned made his appearance at the breakfast-table, and, in fact, the elder remained invisible until we were within three days of Queenstown. The young lady, however, was in her place, and ate with an appetite that set sea-sickness at defiance.

"You are accustomed to ocean traveling?" I ventured to remark, in my most insinuating tones.

"Oh, no, sir. This is the first time we have ever been across."

"Indeed! And you are not afraid of sea-sickness?"

"I have not been ill yet, but poor Colonel Kilgore I hear, is quite sick this morning."

"Colonel Kilgore?"

"Yes, the gentleman who sits opposite you, whom you saw with us yesterday."

"Ah! He is an old friend of yours?" I asked, rather savagely.

"Oh, no, indeed," she replied, with a little laugh. "We only met him on the steamer. He helped us about our baggage, and was so kind. He is in the British army, I believe. He gave me his card."

"One cannot be too careful in respect to acquaintances formed while traveling," I observed, gloomily.

Her brown eyes opened wide as she looked up in my face, while the shadow of a smile came into the corners of her red mouth in answer to this brilliant remark. Its absurdity struck me when too late to rectify my blunder, and I burst into laughter, in which she joined, and displayed her white even teeth and her dimples, until I could scarcely resist the temptation to kiss her then and there. We got on famously after that, and I gave her my card, upon a duplicate of which she wrote, in a neat, clear hand, her name, "Clara Bertrand."

After that morning I was at her side almost constantly, whenever she appeared either in the cabins or on deck. The only exceptions were when the villainous Kilgore was present. That individual made his appearance on the third day, and I will give him credit for as good taste as my own, for he seemed as desperately in love with Miss Bertrand as I. In fact, we each recognized in the other a rival, and our hatred for each other soon became equaled only by its common adoration for its cause.

We had an unusually smooth sea during the entire voyage, and for the greater portion of the time the nights were moonlit. Such opportunities for quiet *têtes-à-têtes* on deck, under the stars, were not to be neglected, and we had not been four days out before Kilgore and I learned how to improve them. As for Miss Bertrand, she bestowed herself upon both of us with pretty equally divided attention, keeping us in tow like a couple of sculpins on a double-hooked line.

This would not last long, and I realized that, at most, only eight days of this happy, delicious existence was allotted to me, half of which was already gone. Love makes rapid strides when time pursues. And so, one night, I kissed her. I don't know exactly how it came about. Miss Bertrand had come on deck for a little fresh air before retiring to bed. I had been pacing the deck for an hour, hoping for her appearance, and when at last she appeared in the companionway, I was at her side in an instant. The colonel, strange to say, was nowhere to be seen. We strolled forward, and stopped in the shadow of the great smoke-stack, and stood looking over the rail at the heaving, phosphorescent sea. What I said I know not, but I tried to tell her of my love for her. As I spoke, softly and tenderly as lovers do, I felt, or thought I felt, her little form nestle closer to my side. I looked down into the beautiful eyes, which met mine, full of a tender radiance. And then—I could not help it—I bent suddenly and pressed my burning lips upon her mouth.

With a quick scream she sprang from me and fled towards the cabin. Almost at the same moment the stalwart form of Kilgore emerged from the shadows near by. I passed him without condescending to speak to him, and followed Miss Bertrand, but when I reached the saloon she had disappeared, and there was nothing left for me to do but to seek my own room to brood over my vexation and disappointment.

In about an hour I had so far succeeded in calming my feelings as to commence preparations for going to bed, when I was startled by a sharp rap at the door.

The immediate and natural effect of this peremptory summons was the opening of the door and the entrance of a tall, stout individual, with a fierce, black mustache and a very red face, which imparted to his general appearance an aspect of great ferocity. This gentleman closed the door behind him, and, drawing himself up until he looked at least two inches taller than before, exclaimed, in a voice like the roar of an African lion:

"Mr. Bangs, I believe?"

"That is my name, sir," I replied, motioning him to be seated.

"Ahem! My name, sor, is Gilhooly—Captain Gilhooly, of the British ar-rmy. I have the honor to be the bearer of a communication from my friend, Colonel Kilgore."

"I think I have seen you in Colonel Kilgore's company," I replied. "What is the communication?"

He drew from his pocket an envelope and handed it to me in silence. I opened it, and had the pleasure of perusing the following epistle:

"MR. B. BANGS—*Sir*: Immediately upon receiving this message you will please inform me, through my friend, Captain Gilhooly, at what time and place, upon this ship, you will meet me for the purpose of giving me that satisfaction which, as a gentleman, I have a right to demand.

"Sir, a cowardly apology or evasion will not be entertained. Unless your answer is prompt and to the purpose, I will not only cowhide you in public, but will post you as a poltroon in all parts of the ship.

"I beg further to inform you that there will be no necessity for you to further intrude upon the society of Miss Bertrand, your attentions to that lady being as offensive in the eyes of the other passengers as you are contemptible. WELLINGTON KILGORE."

Concealing the inward agitation which this bloodthirsty effusion naturally produced, I tossed the paper carelessly upon the table, and, assuming a ferocity of manner which entirely put Gilhooly's own in the shade, I roared:

"So! This fellow wants me to fight him, does he?"

"Sir," returned the captain, "my friend will *make* you fight him."

"*Make me!*" I exclaimed, striking the table with my fist with such force as would have knocked it down had it not been fastened to the partition. "*Make me!* It is *I*, sir, who will compel *him*. I have been thirsting for that red nosed loafer's blood ever since I came on board. *Make* me, indeed!"

Captain Gilhooly seemed somewhat impressed by this style of talk, and I therefore continued it.

"I had resolved, sir, never again to fight a duel. The last one in which I took part was that unfortunate affair with General Poppoff, of which you have probably heard. I had already killed his five brothers in as many different duels, and when his young widow became insane through grief, and drowned herself and her two children, I vowed never again to cause the death of a fellow-creature upon the field of honor. Please excuse my emotion, sir," I said, brushing away an imaginary tear. "I have fought many other duels, in all of which I have invariably grassed my man, but not one of them caused me so much regret as the last. However, sir," I resumed, again kindling to wrath, "since this contemptible puppy has had the impertinence to challenge me, and as a duel on shipboard would be somewhat of a novelty, I will meet him whenever and wherever he likes."

"Then, sir," said Captain Gilhooly, "if you will be kind enough to refer me to your friend, we will settle the preliminaries at once."

"I have no friend on board," I replied. "In such a small matter, why not determine the details ourselves?"

"That will be quite satisfactory," replied the captain, graciously. "Suppose, then, we fix the time for to-morrow?"

"I would prefer to-night," I said, with a yawn. "That will give me to-morrow to attend to more important matters."

The captain looked at me in amazement, and said, quite deferentially:

"Very well, sor. Suppose we say midnight. Now, as to the place?"

"That is perfectly indifferent to me," I replied. "I will meet the fellow anywhere he chooses, between the boiler-room and the masthead."

"I would, then, suggest the colonel's own stateroom. It is in a retired part of the ship, and quite large enough for our purpose. The choice of weapons, I believe, sor, rests with you."

"Oh, hang the weapons!" I exclaimed. "Take any weapon you like. I am familiar with all kinds, from bowie-knives to artillery."

"Shall we say pistols, then?" mildly inquired Captain Gilhooly.

"If you like," I replied, "though you could scarcely make a worse choice for your friend. I'm in unusually good practice just now."

"As the space is limited, perhaps, as you are familiar with all weapons, cavalry swords would be better," suggested the captain.

"Say swords, then," I replied. "It is quite immaterial to me."

"Then, as all the preliminaries are now settled," said the captain, moving towards the door, "I will take my leave. We will meet in Colonel Kilgore's stateroom at midnight. I have two very good sabres, with which the colonel and I often practice."

"Very well," said I. "I shall look forward to the pleasure to-morrow of seeing your friend's ugly carcass sewed up in a hammock and shot into the sea. Good-evening, sir."

As Captain Gilhooly closed the door behind him, I threw myself upon my berth and buried my fingers in my hair. A cold perspiration broke out all over me. I had got myself into a fine fix. Here was I, a quiet, inoffensive gentleman, who, prior to commencing this unlucky voyage, had led the most unobtrusive and harmless existence in the world, become, in the brief space of four days, madly in love, the rival of a bloodthirsty British cavalry colonel, and the principal in a duel. What the deuce was I to do? What the deuce should I do? I had never fought a duel in my life. I never had fired off a pistol more than six times, and, if my memory served me, I had not, on either of those occasions, succeeded in hitting anything. As to cavalry sabres, I scarcely knew one when I saw it. We were fifteen hundred miles from the nearest land. I could not run away, that was clear. If I met this ferocious monster, with his horribly suggestive name—Kilgore—and undertook to fight him on his own ground, with his own professional weapon, he would certainly "wing" me, if he did not kill me outright, and I would be laid up for the remainder of the voyage, and thus debarred from all further intercourse with Miss Bertrand, whom the colonel would have all to himself. If I failed to appear at the time and place appointed, I would be published as a coward, and would be lost in Miss Bertrand's estimation for ever. Worst of all was the thought that already I had offended her past all forgiveness.

But—ah! A happy thought! The duel could be stopped by the officers of the ship. I would write an anonymous letter to the captain of the steamer, informing him of the projected meeting. By that means my reputation for courage would be sustained, and no bodily harm would occur to any one. I jumped up with the greatest alacrity and got out my writing materials. There was no time to be lost. In ten minutes I had indited my brief epistle, and was on my way to the main deck.

All was quiet above. The passengers had mostly retired to rest. On the bridge an officer paced silently to and fro, and the ship rolled easily over the long, regular swell. The deck-watch were forward, on the forecastle. From the window of the captain's room a light streamed forth, and, stealing softly aft, I saw him at his table, bending over a chart. I dexterously shied my letter through the window, and hastily retreated to the cabin. On my way down the staircase I met Kilgore coming up. I passed him with a contemptuous stare, and made my way to my own room.

So far all was well. At twelve o'clock I knocked at the door of Colonel Kilgore's room—No. 45—and was admitted by Captain Gilhooly. Kilgore was there, dressed only in his shirt and pantaloons. I nodded to him grimly, and, seating myself, began to whistle while I took off my boots.

"These are the tools," said Gilhooly, producing an enormous pair of cavalry sabres, and laying them on the table. "They've an edge like a razor."

I glanced at them carelessly. "Shall we lock the door?" I asked.

"By no means," exclaimed the colonel, starting forward, hastily. "This must not look like a secret assassination. This is nothing to be ashamed of."

"Quite right," I said, feeling much relieved. "I would prefer the door closed, but not locked."

To tell the truth I began to feel no little anxiety. If the duel was to be interrupted it was high time the interruption took place. If the captain had read my letter, where was he?

"Choose your weapons, gintlemin," said Gilhooly, and I stepped forward and selected one with much apparent care. The colonel having taken the other, the valiant Gilhooly placed us in position and retired to a corner out of harm's way.

"Now, then," said he, "at the word *three* you will begin; one—two——" but he had no opportunity to proceed further, for the door was thrown suddenly open, and a quartermaster appeared, followed by two of the cabin stewards. In an instant we were disarmed and the sabres were confiscated.

"Gentlemen," said the quartermaster, "this cannot be permitted."

Kilgore was perfectly frantic with rage and disappointment, struggling and fighting with the stewards for the possession of his weapon. Not to be behindhand in that sort of thing, I stamped and raved like a maniac. In fact, I created such a disturbance, that the officer and Gilhooly finally forcibly ejected me from the room, which was precisely what I chiefly desired, and then I made my way to my own quarters, filling the air with threats of vengeance on our arrival in Liverpool.

I was not long in discovering, next morning, that the news of our bloodless encounter had spread all over the ship. The ladies smiled approvingly when I made my appearance, and several of the gentlemen came forward and shook hands with me. Colonel Kilgore was no less a hero, and held for half an hour a separate *levée* of his own. I looked anxiously around for Miss Bertrand, but she did not appear at breakfast. At luncheon-time, however, she entered the dining saloon, looking, if possible, more ravishingly and bewitchingly beautiful than ever.

"Can you forgive me?" I whispered, when she had taken her usual seat beside me.

"A woman can forgive almost anything to a brave man," she replied. "Have you not risked your life for my sake?"

"A mere trifle," I said. "To have died for you would have been——" but a look in the brown eyes checked me. To make love at a luncheon table, in a room full of people, would have been difficult, if not impossible. The passengers were nearly all in their places, the stewards were behind our chairs, and Colonel Kilgore was savagely eying us opposite. At that moment a diversion was caused by the unexpected entrance of Mr. Bertrand, who had hitherto been invisible since the commencement of the voyage. He was very red in the face, and was holding his sides as though in exquisite pain. He staggered towards the table, and holding to the back of his chair, cried out, between explosions of laughter:

"It's the biggest—ha, ha, ha—thing I ever heard of in my life. Ho, ho—such a jo-boke! The captain told the first officer, and he—he, he-e-e—told me. Colonel Kilgore, here, challenges a man to fight a duel—ha!—and then—oh, dear me—sends to the captain of the ship and gets him to prevent it!"

"It is false, sir!" roared Kilgore, springing to his feet, in which action he was followed by Captain Gilhooly.

"No, it isn't," returned the old gentleman; "you gave a dollar to Jim, the steward, here, to inform the captain that a duel was going to be fought in your room, and—he!—the captain made him tell who sent him, and he said it was you."

The excitement produced by this announcement was intense. Jim, the steward, disappeared in the direction of the pantry. The gentlemen looked at Kilgore with undisguised contempt, while the ladies smiled upon me more sweetly than ever. In the roar of laughter which followed, the colonel and the valiant Gilhooly rushed from the cabin and were seen no more. For the moment I scarcely knew whether most to pity the unfortunate Kilgore or to despise his dastardly cowardice. Mr. Bertrand went into fresh convulsions, while the look that I received from the brown orbs at my side convinced me that Clara Bertrand was from that hour my own.

"But that isn't all," continued the old gentleman, when quiet was somewhat restored. "I have here a document—he, he!—a most remarkable document, that was received by the captain last evening. It was tossed in at his stateroom window. I borrowed it to read to you—he, he-e-e! Here it is:

"SIR: You will doubtless be much surprised at the substance of, and the manner of receiving, this letter; but as a passenger on this vessel I deem it my duty to acquaint you with the fact that to-night, at midnight, two of your passengers propose to meet in mortal combat in Stateroom 45. I call upon you, sir, as commander of this ship, to take such measures as, in your judgment, are necessary to prevent the shedding of blood. Any attempt to ascertain the name of the writer of this communication will be useless. Yours truly,

"—— ——."

"Now, here," continued the old gentleman, "is where the—the—oh, dear!—the joke comes in. It purports to be anonymous, but the writer forgot himself, and signed his name at the bottom—'B. Bangs!'"

"It is a lie!" I exclaimed, jumping up. "that is not my handwriting!"—but Miss Bertrand had taken the letter from her father's

Digitized by Google

hand, and drawing my written card from her pocket, calmly compared the two. I saw instantly that all was over, and in the storm of hisses which ensued I sneaked out of the cabin, looking back, as I reached the door, at the beautiful Miss Bertrand, who sat stonily regarding me with a most contemptuous curl to her red lip.

Yes, it was all over. I kept my room during the remainder of the voyage, solaced only by the reflection that Kilgore was in the same predicament as myself. I resolved to leave the ship at Queenstown, and did so. I was not surprised, when I came on deck in that harbor, to find that Kilgore was also going ashore there. Just before going over the side, I found time to say a few words to Miss Bertrand, who stood on the deck, watching the disembarkation of the mails and passengers. She did not turn away from me, and, as she was standing somewhat apart from the others, I ventured to approach her.

"Miss Bertrand," I said, "I know that I have forfeited your esteem for ever, but you will remember that several nights since I told you that I loved you. You said you could forgive me for my imprudence on that occasion, and I have since had an eager hope that—that——"

"You must not say such things to me," she said, piteously. "What have I done to give you cause? Don't, don't!"

"You have done nothing," I said, "except to be what nature made you—the most beautiful woman I ever saw. Clara Bertrand, I will never give you up. I will yet show to you that I am not the coward that circumstances seem to prove me. At least give me leave to see you again, in whatever quarter of the world you may be. Although I have made myself so ridiculous in his eyes, I am sure your father does not dislike me."

The beautiful eyes opened wide, and their owner gazed at me in astonishment.

"I do not understand you," she said. "My father is dead. What do you mean?"

"Can it be that I have been mistaken?" I replied. "I supposed that Mr. Bertrand, the gentleman with whom you are traveling, was your father. Ah, your uncle, perhaps?"

The bewitching face broke into dimples, and from between the pearly teeth came a burst of clear, ringing laughter, as melodious as a silver bell.

"This is too ridiculous," she said. "Poor Colonel Kilgore has been laboring under the same mistake. Mr. Bertrand—the gentleman with whom I am traveling—is my *husband!*"

ATTACHING THE SUSPENDERS TO THE EAST RIVER BRIDGE CABLES.

THE decision of the courts compelling the City of New York to contribute her share of the expenses of the East River Bridge, according to the terms of the charter, has led to a vigorous resumption of work, which will be maintained throughout the Winter. At present the men are engaged in placing in position the suspenders which are to support the roadway. There will be thirteen suspenders on each of the four cables on each side of both towers, making 208, all of which will be put up during the Winter. The longest measure 128 feet. These suspenders are of steel wire rope, made by the John A. Roebling's Sons Co., 1⅝ inches in diameter, with a socket at each end. The upper socket is fastened by means of a bolt 1⅝ inches in diameter to a band of wrought-iron five inches wide and five-eighths of an inch thick, which is bolted to the cable. At the lower end of the suspenders are two bolts 1⅝ inches in diameter, through cast-iron sockets, by which to attach the beams to the suspenders. After the beams are in place, the trusses will be erected. The thirteen suspenders to be placed this Winter will extend nearly 100 feet from the piers. The cables are to be swayed thirteen feet nearer together than they are now, the outer ones being brought six and one-half feet nearer the centre. A strain of twenty-two tons will be required to draw them together. They will then be connected at intervals with wire-rope stays. If all the work that is now laid out is accomplished, about 100 feet of the superstructure on each side of both piers will be completed by Spring, except the flooring plank.

SENATOR BLAINE AT COOPER INSTITUTE.

THE recent political canvass in this State was marked by an energy and vigor which were scarcely anticipated at the time the nominations were made by the respective parties. On the part of the Republicans the campaign was especially earnest, the managers being stimulated by the party successes elsewhere, and by the divisions in the Democratic ranks, to an extraordinary expenditure of effort, in the hope that by securing the control of the State administration the battle of next year would be more easily and certainly won. The Democratic canvass was less ostentatious in the way of large and imposing public meetings, and there were fewer Democrats than Republicans of national reputation on the stump; but the work performed quietly and unobtrusively was, perhaps, quite as effective as that of their antagonists. Among the distinguished gentlemen who participated in the Republican canvass, we may name Senator Blaine, Senator Conkling, Secretaries Evarts and Sherman, Generals J. A. Garfield and Joseph R. Hawley, Governor-elect Charles Foster of Ohio, ex-Secretary Boutwell, United States Senator Allison, Frederick Douglass, ex-Speaker Galusha A. Grow, and others scarcely less prominent; and at the hands of gentlemen so able and so familiar with affairs the discussions of public questions were, of course, exceptionally able, although naturally colored, more or less, by partisan bias.

The final and most impressive demonstration of the Republicans in this city was made at Cooper Institute on the evening of October 30th. The meeting was held in pursuance of a call issued by a large number of prominent merchants, and was composed largely of persons interested in mercantile pursuits and the sub-central business interests of the metropolis. Mr. Elliot C. Cowdin presided, and on the platform, every available inch of which was occupied, were General Chester A. Arthur, Chairman of the Republican State Committee; Edwards Pierrepont, ex-Minister to England; E. W. Stoughton, ex-Minister to Russia; Murat Halstead, editor of the Cincinnati *Commercial*, the Hon. Simon B. Chittenden, John D. Lawson, Thomas C. Acton, William Lambeer, Postmaster James and L. Bradford Prince, Chief Justice of New Mexico. The event of the evening was a speech by Senator Blaine, who was indeed the hero and the attraction of the occasion. When he came forward, upon the announcement of the chairman, the audience rose in a body and saluted him with cheers and the most enthusiastic demonstrations of welcome, which only subsided when the Senator, with a wave of his hand, appealed for a hearing. His speech, which occupied nearly two hours in its delivery, was a brilliant exposition of the record of the Republican Party as he understood it, and afforded the keenest enjoyment to the vast audience to which it was addressed. Mr. Blaine is in some respects a speaker of unusual power. He has a voice of rare quality—clear, ringing and magnetic. His manner is easy, natural, and always evenly poised. He never strains after effect, but goes to the marrow of his subject in close, incisive sentences which sometimes compress a whole history into a single phrase. He has a happy faculty of dropping, occasionally, into colloquialisms, which add very much to the interest and charm of his speeches. Few men have greater breadth and versatility than he; and this was well illustrated in his Cooper Institute speech, in which he discussed the gravest questions in such a way that any youth of ordinary intelligence could understand him, any banker or financier could be interested and edified, and any one, man or woman, educated or uneducated, could be instructed as well as entertained.

The meeting was subsequently addressed by Hon. S. B. Chittenden, Murat Halstead and Hon. L. Bradford Prince. After the adjournment, Senator Blaine found himself the centre of a levée on the platform, hundreds of gentlemen coming forward to shake hands with him.

AN ANCIENT TOMB AT YORKTOWN, VIRGINIA.

IN a recent description in our columns of the old town of Yorktown, Va., reference was made to the ruins of the church, or temple, from which Temple Farm, the scene of important historical incidents, derives its name. Of this little church nothing now remains but the outlines of the foundation-walls and a solitary tomb, the slab of which is imbedded in the roots and trunk of a catalpa-tree. This tomb conceals the ashes of one whose family name has been familiar in Virginia annals. The inscription is partly defaced, but sufficient of it remains to indicate its spirit and significance, as follows:

"Major William Gooch, of His ——
—— Dyed October 29th, 1650,
Within this tomb there doth remain
No shape but substance true
Itself though young in years but ——
Yet grac'd with virtuous morall and ——
The church from him did good pa
In counsel rare fit to adorn a ——"

We give an illustration of this ancient tomb on page 177.

THE DENTAPHONE

HEARING THROUGH THE TEETH.

THE dentaphone is a new invention whereby the deaf and the partially deaf are enabled to hear through the medium of the teeth. In the ordinary process of hearing, the sound-vibrations in the atmosphere impinge on the drum of the ear and set it in vibration. This vibration is then conveyed along a chain of bones in the middle ear, and finally communicated to a thin membrane which divides the middle from the internal chambers of the ear. Behind this membrane is the liquid contained in the internal ear, and floating in this liquid are the fine filaments of the auditory nerve. Of course the vibrations communicated to the membrane from the chain of bones in the middle ear are from the membrane imparted to the liquid, and by it to the auditory nerve, thus constituting the sensation of hearing.

The dentaphone is a chambered box, in size and shape much like an old-fashioned silver watch, and weighs about an ounce and a half. In the box is secured a delicate vibrating diaphragm, and the material and mode of securing this diaphragm, together with the size and shape of the chambers, constitute the effectiveness of the instrument, and have been determined by experiment. On the surface of the diaphragm strike the sound-vibrations of the atmosphere and set it in motion, just as they would set in motion the drum of the healthy ear. These vibrations are imparted to the mouthpiece in contact with the teeth of the upper jaw; from the teeth they travel through the bones of the face and head (not through the nerves of the teeth, as some physicians and pseudo-scientists have supposed—for the nerves of the teeth can no more conduct sound-vibrations than the nerves of the hands and arms can conduct light vibrations), and finally are communicated to the liquid in the internal ear. From this liquid, of course, they are imparted to the filaments of the auditory nerve. In short, then, the success of the dentaphone depends on the fact that by it the sound-vibrations reaches the auditory nerve, not through the diseased outer and middle ear, but by another channel through the solid bony framework of the face and skull. It has long been known that certain sounds, such as the ticking of a watch held between the teeth, the beating of a pump-piston in an engine, when a rod of wood extended from the outside of the engine to the teeth of the listener, etc., etc., could be readily heard through the bones of the face and head, but it was not until the invention of the dentaphone that the fact was demonstrated that the delicate modulations of the human voice could be so conveyed. However, the phonograph and the telephone have made it clear to the unscientific that the finest tones and modulations of the voice, and all the varying notes of the opera, are no more nor less than mechanical effects produced in the atmosphere, and capable of being recorded, or transmitted and reproduced.

In experiments with the deaf and dumb it was found that many could hear sounds through the dentaphone and repeated them with fair success. Many are of opinion, from the experiments made in Cincinnati and elsewhere, that the dentaphone will be used to educate the deaf and dumb to hear and repeat spoken words. *A priori*, we would be inclined to say that on congenital mutes, where there is no paralysis of the auditory nerve, the dentaphone will be successfully used in educating the deaf and dumb. In the case of the deaf its efficiency is beyond all question, and it has the unqualified indorsement of leading journals in whose offices experiments and tests were conducted. The mode of action of the dentaphone illustrates the evolution of the special senses from an original simple sense of touch, and the instrument is also considered by physicians as likely to be of service in diagnosis of diseases of the ear. The American Dentaphone Company of Cincinnati publish a free pamphlet containing a full description of the dentaphone. The invention is the work of a well-known scientific gentleman of that city.

THE LATE UTE OUTBREAK AND MASSACRE.

THE publication of the personal narratives of Mrs. N. C. Meeker and her daughter Josephine during their captivity, after the assault by the Ute Indians upon the White River Agency, forms a most thrilling sequel to the story of this remarkable outbreak. The end is not yet. General Adams succeeded in obtaining the release of the captive women and children as a preliminary to peace, but the Government sturdily insists that the Utes must deliver the murderers of Agent Meeker to the troops before any propositions will be considered. In the meantime it will be interesting to our readers to study portraits of the leaders of the tribe and the instigators of the massacre.

Ouray, the chief of all the branches of the Ute tribe, is one of the most intelligent of red men. He is a firm friend of the whites, and it was solely through his interference that the revolting Indians halted in their march of murder and refrained from further violence. He has visited Washington three times, and, having learned to read and write, was in the habit of communicating his wants and grievances direct to General Grant when President. Douglass is the chief of the White River branch of the tribe, and had frequently professed peace. Immediately after the outbreak at this agency last Summer, Lieutenant C. A. H. McCauley, of the Third Cavalry, proceeded thither and made a treaty with these Indians, at which time Douglass presented him the photograph from which our engraving is made, with the request that it be sent to the "Great Father" with the message that Douglass would always be a good friend of the white man. The last letter written by Mr. Meeker before his death was to Major Thornburgh, dated one o'clock, September 29th, three hours after the attack had commenced and Thornburgh's death, stating that "all was quiet at the agency and that Douglass had the United States flag flying above his house." The last authentic accounts state that Douglass took no part in the fight, and that he was guarding Mrs. Meeker and the other women from injury. It will surprise many who have had faith in the fidelity of Douglass to read Miss Meeker's assertions of his treachery and brutality as detailed in her narrative. Jack, to whose camp Mrs. Price and her children were conveyed, after the captives were separated, is one of the war chiefs of the White River band, and is supposed to have been one of the leaders in the attack at the agency. He is next in rank to Douglass, and is noted for his shrewdness and cunning.

Another ringleader, doubtless, was Colorow, notorious in Colorado and the upper Ute country as a bad Indian, whose conduct was so cowardly that his own branch had deposed and superseded him as chief. Both Mrs. and Miss Meeker speak in the highest praise of Chief Ouray, his wife, and Johnson, and his wife Susan, who is Ouray's sister. During one of the councils of war, while the captives were on the march, Susan burst suddenly into the centre of the circle of Indians who were about deciding to hold the prisoners as hostages for the murderers of the agent, and demanded that the captives be set free, war or no war. Her brother, Ouray, she said, had ordered it and they must obey. This is supposed to be the first instance where a squaw has taken any part in an Indian war council.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

A Novel Engineering Feat.

A peculiarity of the bridge recently completed over the Rance River near Dinan, France, to accommodate the Cherbourg and Brest Railroad, is that the great span, 314 feet long and weighing over 200 tons, was constructed on the land and projected to its place on the abutments by means of twelve monster windlasses.

The Destruction of Ircousk.

The town of Ircousk, or Irkutsk, as some geographers spell it, which, so far back as the 25th of June, was destroyed by fire, is situated on the banks of the river Angara, close to the lake Baikal, from whence the Angara flows in a northwesterly direction to join the waters of the Yenisei, which afterwards find their way into the Arctic Ocean. Fresh fires quickly broke out in various parts of the town as one was extinguished, and several explosions of mineral oil occurred, adding fresh vigor to the flames, and it seemed at one time as if nothing would be left but a smoldering heap of ruins. But, after burning for more than twenty-four hours, the flames were eventually got under, but more than a third of the town was thus in ashes. The fire is supposed to have been of Nihilist origin.

The Arago Statue.

A statue of François Arago was inaugurated at Perpignan, on September 21st, the same day that one was uncovered at Montbéliard to the memory of Colonel Denfert-Rochereau, the defender of Belfort in the Franco-Prussian War. The discourses over the Arago Statue were pronounced by M. Jansen, in behalf of the Academy of Sciences, M. Bréguet for the Bureau of Longitude, and MM. Paul Bert and Jules Ferry for France and Public Instruction. In the evening the town was brightly illumined, artificial fires were exhibited, and military concerts given.

Launching of the French Ironclad "Admiral Duperré."

The *Admiral Duperré*, an ironclad of the first class in the French navy, was launched at Toulon on the 11th of September last. She is the largest vessel in the French fleet—her dimensions, the thickness of her armor, the power of her guns, are equal in every respect to the English *Inflexible*, and the Italian *Duilio* and *Dandolo*. But whilst these latter vessels are only protected by a shot shield, midships, the *Admiral Duperré* is encamped in mail from her cutwater to her stern post. The bridge is protected in such a manner as to be impervious to the heaviest projectile that can be launched against it, and is placed at an elevation above the thickest armor-plating in the ship. Her extremities are divided into a number of bombproof compartments and protected by iron-padding," which has been tested to resist the impact of the heaviest artillery afloat. Her construction is analogous to that of the most recently launched English ironclad, but is of a more solid and shot-resisting nature. She is completely built of steel, with the exception of the keel, the stem-post and the plating of the carène which are of iron. She is registered at 10,457 tons.

Autumn Review of the Danish Army.

The visit to her home of the Princess of Wales was happily timed so as to enable her to witness the Autumn manœuvres of the Danish Army which were held on a plain near Copenhagen. The Princess and her suite, with members of the Royal family, were driven to the spot in a court-carriage, while the King with a brilliant staff of native and foreign officers, all handsomely mounted, nearly surrounded her carriage.

The Surrender of Cetewayo.

Great excitement prevailed in the British camp at Utindi on the arrival of the captive King, who came in in the manner depicted in the sketch about 10 A. M., on the 31st of August. He went into a tent placed for him by Sir Garnet's staff camp, but Sir Garnet did not interview the King himself. Cetewayo, after having rested and eaten food, left in an ambulance at 2 P. M. for Pietermaritzburg, the party in charge of Captain Poole, R.A. An escort of Lonsdale's Horse accompanied, under Captain Ulick de Berg. Cetewayo had a long private interview with John Dunn, in whom he appeared to have full confidence.

AT HOME AND ABROAD.

—THE Japanese are about to take measures to stop the exportation of silkworm eggs.

—THE official statistics of the recent inundations in Murcia, Spain, show that four-fifths of the arable land is ruined and 3,000 persons are missing.

—A LIVELY immigration to this country from the vicinity of Genoa is said to be going on. On one day recently 1,000 persons left, and on the next day 1,200.

—THE annual congress of German authors in session at Dresden has instituted a tribunal of arbitration for the purpose of settling all difficulties relating to literary property.

—EGYPTIAN sculptors have responded to the invitation of the Municipal Council of Paris to compete, with designs, for a statue of the Republic to adorn one of the squares of the city.

—RUSSIA has more sheep than any other country in Europe, but of late the number has declined, as more land is being put under grain crops, and hence a decline in wool export.

—OF 2,504,067 shares of stocks of all kind on the New York Stock Exchange only 550,582 shares pay dividends—the remainder representing property whose value lies in the future.

—TEAMSTERS along the Gila River, Arizona, complain of the large herds of wild camels that have of late taken possession of the main roads, to the consternation of horses and mules.

—WINE-MAKING in Australia is becoming an important industry, and some think will, in the course of time, rival the trade of some European countries. The total yield this season is estimated at 300,000 gallons.

—THE Government of Peru is reported as likely to accept a proposition from Mr. John D. Meiggs for the completion of the famous Oroya Railroad to the Cerro de Pasco, and the drainage of the great silver mines at that place.

—THERE was a slight increase in the registered tonnage of American vessels during the last fiscal year. The estimated increase in the tonnage of steam vessels was 8½ per cent., and in that of sailing vessels a less proportion.

—IT is becoming a fashion in Europe to travel in private railroad cars. The Baroness N. de Rothschild owns one that cost $20,000, and the Countess Potocka has ordered one at $25,000. These vehicles are smaller than American cars, but are very elegant.

—ST. LOUIS is now shipping bottled beer in bond to various foreign ports. The tax paid by the brewers of that city has increased $62,992.38, representing at 92½ cents per barrel over 68,000 barrels increase in the nine months ending September 30th.

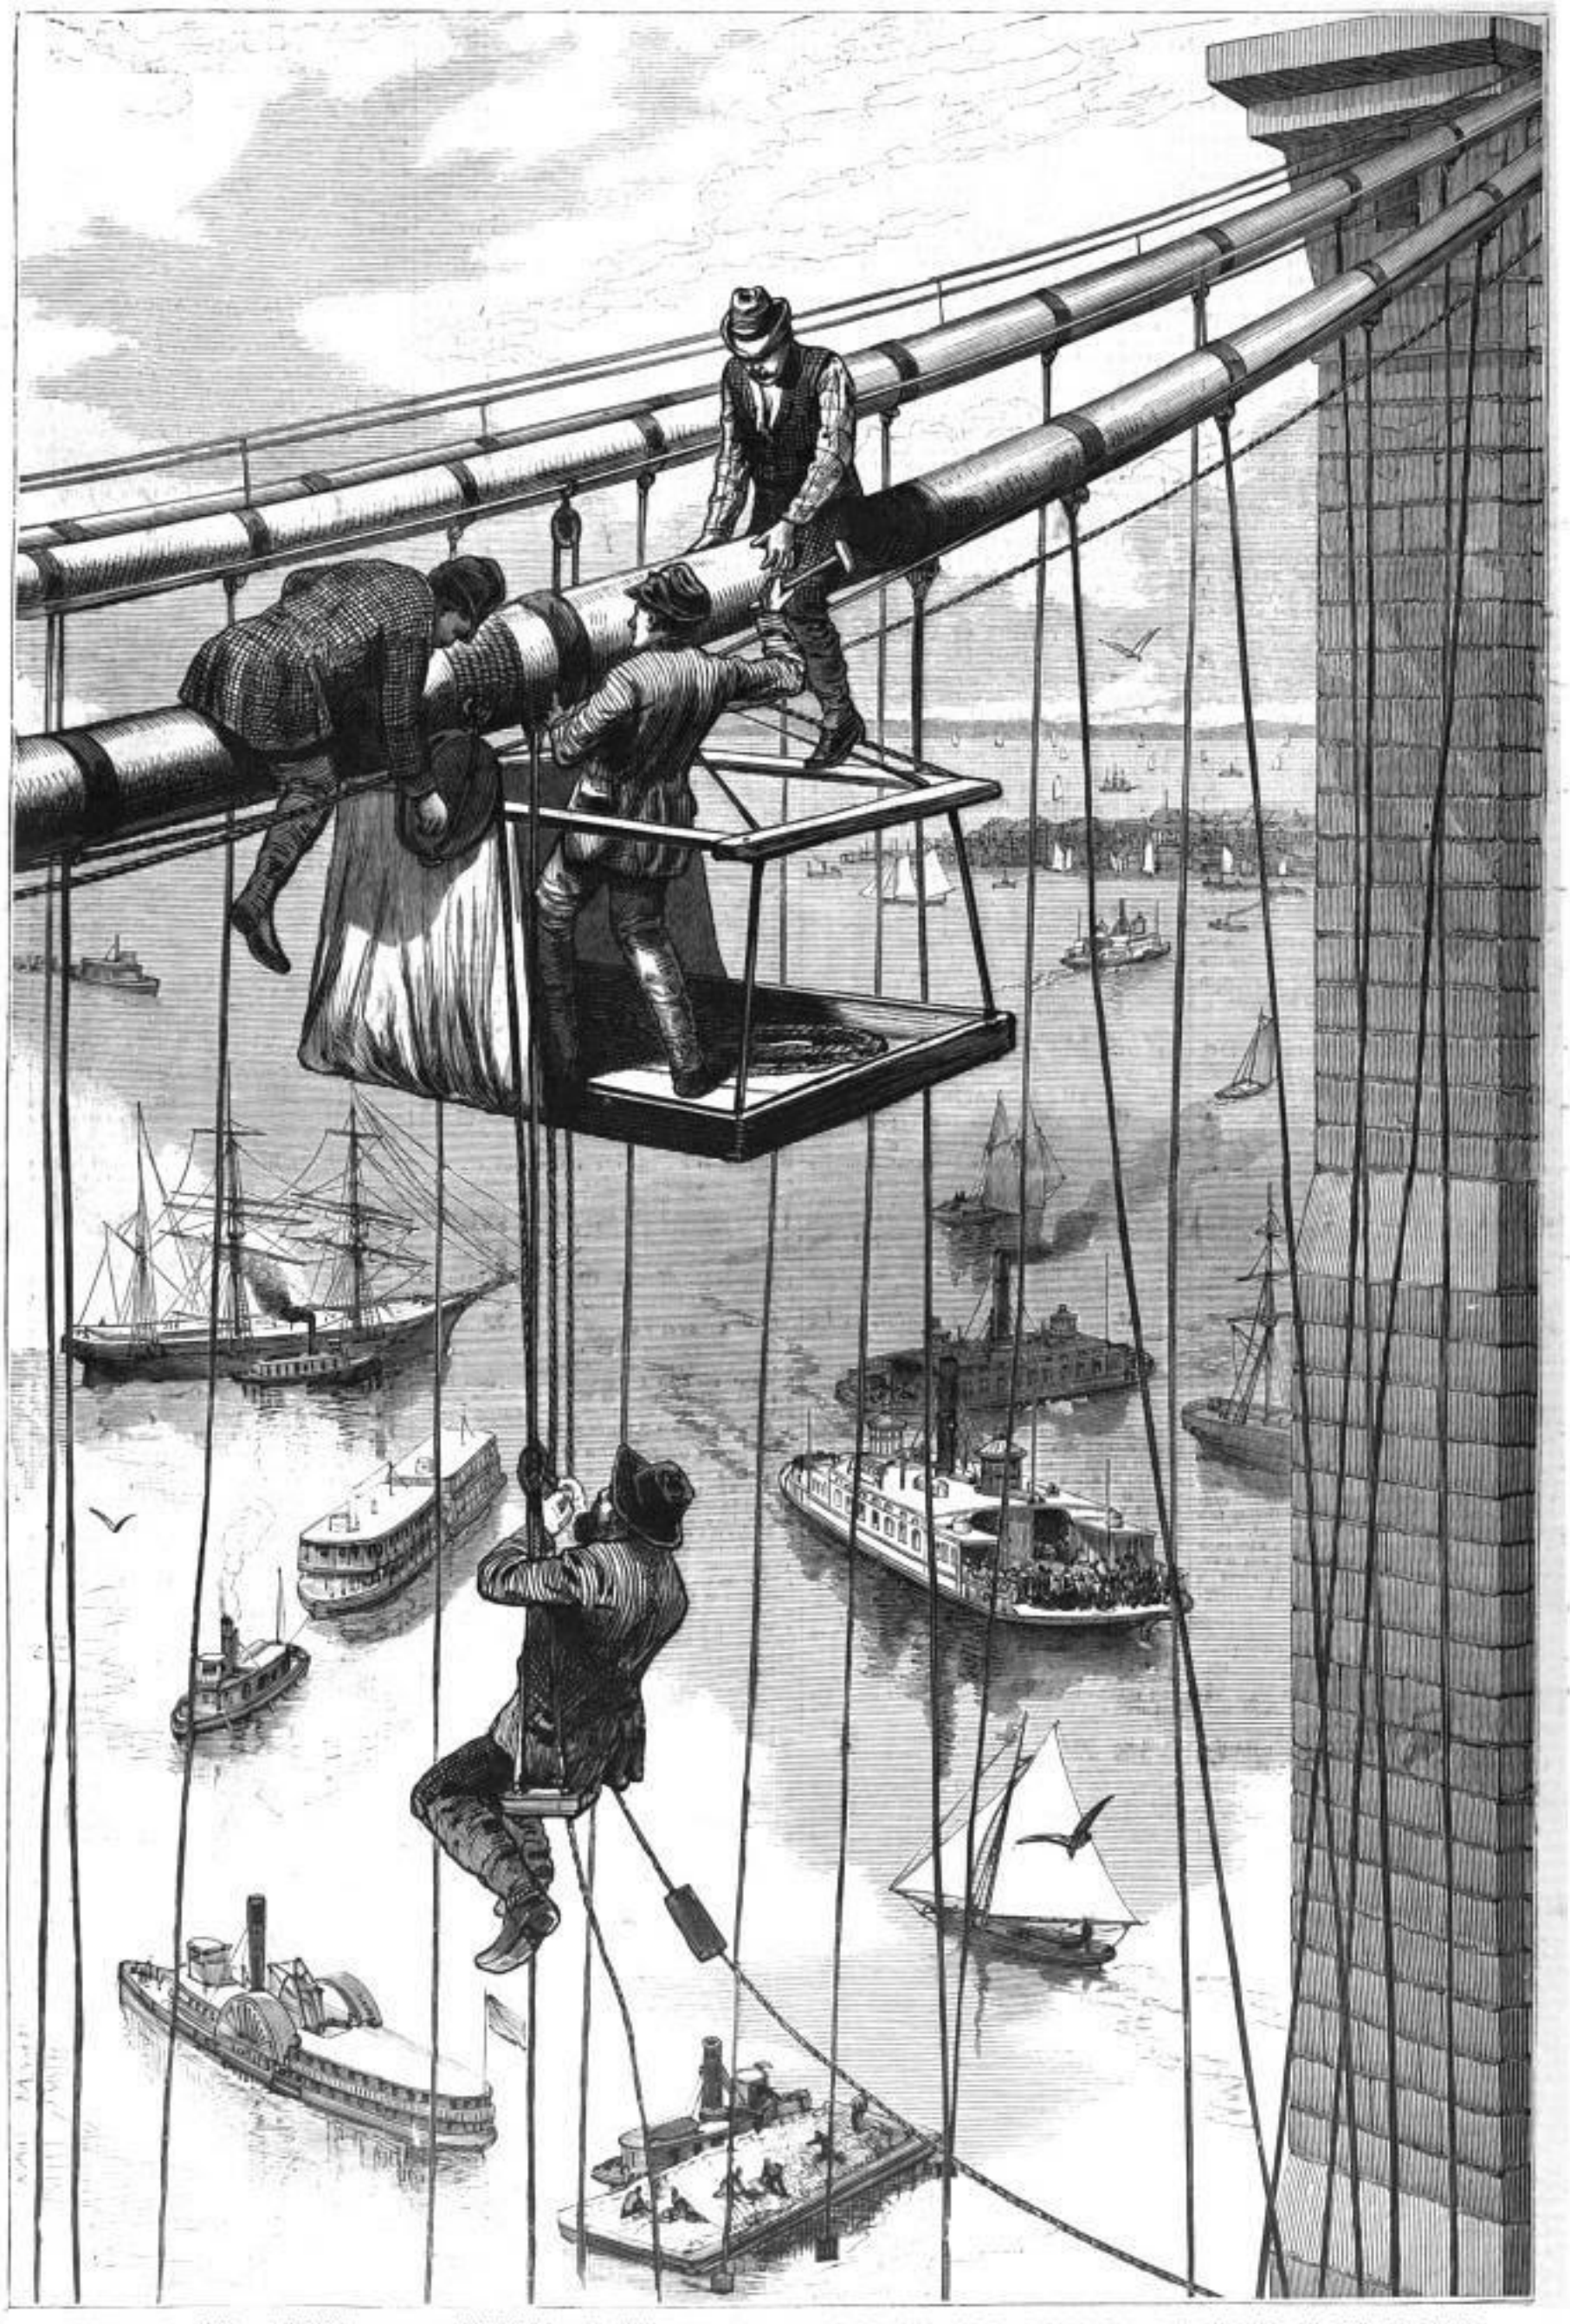
—IT is estimated that the production of silk manufactures in Paterson this year will reach fully $10,000,000. The weekly consumption of raw silk is estimated at 10,000 to 15,000 pounds, and between 9,000 and 10,000 persons are engaged in the industry.

—A VELOCIPEDE race was run recently round the Lake of Geneva. The distance, 106 miles, was done by the winner in 10:41, which, considering the hilly character of a great part of the road, and that a strong north wind was blowing at the time, is regarded as a very creditable achievement.

—NEW COLLEGE, Oxford, celebrated on October 14th its five hundredth anniversary by displaying its noble chapel, restored as nearly as possible to the form its founder intended it to bear. A high-pitched oak roof replaces the plaster ceiling which has offended so many generations of æsthetic visitors.

—MONTENEGRO is a unique country in regard to its postal business. Until lately the mails were not sent to any of the cities or villages, but every citizen had to go for his letters to the capital, Cettinje. There has now been established a postal department, and the mail is sent from Cettinje to four other cities. The mail carriers travel to these four cities on foot three times weekly.

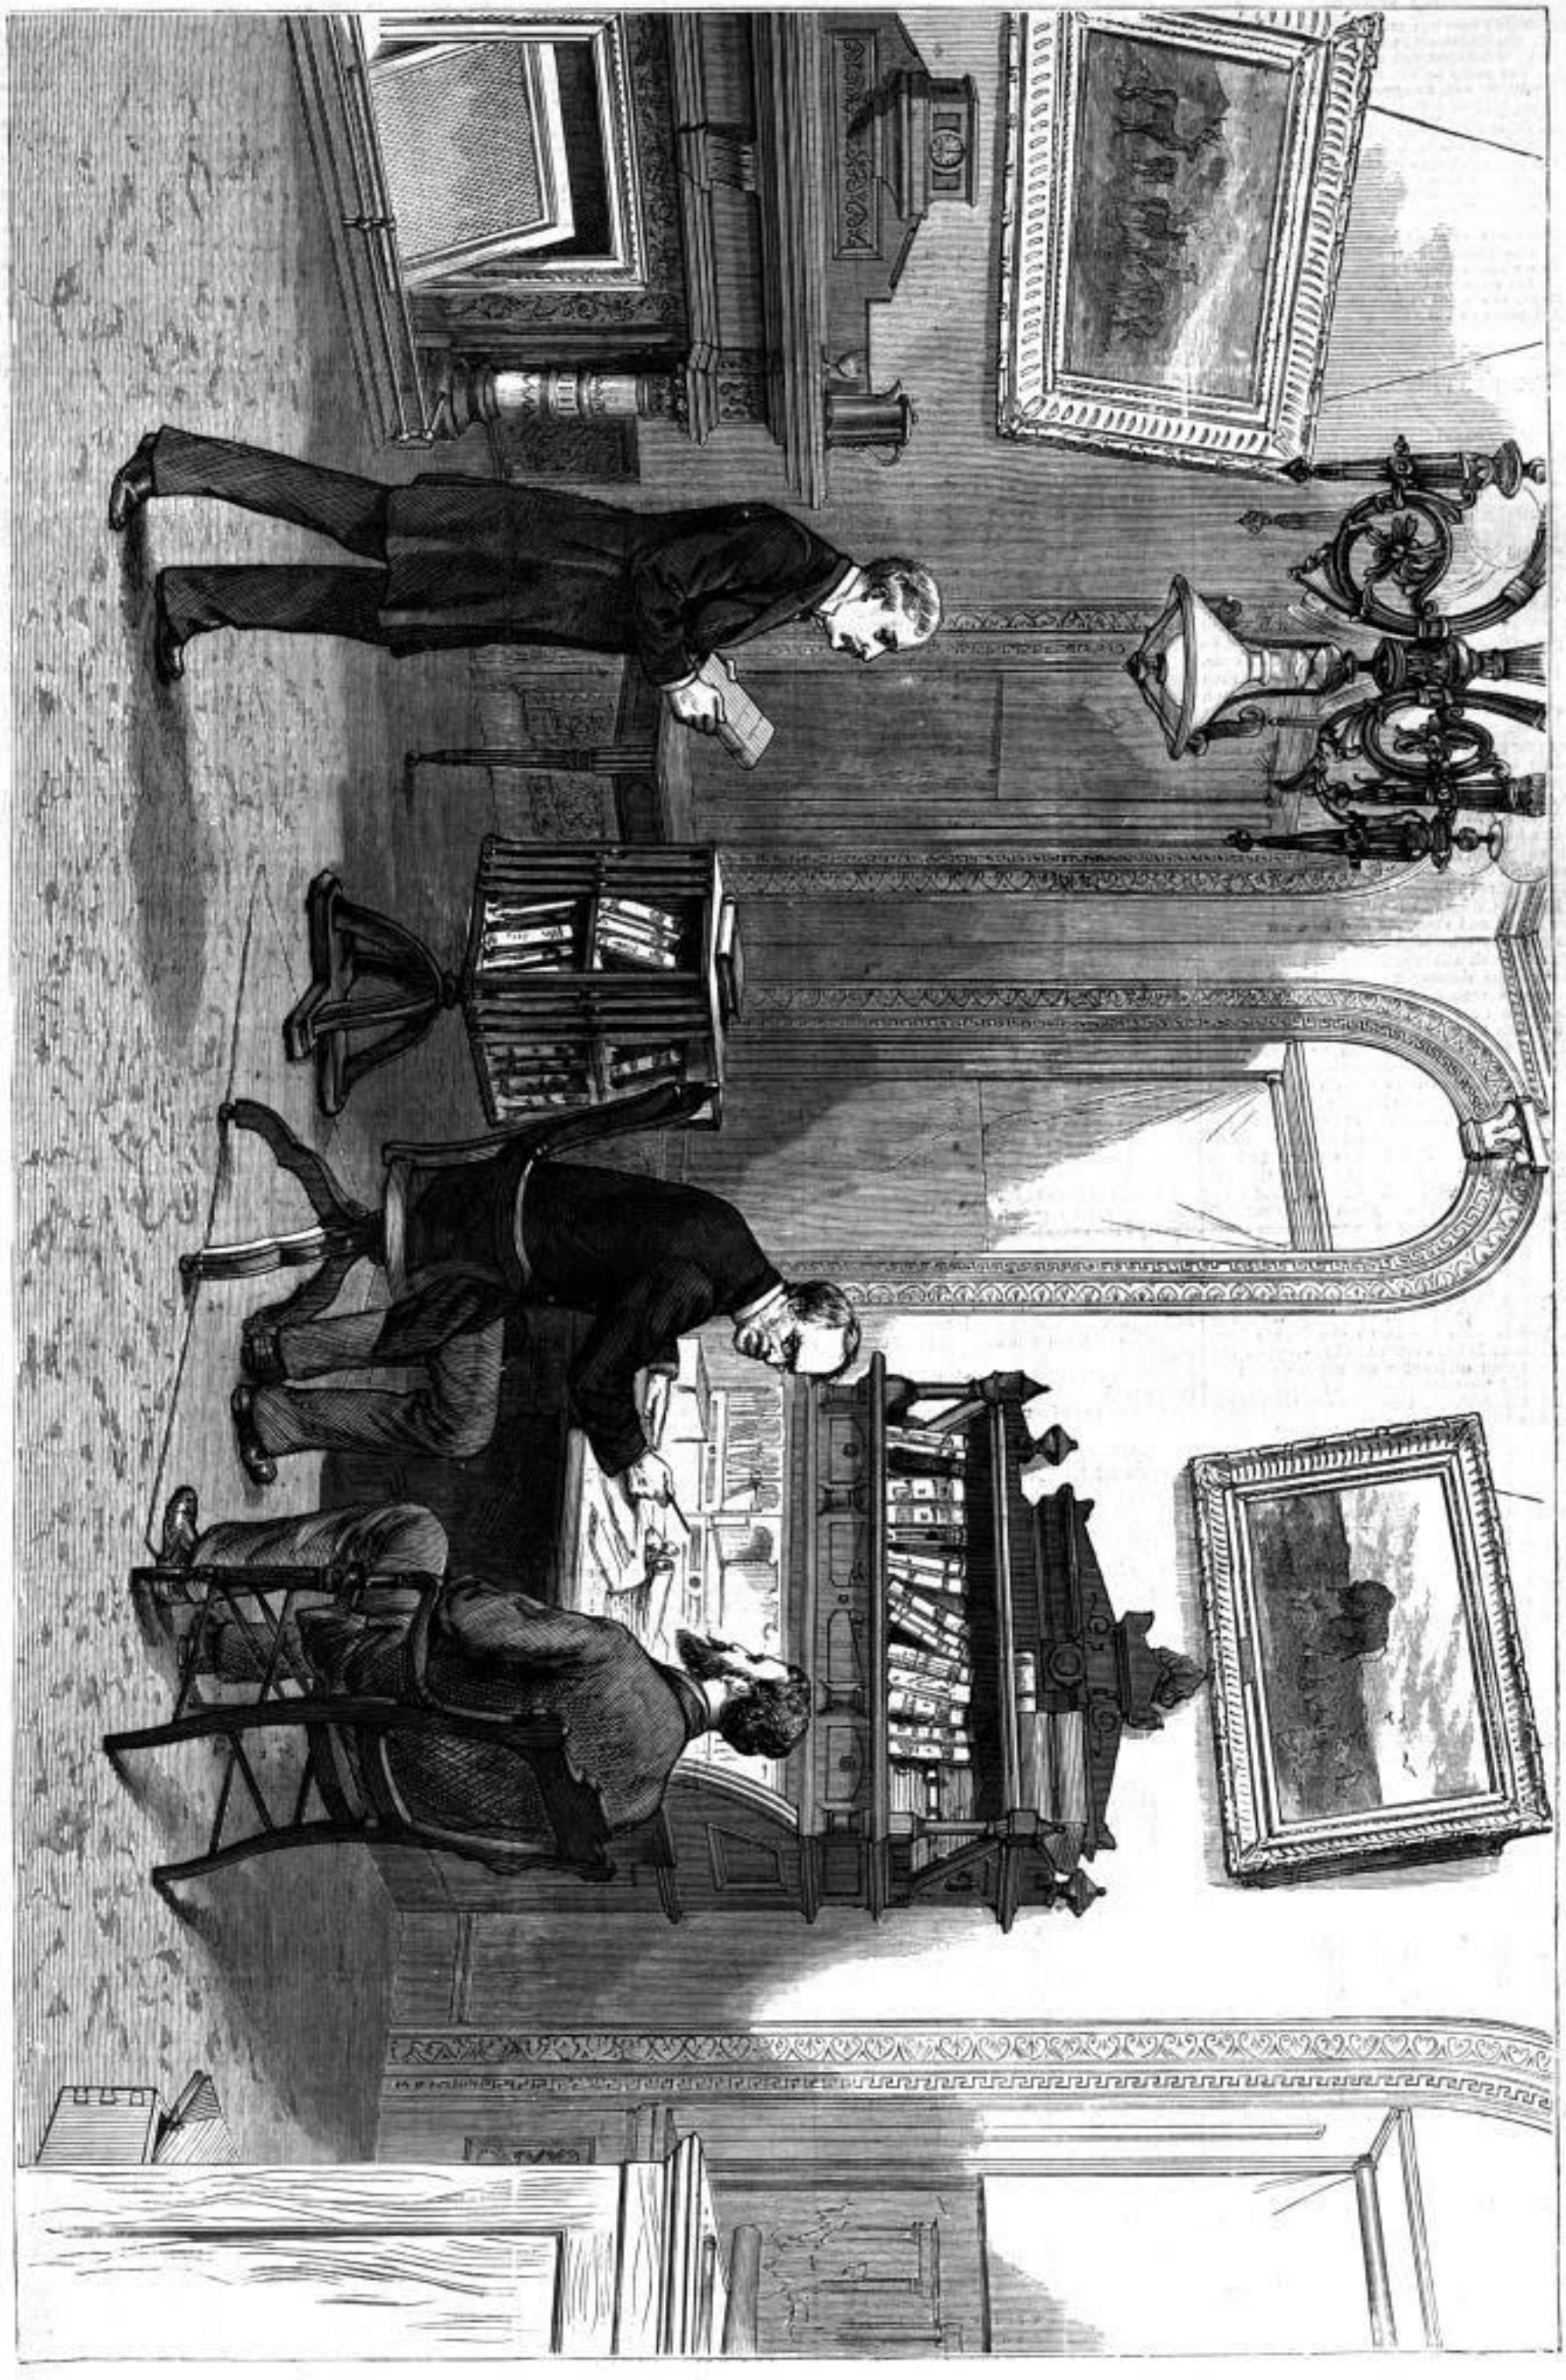
—THE Gothard Tunnel is now within 850 metres of completion, though some considerable time must necessarily elapse thereafter before it can be opened for traffic. One of the first uses to which the passage will be put will be to unite Geneschenen and Airolo by an underground wire, obviating the frequent interruption of telegraphic communication by storms and avalanches.



—THE American Isabella grape planted in Würtemberg, Germany, grows with extraordinary luxuriance, and, during the present season, in which the German vineyards are generally in rather a poor condition, this is about the only vine that bears abundant fruit. The United States sends cheese and beef to England, and grapes and lager beer to Germany. It remains now that they should furnish wines to France.

—A REVELATION has been made in Hong Kong of a system of human slavery. Raids have been made by desperadoes among the villages of the mainland, and young girls have been captured and brought to Kong Kong and sold. The discovery was made through a proclamation offering a reward for a runaway slave girl fourteen years of age. The operations of slave-traders are very extensive, reaching even to Japan.

—A LARGE pottery firm in Staffordshire, England, which does a large trade with this country, has decided to remove its seat of manufacture across the water with a view of locating in Philadelphia. Arrangements are now being made to close up the home works, and the workmen are preparing to settle in a new land. The party will, in all probability, arrive here before Christmas. Several other owners of potteries are considering the desirability of permanently settling in the United States.



—THE cholera is rapidly subsiding in Japan. Official returns show upwards of 150,000 cases since the outbreak in April, and 85,000 deaths. The suppression is now attributed to the energetic efforts of the Government and the unprecedented expenditures for sanitary purposes. The authorities claim that if their endeavors had been seconded, instead of openly opposed, by the European representatives, the epidemic would have been under control two months ago, and probably thousands of lives saved.

A CAPRICE.

I MIGHT have won that love as sweetest prize,
You offered me in passion uncontrolled;
But, like a beggar with averted eyes,
Who passes heeding not the scattered gold,
I went my way, unconscious of your pain,
Lured by illusive dreams and fancies vain.

You held unto my parched and trembling lips,
A chalice burning with a hope divine;
But no love's light shone through my soul's eclipse,
I did not taste the rare, consuming wine,
While, thirst consumed, to arid goals I went,
Filled with the poisons of my discontent.

This was your thought, oh, woman! you did not know
How it delighted my imperious pride,
To see your maddening loveliness bend low
And crave my love; ever ungratified—
Merely to rob you of your life-long peace,
And please an idle whim, an hours' caprice!

F. S. SALSER.

"WE PARTED BY THE RIVER-SIDE."

CHAPTER II.—ANNAH'S STORY—A MAD MARRIAGE—THE AUTHOR SPEAKS.

THEY are driving back to the city again, Doctor Dean and Mr. Chesterleigh, through the golden Summer sunlight, and as they go dashing along swiftly as the thorough-bred bays can carry them, the doctor's mind is troubled by some disagreeable thoughts.

"I have known Earl Chesterleigh ever since he was a toddling boy in short frocks, and never before in all my life have I seen him so painfully embarrassed, so utterly ill at ease, and so relieved to go, and yet so more than eager to remain in ladies' society as he was a few moments ago," he muses, feeling strangely annoyed. "He himself was the one to propose our going; but it was idle talk, for I saw, plainly enough, the look of keen disappointment in his eyes when I showed my willingness to depart, and no one opposed our going. Why this was so I cannot think, unless—— Well, a handsome young man like himself, who has laughed in the sunlight all his life, and has roamed in every land and soil, a bidden guest at table of royalty, and has lived like a prince all his days, does not blush up to his ears and over them, and stammer and look away, and fuss uneasily with his hat, and, worse than all the rest, thank a lady with his soul in his eyes, because she decides to nurse his child and accept his money—he does not, I think, do these things for *nothing*. Nobody knows that better than I do. I am an old man, and have had millions of opportunities for studying that greatest of all mysteries—human nature; and so, I think, a man does not do these stupid things unless—unless he is going to make a consummate ass of himself. In the depths of my prophetic soul, I believe he has done that already. I believe that he has fallen in love at first sight with Annah, and the thought troubles me excessively. I regret that I introduced them, and I am filled with dreadful forebodings. How will it end, I wonder——"

"By Jove, doctor, what a beautiful woman she is!" exclaimed the young man, suddenly, breaking in on that person's unpleasant reverie, like a thunder-clap.

"Which? Who? Oh, the lady we have just passed! So she is, so she is, my boy. Handsomest lady in town to-day," replies the doctor, in an off-hand way, affecting not to understand.

Earl Chesterleigh throws back his bonny, dark head and laughs a merry, boyish sort of a laugh.

"What a stupid old party it is, to be sure! I was not referring to the lady we just passed. I—I was speaking of Mrs. Waters," he says, with considerable hesitation, pulling his silky brown mustache in rather an uneasy, embarrassed way.

"Mrs. Waters, eh? Oh, well, yes, Mrs. Waters is a pretty woman, too, I must admit," replies Doctor Dean, indifferently, making a mental resolve that this foolish young man shall have no encouragement from him.

"*Pretty*, doctor. Pardon me, *pretty* is not the word. She is simply *beautiful!* I never saw such superb eyes before—never! They are like some rare, blue jewels, and her mouth—ah, her mouth is sweeter than a flower, and her voice is like soft music heard at night——"

"Look here, Earl, do you think it is becoming of you to sit here and rave over another woman's charms like that—you, a married man and the father of a handsome son? By the Lord Harry, no, it isn't. And just have the goodness to quit it, will you? I've heard enough!" exclaimed the doctor, sharply, losing patience.

Over the young man's handsome face a swift dark red runs, up to the very roots of his leaf-brown hair even. He flashes a furious look at the speaker, gnaws his under lip for a moment, then laughs again. But this time it is forced and harsh, and the merriment is gone out of it.

"What do you mean by speaking to me like that, doctor?" he bursts forth, in rather an aggressive voice. "I'm no boy, and am I never to see anything beautiful in the world again—am I to become deaf and dumb and blind, simply because I am unfortunately a married man, and the father of a handsome boy'? Hang it, man, I haven't lost my senses if I am married, thank the gods! And what's more I don't intend to either, if I can help it. What a knight of the woeful countenance you are! In heaven's name, what are you so solemn about?" and he ceases speaking, and regards his old friend with wide, surprised eyes.

His anger has suddenly vanished. He is his own gracious, smiling, courteous self again; so the doctor resolves to say what is in his mind at once, without more ado.

"Earl, I have always shown myself to be a friend of yours, have I not? Indeed, since the death of your father, I've been something more to you, I believe."

"You have! you have!" the young man exclaims, laying a shapely, brown hand upon the other's knee. "You have indeed, doctor. Sometimes I do not know what I should have done without you. Forgive me for getting into a temper. I did not mean it. I never do mean it with you, dear old man. Now, then, go on. Say your say."

"Earl, will you do me a favor?"

"*Will I do you a favor?* What a question! With all my heart! How much do you want?" demands the impulsive, generous, big-hearted boy, putting his hand into his pocket and smiling all over his dark face.

"It is not money I want, Earl."

"Not money? By Jove! not money? What the—mischief is it, then?" he asks, taking his hand from his pocket and regarding his friend in a puzzled way. "Don't be afraid. Anything I've got you can have—that is, anything except my 'handsome son,'" and he laughs again his boyish laugh.

"I want you to let me get some other person to nurse your handsome son, and not engage Mrs. Waters;" and as the doctor speaks, he looks keenly at him—at his smiling eyes and mouth.

In an instant the smile is gone, and his young face is as grave as some saint's.

"That one look is enough," the old man thinks bitterly, with a sigh. "I am undone. The truth is known to me at last. Fate has stepped in my way. She stands in my path and gathers the threads of the glittering mesh into her own busy fingers."

For a moment Earl Chesterleigh regards him in breathless, dumb wonder; then:

"Did I understand you rightly? Did you say that you wanted me to let you find some one *else* to nurse my baby, and not engage Mrs. Waters?" he gasps, putting his hand over his mouth for an instant, and still regarding him.

"Yes; you understood me, rightly. That is what I said."

"May I ask what reason you have for this sudden change—you, who first begged of me to take the lady? Will you kindly explain?" he asks, with some restraint.

"I have a reason and a good one," the doctor replies, quickly, "but I prefer not to give it, for if I do, you're sure to get into another rage."

"But I promise you I will not," he says, hastily.

"Very well; do not forget what you have promised. My reason is simply this. If that lady comes to your house, she—she will be the cause of trouble to you, to your wife, and to herself. There will be no end of misery for all of you. Believe me, and grant the favor I asked of you but a moment since," the old man urges, anxiously.

"I do not know what you mean. How will she be the cause of trouble and misery? Explain, please," he demands, impatiently, frowning a little.

"Earl, my dear boy, you know in your heart as well as I know, now, that if you were to dwell in the same house with that woman but for a week, the fancy of to-day will have grown into a conquering madness."

The young man utters a sound, a sort of pant, and draws his breath in sharp and hard, and scowls furiously upon his old friend. He opens his lips, too, and some fierce, hot speech trembles to come forth. But it is not said. He remembers his promise, and, mightily as the desire is to hurl it at him, yet he is a gentleman from top to toe, and will not break his word.

For a moment the doctor remains quiet. Then, when he sees that his anger has departed, he speaks again:

"We need not talk longer on this subject; it is unpleasant. Will you grant me the favor I have asked?"

"No," he says, briefly. "I will not."

"Why? What reason have you for refusing?"

"I decline to answer," comes the quick, decisive reply.

"A willful man must have his way," the doctor mutters to himself, then holds his peace. "I have done my uttermost," he thinks; "I have said all that one dare say to a man of his passionate, determined, indomitable nature. And what need of more words? Opposition only makes him the more bent upon having his own way."

So they fly along, for at least ten minutes, in silence. Then Earl Chesterleigh turns towards his companion, suddenly, and speaks:

"Doctor, I would like to know a little more of the lady, if—if you do not mind," he says, with cool restraint in his voice and manner. "My wife will question me, you see. She is a widow, I think you told me?"

"Yes, she is a widow, and has been for eight months. And a week ago her baby died; so she is childless, also, poor little soul! She has had a great deal of misery since."

"Yes, yes; I know about the loss of her child; you told me before," he cuts in, impatiently. "Tell me about her husband, will you? Was she—was she—did she love him, do you think, and did she grieve for him much when he died?" and he regards the doctor with two wide expectant eyes.

The poor, unhappy gentleman would give half he is worth to be able to say that she *did* love her husband dearly and that her heart was buried in his grave. But even if he could tell him such a deliberate lie as that, with those searching eyes upon him, of what would that avail? Sooner or later he must learn the truth and despise him for the deception. There is only one thing left for him to do. He can evade the question, and he does so.

"Look here, Earl; since you are so exceedingly curious to know more of the lady, I will tell you what I know of her married life, and you may form your own conclusions. All I ask of you is to keep the story to yourself."

"I will. Go on, please."

The doctor looks at him—at his handsome, flushed face, that is full of suppressed eagerness; at the dusky, passionate, waiting eyes—and once more he is weighed down by dreadful forebodings. With an effort, he begins Annah's story.

"Two years ago she married. The man was an idle, worthless, disreputable, handsome scamp as ever drew the breath of life; but, poor little thing, she did not know that. Annah is a beautiful singer—her voice is one of the loveliest I ever heard, and her husband was one of the finest tenors. It was owing simply to these two facts that they ever met. A society to which Annah belonged—some amateur theatrical society it was, I believe—decided to give some operas once in the city, and she was to do the soprano, of course. Well, her husband was engaged to sing tenor, and that was how they first met, more's the pity! I do not think Annah had known the young man more than a week before she was madly in love with him. What! You think it was only a schoolgirl fancy? Good God! Earl, the girl was twenty-one years of age. Quite old enough to know her own mind, I should say. Well, whether she was or wasn't doesn't matter. The fact remains, she was in love with him, and, after a time, he discovered it. By Jove! he couldn't help it, I guess. If ever a woman sung her soul out to a man she did to him, poor little blind fool! Ah, you should just have heard her sing that song you were whistling a while ago—the letter-song from "La Perichole," you know. I've heard it sung many times before and a number of times since, but never but once in my life have I heard it sung as the composer intended it should be, and then Annah did it. But she could not have done it so well either, I suspect, only the madness of a grand passion was upon her, and she was carried out of herself by the little god with wings. Well, as I said, he discovered that she loved him, and so learning that she was wealthy, and being base and unprincipled to the core, he took advantage of her weakness, and when they had known each other but three short weeks, he persuaded her to marry him secretly. His reason for this was, he knew full well that her sister would never give her consent. Barbra is a very wise woman, indeed, and she read him like a book, and he feared her influence over Annah, you see. Well, in three weeks they were married, and unsuspecting Barbra knew nothing of it until four weeks later.

"Of course, when she found it out, she was furious. There was a terrible scene, and Annah left the house and went to the city with her husband. That was exactly what he wanted. He wanted her away from under Barbra's watchful eyes. But after a while Barbra's hurt and her anger melted away under her love for the girl, so she went and sought Annah out and brought her back home again. The poor little thing was willing enough to come, too, so I learned, for even in six months' time the veil had been torn from her dazzled eyes, and she saw her husband *as he was*. But what could she do? She had foolishly gone and given herself into this man's power, so she must abide by the consequences. He went down with them to their lovely home, and, for six months, behaved himself rather decently, for *him*. But at the end of that time, the respectable life he led, and the very charming society that he associated with, became distasteful to him, and so, one fine morning, Annah woke up to find herself deserted. Well, no, not exactly deserted, either, for he left a little note saying that he should come back in a week or so. And he was as good as his word, too. He did come back, but it was only for the purpose of getting money out of his wife. The little stupid gave it to him, and again he disappeared.

"That sort of thing went on for some time. He would come back only to extort money from Annah, then would be off again. The last time he came home, however, she refused to give him anything more. She never saw him again. By my advice she was going to apply for a divorce, and was on her way to the city for that purpose, when she received tidings of his death. He was killed instantly. Thrown from a buggy and crushed out of all semblance to his handsome self. That was eight months ago, before her child was born. To-day she is a widow and childless. It is a mercy the little thing did not live, I think."

"So that is her story," his listener exclaims, drawing his breath hard. "Poor little lady. How extremely sad it all is!" "From my soul, I pity her."

"And pity is akin to love," the doctor quotes, gravely pulling up the horses that he may alight.

Over the face that is raised to his, there comes a swift, defiant, resolute look that baffles him. In his own mind, Earl Chesterleigh has suddenly decided upon something, but what that something is his old tried friend is unable to tell. He cannot even guess, quick as he has always been to read him. He waits for a moment, thinking the young man may speak further. But no, he has no such intention.

"And so you will not grant the favor I asked of you, Earl," he begs, at parting.

A pained expression leaps into the young man's eyes, and for a moment he wavers. Then his smooth, dark cheeks flush hotly.

"I—can—*not*, doctor," comes his passionate, startling answer, and, turning quickly, he strides up the path to his house, and leaves him.

"I have done my uttermost and have failed," the doctor mutters to himself. "Fate stands in my path, and her fair, mischievous hands hold all the silken threads."

CHAPTER III.—THE AUTHOR SPEAKS.

"I love thee, and yet I must leave thee."

IT is a room marvelous in its beauty. Exquisite as rich as velvet and shimmering satin, and priceless lace, and clustering flower, and all costly things lying about, can make it.

In a low, luxurious chair, a little away from the deep bay window and the sweet perfumed air of Summer, sits Annah, rocking slowly to and fro and singing, soft and low, a lullaby to the infant in her arms.

Presently the violet satin curtains and the rare lace that drapes the carved archway are parted gently. A man steps into the room softly, and lets their richness fall downwards behind him, and then stands still and regards the picture before him.

The woman has not heard him enter—ah, he took good care that she should not—and so he gazes, unrebuked at her—at the head with its crown of sun-touched hair; at the face that is like a cameo cut in some creamy stone; at her liquid eyes that are like blue flowers in the rain, and a sigh escapes him, and for a moment he looks away as if dazzled. But only for a moment. The fascination is too great. He turns back again and looks, not at her this time, but at the small baby-head pillowed on her arm; at the little rosy, velvety face; at the tiny, soft, sweet mouth, clinging to the milk-white beauty of her breast, and over his face there comes a look of intense, unutterable longing.

The baby is asleep, and the lullaby dies away. The woman's face is bent forward low upon her chest, and presently a great tear splashes down on the pretty rose-leaf hand of the unconscious little one.

The man's fond, envious eyes discover it instantly. The sight of her misery tortures him, and a second sigh escapes him which betrays his presence.

For the first time she lifts her head and glances round, and discovers him standing there. All in a moment her face is one exquisite blush, down over the creamy throat even. With a quick movement she lifts the fleecy shawl the baby wears, and covers the snow of her bare bosom with it, then glances up at him again.

"I—I did not know you were there," she gasps in a breathless way. "You quite startled me."

"Pardon me, I am sorry to have done so. I only just came—that is, I came and waited for a second to see if baby was sleeping. Estell wanted him brought to her if he was not. Poor little soul, she is so jealous of her boy. She fears you will rob her of his love. He is asleep, I perceive."

"Yes, he is asleep, but I will take him any way, if she likes."

"No, do not. She would not care to have him, since he is asleep," and he advances to her side. "Although I am his father, I must say that he *is* a handsome little fellow, isn't he?" he demands, regarding the innocent young thing with pardonable pride. Then, all of a sudden, he stoops his high, handsome head, and touches the pink, downy upturned face with his lips fondly.

And who shall say his daring mouth does not touch the woman's hand also? From the swift sweet surprise on her face, one might venture to think so. Ah, well, that was little to do, considering his temptation.

"Mrs. Waters, I am going for a drive, and I thought you might like to go out and see your sister," he says, lifting his head and looking down at her.

"Thank you. You are very kind, but, no, not to-day, I guess. Why do you look so—so grave?"

"Well, I supposed, of course, that you would wish to go, since you have not been to see her yet this week."

"Ah, yes, but I have been this week, though," she interrupts, hastily.

"You have been this week?" he echoes, in high astonishment. "When? I did not know it. How did you go? You certainly did not walk! It's a good five miles. And—and I hope you did not hire a carriage for the purpose?"

"Oh, no, certainly not. Doctor Dean was good enough to take me out on Tuesday," she falters, remembering, when too late, that she did not intend to speak of that to him.

"Oh, he was, was he?" said he, gazing down at her with angry, jealous eyes. "If I'm not mistaken, I asked you to go on Tuesday, myself, did I not?"

"Yes, sir, you did; but—but, you see, I had promised Doctor Dean first."

"Do not promise him anything again," he pants, hoarsely, utterly forgetting himself, in his envious rage, and striding furiously up and down the elegant room.

She watches him for a moment in his mad march, then she rises to her feet and faces him, as he comes back, with his child in her arms.

"Mr. Chesterleigh," she begins, in her pretty, low voice; "Mr. Chesterleigh, you forget yourself. I do not consider that you have any right to order me in that manner, and I trust you will not presume to do so again; that is all." Then she is about to leave him, but something in his passionate eyes and the white misery of his face prevents her.

A long, quivering sigh crowds through his lips. He stands with folded arms and head proudly lifted, like a monarch, gazing down at her.

The bewitching beauty of the woman conquers him—or is it the little god with wings?

His proud head is bowed humbly before her. In another instant, "Forgive me," he pleads, in a voice gentle as a woman's.

She says never a word—she only lifts her thick bronze lashes and looks at him with eyes that are drowned in sudden tears.

For an instant he regards the alluring face with luminous eyes that are full of infinite yearning. Then he turns fiercely away.

"Excuse me for intruding. I should not have come, I know; but the desire was far greater than I could resist. I will leave you now—you are a temptation, with my baby at your breast, that will drive me mad!" he mutters, through close shut teeth. Then the door opens and he is gone.

She staggers back uncertainly, and falls into

Digitized by Google

the low, luxurious chair again, and stares, with unseeing eyes, at the door that has closed between them.

The infant, startled by the abrupt motion, is awakened. It lifts one tiny dimpled hand, its long, black lashes sweep upward, and it looks into her white face with its father's own eyes.

"Oh, my baby, my baby!" she sobs, passionately, kissing the downy face again and again, "your papa has broken my heart, dear. He has, he has! Only five weeks—five short weeks—such a very little time, and yet—and yet he holds all my heart in his dear hands. God pity me and forgive me! Oh, Earl, my darling, my darling, 'I love thee, and yet I must leave thee!'"

(To be concluded in our next.)

—No. 3.—

THE GENERAL OF THE ARMY SPEAKS

WHAT HE THINKS OF THE INTERIOR DEPARTMENT.

His Views of the Ute Indian Troubles.

"THE ZULU WAR WELL MANAGED."

But England should have Younger Generals.

"THE Indian Bureau was got up for political purposes," said General Sherman to the writer, in that short, sharp, decisive tone that rings of command. The General was seated in a swivel-chair opposite his great pigeon holed wall-desk, in his palatial bureau in the War Department, skimming dispatches with eagle glance, and indorsing them with a rapidity that vainly endeavored to run abreast with his thoughts. The apartment is a sumptuous one, and General Sherman has not missed the opportunity to decorate the walls of his "work shop" with splendid oil paintings. There are three of these. "After the Combat," a dead stag surrounded by hinds; "The Last Stand," a buffalo attacked by wolves on a prairie; and "A Wounded Buffalo," the baited animal pursued by prairie wolves. There is nothing in the bureau to announce to the visitor that he is in the sanctum of "grim-visaged war." The piping times of peace are elaborately represented by the Axminister carpet, the gilded mirror, the French clock, the superb mantel and the rotary book-stand. There is not so much as a gun, or a sword, or a pistol to be seen, not even a military map *en évidence*, and the sparse etchings representing scenes in the late civil war might safely adorn a lady's boudoir. A few touches here and there, and this well-lighted, lofty and charmingly-proportioned chamber might be converted into a drawing-room.

The Department of State, in which is located the War Department, stands west of the White House, and is one of the handsomest, if not the finest, building of the kind in the world. Its style is the Italian Renaissance, which combines the massive proportions of the ancient with the elegance of modern architecture. This magnificent edifice is devoted to the Departments of State, War and Navy. Few are admitted beyond the main floors, where the chief business of the departments is transacted, and there is little to allure the ordinary sightseer save the severely classical architecture and the imposing but gloomy corridors, from which the bureaus give on either hand like grim official vaults in which official secrets lie moldering to decay.

Up and down the massive steps toil crafty-looking diplomats, bronzed veterans, and sunkissed sons of the briny. One can tell at a glance which department the visitor is in quest of. The diplomat, his eyes upon the steps, falls upwards. The soldier, gazing straight out before him, marches upwards. The sailor, looking at the roof, rolls upwards. The attendants at the entrances of the porticoes anticipate querists, and ere the visitor opens his lips he receives his instructions in so eminently satisfactory a manner as almost to bewilder him by the unexpectedly rapid result.

An attendant, as "straight i' the back" as Corporal Trim, ushered me into a bright, cheery, lofty apartment, sacred to the aide-de-camps of the General of the Army. This room is carpeted in Brussels, and, from a strategic point of view, in common with that of the chief's, commands the conservatory of the White House.

There are standing desks in this apartment, and drawers from which innumerable maps peep forth. There is a small military library "on hand." The walls are covered with etchings of scenes enacted during the late Civil War, each possibly possessing some memento of that "scourged time" for the brave and distinguished warriors by whom General Sherman is officially surrounded.

"We know the strength, effectiveness and condition of every army in the world in this bureau," observed General McCook to me, laying his hand upon a portly tome. "We can tell it to a gun, to a man and to a ration. Here is a book—'General Upton on the Armies of Asia and Europe'—that we place in the hands of the colonel of every regiment, and forward to every post library in the United States. It is a wonderful index to the fighting condition of the world."

A wide-open door gives upon the bureau of the General, whose sharp tone of command reached me incisively, as he issued rapid directions to attendants, and electric instructions to his aides. Beyond his bureau, which was bathed in sunlight, lies another apartment similar to that in which I stood, also devoted to the purposes of his personal staff, which is composed of six aide-de-camps, each of whom holds the brevet rank of general.

General A. M. D. McCook, the most courteous of aide-de-camps, having announced me to General Sherman, I was at once ushered into the presence of the man who marched from "Atlanta to the Sea."

"In the Spring of 1846 I was a lieutenant of Company G, Third Artillery, stationed at Fort Moultrie, South Carolina."

Thus does General William Tecumseh Sherman commence his vivid and intensely interesting "memoirs," and ere I proceed to relate the substance of my somewhat brief interview let us take a glance at the record of the great captain who executed that marvelous march to 'Ocean's melancholy waste.' Born at Lancaster, Ohio, February 8th, 1820, he is now in his sixtieth year, and twenty years younger than most men of his age. He graduated at West Point in 1840, served in the Florida War in 1840-42, and was at various military posts in the South till 1847, when he went to California and was acting assistant adjutant-general there till 1850. He was on commissary duty at St. Louis in 1850-53, and at New Orleans till September 6th, 1853, when he resigned. From 1853 to 1857 he was a banker in San Francisco and New York, and in 1858-59 he practiced law in Leavenworth, Kansas. He was superintendent of the Louisiana Military School at Alexandria from 1859 to January, 1861, when he went to St. Louis. On May 14th, 1861, he was reappointed in the army with the rank of colonel, and on the 17th was made brigadier-general of volunteers, and he commanded a brigade in the first battle of Bull Run, July 21st. In October he was appointed to the command of the Department of the Cumberland, but afterwards took charge of a camp of instruction at St. Louis till February, 1862, when he was placed in command of the district of Paducah, Ky. He commanded a division in the Tennessee and Mississippi campaign; was in the Battle of Shiloh, where he was wounded, was in the advance upon and siege of Corinth, and was made major-general of volunteers. He also commanded the hastily organized expedition against Vicksburg. In 1863, in command of the Fifteenth Army Corps, he led the expedition which carried Arkansas Post by assault, and was actively engaged in the siege of Vicksburg. He was made brigadier-general in the regular army, and during the Summer and Autumn was engaged in various operations in Mississippi and Tennessee. He commanded the left wing at the Battle of Chattanooga, and compelled General Longstreet to raise the siege of Knoxville. In February, 1864, with 20,000 men, he marched to Meridian, Miss., and broke up the railroads centring there. He held the command of the Department and Army of Tennessee till March, when he took that of the Military Division of the Mississippi. Having organized at Nashville an army of 100,000 men, he invaded Georgia, victoriously engaging the Confederate forces under General J. E. Johnston at Dalton, Resaca, Cassville and Dallas. He defeated General Hood, Johnston's successor in command, before Atlanta, the severest battle being fought on July 22d, and began the siege of that city. On August 12th he was made a major-general in the regular army. On the night of December 1st, Atlanta was evacuated by Hood, and General Sherman occupied the city till the middle of November, when he began his famous march to the sea. He reached Savannah December 13th, stormed and captured Fort McAllister, and on the 21st received the surrender of the city. On the 22d General Sherman sent the following telegram to Abraham Lincoln:

"SAVANNAH, Georgia, December 22d, 1864.

"*To His Excellency President Lincoln, Washington, D.C.:*

"I beg to present you, as a Christmas gift, the City of Savannah, with one hundred and fifty heavy guns and plenty of ammunition; also about twenty-five thousand bales of cotton. W. T. SHERMAN, Major-General."

This message actually reached the President on Christmas Eve.

General Sherman marched into the Carolinas, compelling General J. E. Johnston to surrender at Durham Station. In July, 1866, he succeeded General Grant as Lieutenant-General, and later on was employed on a special mission to Mexico. He was created General on the vacation of that grade by General Grant. In 1871 he obtained leave of absence for a year, and traveled in Europe and the East, and on his return took up his residence in Washington as Secretary of War.

"The Indian Bureau was got up for political purposes," observed the General, in response to a question of mine.

"The War Department had control of the Indian Territory until a comparatively recent date?"

"Till 1849."

"Why was it removed?"

"To make a political department, sir. These gentlemen mean very well, but they don't know how to deal with Indians. The Indian must recognize in the peacemaker the lawmaker."

"Do you not admit the civilizing exertions being made by the Department of the Interior?"

"I do; but the Department would make Christians of the Indians before they'd make men of them. In fact, they are for putting the cart before the horse. Soldiers are the only element fit to keep Indians in order. When the Indian Bureau gets into trouble with the Indians, it calls upon us, and when we get our work done, it begins to undo it again."

"The Bureau views the new carrier system with considerable satisfaction."

"Humph!"

"Are you in favor of the new Indian police?"

"Humph! Yes; *as* police they may answer very well."

"Then you are of opinion that the Indian is but an indifferent reasoner?"

"Indians don't reason, and they don't read newspapers; but"—swinging round upon me—"they can't stampede us."

"The Utes hoped to do this?"

"Yes; they're like the rest of the Indians—when they see a garrison reduced they think it a good time to go and clean it out."

"Is the Ute trouble over?"

"No, sir, it is not, but we will soon settle it. Every event cuts out its own future. We are doing in the Indian territory what England is doing in Zululand—we are spreading civilization."

Concerning the Ute difficulty, General Sheridan reports to General Sherman:

"The recent and unexpected outbreak of the Utes at the White River Agency seems to have been brought about, as far as I can ascertain, by local causes. The Indian agent wished them to engage in farming, and many of them were uncompromisingly hostile to anything in the way of labor, which might assist in making them self-supporting. As soon as a knowledge of the trouble was communicated by the Indian Bureau to the military authorities a force which was deemed more than sufficient by the agent was sent from the nearest post, under command of Major Thornburgh, Fourth Infantry. Before the troops reached the agency the agent, Mr. Meeker, and most of his employés were murdered by the Indians, who then came out and attacked Major Thornburgh's force at a point eighteen miles distant from the agency, killing Major Thornburgh and twelve of his men and wounding forty-two others, officers and men. The ground selected by the Indians was exceedingly favorable to them, and they succeeded in beleaguering the command and holding it until it was relieved by Colonel Merritt's command, which was thrown forward with great rapidity to its rescue. The troops under Colonel Merritt then pushed on to the agency without opposition, where they discovered the dead bodies of the agent and his employés. At present a large column of troops is held at White River Agency, another large column is being organized at Fort Garland, and still another at Animas Valley, pending the action of the Indian Bureau, through its special agent, General Adams, and these troops will be held at these points, awaiting the result of General Adams's negotiations with Chief Ouray for the surrender of the murderers."

General Sheridan complains that the forces under his command are too small to properly perform the duties incumbent upon them throughout the vast extent of territory they occupy. The ratio of the force is one man to every seventy-five square miles of the Departments of the Platte, Dakota and the Missouri, and one man to every one hundred and twenty square miles in the Department of Texas, and recommends the establishment of a northwestern post.

Referring to the Zulu war, I asked General Sherman for an opinion.

"In what way?"

"Its management by the English?"

"I think it was very well managed, sir."

"Lord Chelmsford permitted himself to be surprised at Isandula?"

"Surprises will always happen. A general is bound to guard against them, but they will happen."

"Do you think Lord Chelmsford an able commander?"

"He did his work well enough. England seems to me to make a great mistake in leaving everything to her one general."

"You mean Sir Garnet Wolseley?"

"Yes, I do. A nice, able fellow. I had him out with me, and like him immensely; but England should give a chance to some of the younger men. There are lots of men who would distinguish themselves if they only got the chance."

On the subject of Autumn manœuvres, I asked the General if he was in favor of them.

"No, sir, I am not. There can be no battle without bullets. When I was in England I was asked to attend one. I begged to be excused, on the ground that I considered them useless. An engineer officer, since dead, high in command, came to me next day and said he entirely agreed with me. It would be better to march a regiment from Liverpool to London, bivouacking on the way."

"Have you any disquietude on the subject of the Mexican Indians?"

"Not a bit."

"Yet reports say——"

"They are our own Indians that are giving trouble," he jerked in, "but they don't amount to anything. We have good men all along the line."

On the subject of the condition of the army, the General says that the army is in a state of high efficiency, and that its operations during the last year have been altogether creditable and satisfactory. Notwithstanding the numerical weakness of the army, it has guarded 3,000 miles of frontier; and, with numerous posts to garrison, it has achieved great success in dealing with hostile Indians. General Sherman claims great credit for the policy of the army in dealing with the Indian question in the Northwest, where, he says, if a different policy had been pursued, as some recommended, a long line of frontier settlements would have been exposed to the incursions of the hostile Indians, and would have felt the fury of the attacks of Sitting Bull and his warriors.

Referring to the disposition of the United States forces in the Indian Territory under Sheridan's command, there are four departments—Dakota, Platte, Missouri and Texas:

"The Department of Dakota comprises the State of Minnesota and the Territories of Montana and Dakota, garrisoned by twenty-one permanent posts and four temporary encampments, command by Brigadier-General Terry."

The Department of the Platte:

"It consists of the States of Iowa and Nebraska and the Territories of Wyoming, Utah, and a portion of Idaho, garrisoned by seventeen permanent posts, commanded by Brigadier-General Crook."

The Department of the Missouri:

"Consists of the States of Illinois, Missouri, Kansas and Colorado, the Indian and New Mexican Territories, and two posts in Texas—Forts Elliott and Bliss—garrisoned by twenty permanent posts and eight encampments, commanded by Brigadier-General Pope."

And the Department of Texas:

"Embraces the Mexican frontier, garrisoned by thirteen permanent posts and ten encampments, commanded by Brigadier-General Ord."

The forces of the division are assigned to the several departments:

"Dakota, officers and men, cavalry, 1,538; infantry, 3,649."

In the Department of the Platte:

"Cavalry, 1,448; infantry, 1,525."

In the Department of the Missouri:

"Cavalry, 1,269; infantry, 1,525."

In the Department of Texas:

"Cavalry, 1,817; infantry, 1,787; artillery, 188. The number of permanent posts in this division is 71, which, together with 22 temporary encampments, gives an aggregate of 93 stations to provide for during the Summer. These posts have been garrisoned by eight regiments of cavalry, aggregating 6,098; four companies of artillery with an aggregate of 188; nineteen regiments of infantry with an aggregate of 9,042, and 200 Indian scouts, making a grand total of 15,517 officers and men."

A new northwestern post has been recommended about midway between Forts Buford and Assiniboine, and as near to the northern boundary line as the local conditions will permit; and General Sheridan recommends that an appropriation of $200,000 be asked for its construction. It is estimated that the rapid progress of the Northern Pacific Railroad will fill up the Northwest with hardy pioneers and emigrants, and it is recommended that the establishment of this post should take place during the Summer of 1880.

General Sherman is tall, thin, wiry and straight as a whip. His face is considerably wrinkled and his short beard is in bristles. His eyes are small, and close themselves as if searching for a concealed battery or an ambuscade. His forehead is high and well developed. His lips are thin, but his mouth denotes decision and dogged tenacity of purpose. He speaks in a short, sharp way, and never wastes a word.

"On duty," observed one of his aide-de-camps to me, "he is the unflinching soldier, but when 'off' he is as genial and delightful a companion as it is possible to meet. He comes into this room when he can spare a moment from his arduous duties, and sits down with us for a smoke and a chat. He is very fond of stories of the war. He is the most thorough worker I ever met. No amount of work seems to take a feather out of him. He works at any or at all hours, as the work may come up."

During my interview with the General of the Army, he continued reading and annotating dispatches with a rapidity that was almost bewildering. "This work is all connected with the Quartermaster's Department," he observed, as he flung the last report with his written comments down upon the desk.

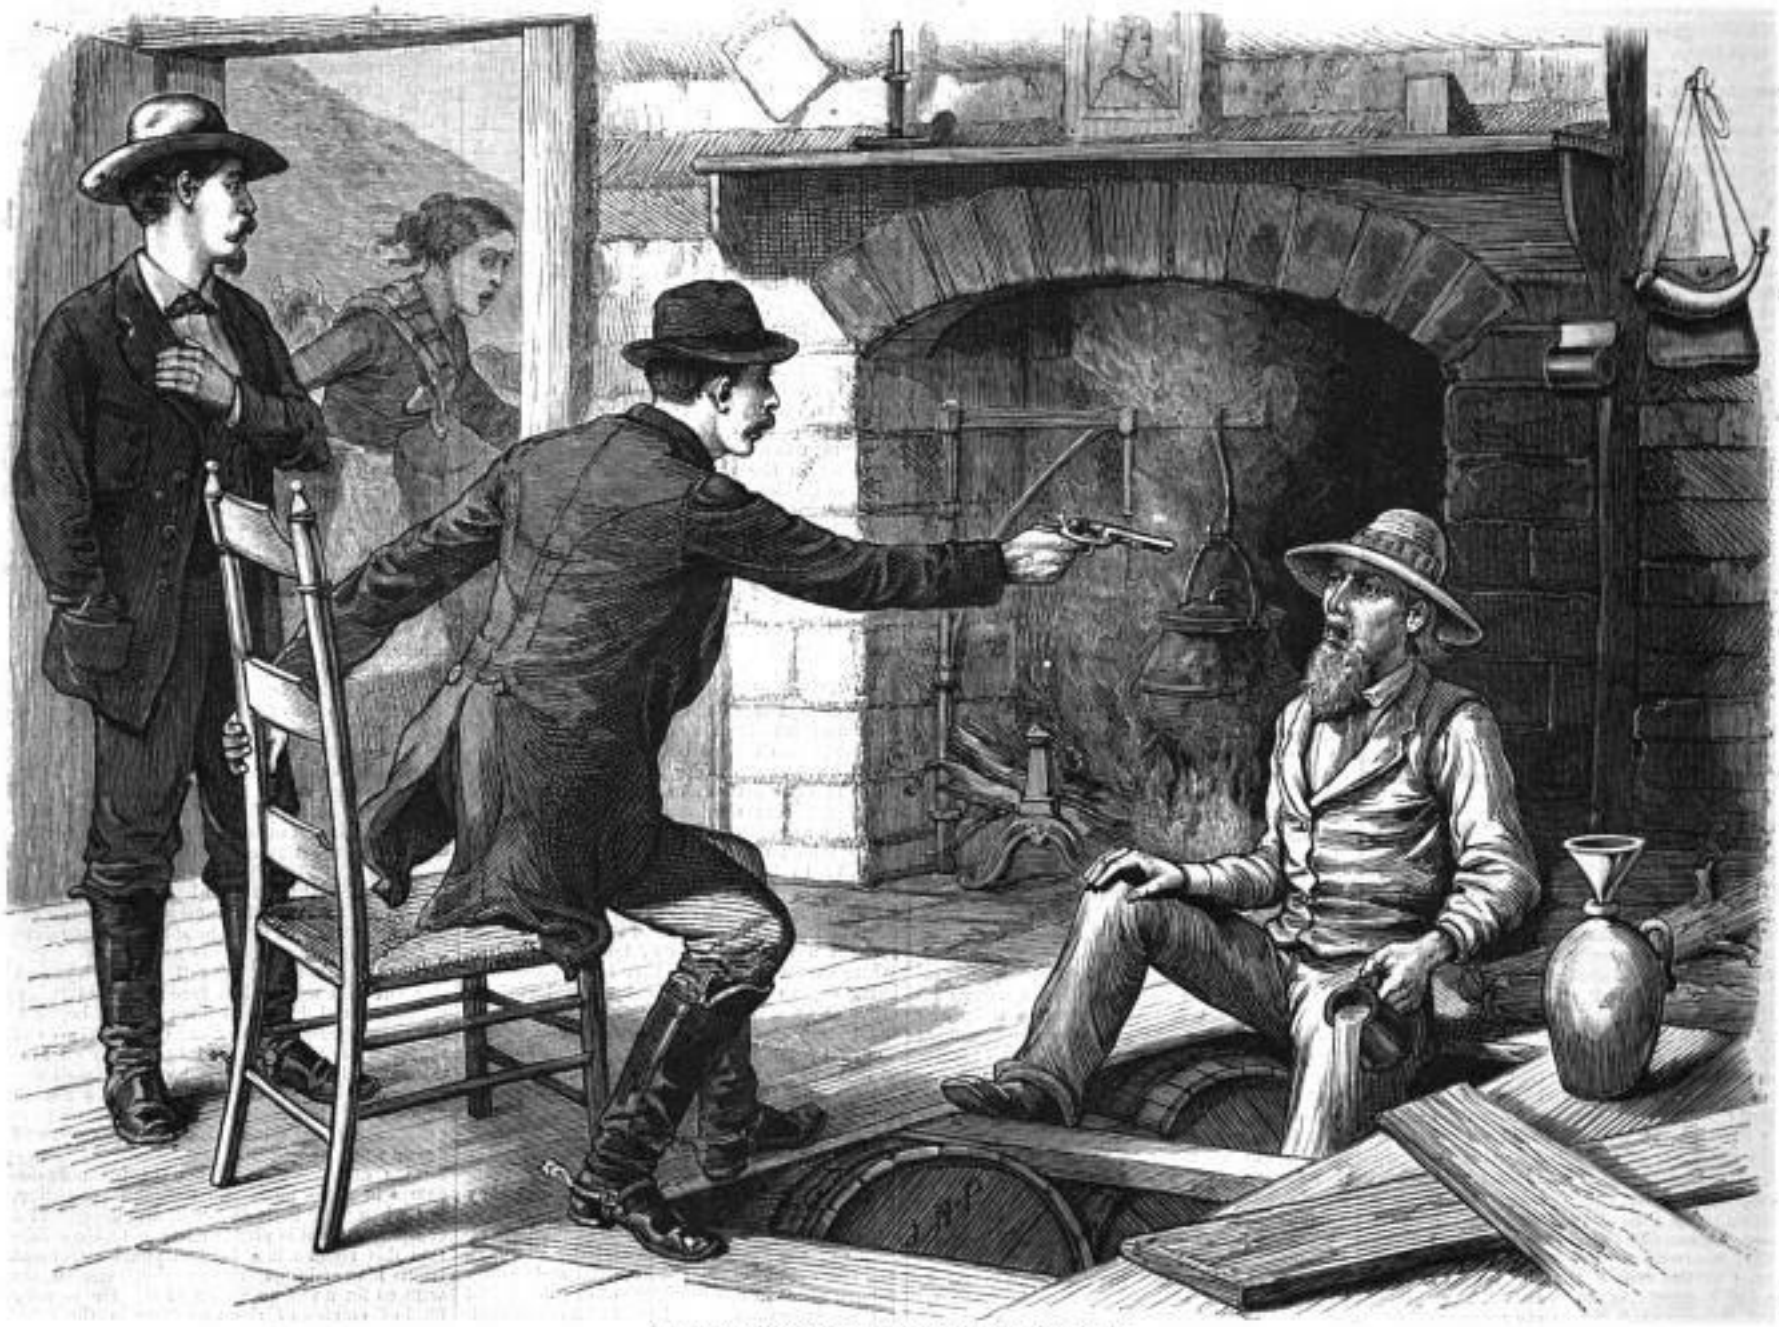
An attendant having announced that the carriage was in waiting, the General seized his soft felt hat, and, issuing a hurried order to General McCook, literally darted out of the room.

PERSONAL GOSSIP.

MAJOR DE SERPA PINTO, the distinguished African explorer, is seriously ill of disease of the lungs.

GRAND DUKES ALEXIS and PAUL have left Paris for Russia. They will visit the Emperor William on their way home.

PROFESSOR SARGENT, of Harvard College, is to conduct an investigation into the forest area and the forest wealth of the United States for the tenth census.



BISMARCK has been the recipient of 470 crosses or decorations of various kinds, the display of which in a single row would cover six yards. The only Power not represented is said to be Great Britain.

PROFESSOR BURNHAM has decided that the Lick Observatory shall be built upon Mount Hamilton, in Santa Clara County, California. Professor Newcomb agrees with him upon the suitability of this site.

AMONG recent deaths we note those of ex-Judge Darius Peck, of Hudson, N. Y., October 27th, aged 77; Medical Director John J. Abernethy, United States Navy, October 28th, aged 75; General James H. Craig, Judge Advocate General on Governor Hoffman's staff, in Brooklyn, October 29th, aged 45; Hon. Isaac N. Norris, ex-Member of Congress from Illinois, at Quincy, October 29th, aged 67; John Blackwood, senior partner in the Edinburgh firm of Blackwood & Sons; General Joseph Hooker, October 31st, aged 64; the Rev. Jacob Abbott, author, October 31st, aged 75; John S. Buckstone, English comedian, October 31st, aged 77, and General Von Podbielski, Inspector-General of Artillery and Quartermaster-General during the Franco-German War, October 31st, aged 65.

THE Rev. Dr. Thomas A. Starkey, who was elected Protestant Episcopal Bishop of Northern New Jersey, to succeed the late Bishop Odenheimer, on October 30th, is rector of St. Paul's Church, Paterson, and Dean of the Convocation of Jersey City. He is a native of Philadelphia, is fifty-five years of age, and was originally educated to be a civil engineer. He subsequently studied for the ministry, and was ordained a deacon in Philadelphia in 1847 by Bishop Potter, and a priest in 1848 at Pottsville, Pa., by the same bishop. From 1848 to 1850 he was a missionary in the mining regions. In 1850 he became rector of Christ Church, Troy, N. Y., and continued in that charge for four years, when he resigned to succeed Bishop Kip as rector of St. Paul's Church, Albany. In 1859 he resigned and became rector of Trinity Church, Cleveland, Ohio, and in 1868 he accepted the rectorship of the Church of the Epiphany, Washington, D. C. In April, 1877, he became rector of St. Paul's Church, Paterson, and subsequently Bishop Odenheimer appointed him Dean of the Convocation of Jersey City. He is a High Churchman, but is not regarded as an extremist.

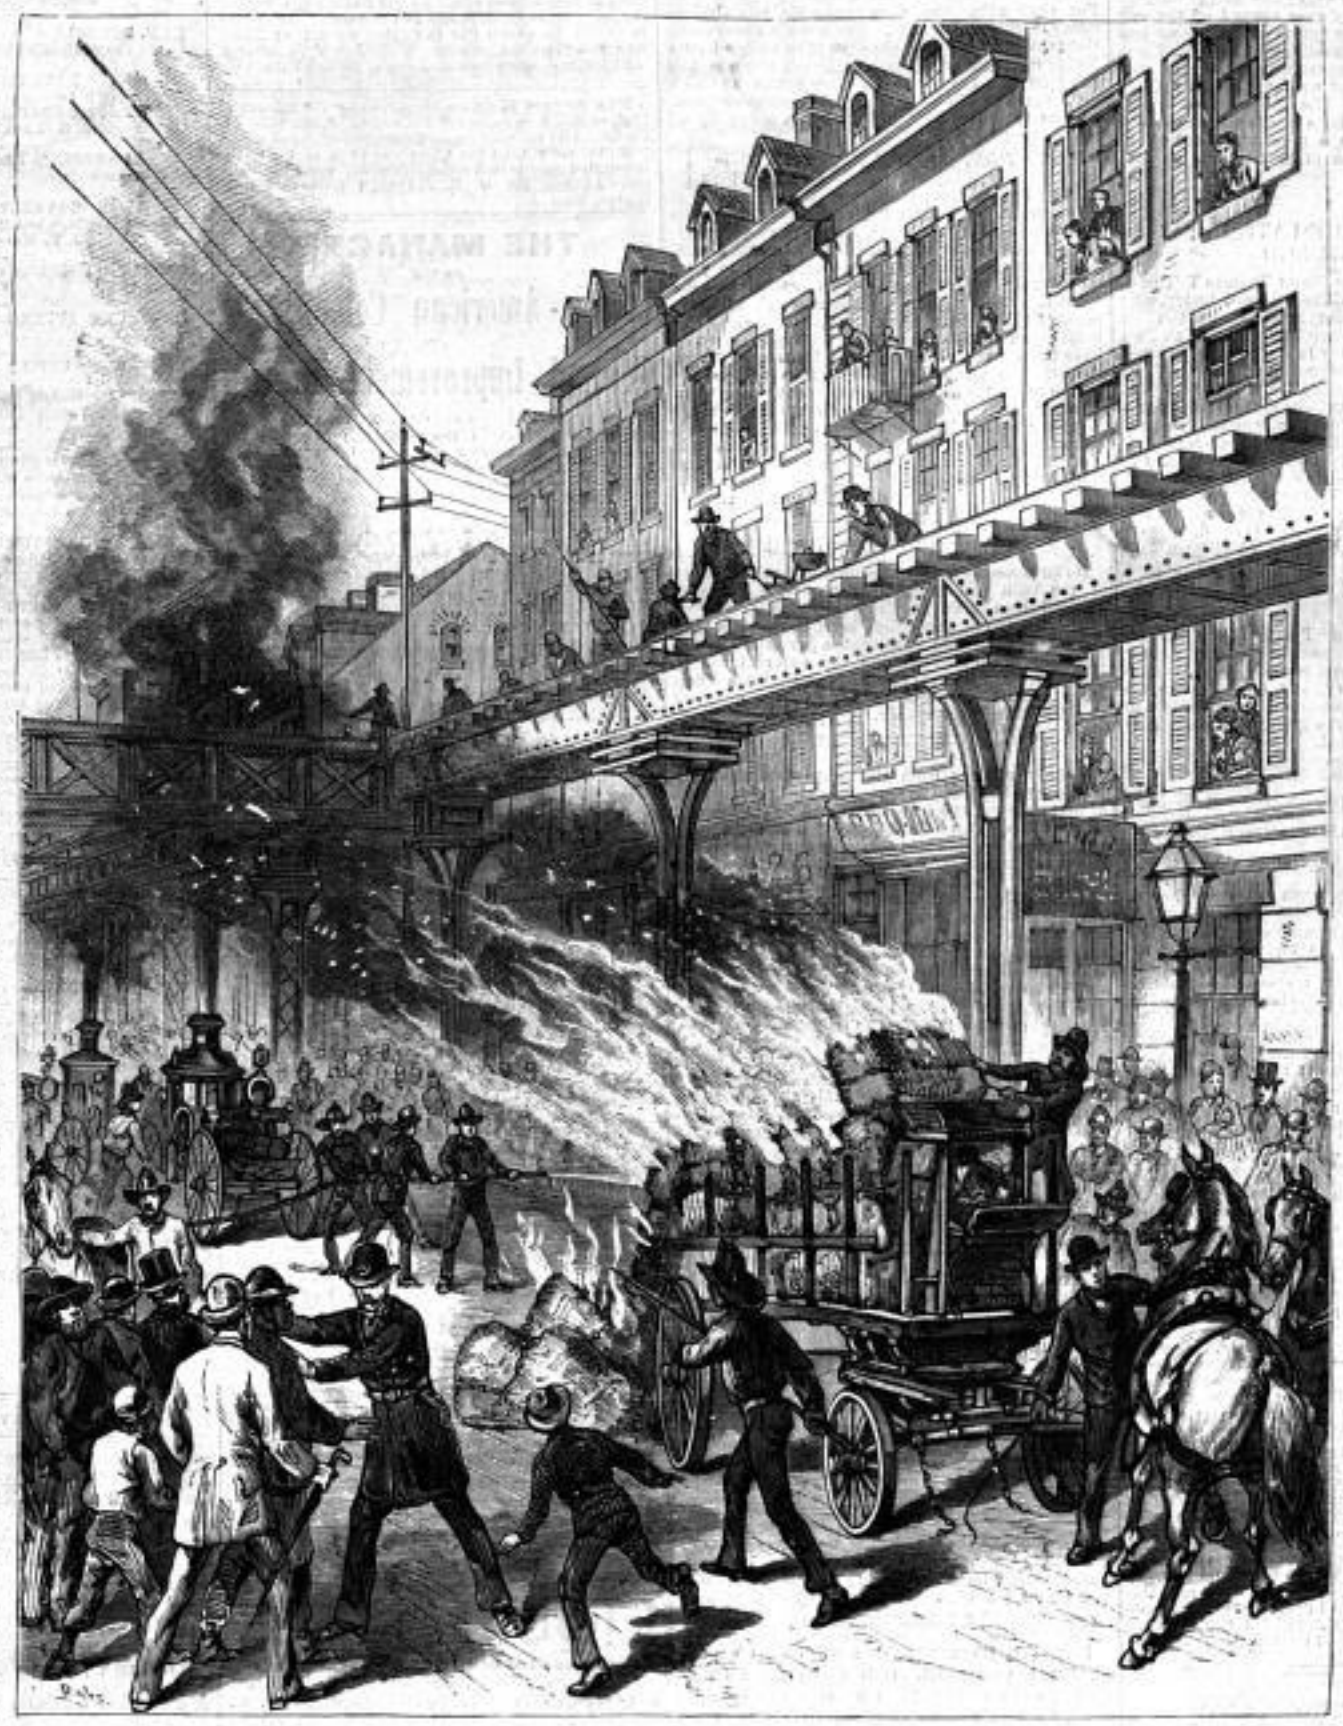
UNITED STATES MARSHALS FOLLOWING A TRAIL UP THE MOUNTAINS.



SOUTH CAROLINA.—THE ILLICIT DISTILLATION OF WHISKY IN THE MOONSHINE REGIONS.—FROM SKETCHES BY J. H. CORNELISON

Digitized by Google

"MOONSHINERS" AND THEIR TRADE.

THE illicit distillery operations in North and South Carolina, Georgia, Tennessee, and some other States, are not as extensive, perhaps, at this time as they were a few years ago, but they still have a magnitude which is but imperfectly understood by the public at large. In some of these States the business has been carried on for generations. The "moonshiner" of the mountains of to-day was born and has grown up in the practice of his peculiar trade, inheriting it from those who, as distillers, had never known what it was to be molested by the law. In the old times "everybody used to run his own still." The business was increased by the stringency of the blockade during the war, and when the war ended, the trade went on, spite of the revenue laws, which made the practice of distilling a crime. Pressed and harassed by the Government officials, the "moonshiners" gradually begun to distill in secret in out-of-the-way places, and when driven to extremities, they have not hesitated, with armed violence, to defy the Government. In South Carolina, where the internal revenue officials have encountered the greatest difficulty in executing the law, the country occupied by the "moonshiners" is wild and rugged in the extreme, and offers means of defense which make it almost impossible for the officers to capture the offenders. Lying as it does in the very heart of the older States of the Union, this section is to-day a veritable *terra incognita* to the citizens of these States, and even to thousands of people who are born and live all their years within sight and within a few hours' journey of the forbidding rocky walls which mark its confines. A tourist, who recently traveled one day's journey (usually reckoned at fifteen miles) into this region with a light buggy, states that he walked most of the way, owing to the necessity of relieving his horse on the ascents and from precautionary motives in the matter of the descents, and ascent and descent made up the entire distance. For the most part, the hardy mountaineers use large sleds, and where wagons can be employed at all, from ten to twenty bushels of corn are accepted as a fair average load for two horses or mules. In several places the roads actually cross themselves in ascending the mountain sides, and the traveler finds himself crossing his own track at acute angles in order to pass from one incline to another.

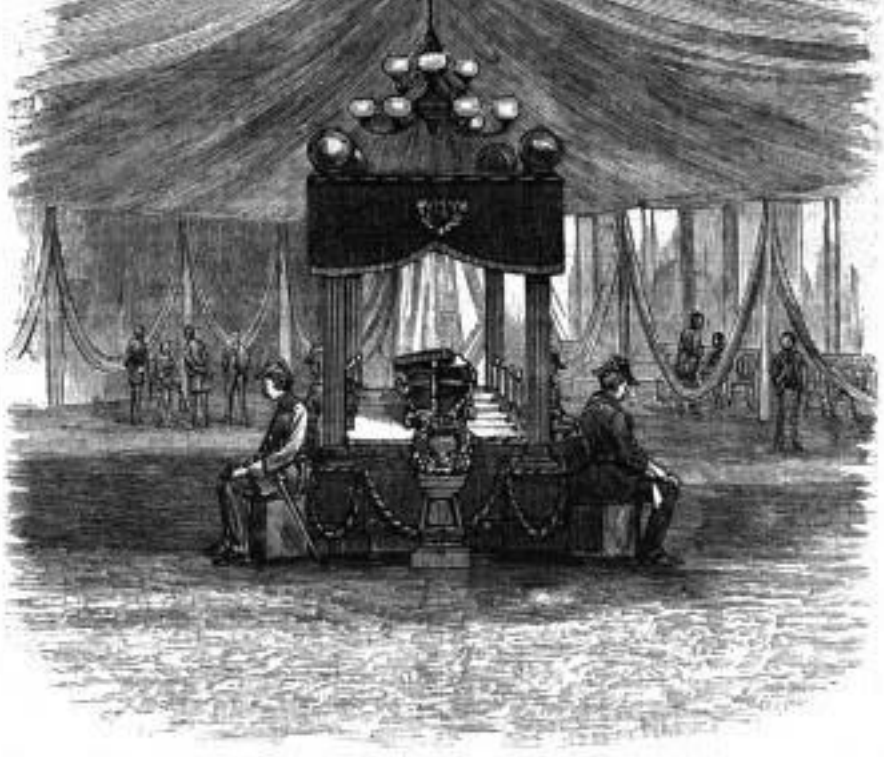
It is in this practically inaccessible region that the Georgia moonshiners locate their stills and carry on their illicit trade. In the seclusion of the mountains, living in huts and shanties of the rudest description, with their families around them, and with utter contempt for all authority, they grow their corn, and then convert it into whisky, earning, at best, but meagre returns—scarcely securing, indeed, the little necessaries of their humble homelife. With all their precautions, however, they are sometimes surprised at their work. Pursuing obscure and difficult trails, the revenue officers cautiously and stealthily penetrate the mountain fastnesses, and sometimes without a struggle, but oftener after desperate and bloody conflicts, secure the distillers, seize their paraphernalia, and carry off their prizes to imprisonment and trial. Our illustrations afford a vivid idea of a scene of this character, and of the peculiar difficulties which attend the search for and capture of the offenders. During the past year over 200 confirmed law-breakers in South Carolina, under an offer of Government clemency, came in and pleaded guilty to charges of illicit distillation, and these constituted only a portion of the "moonshine fraternity" who habitually cheat the Government by their dishonest practices. It is probable that the Government will never be able to entirely exterminate the illegal manufacture of spirits in the more secluded districts of the States we have named, but it can scarcely be otherwise than that, in time, the authority of law will make itself felt even in the shadow of the mountains where whisky has so long been supreme.

NEW YORK CITY.—A NOVEL STREET SCENE—A TRUCK-LOAD OF COTTON IGNITED BY BURNING COALS FROM THE ELEVATED RAILROAD IN GREENWICH STREET.

REAR-ADMIRAL MIGUEL GRAU, COMMANDER OF THE PERUVIAN IRONCLAD "HUASCAR."

REAR-ADMIRAL GRAU.

THE chief feature of the present war between Peru and Chili has been its essentially maritime character. At the beginning of the war the Peruvians possessed what they considered a powerful navy; but early in the war their most formidable ironclad was lost while chasing the little Chilian vessel *Esmeralda*, and now it is reported that the much-talked-of *Huascar* has been taken off Mejillones, and all hands massacred. This powerful little monitor, it may be remembered, in 1877 was seized by the rebel President Piercla, and engaged in a sharp action with H.M.S. *Shah* and *Amythest*, being subsequently compelled to run into Iquique and surrender to the Peruvian squadron. During the present war the *Huascar* has roamed the seas, seizing Chilian mail-steamers and merchant-vessels, destroying her men-of-war, bombarding towns, cutting submarine telegraphs, and finally capturing a richly-laden transport, the *Rimac*.



The commander, Captain Don Miguel Grau, came from an old and distinguished Spanish family, his father having joined the patriotic cause during the War of Independence. He himself, after serving for some time in the merchant service, where he proved himself an able and careful navigator, was induced by the late President Balta to leave that service, and take the command of his present ship, the *Huascar*, which he had held for over fourteen years.

A subscription has been raised by prominent Peruvian ladies in Paris, and others who have lived in Lima, to present Rear-Admiral Grau with a sword of honor, in token of the respect felt for him, and their admiration of his gallant conduct in his country's defense.

The last mail from Peru brings the intelligence that the Peruvian Congress has conferred on him the title of Rear Admiral, but no details have as yet arrived of the capture of his vessel and the reported massacre of himself, his officers and crew.

A NOVEL STREET SCENE.

A CURIOUS accident occurred on Greenwich Street, in this city, October 26th, to a large double-truck loaded with thirteen bales of cotton. In passing under the elevated railway, a burning coal from the forge of workmen who were engaged in riveting braces on the track overhead fell upon the cotton and set it on fire the whole load being speedily in a blaze. A fire-engine hurried to the scene and poured a stream upon the truck,

NEBRASKA.—THE REMAINS OF MAJOR THORNBURGH LYING IN STATE IN THE MASONIC TEMPLE, OMAHA FROM A PHOTOGRAPH BY E. L. EATON.—SEE PAGE 186.

Digitized by Google

but did not succeed in extinguishing the flames until they had run over every one of the thirteen bales, and in nearly every case burned off the end sacking that incased the cotton and more or less exposed cotton. Subsequently, while the load was being removed to the storehouse of the owner, the fire again broke out, but was suppressed without much further damage. The spectacle of a load of cotton wrapped in flames in one of the busiest streets of the city made a momentary sensation, while at the same time presenting an unusual picturesque effect.

FUNERAL OF THE LATE MAJOR THORNBURGH.

THE funeral of the late Major Thomas T. Thornburgh, of the Fourth United States Infantry, who was killed by the Ute Indians at Milk Creek, Col., on September 29th, took place at Omaha, Neb., on October 22d. The body lay in state in the Masonic Temple, guarded by detachments of Knights Templar, who had full charge of the obsequies, and a battalion of soldiers under Colonel Gentry. After a march of two miles the procession reached Prospect Hill Cemetery, where the Rev. F. T. Webb, of Council Bluffs, conducted the Masonic ceremony, the Knights having formed a triangle about the grave, inclosing also the family of the deceased and the army officers in attendance. At the conclusion of the service the battalion of the Ninth Infantry fired three volleys over the grave, which had been dug beside that in which the young son of the deceased was buried.

AT the Standard Theatre "Pinafore" still sails on an ever-widening sea of popularity. Mr. Arthur Sullivan, author of this most popular opera, is now on his way to this country, and receptions in his honor are already in preparation. Mr. Sullivan will find his masterpiece most worthily and creditably represented at the Standard.

FUN.

THE spanked child dreads the slipper

EYES are not eyes when cigar-smoke makes them water

THE best home-stretch is taken in the evening on the sofa.

NOAH was the first man who strictly observed Lent. He lived on water for forty days and forty nights.

INDIAN Summer, this. And, speaking of Indian Summer, that's about all that is left that the Indian can call his own.

A SCHOOLMISTRESS asked a child what a noun spelt. The child hesitated. Said the teacher: "What do I do when I look at Mr Smith?" "Squint," replied the pupil.

A RATHER gayly dressed young lady asked her Sunday-school class what was "meant by the pomp and vanities of the world." The answer was honest, but rather unexpected: "Them flowers on your hat."

GOVERNESS: "Now, Jack, if I were to give twelve pears to Maude, ten to Edith and three to you, what would it be?" Jack (aged six): "It wouldn't be fair."

TWO CHILDREN were playing in the sand together. The small boy said to the little girl: "Do you wish to be my little wife?" *The Little Girl* (after reflecting): "Yes——" *The Small Boy*: "Then take off my boots!"

VILLAGE DOCTOR (to the grave digger, who is given to whisky): "Ah, John, I'm sorry to see you in this pitiable condition again!" *Grave-Digger*: "Toots, sir! Can ye no' let me little fau t o' mine gae by? It's mony a muckle ane o' yours I ma'n happit owre, an' said nuthing about!"

CHEESEMONGER: "I call yours a sighnocure, Jim. You clape that 'ere paper round yer 'at, and there you are—a penny each!" *Fly-catcher* (who has a sheet of well filled fly paper around his beaver): "Ah, but look at the labor of catchin' 'em, and stickin' of 'em on at the outset, Bill!"

A LITTLE girl was puzzling herself about her transference from heaven to this mundane sphere, and questioned her mother: "Did God and the angels have a funeral when I came away?" "I presume there was no funeral," replied the mother. "Well," said the child, "I presume they all felt bad."

A MODERN IMPROVEMENT.

IS it possible that a New York merchant can afford to cut off a dress pattern of silk or velvet, send it to Texas, and then if the buyer does not happen to like it, take it back? Wonder if he makes more money out of the new customers gained by such liberality than he loses by the Joneses, who "scarcely know whether they like it or not," and the Smiths, who "would keep it at a trifle off"?

The latest thing in dry-goods is from a catalogue from Messrs. Lord & Taylor. Think of the self-restraint of a merchant who can go through millions of value in articles of luxury and use, and never once stop to praise anything. Not less noteworthy is it to see things called by their right names, as when a beaver or flannel is styled "cotton-and-wool"; or, when a so-called twenty-inch velvet is quoted as "nineteen inches"; or, when a 12-4 blanket is said to "average about two and three-quarter yards long." After this, one is less surprised at the terms: "Any article that is unsatisfactory may be returned."

The catalogue is an admirable specimen of book-making. The type is large and severely plain; the engravings vary a good deal—some of them being excellent and some quite inferior.

A DISTINGUISHED MEMBER OF CONGRESS.

HON. WM. D. KELLEY, who had suffered for years from Chronic Catarrh, accompanied by an almost daily effusion of blood, was induced to try "Compound Oxygen" for relief, and the benefit received was so great that in a letter to the undersigned he says: "You are authorized to give any degree of publicity to my assertion that the use of your gas at intervals has so far restored my health that I am not conscious of having discharged any blood for more than a year, and that my cough, the severity of which made me a frequent object of sympathy, has disappeared. My experience under your treatment has convinced me that no future dispensatory will be complete that does not embrace the administration, by inhalation or otherwise, of your agent or its equivalent, to those who, from their vocation or other causes, are, as I was, unable to assimilate enough of some vital element to maintain their system in healthful vigor. Thanking you for renewed health, strength, and the hope of years of comfortable life, I remain your grateful friend." Our "Treatise on Compound Oxygen, its Nature, Mode of Action, and Results," sent free. Address Drs. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

DO A CLEVER THING

For your wife. She does many for you—bakes, cooks, scrubs and mends. Her work is never done. Get from your grocer a package of Gilt-Edge Butter Maker for twenty-five cents. She can churn in half the time, get ten per cent. more butter, and of a color that she will be proud of. The valuable book, "Hints to Butter Makers," is given away by all storekeepers.

NOVA POST OFFICE, Ashland Co., Ohio.
May 28th, 1879.

BUTTER IMPROVEMENT CO.:

Gentlemen—My attention was called by your correspondent of Elyria, Mr. Boynton, to your Gilt-Edge Butter Maker, and wished me to give it a trial. We churned one gallon of cream according to your directions in your letter to Mr. Boynton, with the following result: Time of churning, 12 minutes; produced 3½ lbs.; color good, and quality far better than anything that I have tried previously. I have been engaged in the dairy business, more or less, for the last fifteen years. Also took of the same cream, the same time and from the same bulk, omitting your powder, as per directions, with the following result: Time of churning, 20 minutes; 3 pounds, quality inferior, short of what is required in our market. I would further say I made a second trial, with about the same result. Truly yours,
C. S. VAN AMANN

CUTICURA REMEDIES.

HAVE speedily and permanently cured Humors of the Skin and Scalp of Children and Infants afflicted since birth.

The treatment prescribed in such cases is mild doses of the Cuticura Resolvent, a perfectly safe yet powerful blood-purifier, and the external use of Cuticura, the great skin cure. The Cuticura Soap should be the only soap applied to the diseased skin for cleansing purposes.

RECENT advices from Germany state that the phylloxera has made its appearance in the vineyards of that country, and seriously threatens the vintage of next year. Combined with the short crop this year in France, this fact brings into greater prominence the importance of our American wines and vineyards. In some departments, champagnes, for instance, Messrs. A. WERNER & Co., of this city, have already developed a large and rapidly growing trade, while in other brands they are fast bringing forward equally deserving claimants to popular favor. In all essential qualities the American wines stand successfully the test with the foreign goods, and require only good judgment and enterprise, like that of WERNER & Co., to fully establish themselves in the public demand.

THE St. NICHOLAS Hotel, of this city, competes favorably with all its rivals in cooking, close attention to guests, elegantly furnished rooms, and a profusion of all the modern conveniences and appliances wherewith the guest is saved every trouble and effort. The rates are very moderate, and the throngs of visitors attest how much these things are appreciated by the public.

THAT invalid wife, mother, sister, or child can be made the picture of health with HOP BITTERS.

THE great success in the sale of the well-known Model Printing Press, manufactured by J. W. Daughaday & Co., of Philadelphia, is due to the fact that it is not only a money-saver, but a money-earner, wherever it is used. There is no trouble in its operation, and when once in use, there is no getting along without it. The attention of our readers is called to the Manufacturers' advertisement in this paper.

IF SUCCESS be the true test of merit, it is certainly a settled fact that "*Brown's Bronchial Troches*" have no equal for the prompt relief of Coughs, Colds and Throat troubles.

BURNETT'S KALLISTON, as a wash for the complexion, has no equal. It is distinguished for its cooling and soothing properties, removing tan, sunburn, freckles, redness and roughness of the skin, etc., curing chapped hands, and allaying the irritation caused by the bites of musquitoes and other annoying insects.

CONSUMERS desiring the best CHOCOLATE or Cocoa should purchase that prepared by Walter Baker & Co. Established in 1780, Walter Baker's Chocolate has no superior, and its standard is always maintained. All grocers sell it.

CARELESSNESS of others may cause you bodily injury; better be insured in THE TRAVELERS.

HEADLEY'S "Illustrated Life and Travels of General Grant" is full of information, and beautifully and profusely illustrated. It contains, among the two hundred and fifty odd engravings, a superior portrait on steel of the General, and is elegant out of the Arabian stallions presented him by the Sultan of Turkey. An immense sale may be prophesied for this work, by reason of its authentic character, excellent authorship, fine mechanical execution, superior style and low price.

REAL ESTATE IN THE WEST.

THE Denver Land Co. offer in another column alternate lots in their addition. These alternate lots are in fact given away, though a nominal charge of one dollar is made for the deed. The company limit the number purchasable at this price to five lots. Many of the large cities of the West have been started in a similar manner, and those who secured lots then, find themselves now in possession of valuable property. The opportunity does not often present itself of making an investment in real estate at such prices. The reliability of the company and their title to the property being well established, their could be no risk, with a fine prospect for a rapid increase in value. Denver has had such a wonderfully rapid growth, it is probable that the land offered will be speedily taken up.

HALFORD TABLE SAUCE, a genuine relish exactly suited to all tastes and all conditions of people.

WHEN worn down and ready to take your bed, HOP BITTERS is what you need to relieve you.

One inch in thickness of H. W. Johns' Asbestos Cement Filling, applied to hot air and steam pipes, boilers, etc., is equal in effectiveness as a non-conductor of heat to double the quantity of any other cements or filling. Be sure and get the genuine H. W. Johns' Manufacturing Company, sole manufacturers, 87 Maiden Lane.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

1 CITY LOTS

Opera House, Denver, Col.

25x125 FEET

SITUATED IN NORTH DENVER,

U. S. Mint, Denver, Col.

EVERY OTHER LOT ABSOLUTELY FREE!

FREE!

☞ WARRANTEE DEED WITHOUT RESERVE.

Denver now has a population of 40,000. Great cities are the outgrowth of great countries. Twenty years ago Denver was a small trading post on the frontier, now it is a large city, with numerous Churches, Hotels, Theaters, Street-railroads, Gas-works, Water-works, Gold and Silver Smelting and Refining Works, with a United States Mint, and is the great Railroad Center of the West. There are seven First-class Railroads now running and connecting with all the Principal and Branch Railroads from Maine to California. It is the Capital of Colorado, naturally the richest State in the Union, and located in about the geographical center of the United States. The climate is charming, with the best water and purest air in the world, and the scenery is unexcelled for beauty and grandeur. It is surrounded by the richest Gold, Silver, Copper, Iron, Lead, and Coal Mines and Agricultural Lands in America. It is now the headquarters for Colorado, Kansas, Nebraska, New Mexico, Wyoming, Nevada, Arizona, and Northern Texas. The rich mineral and agricultural resources of this vast country will make Denver the largest and wealthiest city in the West.

WHY LOTS ARE GIVEN AWAY.

As the tide of immigration is now in this direction, it is the Company's interest to have people locate in Denver and on their property. To encourage emigration here, the Company will give to any one sending their name and address a warrantee deed, in fee simple, for one or more lots in North Denver, situated in Weld County, State of Colorado, in immediate view of this beautiful city, the only charge being one dollar to pay the Notary Public fees for acknowledging deed and conveyance. The Company does not give every lot away, but each alternate one, and does not expect that every person who gets a lot in North Denver will come here, but a great many will, and they will induce their friends to follow. The increased population will soon make this property very valuable, and this Company retain each alternate lot, which they hold at prices varying from $25 to $500, according to location. For this reason the above proposition is made. The deeds are unconditional, not requiring any one to settle or improve, but with full power to transfer and deed to others. The limit to any one person taking advantage of this offer is five lots. This **property is not hillside, mountain, or swamp, but is level, fertile,** and has advantages for building upon too numerous to mention. Full and satisfactory information, with indorsements from our best citizens, will be furnished.

CERTIFICATE OF TITLE.

I, W. C. SANDERS, County Clerk and Recorder within and for said County and State, do hereby certify to the above and foregoing to be true, and title complete to the land therein described according to the records in my office. I further certify there are no abstracts or transcripts of judgments, taxes or other liens standing against said land. In testimony whereof I have hereunto set my hand and affixed my official seal this 26 day of August, A. D. 1879.

[SEAL.] State of Colorado, } ss. County of Weld. }

W. C. SANDERS, County Clerk and Recorder.

INSTRUCTIONS.

This Company will send by return mail, to any one sending within sixty days from the date of this paper their names, P. O. address, County and State, plainly written in full, a clear warrantee deed to a lot 25 feet front by 125 feet deep in North Denver, Colorado, clear of all taxes.

High School, Denver, Col.

Applications for city lots must be accompanied with one dollar for each lot to pay cost of making and acknowledging deed, postage, etc. The lots then can be sold and transferred at your pleasure.

Let all improve this opportunity to secure a home in the richest State in the world. Deeds sent to any part of the U. S. and Canadas. Address all letters to

DENVER LAND COMPANY,
449 LAWRENCE ST., DENVER, COL.

One of the many Churches.

ONLY $1.

PARLOR TABLE CROQUET.

The Greatest Novelty of the Age!

With our unrivalled facilities for wood-work of all kinds, we are able to get up an article of this kind at a price that would not be looked at for an ordinary Croquet. Our Parlor Croquet fits any drawing room, and is complete in every respect. It has brass sockets, hard wood mallets, balls, and pegs; elegantly enamelled and colored, with corner posts and elastic sides. The fascinating game of Croquet can be played on any dining table as dexterously as on the finest lawn. It will afford innocent enjoyment through the long winter months than any other game, even at 20 times the price. THE PHONOGRAPH SET TO MUSIC!

The Phonographic Piano.—A Most Wonderful Invention.

The Phonographic Piano has been called the most marvellous mechanical invention of the age. It will play any tune that ever was written, in a melodious and pleasing manner. Difficult and simple music produced in a masterly style, and it can be played by a child as well as by a grown person, and will furnish music for singing schools and social gatherings of any description, playing hour after hour, without any knowledge of music being required in the operator. The most wonderful of all musical inventions; a machine which in a purely mechanical manner produces the most difficult and exquisite music, Waltzes, Polkas, Marches, &c., &c., without any practice or knowledge of music whatever; far superior to any music-box, even though it cost thousands of dollars; for there is no limit whatever to the number of tunes it will play. This instrument is on the principle of the wonderful Phonograph. It has just been perfected (the accompanying cut showing it in its improved form), and in having the largest sale ever obtained by a musical instrument in the country. It has solid metal cams in imitation of green bronze; the notes or bars (the music producers) are metal, on same principle as a tuning-fork, which produces the clearest and most melodious notes, and never get out of tune; the bars are struck by strikers, the same as the wires are in a Piano, only their work automatically instead of by the fingers. The strip of prepared paper in which the tune is stamped or perforated, is about 20 inches wide, and as it passes through the rollers and over the bars the strikers spring through the perforations in the paper and strike the right note; this is all done automatically without any assistance from the operator (except turning the rollers), and the tune is played as patiently as by the most expert musician. It would be one of the most appropriate presents to make anyone, especially where there is no Piano. In point of execution and fineness of tone, it will compare favorably with a fine music-box, and its capacity is unlimited. We predict for this instrument a most wonderful sale. It is going faster than any musical instrument ever invented. Its action is perfectly **marvellous.** The music is superb, and everybody delighted. No knowledge of music required, and a child can operate it and furnish music for any occasion. Make your child a sensible present, one which will amuse and instruct and only the child but the whole household. The price of the Phonograph Piano is only $15, and a selection of popular tunes goes with each instrument. Boxed *free* and sent to any address on receipt of price. Address **THE MASSACHUSETTS ORGAN CO., 43 Washington Street, Boston, Mass., U. S. A.**

Agents Wanted.

FRANK LESLIE'S PUBLISHING HOUSE,
53, 55 & 57 Park Place, New York.

OUR CATALOGUE is now ready and will be sent on request. It contains 168 pages and 375 engravings of suits, cloaks, fur-garments, millinery, underwear, infants' clothing, laces, embroideries, etc., and is designed to convey information in regard to our entire stock. With its aid a lady can order samples of such goods as she may want, and from these samples with prices affixed she can select goods understandingly and with as much confidence as if she were present in the store—perhaps with even greater success, for therein all the various kinds are put before her in an orderly arrangement favorable to comparison and choice.

"In addition to these facilities now so fully afforded for the first time—or rather in consequence of these facilities—we venture to guarantee the full satisfaction of the buyer without stint or reserve."—*Extract from the Preface.*

Our stocks are fuller and perhaps richer than ever before; and on account of the lateness of seasonable weather many articles are marked down to extraordinary prices. In marked-down goods also absent buyers have the same advantage as those present exactly.

THE LATE GEN. HOOKER.

MAJ.-GEN. HOOKER, who died suddenly at Garden City, L. I., October 31st, was a man of mark in an age distinguished for its great and notable men. He was born at Hadley, Mass., in 1815, and was graduated from West Point in the Class of 1837. He entered the army as a second lieutenant in the First Artillery. During the war with Mexico he was brevetted a lieutenant-colonel for meritorious service in the terrible fight of Chapultepec. At the close of that war he was made a captain in the First Artillery and assigned to the Pacific Division. While in California he retired from the army and began farming. When the late civil war broke out he at once offered his services to the General Government, which made him a brigadier-general of volunteers, and sent him to guard the Lower Potomac. In March, 1862, he was assigned to the command of a division of the Third Corps in the Army of the Potomac. In the fighting on the Peninsula "Hooker's Division" took part in the siege of Yorktown, the battle of Williamsburg, and the engagements at Fair Oaks, Frazier's Farm, Malvern Hill, and others of less note. Subsequently he took part in the battle of Manassas and the succeeding conflict at Chantilly.

In the Fall of 1862 Gen. Hooker was placed in command of the First Army Corps. At the battle of Antietam he was severely wounded. In the following November he returned to participate in Burnside's fatal Rappahannock campaign as the commander of the Centre Grand Division (Third and Fifth Corps). In the meantime, on account of his services in the Peninsula campaign, he had been made a brigadier-general in the regular army. Upon Burnside's resignation President Lincoln gave Hooker command of the Army of the Potomac. At Chancellorsville, although his forces outnumbered the enemy, he was outmanœuvred by the Confederates, and defeated. Lee soon after invaded Pennsylvania, and Hooker followed him. When he had reached Frederick, Md., his plans were disconcerted by Halleck, who refused to put the troops at Harper's Ferry under Hooker's orders, who thereupon resigned.

In the following September General Hooker was sent to the Army of the Cumberland, and put in command of the Twentieth Army Corps. He was engaged in all the battles of that army until after the siege of Atlanta in July, 1864, when on a question of command he was again relieved at his own request. His engagements in that campaign included the "battle above the clouds," which compelled the Confederates to abandon the Chattanooga Valley. Following up this success, he cleared Missionary Ridge of his enemy. After the war he served in command of various Eastern departments, and in October, 1868, he was retired upon a full rank of major-general.

General Hooker was in his usual health until an hour before his death. A week before, he gave a large dinner-party at the Garden City Hotel, when he seemed to be in the best of spirits. He took his accustomed walk on the day of his death and did not complain of feeling ill until about four o'clock, when he retired to his apartments. After an hour he arose and busied himself about his rooms until 5:45 P.M., when his valet, hearing the General struggling for breath, hastened to his side and assisted him to lie down upon his bed, at the same time ringing the bell for help. Before assistance could arrive the General was dead.

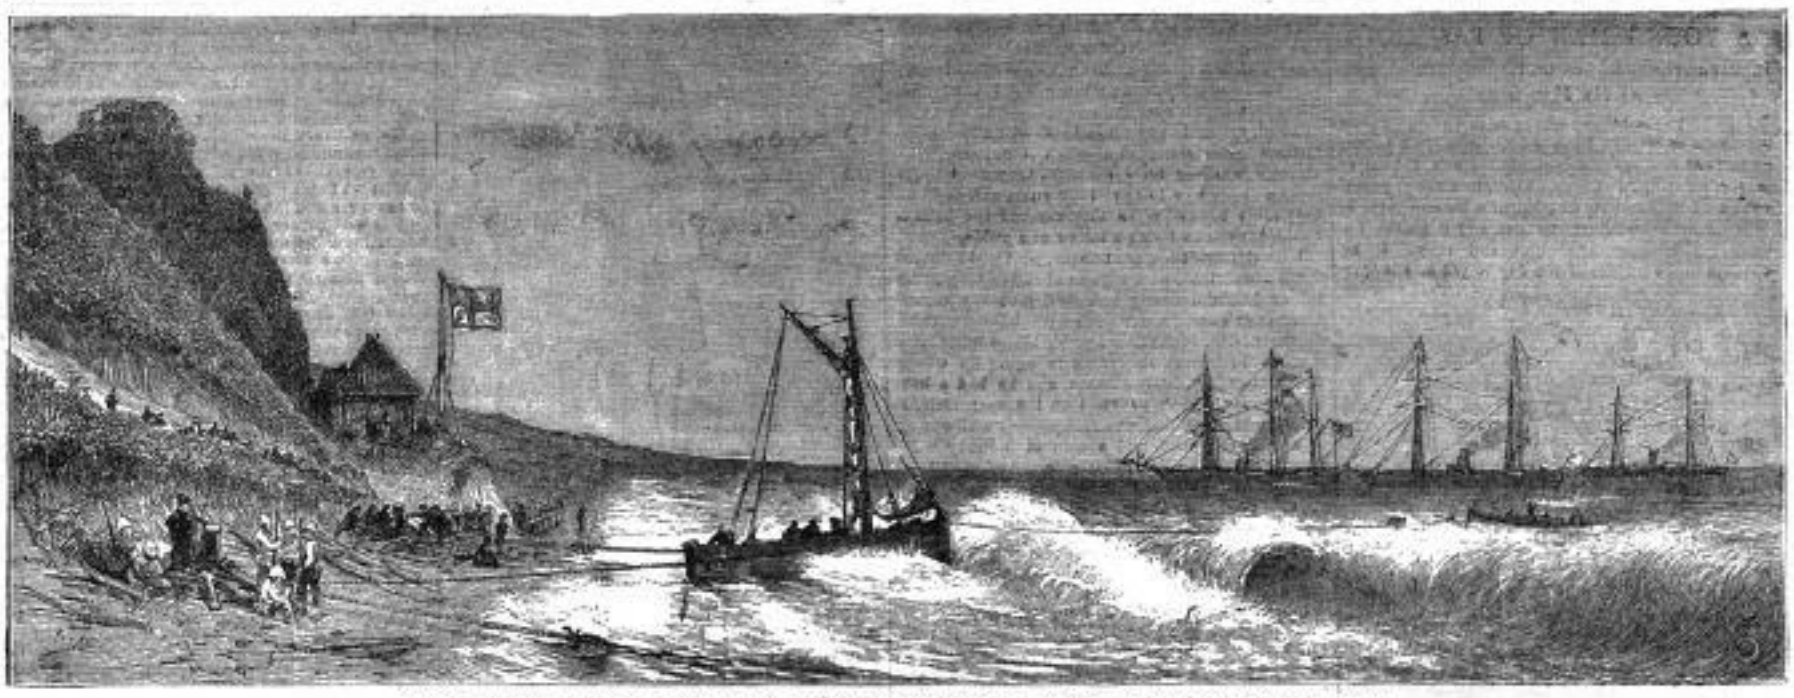
THE LATE GENERAL JOSEPH HOOKER, U. S. A.

THE LATE HON. ZACHARIAH CHANDLER.—FROM A PHOTOGRAPH TAKEN IN 1869.

DEATH OF HON. ZACHARIAH CHANDLER.

SENATOR ZACHARIAH CHANDLER, of Michigan, who was for many years a conspicuous figure in American politics, was found dead in his bed at the Pacific Hotel, in Chicago, on the morning of November 1st. On the evening previous he had addressed an audience of 5,000 people on the political issues of the day, and on returning to his hotel gave orders to be called at seven o'clock, as he was to leave for his home in Michigan at eight o'clock. The boy who called at that hour could get no response when he rapped, and finally, when put through the transom, found Chandler lying dead in his bed. The body was still warm on one side. Death was probably caused by apoplexy. Mr. Chandler was born in Bedford, N. H., on the 10th of December, 1813, and after receiving an academic education, removed to Michigan. There he engaged in mercantile pursuits, achieving marked prosperity and a large fortune by his integrity and enterprise. In 1851 he entered into active political life, being elected Mayor of Detroit. Next year he ran as the Whig candidate for Governor of the State, and in 1857 was elected United States Senator to succeed General Lewis Cass. He was re-elected to this office in 1869, his term ending March 3d, 1875. He was a candidate for re-election a third time, but owing to a Republican "bolt," was defeated by Mr. Christiancy, and in the following October he was appointed by President Grant Secretary of the Interior, which he held until the 3d of March, 1877. Last year he was again elected to the United States Senate, and took his seat at the extra session of Congress, at which he attracted much attention by his "stalwart" utterances on the Southern question.

Mr. Chandler was a man of very pronounced convictions, aggressive in temper and character, and thoroughly sincere and earnest in everything he undertook. He abhorred shams, and had a supreme contempt for all duplicity and cowardice in politics. He had rare executive qualities, and as chairman of the Republican National Executive Committee in the campaign of 1876 displayed a sagacity and energy which largely contributed to the successful organization of his party in the Northern States. In his long political career, his methods were often criticised, but his personal integrity and purity were never questioned, even by his political adversaries, and he leaves a name as a man and patriot which is without spot or blemish.



BIRTHPLACE OF THE LATE GENERAL HOOKER, HADLEY, MASS.

THE LATE HON. Z. CHANDLER AS HE APPEARED AT THE RECEPTION GIVEN TO THE COMMERCIAL CLUB OF BOSTON AT SQUANTUM, R. I., AUGUST 20, 1879.

THE CAPTURE OF CETEWAYO.—THE KING EMBARKING ON BOARD THE TRANSPORT SHIP "NATAL" AT PORT DURNFORD.

NEW FIELD STRETCHER FOR THE BRITISH ARMY.

THIS improvised field-stretcher has been invented by Sergeant-major Sanderson, of the Thirtieth Regiment, with the object of obviating the difficulty experienced in getting the wounded quickly off the field after engagements, when, owing to modern firearms, a large number of men are disabled in a very short time. As a rule, the ambulance corps can rarely be kept sufficiently close to the main body to be immediately available after a severe action, which, moreover, may possibly have covered miles of ground. Thus, the wounded being scattered all over the field, the doctors have to run from place to place, and have so many men to attend to who lie widely apart that but little time can be devoted to each case, while many wounded have frequently to remain on the field unattended to for hours, and it has been known that occasionally some have been overlooked altogether, their comrades having been sent off elsewhere, and the Hospital Corps being ignorant of their whereabouts. Sergeant-major Sanderson proposes that every corps should be drilled to put together this contrivance, and thus, after an engagement, sections of the troops themselves could be told off to re-traverse, where possible, the ground over which they had marched, and to pick up their comrades. Then utilizing their own or their enemies' rifles, with which and the coat and valise straps the stretcher is made, a folded great-coat serving for a pillow, they should improvise these litters—a work of ten minutes—and carry the wounded off to the nearest "Doctors' Post." The advantages of this stretcher, which can be improvised by the soldiers with the accoutrements which they always have with them, are manifestly great, and the Thirtieth Regiment has been duly drilled in making them. Four men are told off to each stretcher, two rifles being lashed together to form one side, which is connected with its fellow by accoutrement straps, forming the bed of the stretcher, about two feet three inches in width.

THE STRETCHER IN USE IN THE FIELD.

THE NEW ARMS-AND-ACCOUTREMENT STRETCHER USED IN THE BRITISH ARMY.—THE FORMATION OF THE STRETCHER.

CAPTURE OF THE ZULU KING.

THE capture of Cetewayo, the savage but heroic King of the Zulus, was effected by a patrol under command of Major Marter, of the Queen's Dragoon Guards, on August 28th, in a kraal at the edge of the Ngome Forest. He had been pursued for a fortnight incessantly by Captain Lord Gifford, under the orders of Major Barrow, through the wild region north of the Black Umvolosi River. He was immediately brought, with his companions, to Brigadier-General Clark's encampment on the banks of that river, stopping at the Ndaza royal kraal on the way. The hut in which he slept on the night of August 29th was guarded by Major Marter and Captain Astley Terry, and Lieutenant Hutton, of the Sixtieth Rifles, while six sentinels passed close by. This extra vigilance was enforced because of the escape of some of his followers during the day. On September 4th the prisoners were brought down to the seashore at Port Durnford, in a wagon drawn by ten mules, escorted by a squadron of Bettington's Horse, all in charge of Captain Ruscombe Poole, R. A. A company of the Ninety-first Regiment was drawn up on the spot, forming line opposite to the escort, below the signal-station, which had its flag flying. The wagon stood in the square between two lines of military, with the beach at the third side, and with a surf-boat, under Commander Caffin's orders, ready to receive the distinguished voyagers. All the dignity with which Cetewayo had borne his captivity gave way as he saw the sea and realized his fate. In the surf-boat he had his first experience of *mal de mer*, and is said to have conceived the idea that he had been poisoned, while the antics of the whole party are said to have been ludicrous. Nothing could persuade them to sit down quietly, and when they moved they did so crawling on all fours. In the transhipment from the surf-boat to the steamer they were treated not only with gentleness, but with a tender consideration that almost amounted to homage. A bridge was made for the passage from the boat to the ship, and on the poop of the *Natal* a temporary kraal was erected, consisting of a wooden framework covered with a heavy tarpaulin. The surf runs so high on this coast that landing or embarking can only be effected by means of surf-boats, which are hauled to and fro on a rope, one end of which is fixed on board a tug vessel, while the other is firmly anchored on shore.

THE ROYAL LIBRARY OF PARIS.

IN 1739 the Royal Library of Paris contained 300,000 volumes and objects of every description. In 1859 the number averaged 1,200,000. During the last 20 years the increase has been more sensible, and the actual number is estimated at 2,000,000. The mean annual increase from legal deposits alone is 20,000. Out of these 2,000,000 about 450,000 are devoted to French history, 200,000 to theology, 90,000 to science and philosophy, 60,000 to natural history, and 20,000 to English history. Part of the French and English historical and medical works are arranged in systematic catalogues.

THE CAPTURE OF CETEWAYO.—HUT IN WHICH THE KING WAS CONFINED ON THE NIGHT AFTER THE ESCAPE OF SOME OF HIS FOLLOWERS.

A YOUNG MAN OF FASHION

ILLUSTRATIONS SHOWING HIM AS HE IS, AND AS HE HAS BEEN.

NEVER in the history of the race has the young man of fashion been so respectable a person as he is at the present moment. He is, to look at in the morning, a shaggy object, in a rough great-coat and a low, easy felt hat or a fur cap. He is dressed in loose-fitting garments, not meant for show. His shoes are stout and easy. If he chooses in the middle of the day to get married, or

COSTUME OF VENICE, SIXTEENTH CENTURY.

to give away his sister in the holy rite, he then wears a broadcloth double-breasted coat, and is very nice as to cravat, but no show is allowed even then. For dinner he dresses in the quietest suit of black, not so ornamental as his butler's. He wears the plainest of linen shirts, with a gold button or a linen one, and an immaculate tie. On his large, shapely, perhaps brawny, but well-kept hands, are two rings, but no gloves. He does not even permit a gold watch-chain to appear, so remorselessly plain is he. If he has a foppery, it appears in a pair of delicate silk stockings and a neat pump. His nails are like Lord Byron's, "a rosebud with a halfmoon in it"; he is as clean as a moonbeam. A tub, in the morning, of cold water; another, of hot, before dinner; and if *vinaigre de toilette* or cologne, or violet-powder, find their way to his toilet, it is merely as supplementary to much scrubbing in good soap-and-water. He is careful not to offend women either by a stare or a swagger, or any inattention to their comfort in public conveyance or the ballroom. He cleanses from himself the traces of cigar-smoke and of liquors before he enters their presence. He may be a working, and still a man of fashion, or he may be the inheritor of a great fortune and a man to whom leisure is becoming and proper; but in either case he is the same simple, manly, unaffected person. Not brightening his beauty by any adventitious aid of dress, he may dress six times a day if he chooses, but each time it is with reference to the amusement or the work he has on hand, and not a "fixing up" of himself.

To be an effete or effeminate man now requires courage. No matter how much a man may stow away in his inner consciousness of that character, he dares not show it. If he is not able to wrestle, he must know men who do. If the "Chicken" and the "Danbury Pet" are not to his taste, he must read up about them. He must, if not able to "pull an oar," know all about boating as a science, and he must be able to fight, if need be.

Many of us can remember when a dandy choice few spirits appeared in coats which fitted in around the waist; when fine cloths (not rough tweeds) were worn by gentlemen; when a man prided himself on his small, white hands, and when there was, no doubt, a distinct country known as "swelldom." There was then a privileged class—privileged to lounge in club-windows, to do nothing and to know less than nothing—yes, very much less.

These men, if they could lead the German, if they dressed well, had money, and could send bouquets and keep horses, play high and pay their gaming

THE MAN OF FASHION, A. D. 1800.

debts, were called the young "men of fashion," and were in great request in society. Many of them led a tame-cat existence at the feet of some woman of beauty and fashion, who, with no very inconvenient scruples, yet needed this addition to her dress, her fan and her opera-box, of an attendant satellite. It was a poor copy of the Italian *cecisbeo* as described by Lady Mary Wortley Montague, and of whom an Italian nobleman said to her: "We recognize the fashion, but we have never had your English *sangfroid* to describe it." Yet it was a copy, a recognized necessity. Even the good, the honest, the hard-working men of the world looked upon these men with a certain respect, noticed how they dressed, rather felt towards them as members of a distinct profession; and when they, the bees, stopped working for a moment, they went to the drones to see how to have their coats cut, and how they must behave when they entered the halls of Fashion, even imitating a mince or a stride.

With tightly-fitting pantaloons, with frock-coat of finest broadcloth, with billows of satin cravat, with rolling hat and neatly buttoned gloves, with ambrosial curls and (it was said) with painted cheeks, did poor N. P. Willis, the last of the dandies, promenade Broadway thirty years ago. He was a figure, then, decidedly elegant, and he had a host of followers. Then he got into the caricaturists' hands, and much that was really great and worthy in a man of genius and a man of industry went down before the voice of ridicule. And yet he did much good. He rebuked our American mistakes. He told the Elijah Pograms and the Colonel Bardwell Slotes that they must not wear dress-coats in the morning, and satin stocks at breakfast. He attacked the satin waistcoat, and brought in the broad, strong, English shoe.

It was not strange that, attached to the traditions of that elegant society which he saw in London, Willis forgot to go on with the times, and during our war was seen at Washington and at the White House as the "curled and perfumed Assyrian bull" which Tennyson has immortalized in "Maud," taking the idea from the illustrations in Layard's "Nineveh," and, observing the resemblance to a London swell of thirty years ago, he uttered that line which so few people understand.

But those who followed N. P. Willis in his nicely-fitting coats forgot to follow his genuine accomplishments. None of them tried to write "Absalom." They were not dandies of genius, so that intermediary stage, where a man hung on to the trailing skirts of fashion, by effeminacy of manner, a womanish attention to dress, a very mannish aptitude for dissipation, and no possible idea of being anything or doing anything, was, perhaps, the poorest episode in the history of a man of fashion.

In our country it was definitely brushed away by the war. A great movement, politically, rousing the best men and bringing them to the front, swept away all the cobwebs, and the Duke of Wellington's remark was made more than once, "the puppies fight well," as the loungers in club-windows became the famous colonels of regiments. Waists were let out, corsets were thrown to the housemaid, shoes were broadened, and the man, hidden in the calyx of the dandy, blossomed forth.

In England the tendency to out-of-door sports—

THE MAN OF FASHION, A. D. 1830.

the cricket, the ball-club and the rowing-match—was doing the same work, and the progress of the age, that high-sounding phrase by which we express the hidden force which brings about an inexplicable change in any set of customs or manners, was telling the knell of old formalities.

As it became the fashion for every man to try to be able to pull a good oar, so that man must first be sober in his meats and drinks. "Physical culture" put an end to much drunkenness. It is the best apostle of the temperance reform—it is the real Father Mathew. Then one word in favor of clubs. They are a great improvement on the old bar-room, where men used to congregate, and where the man who could not drink was thought a milksop. Young men at clubs now undoubtedly drink too much, are too lazy, too fond of cards, are very far from being Paladins of Charlemagne or knights "*sans peur et sans reproche*," but they are vastly better men than was the dandy of thirty years ago.

But the man of fashion of to-day, he who by inherited wealth is removed from the necessity of work, he who can consecrate his youth to amusement if he chooses, is apt to be, in the first place, an accomplished man.

He knows music well, can sing a good song, play the piano or some instrument, or he is an artist. He can sketch, paint a tile or a very nice water-color; he can etch if he chooses, or dabble in art in the studio of a sculptor. Indeed, one of our richest young men in New York is an admirable sculptor, or he takes to chemistry or some other natural science. If these do not amuse him, he becomes a cricketer, or a boatman, or a ball-player, or he drives a coach—a very manly occupation—and in almost nine cases out of ten, he is a well-read man. Not now, as formerly, at a dinner-table, could an alarming swell make the mistake of asking if "The Shield of Achilles" were a horse, nor if "Richelieu" were one of Shakespeare's plays, nor if "Pericles" were a species of shell-fish. A young man of fashion

COSTUME OF THE REIGN OF WILLIAM III.

must know something, else he would be a very poor companion for his "sisters and his cousins and his aunts"—for they all know a great deal.

There has been one thing rather against young men in America, and against the best class, too; they were put at work so young that they had not time to cultivate their minds as their sisters and lady-loves were doing (for a more clever, industrious, bright set than the young American women do not exist). This brought about a sort of indulgent tranquillity towards the minds of men, on the part of women. They loved men for what they were, the most indulgent, chivalrous, noble husbands in all the world, and forgave them for what they did not know; so men were allowed to be stupid. "*Nous avons changé tout cela.*" Men must not be stupid any longer. A man must go to Harvard or Yale or Princeton, and the more he is worth the more he must know. He may wind up at Oxford, if he have a mind; nay, if he go down-town and sweep out a store (and these are the nineteenth-century knights), he must read, think and inwardly digest. Most young American men continue to do this; they justify About's description of them. Their enormous energy, which has been partly the fruit of necessity, partly brought out by the whip and spur of climate, partly the growth of republican institutions which are always issuing such drafts on the Bank of Hope, have made young Americans almost ludicrously successful and a proverb to Europeans.

The words "dandy" and "fop" have thus, it would seem, become obsolete. The dandy is like the dodo, an extinct bird. It is rather a pity, for it deprives literature and the drama of a type. The English dandy made almost his last bow to an English audience in the play of "Money," where, as *Sir Frederic Blount*, he stands for the incarnation of feebleness, selfishness and fine clothes. The Dandy in Disguise gave us the fine novels of "Pelham" and of "Cecil, a Coxcomb," probably the best society novel ever written. That iron hand under the velvet glove, that hero who seeks the sunny or the shady side of Pall Mall, lounges in at clubs, speaks with a lisp or a drawl, and then goes out to conquer the world with the courage of Hercules, the strength of Samson and the wiliness of Jason, has been very dear to the novelists, down to Ouida. But now she has got to give him up, for he is too rare for identification. The man who loves fine clothes, who has really the native instinct of self-adornment, who would prink his feathers, must now take refuge in being a soldier and wear a uniform, or he must go mildly into private theatricals, for there is no dandyism allowed by the regulation-drill of the nineteenth century.

It is curious to observe how Robertson tried, in his society drama, to rehabilitate the dandy, but his are all dandy lions; the strong, real, true man is masquerading—there was no genuine Brummelism in it.

The history of old dandies is pathetic, that of Brummell almost a tragedy. Some letters of his, in possession of a lady of this city, came out during the Metropolitan Fair in the sale of autographs. They were beautiful letters, written in a fair English flowing hand, such as the duchesses write, and betrayed a more than usual amount of culture.

They were written, poor old fellow! from Bologne, whither he was banished by poverty and the frown of George the Fourth, the most heartless dandy whom the world ever saw; and he speaks in one of having just forwarded a monkey across the Channel to "a lady of quality," and makes some witty commentaries on his past. All leaders must have talent. Brummell had, or he would not have had such a following. Count D'Orsay, the prince of the dandies, had much accomplishment and real learning; yet to dress his fine person in garments which fitted like his skin, to wear coats with immensely rolling collars, to arrange a watch-chain in many a glittering coil across his delicate waistcoat, was to him the occupation of many a precious hour. Byron admired him and copied his style of dress, until Lady Jersey said, "My dear Byron, you are never so handsome as you are with your collar turned back, and your hair matted down by your hat"; and then Byron assumed a foppery of carelessness, for the great poet had his weaknesses, and was not indifferent to the reputation which he had of being the handsomest man in London.

Lord Houghton was a great dandy in his youth. Bulwer Lytton called him the "cool of the evening"; but no greater dandy ever lived than Benjamin Disraeli, the man who made himself of the falsest prophecy—"the history of heroes, it is the history of youth!" The fop, perhaps, a shade removed from the dandy, back a century or so, into the time of snuff-boxes and powder, was the dear darling of the French comedy, the precious outlet of Pope's spleen (as in his sketch of Lord Hervey), the conductor for some of Cowper's melancholy madness. A book could be written on the "Place of the Fop in Literature."

Shakespeare did not trouble himself much about them. The great master dearly loved a beautiful young man; he liked to flood the world with Hamlets and Romeos and Valentines. Malvolio, in his melancholy, gartering his stockings with yellow, is perhaps a fop in love, but the character did not receive study at his hands. Perhaps there were few fops in his day. Fine dressing was *de rigueur* in the days of the Virgin Queen; noble living, and an echo of chivalry, were yet in the air. One can scarcely imagine a fop in the same age as that which produced Sir Walter Raleigh.

But Sir Walter Scott designed to sketch the character in Sir Percie Shafton, and great masters, in France, England, Germany, in poetry, the drama, and in romance, in painting, have all delineated it.

How Hogarth luxuriated in it! In "Marriage à la Mode" the fop is immortalized.

Now the painter, the dramatist, the romance-writer has no such subject. He must, if he sketch the young man of fashion, draw a very prosaic picture of a very good fellow, sometimes as handsome as the Antinous, but concealing his graces under a billycock hat and an ulster; sometimes as tall, as noble, as Greek in outline, as the Apollo, with the same "beautiful disdain" in his profile, but quite careless, perhaps ignorant, of the fact, or profoundly indifferent to it; thinking much more of the biceps or the muscle in the forearm than his beauty; wondering whether he shall beat as single-scull, or if he shall win the race on his horse Bouncer, or if he shall make a score at cricket, or win at racquets, than if he shall make a good effect in the drawing-room.

All this devotion to physical exercise has improved the beauty of American young manhood, and is removing from us the reproach of being the skinny, sallow Yankee which we are represented as being on the English stage. The sculptors say that the young men of to-day are far nearer the Greek models than they were twenty years ago. They live nearer to the Greek model. They run, they throw the quoit, they exercise the arms, they bathe, they cultivate the body, not thinking of themselves or of their beauty. They have unconsciously attained to the highest beauty, and we who see them rowing on Saratoga Lake, or playing at cricket, or riding a horse in jockey dress, or playing in burlesque, where they allow themselves free play in dancing and in grace, say to ourselves that Phidias and Michael Angelo did not model from their imaginations or from a demigod, but from such boys as these.

There is a fresh departure in this return of the young man of fashion to masculine work. There was something very fine in the coaching mania. It was not a bad sight to watch Colonel Kane's face as he drove at a full run down from the Park to the Hotel Brunswick, a dozen lives in his hands, a thousand under his horses' feet. It was a command of all the finer forces of observation and of strength which were brought into play to avoid an accident in our crowded streets. One might say that a man with no fortune at all, an ordinary coachman, who had not had Colonel Kane's opportunities of education and polish, from contact with the best people

COSTUME OF THE LATTER PART OF THE EIGHTEENTH CENTURY.

in England and America, could have done it as well. But an ordinary coachman could not have done it as well, nor have made it so delightful to hundreds of people to take a drive in the open air through our Spring scenery. It was much better than lounging in a club-window, or on the "shady side of Pall Mall." It proved itself to be wise by the manner in which it was patronized, and fortune favored the brave and spared Colonel Kane an accident, such as might have happened even to his cool head and wonderful nerve.

The world is full of heroes—on the quarter-deck, on the little schooner, on the raft, on the prairie, down in Wall Street in some grim back office, in the ranks of the fighters for bread, and in the much-to-be-pitied soldiers who are leading up to that forlorn hope, an attempt to make a life of leisure pay in America. In a country where work is the fashion, where there is no licensed leisure, as there is in Europe, a young man who has to get rid of his day in amusement is to be commiserated. He has in the first place to get rid of himself, a very troublesome customer. There are his muscles and sinews demanding action. There is his brain uncomfortably stimulated by the oxygen in the atmosphere. His forces have to be fatigued; as Mrs. Stowe forcibly puts it, "passions and feelings are pouring into his veins like tides into the Bay of Fundy." He is a hero who innocently conquers this problem. No wonder old Watts remarked with much freedom *apropos* of Satan, that he always found some work for idle hands to do.

All honor to the young man of fashion of the nineteenth century! That he is so modest, so well-behaved, so manly a man with so little affectation, with so keen an appreciation of outdoor exercise and cleanliness, with so plucky a heart and with such a gentle, true and chivalrous devotion to women:

"For, though all unknown it be,
In such manly modesty,
We the real hero see."

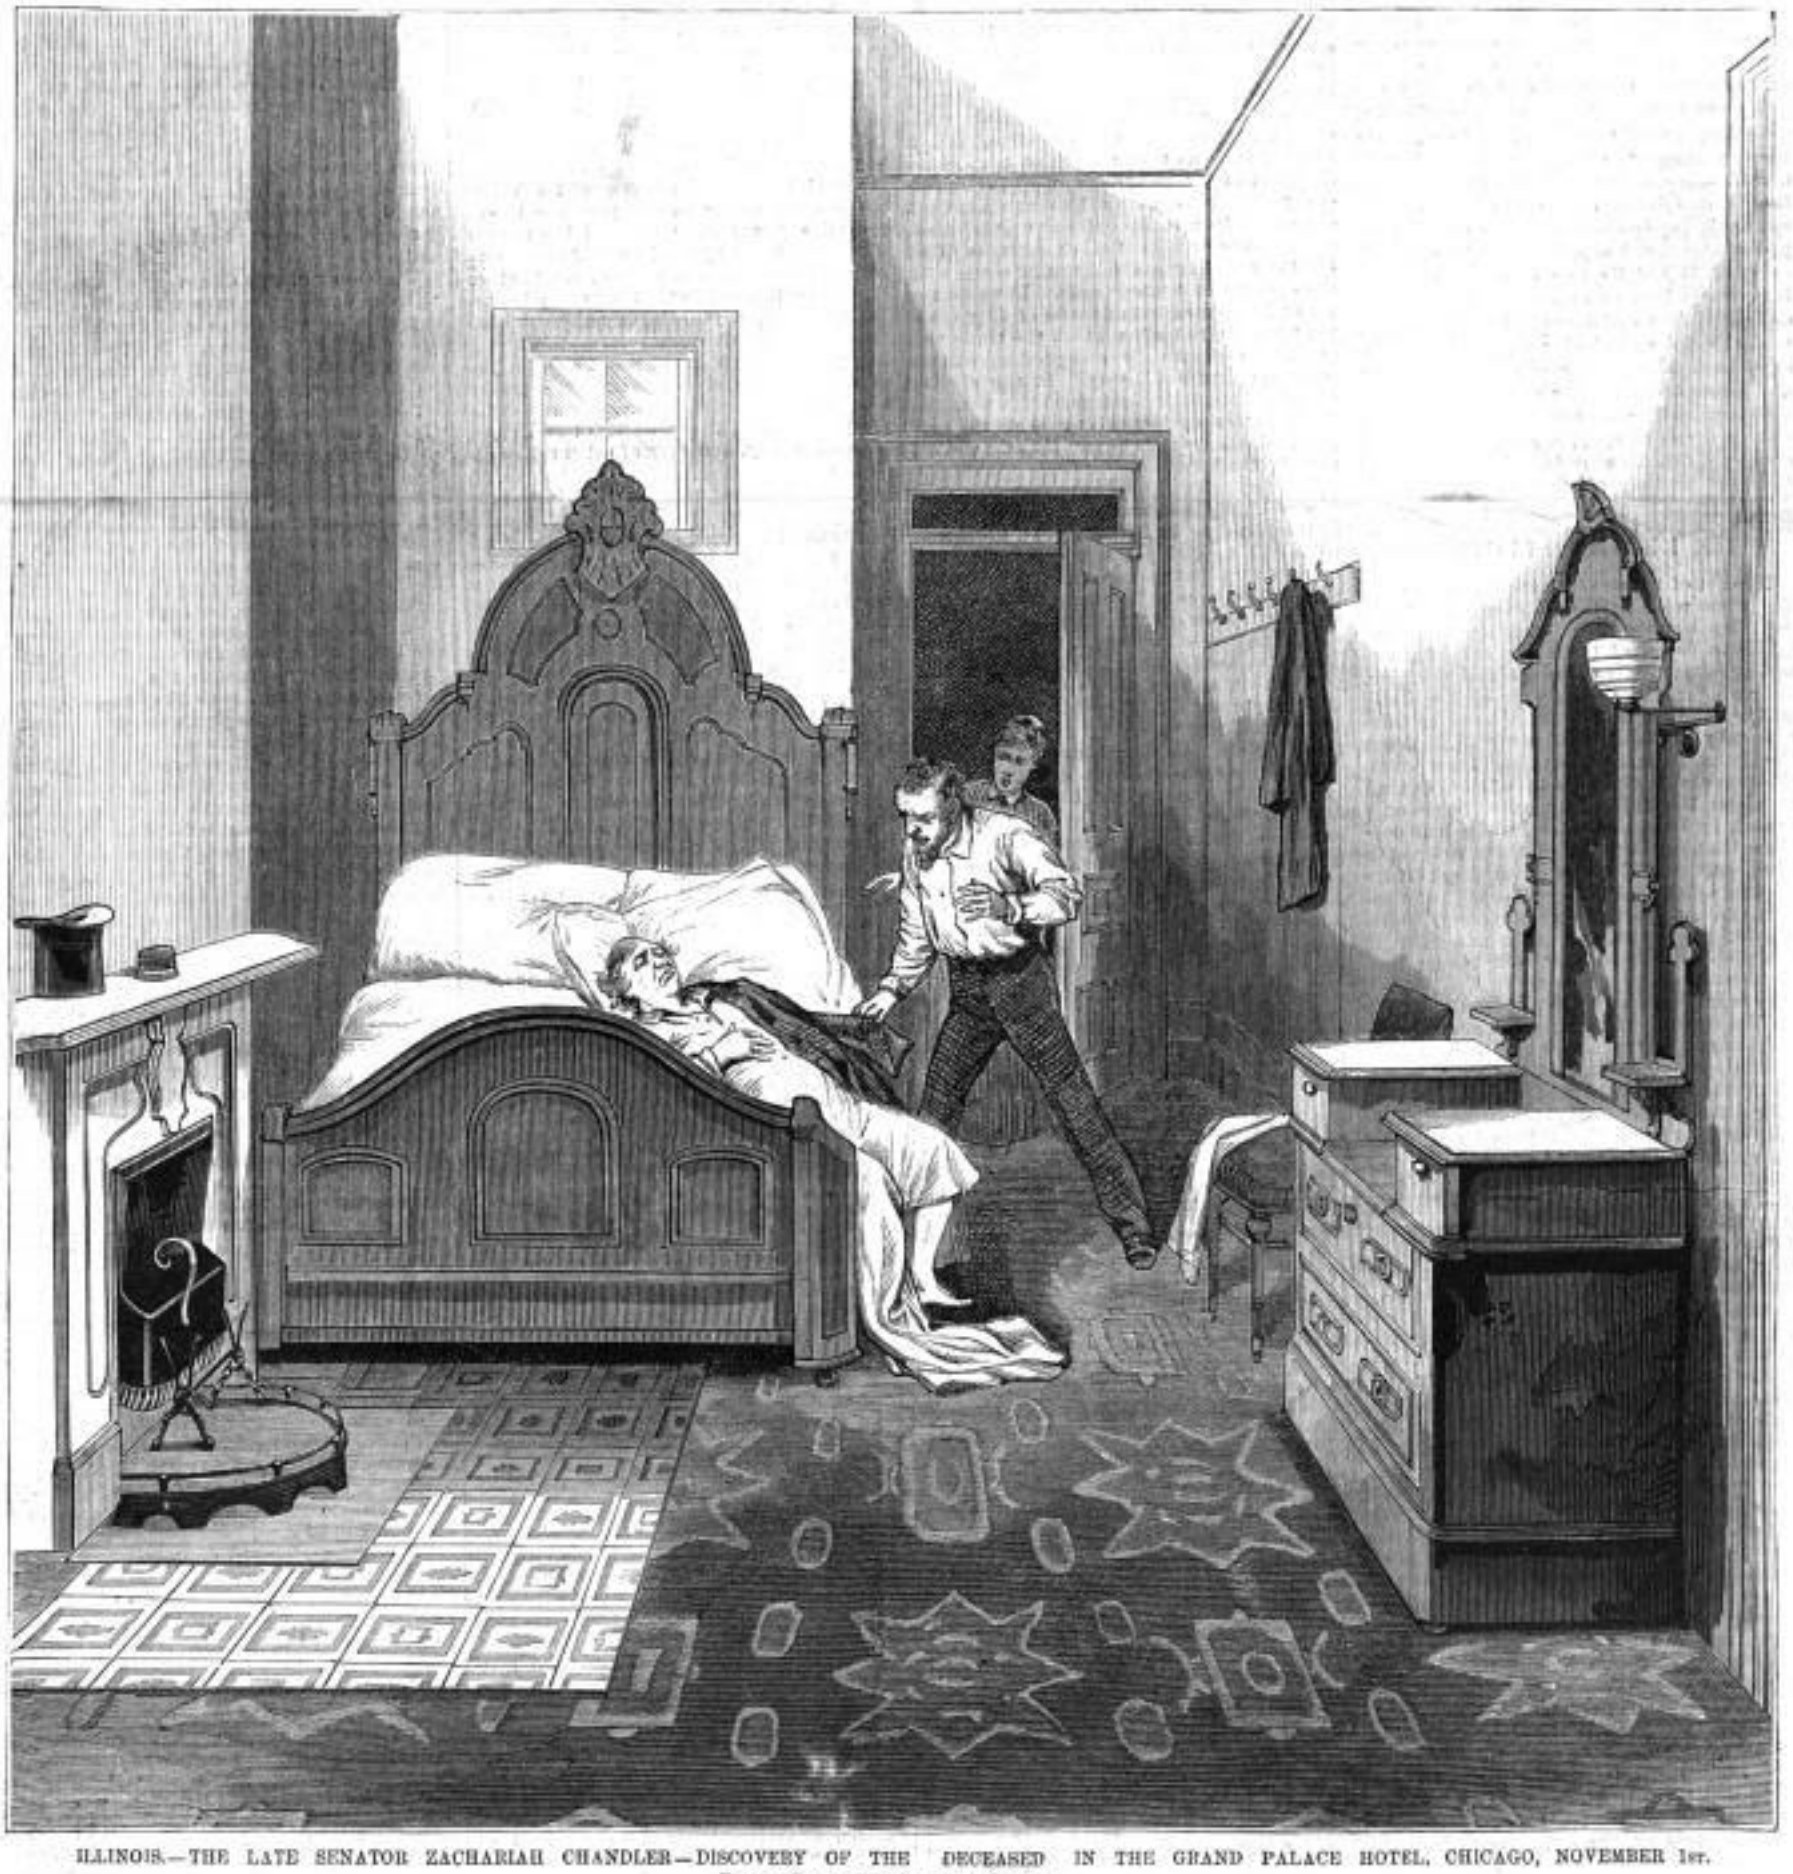
FRANK LESLIE'S
ILLUSTRATED NEWSPAPER



Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,260—Vol. XLIX.] NEW YORK, NOVEMBER 22, 1879. [PRICE, WITH SUPPLEMENT, 10 CENTS. $4.00 YEARLY. 13 WEEKS $1.00.

THE LATE HON. ZACHARIAH CHANDLER.

THE death of Hon. Zachariah Chandler, in the Grand Pacific Hotel at Chicago, created a profound sensation throughout the country. He had been filling a political campaign engagement, his last address being before an immense audience in McCormick's Hall, Chicago, on October 31st. Returning at the close with some friends to the hotel, he spent some time in conversation, during which he complained of an attack of indigestion. Although he had business requiring his attention at home on Saturday, he was persuaded to stop at the hotel over night, orders being given to call him at seven o'clock in the morning. When, on Saturday, the office-boy knocked upon the Senator's door there was no response; a second summons elicited no answer, and then the boy climbed to the transom and looked over. The body of the Senator was seen lying in an uneasy position on the bed—the feet extending over one side, his arms raised above his head and holding a coat that was partially wrapped about his shoulders. Gaining access to the bedroom, the boy found the Senator's body somewhat warm, but the pulse had ceased beating. Dr. McVickar was at once summoned, and he pronounced Mr. Chandler dead. From the arrangement of his clothing and the appearance of the room, it was surmised that he had awakened before the hour at which he was to have been called, and had laid out a clean shirt, having put the coat around his shoulders on account of the morning chill, and then, being stricken with apoplexy, had staggered towards the bed, and died in the position described.

(Continued on page 203.)

ILLINOIS.—THE LATE SENATOR ZACHARIAH CHANDLER—DISCOVERY OF THE DECEASED IN THE GRAND PALACE HOTEL, CHICAGO, NOVEMBER 1ST.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, NOVEMBER 22, 1879.

We give in the present issue the fourth of a series of illustrated interviews with eminent public men, which it is proposed to continue as a special feature of FRANK LESLIE'S ILLUSTRATED NEWSPAPER. *The present interview, with George Jacob Holyoake, the well-known English philanthropist and reformer, relates to the land question in Great Britain and the movement now in progress for the colonization of English farmers in the United States. Mr. Holyoake speaks as an authority on this whole subject, and his statements will be found deeply interesting to all our readers.*

In the present Number we commence the publication of a powerful new serial story, entitled "The Hidden Witness," written expressly for our columns by the author of "That Husband of Mine." This story, for which we pay a large sum, will run through several Numbers, its interest deepening with each successive chapter. We illustrate also, in the present Number, the Grant reception at Galena and Chicago and the Chandler obsequies at Detroit, from original sketches made by our special artist. It is our intention that the ILLUSTRATED NEWSPAPER, *not only in its pictorial representations of passing events, but in its literary features, and its catholicity and comprehensiveness in dealing with the questions of the day, shall hold the lead it has fairly won in illustrated journalism, and to that end we shall avail ourselves of all the resources which experience can suggest or money can command. The coming year, in which the great national contest for the Presidency is to be decided, will be marked by discussions and events of supreme interest and importance, and the present, therefore, is just the time to subscribe for the* ILLUSTRATED NEWSPAPER, *in which all these events and discussions, and those which lead up to them, will be treated with absolute impartiality and independence. For purposes of present instruction and future reference, there can be nothing more instructive and valuable in the family, in which children are being equipped for life's duties and responsibilities, than just such an illustrated history of the times as we present.*

THE RECENT ELECTIONS.

IN eight of the eleven States in which elections were held on November 4th the Republicans made conspicuous gains, while in seven of them they achieved victories surprisingly complete and decisive. In New York, the candidacy of Mr. Kelly secured the election of Mr. Cornell as Governor by a plurality of some 37,000, but the Democratic nominees for Lieutenant-Governor and other State offices, having received the full party vote, were only beaten by bare majorities, while it is possible that one or two of them may have been successful. The State Legislature is overwhelmingly Republican. In Connecticut, New Jersey, Pennsylvania, Wisconsin, Minnesota, Nebraska and Illinois the popular verdict is even more pronounced in the general result.

It is impossible to mistake the meaning of this result. It is a protest against the reactionary policy which was inaugurated at the special session of Congress, and a declaration on the part of the people that they will not tolerate any assault, from whatever quarter, on the established results of the war, or acquiesce in any disturbance of the sound financial system which has brought a revival of national prosperity and placed the public credit upon a foundation at once honorable and secure. Whether they intended it or not, it is undeniable that the attitude of the Democratic leaders in Congress on the question of the sovereignty of the nation—their arrogant assertion of State Rights, and their failure to condemn acts of violence and intimidation committed under cover of that doctrine, in violation of Federal law—has created a widespread feeling of unrest and alarm in the public mind. This feeling has been especially strong among that class of moderates—merchants, farmers, manufacturers and men of business—who consider the agitation of issues involving sectional antagonisms as a menace to the public tranquillity, and who, having no sympathy with the extremists of either party, regard the national welfare as the supreme concern. It is this class whose votes have swollen the Republican victories in the recent elections, and whose support will combine to make the North practically "solid" for that party unless the Democracy shall break loose from the Bourbon leadership which so persistently leads them astray.

The success of the Republicans in such doubtful and uncertain States as Connecticut and New Jersey will probably secure the election, in 1880 or 1881, of United States Senators in place of Senators Eaton and Randolph. In this State, a Republican is likely to succeed Mr. Kernan, and, with other changes which are already assured, the Democratic majority in the Senate will be reduced to a very narrow margin, if, indeed, it is not altogether obliterated. As to the effect of these election results upon the Presidential canvass, it is too soon as yet to speak intelligently, but it is obvious that they increase the chances of Republican success in that great contest. A great deal, however, will depend upon the nominations of the two parties. New York is still fighting-ground, and its vote in the Electoral College, which will be influenced by considerations of character and fitness in the candidates as well as by the principles involved, may after all be decisive.

THE "BOOM" IN IRON.

THE iron trade is "booming." During the past twelve months the development of the business has been most remarkable, and forms a striking incident in the commercial history of the country. Even producers can scarcely realize how great has been the consumption of pig-iron, bar-iron and steel rails since the Spring of 1878. During the fiscal year ending June 30th, 1873, our importations of iron and steel, and manufactures of the same, amounted to $59,308,452, while the imports of the same articles for the fiscal year terminating with June, 1878, were $9,057,633—a difference on the American side of the ledger of $50,250,819. We are now feeling the stimulus at home of this decrease in imports, quickened by resumption and renewed confidence on the part of capitalists.

The course of the market plainly indicates that the stocks which accumulated in 1873–4, large as they may have been, were disposed of before the opening of the present year. In January last the heaviest dealers in iron made extensive purchases, holding the opinion that an advance of at least one dollar per ton would come with the opening of Spring trade. Down to the 1st of May an actual advance of fifty cents per ton occurred, after which the trade was quiet for a short time, and producers made sales for future delivery. In the closing days of June it became manifest that the demand was greatly in excess of the supply, and this brought buyers into the market with increased orders. At this period pig-iron, adapted to the manufacture of Bessemer steel, was selling at $20 to $21 per ton at the furnaces, and foundry and mill-irons from $17 to $20 per ton, cash. The few months that have since elapsed have witnessed the heaviest advance in iron that the country has ever known in a like period.

At this time of writing, the cash price of Bessemer metal at the furnace is $35 per ton; mill iron, according to grade, sells at the furnaces at the rate of $33 to $36 per ton, and Hocking Valley irons command from $32 up to $35. During July the advance in iron amounted to about three dollars per ton; in August the advance was equal to four dollars; in October the price was increased almost seven dollars, and about two dollars in November. Bar iron has more than doubled in price since the month of June, selling at that period at the rate of $1.60 per one hundred pounds, and now commanding as high as $3.50 for a like weight.

The demand is great, and there is no probability that it will diminish for a considerable time to come. According to present indications, the mills in operation throughout the country will be taxed to their utmost capacity, and new enterprises will necessarily arise. In the meantime, as at present, the home prices will be largely governed by the cost of imported irons. But for our tariff, large quantities of European iron would be sent into the American market, but from the present outlook, foreign producers are likely to have all that they can do at home. Buyers are assuming control of the European market, and enterprises that have been lying dormant for years are being revived and vigorously pushed. Particularly is this true of Russia and France, in which countries there is considerable activity in the building of railways. Another incentive to the demand for iron is to be found in the fact that ocean freights have become remunerative, and this, very naturally, gives an impetus to iron ship-building.

Taking into consideration this item of ocean freight, we find but little difference in the prices of iron at home and in Great Britain. In June last Scotch iron commanded $9 per ton. Since then the price has advanced one hundred per cent., being now quoted at $18 per ton. Add to this the ocean freight, which has risen to $4 and $5 per ton from Glasgow to New York, and the price of Scotch iron laid down in the latter port would range from $22 to $23 per ton. But this is not all. During the past three or four months transportation rates from the seaboard to all western points have advanced fully two dollars per ton, thus increasing the cost of foreign irons to Western consumers. With these equalizing causes operating in favor of home producers it can scarcely be expected that much foreign iron will find its way to a market in the United States.

There does not seem to be anything of a speculative nature in the extraordinary advance of prices in the iron market. The rise occurs as the natural result of a demand greatly in excess of production and the inability to meet existing wants with existing means of production. The result will be to put new furnaces and mills in operation, thereby extending the usefulness of capital and creating an additional demand for labor. Very few people are aware how many persons, with their families, are directly interested in the iron business. Turning to the list of occupations furnished by the census of 1870, we find the following: Operatives engaged in iron furnaces, 7,452; rolling-mills, 17,249; iron and steel works, 22,141; machinists, 54,755; tools and cutlery, 5,351; blacksmiths, 141,774. In addition to the foregoing we find several thousands engaged in minor trades calling for the use of iron and steel, to which may be added those engaged in mining iron ore. Perhaps two millions of people derive their support from the several branches of steel and iron working, and it is gratifying to observe that an advance of wages follows in the wake of the iron "boom."

THE TURKISH CRISIS.

ANOTHER crisis in Turkey seems to be unavoidable. With a bankrupt treasury, and the army clamoring in vain for money, and with Russia and England intriguing for supremacy in the Cabinet councils, it will be impossible for the Porte to much longer resist the disintegrating tendencies which have so long been at work. England is evidently beginning to see that the Asiatic reforms will never be carried out unless actual pressure is employed, and a formal demand has accordingly been made by the British Ambassador for the immediate execution of treaty stipulations on this subject. Sir Austin Layard has warned the Porte that unless it shall "speedily introduce the reforms to which it has pledged itself in the Asiatic dominions of the Sultan, and can assure the protection and the just and equal government of the populations, the question of an Armenian nationality, and even of other nationalities, may be raised, which will probably end in further diminishing the authority and territory of His Majesty." Certain demands of England as to the military administration of Erzeroum have been rejected by the Porte, and there are reports that the British fleet, now in the Mediterranean, will proceed to Turkish waters unless all promises are faithfully kept. Austrian and Russian diplomats at Constantinople are closely watching the course of events, and it is quite safe to say that a collapse of the Ottoman Government from sheer exhaustion would surprise no careful observer. As to the motive of Beaconsfield's new aggressive policy, it is no doubt found in the sudden change of the Turkish Ministry, concerning which a Paris correspondent writes:

"From the moment of the disgraced Mahmoud Nedim's return to Constantinople it was evident to all who have studied Oriental politics that a revolution was imminent, and that the influence of Russia had again begun to make itself felt in the councils of the Sultan. Mahmoud's popular nickname, Mahmoudoff Nédimoff, is sufficient in itself to indicate his sympathies. He was the creature of General Ignatieff, and the most devoted of the many agents whom Russia has always subsidized at the Porte. His appointment is one of those *coups de théâtre* which Prince Gortschakoff has already, on more than one occasion, served up to Western diplomats who laid the flattering unction to their souls that the old Chancellor was played out and that Bismarck and Andrassy had checkmated him. Lord Salisbury's heart leaped with exultant joy at the erection of a new and insurmountable barrier to Panslavist ambition; yet, scarcely had the 'roughs' of Manchester been assured how 'Austria would stand, as a vigilant sentinel, at the foot of Turkey's ramparts,' when the news was flashed from Stamboul that the enemy had established its garrison within the place, under command of Mahmoudoff. England has been taken unaware; she thought her hold upon Turkey assured for ever, and hoped to find Austria and Germany convenient cat's-paws, willing to take care of her interests while seemingly they looked after their own. The Vienna alliance was a sure guarantee against Russia, argued the Downing Street wiseacres. So it would have been, but for this new combination, which none of them had ever imagined possible, and now, as the Austro-German alliance has been met by a Russo-Turkish alliance, matters have become more complicated than ever."

PERSONAL IDENTITY.

THE desire to remove and alter at will the distinguishing marks of individuality, has always characterized man. Probably the tiger, being a coarse, unthinking beast, does not trouble himself because of his inability to change his spots; but man resents, as a limitation of his liberty, the ineffaceable stamp with which Nature has marked him. How to change one's face, to commit facial forgery, is a problem that has hitherto never been successfully answered. Ingenuity, aided by the resources of science, has been able to do much in the desired direction, but has fallen short of complete success. Hair can be dyed, straight hair can be curled, and poverty of hair can be supplemented with a wig. Teeth that have perished by the wayside can be replaced by the skillful dentist. The complexion can be dyed dark, or whitened by enamel. The mouth can be concealed with real or artificial mustaches, and in the case of the beardless sex its whole meaning can be altered by a careful training of the muscles. Even the nose can be remodeled by intelligent and persistent squeezing, and the surgeon's art can even supply new noses when they are needed. With the aid of these devices a man can, to a very great extent, alter his original appearance. He can treat himself as the forger treats a bank-note which he raises from a low to a high denomination, by altering the figures on its face. Straight-haired, blond and ugly John Smith can convert himself into a comparatively handsome Italian nobleman by judiciously altering his hair, complexion and teeth. Nevertheless, though he forge himself with the utmost skill, his eyes will betray him. The blue-eyed man will remain blue-eyed while he lives, and the black-eyed man will descend black-eyed to his tomb. You may dye, you may crumple the hair if you will, but the tint of the eye is practically unchanged, as the poet has in substance asserted.

At least such has hitherto been the universal belief as to the unalterable character of the eye, but now comes a German doctor and announces that he has discovered how to completely change the color of the eye. He can give the black-eyed girl eyes of the purest blue, and if she has a taste for novelty, can furnish her with eyes of any specified color. This remarkable man is ready to dye any eyes that may be intrusted to his skill, either blue, black, hazel, green, red, yellow, purple, brown, white, or, in short, any conceivable color. We may shortly expect to see all sorts of novel and entertaining eyes, and fashion may soon order that every lady shall wear one scarlet and one yellow eye—a combination that would be exceedingly gorgeous, though perhaps somewhat barbaric in point of taste.

The result of this discovery of the feasibility of dyeing the eyes will be to enable any man or woman to completely change his or her physiognomy. It gives us the power to utterly thwart the intention of Nature that each person should be marked for identification permanently and indelibly. A man can now alter his appearance so thoroughly, that in his remodeled face there cannot be found a single one of the original features. He may not only thus discard his former self, but he may counterfeit some other and more valuable person. Changing his eyes, he destroys his identity so completely that the most skillful detective could never hope to recognize him. The escaped and eye-dyed murderer can laugh at pursuit, and traveling criminals can fit themselves to the stolen passports of honest men instead of running the dangerous risk of forging passports to suit their own original features.

The question will eventually arise, to what extent the person who has entirely remodeled himself, even to his eyes, can be considered the same individual that he originally was. Suppose that a man marries a woman with black eyes, black hair, dark complexion and the usual quantity of teeth and legs. Suppose, also, that at the expiration of ten years he finds her with yellow hair, blue eyes, light complexion, a full set of new teeth and a cork leg, may he not justly maintain that his original wife has vanished, and that the new and artificial person who has taken her place has no claim upon him? Hitherto the wife, no matter to what extent she might have been altered and made over, could always identify herself by her eyes. If, however, even the color of her eyes is altered, she can no longer claim to be the same physically that she was when first married, and in most cases she will have undergone at least as great a change spiritually. It will probably be decided by our courts, after eye-dyeing becomes common, that its legal effect is to work an entire change of personality, and that the eye-dyed person must be regarded as physically, morally, and in all possible aspects, a new creature. This will, of course, lead, in some cases, to awkward complications; but, on the whole, it will prove a blessing. We all grow tired of ourselves at times, and we may find it an unspeakable relief to throw our old blue-eyed selves away, and begin life anew as other and black-eyed men.

THE CITY LUNATIC ASYLUM.

OUR attention has been called to certain statements in one of the city newspapers impugning the efficiency of the executive management of the City Lunatic Asylum at Blackwell's Island, of which Dr. W. W. Strew is Medical Superintendent. These statements, we are assured, from our own personal knowledge, are altogether without foundation in fact. The truth is that this institution has never, since its organization, been more humanely, systematically or successfully managed than at this time. The number of recoveries,

Digitized by Google

for instance, under Dr. Strew's superintendency has been greater than at any previous period, having so far this year numbered 125 as against 81 in 1877. Dr. Strew gives his personal attention to all the details of supervision, and by his considerate, thoughtful and humane treatment of patients, his genial manner in all his intercourse with them, exerts at all times a wholesome and invigorating influence over the entire institution. His supervision is so thorough that even his most intimate friends are denied the privilege, freely accorded by some previous officials, of mingling with the patients and exploring at will all parts of the asylum. He holds that good discipline is of more importance than the gratification of the curiosity of visiting friends, and we have, ourselves, been more than once refused privileges in the asylum, to which we, at the time, considered ourselves fully entitled. In so large an institution, with several hundred patients, the medical superintendent necessarily comes into contact with every variety of character, and cannot, of course, expect to satisfy the prejudices and exactions of all with whom he has to do; but he has a right to demand that he shall be treated fairly and his administration honestly judged by its results, and when it is attacked from unworthy motives of any sort, every right-thinking journalist should interpose for his vindication. Honest, faithful and efficient public servants are not so numerous that the community can afford to have them driven out by calumny and injustice, in order that small incapables may step into their places. As for three specific cases of inhumanity, alleged to have occurred under Dr. Strew's management, we have made a thorough investigation into the facts, and it is sufficient to say that the charges brought against him are as unfounded as they are cruel.

EVENTS ABROAD.

THE recent municipal elections throughout England afford presages of a coming Liberal triumph. In nearly every contest which involved political considerations the Liberals were triumphant, while in some important boroughs their success was overwhelming. In Liverpool, for instance, they gain eight members of the Town Council, and they are greatly elated at the prospect of speedily securing control of the Government. They certainly have good ground for encouragement, since a change in only twenty-five or thirty seats will destroy the Tory majority and give them the upper hand. Many of these seats belong of right to the Liberals, and were thrown away in 1874 through local dissensions which do not seem likely to be repeated. To capture the rest nothing is required but hard work, and there is every indication that the election will not be lost for want of that. The accession of Lord Derby to the Liberals is, of course, a very serious loss to the conservatives, and will, no doubt, be followed by a division of the representation from Lancashire, which now returns eight Conservatives, and not a single Liberal, to the House.

It is now said that the relations between Russia and England are altogether cordial, that Russia has abandoned the idea of a new Central Asian expedition, and that the English Ambassador at St. Petersburg has actually submitted to Prince Gortschakoff a carefully matured scheme for a mutual understanding between England and Russia in regard to their conquests and possessions in Central Asia, based upon the retention by England of the whole of Afghanistan. Of course, all statements of this character are simply nonsense. The only fact among the rumors of the week appears to be that the Russian Ambassador will not be withdrawn from London, as was at one time proposed, on account of the hostile expressions of Lord Salisbury's recent speech at Manchester. A statement that "Bismarck has requested the Russian Government to withdraw a force of 20,000 cavalry from Poland, on the borders of German territory," lacks confirmation. The Emperor William has furnished another theme for comment in political circles by extending an invitation to the Russian Grand Duke Vladimir and the Russian Ambassador to join him in several days' shooting on the royal estates. It is denied that there is any estrangement between Germany and France.

The Government Bill relating to the abolition of slavery in Cuba has been presented in the Spanish Cortes. It proposes that the freedmen shall remain for a certain time under the patronage of their former masters, receiving wages. After this the freedmen will be under obligation to work under contract, or follow some avocation under the protection of the Government, for another term, at the expiration of which they will acquire civil and political rights. The Government also proposes certain economic reforms in Cuba, and the representatives from Porto Rico will also demand Bills for the reform of the tariffs and the commercial relations with Spain.

The election of the communist Humbert as a member of the Municipal Council of Paris has been annulled. There are many who regard the policy of the Government as to Humbert, and in the suspension of the *Marseillaise* newspaper for publishing a letter of M. Rochefort, as a mistaken one. In fact, the Republican journals are almost unanimous in their condemnation of that policy. A Paris correspondent sums up a review of the situation as follows:

"Twelve years ago M. Gambetta told the Imperialists, 'Every other Government of France has celebrated the anniversary of its origin; the Empire alone does not dare to celebrate the 2d of December!' To-day we may say that, although the Ministerial organs of every régime have always heretofore supported the repressive action of their friends, not one voice is raised in support of the condemnation of the *Marseillaise*. * * We are on the eve of a political crisis, and although the revolution will be bloodless, it will be none the less a revolution. I think a more advanced party will come in; perhaps M. Gambetta will consent to assume the direction of affairs; but the President of the Chambers, for whose talents I have the highest admiration, is as much of a Sphynx as Bismarck, and no human being can tell what are the secret intentions of either statesman until his plans are perfectly ripe for execution. Of only one thing can we be certain: the entire home and foreign policy of France will be modified with the incoming of the next Administration."

The province of Jaen, in Spain, has been devastated by inundations, and there has been a renewal of the floods in Murcia. King Alfonso, on his visit to the inundated districts, was received with genuine enthusiasm. At Murcia, he was welcomed by the whole population. Rich and poor forgot for a while their troubles in order to cheer the King with the new title of "The Charitable and Beneficent King." The marriage of the King is fixed for December 1st. A Bill is before the Chamber of Deputies granting to the future Queen $60,000 annually, and $10,000 annually in case of her widowhood.

Special dispatches represent that affairs in Ireland are becoming more and more serious. The Government has sent an agent to investigate the condition of the people, but does not seem to give much thought to the question of providing a remedy for existing evils. A *World* correspondent states that few of the Irish landlords can get any rent paid at all, and matters are evidently approaching a crisis. It is said that two British cavalry regiments and a body of infantry will be sent to Ireland as a precautionary measure.

The Paris Bourse has been greatly agitated by the failure of several leading speculators. M. Philippart, the well-known financier, has disappeared, leaving enormous liabilities, and the indications are that his downfall will seriously affect the whole speculative market.—In Great Britain the indications of a business revival continue to multiply.—The situation in both Afghanistan and South Africa remains substantially unchanged.—The French Chambers will meet on the 27th instant.—Prince Bismarck is still ill from gout and other disorders.—Austria proposes to reduce the army of occupation in Bosnia and Herzegovina. It is denied that the Protestants in Bohemia are treated with intolerance.—A new commission on the Greek frontier question is talked of.

THE revival of business is very clearly shown by the growing demand for money. Statistics show that the increase in national bank circulation during the last two months reached the sum of $7,500,000, most of which was demanded by the Eastern States, where industry and trade are becoming more and more animated.

SECRETARY SHERMAN, in a recent letter, declines to be a candidate for United States Senator from Ohio. He evidently is gunning for bigger game. General Garfield is said to be the favorite Administration candidate for Mr. Thurman's seat, but he will have several strong competitors, and he may lose the prize. His election would probably prove more satisfactory to the country than that of any other candidate now named.

THE defeat of General Butler for the fourth time, in his aspirations for the Massachusetts Governorship, will afford genuine satisfaction to right-thinking people in all parts of the country. General Butler represents elements in our politics whose dominance would be in every sense unfortunate for the best interests of the country, and his defeat in a canvass in which he had the benefit of some exceptionally favorable conditions constitutes a proof of the soundness of public opinion, and the fidelity of the Massachusetts conscience to traditional convictions, which is all the more welcome because of the doubt as to the result, which, for a time seemed to be justified by the facts in the case.

THE growth of the country and the development of the postal service in keeping pace with the increase of population, is strikingly illustrated by the annual report of the Superintendent of the Railway Mail Service. The report shows an increase of over 400,000,000 pieces of mail matter handled on the postal cars during the past year, the aggregate being nearly 2,650,000,000, or about twenty per cent. more than the preceding year. The report of the Free Delivery Service shows a similar expansion of the benefits of the postal system. The aggregate number of letters, postal cards and newspapers handled during the year by the 2,359 carriers in the eighty-eight free delivery cities amounted to nearly 810,000,000, being an increase in the total number of pieces of nearly 100,000,000.

THE late Legislative elections in Virginia turned upon the question of the settlement of the public debt on the basis of the Act passed at the last session of the Legislature. Seven years ago a funding Bill reduced the debt of Virginia from $45,000,000 to $30,000,000 by "assigning" $15,000,000 to West Virginia for payment. Both States have practically repudiated that third. The Act of last Winter reduces the interest on Virginia's two-thirds from six per cent. to four, and makes regular payment of interest possible without a further increase of taxation. A strong party, led by General William Mahone, favored a new adjustment or practical repudiation, and the fight was between this party and the debt-payers. The latter made a gallant canvass, and seem to have carried the day in favor of an honest payment of the debt. Their majority in the Legislature, however, is at best a meagre one, and the subject can scarcely be regarded as finally removed from the arena of agitation and controversy.

THE report of the Inspector-General of the Army states that all the barracks, workshops, etc., of the military prison at Fort Leavenworth, where 339 prisoners are confined, have been completed exclusively by convict labor, and that it is now proposed, by the introduction of machinery, to manufacture at that point all the boots and shoes required by the army. General Marcy, in view of the success of the experiment as a manufacturing scheme, as well as of its beneficence to the health and future well being of the convicts, recommends that measures be taken for the fabrication of other army supplies which are now obtained from contractors, and thus eventually make the establishment nearly, if not quite, self-sustaining. This employment by the Government of convict labor in competition with free labor will be apt to provoke indignant censure at the hands of those politicians and labor reformers who are making an issue of this matter in the politics of the country.

A LATE letter from Stanley, the explorer, dated at Banana Point, at the mouth of the Congo River, gives the first definite intelligence as to the nature of the work in which he is now engaged. He says that his present mission is to open, and keep open, if possible, all such districts and countries as he may explore in Africa for the commercial world. The mission is supported by a philanthropic society representing several nations, and while not a religious society, his instructions are animated by a Christian spirit. "No violence must be used, and wherever rejected the mission must withdraw to seek another field. The explorer has abundant means, and therefore he is to purchase the very atmosphere, if any demands be made upon him, rather than violently oppose them." Stanley thinks that a year's time will demonstrate whether any satisfactory progress can be made and tolerance secured under this new system. His expeditionary force embraces fifteen Europeans and 200 natives. Further accounts as to this new venture in the interest of commerce and civilization will be awaited with intense interest.

THE Chinese Government is represented by General Grant as looking to the practical utilization of the mechanical skill which its subjects have acquired in this country, by establishing new industries, and so multiply the avenues of employment. Already one woolen mill has been started, with American machinery, and a cotton mill of 800 looms is in course of erection. Sufficient wheat is grown to warrant a large flouring mill. The Government offers inducement to moneyed men to go into a variety of industries on our factory system, and General Grant was assured that it is determined to place itself abreast of the progress of other nations. A California correspondent says upon the subject:

"The Chinese Government is averse to abrogating or changing the Burlingame Treaty, but the objections we have to further incursions of Chinese laborers it is willing to remove, as a matter of national courtesy, by stopping emigration. Nothing is surer than this, viz.: China and Japan will, in time not remote, undersell us in all the markets of Asia, and be independent of us in cereals and in the precious metals. This consummation may prove to be the providential purpose of the Mongolian incursion of men without women to make them homes and permanent attachments here."

THE GRANT RECEPTION IN SAN FRANCISCO.

(*From the San Francisco Chronicle*, October 20th.)

FRANK LESLIE'S ILLUSTRATED NEWSPAPER came to hand a fortnight ago with a large and striking engraving, prepared in the best style of modern art, which presented the main features of the notable occurrence as the average spectator will recall them.

FRANK LESLIE'S CHATTERBOX.

(*From the Covenant.*)

"FRANK LESLIE'S CHATTERBOX for November is before us, and, as usual, is filled with good things for the children, indeed, many things may be read with profit by children of a larger growth. This little magazine has over forty good engravings, touches on Natural and Scriptural History, Poems, etc. Published monthly, price 10 cents, or $1 a year."

NEWS OF THE WEEK.

Domestic.

THE hostile Apache Indians have been driven out of New Mexico.

SECRETARY EVARTS is preparing a note to the British Government on the fisheries question.

PRESIDENT HAYES will open the grand fair of the New York Seventh Regiment, November 17th.

THE Methodist Missionary Committee, at a meeting held last week, fixed the basis of its appropriations for missionary purposes, for 1880, at $595,000.

HON. RICHARD SCHELL, for many years one of the conspicuous figures of American politics, died at his residence in New York, November 16th. Aged 60 years.

DURING September and October, 1,190 children were refused admission to the primary departments of the public schools in this city, for the want of accommodation.

THE steamship *Faraday* has arrived at Halifax, having successfully laid the new French cable from Brest to St. Pierre, and will now lay it from St. Pierre to Cape Cod.

BY an explosion in a candy manufactory at Kansas City, Missouri, November 7th, which partly destroyed the building, seven persons were burned and crushed to death.

THE scramble for Senator Chandler's seat in the Senate has already begun in Michigan. There are several aspirants for it, but indications point to the selection of ex Governor Bagley.

ON November 8th, a span of a railroad bridge over the Missouri River at St. Charles, Mo., broke under the weight of a cattle train, precipitating seventeen cars into the river. Four persons were killed.

"REGULATORS" are extending their organization through Kentucky and threatening all judges and attorneys with summary treatment if they hinder, on legal technicalities, the trials of any persons in custody for felonies.

THE *Sea Breeze*, the first of the whaling fleet to arrive at San Francisco, reports that on September 2d, when fifty miles south of Herald Island, she sighted a sail, which afterwards proved to be the *Jeannette* fighting pack and loose ice.

THE report of Second Comptroller Upton, of the Treasury Department, shows that the total number of accounts and claims revised and adjusted during the year was 20,919, involving $83,271,557, and that 2,311 claims were examined, upon which $2,244,230 were allowed.

CONGRESSMEN WRIGHT, of Pennsylvania, and Murch, of Maine, visited Boston last week for the purpose of taking evidence for the Congressional Committee on the depression of business. Among the witnesses examined were Wendell Phillips and General Horace Binney Sargent.

ADVICES from the Indian Territory report the Arkansas River entirely dry at the Big Bend. This was never known to be the case before. The corn crops are very short in the Cherokee, Choctaw, Chickasaw, Seminole and Creek nations, and much suffering in consequence is anticipated.

JOHN P. HAWS, a bookkeeper employed by the Manufacturers' and Merchants' Bank, of New York, has embezzled $38,455 from the bank, and is a fugitive. He left a letter to his brother, confessing the crime, and implicating a customer of the bank. Most of the money was spent in playing policy.

SECRETARY SCHURZ last week gave audience to a delegation of Indians, representing a certain dissatisfied number of Sacs and Foxes and Iowa tribes, who desire authority to remove to Indian Territory from their present reservation, which comprises 24,000 acres in Northern Kansas and Southern Nebraska. Their request was refused.

MAJOR RENO, of the Seventh Cavalry, who after two years' suspension from duty for an indecent assault, was recently ordered to duty at Fort Meade, is, it is reported, again in similar trouble. He has been placed under arrest, and General Terry has ordered a court-martial to try the charges which have been preferred against him.

SECRETARY SHERMAN, in his estimates for the expenses of the Government for the next fiscal year, asks for seven millions more than was requested last year. Nearly three millions additional will be required for taking the census. Two millions are wanted for the payment of pensions. The Post Office Department, because of its increasing growth, demands two millions more.

THE results of the New York City election, November 4th, show that of the 32 offices to be filled Tammany captured 10, Anti-Tammany 12, and the Republicans 10, but the lucrative and important offices fell largely to the Anti-Tammany party. They elected the Sheriff, County Clerk, a Justice of the Court of Common Pleas, 2 Coroners, 2 Aldermen-at-Large, and 5 District Aldermen.

AT four o'clock on the morning of November 7th the steamship *Champion*, from New York for Charleston, was run into by the ship *Lady Octavia*, off the Delaware Capes, and sunk in five minutes. Thirty-two of the crew and passengers are believed to have been lost, and twenty-five saved. The colliding vessel was seriously damaged, and towed to Philadelphia with the saved passengers. Another Charleston steamer—the *Falcon*, running to Baltimore—was sunk November 9th, by collision with a schooner in Chesapeake Bay, but no lives were lost. The Guion line steamship *Arizona*, which sailed from New York for Liverpool, November 4th, struck an iceberg on the night of the 7th, and went into St. John's for repairs. No one was hurt and the cargo is undamaged.

Foreign.

IT is proposed to place all the Belgian railways under Government control.

DURING October 1,200 immigrants arrived at Toronto, most of whom settled in Ontario and Manitoba.

SARAH BERNHARDT, the actress, has been very ill, and, though her health is now improved, has not yet recovered.

THE Hon. Edward F. Noyes, the United States Minister to France, has arrived at Constantinople on his way to Egypt.

PROFESSOR JAMES CLARK MAXWELL, of England, the writer and lecturer on natural sciences, is dead, in his 48th year.

MARSHAL CANROBERT has been elected to the French Senate. M. Waddington persists in his desire to resign the Cabinet Presidency.

IT is alleged that the Vatican is seriously contemplating the reorganization and increase of American bishopries, in compliance with the recent suggestions of Cardinal McCloskey. The Pope will hold a consistory on the 15th of December, when some action in the matter will probably be taken.

THE LAND QUESTION IN ENGLAND.

Views of George Jacob Holyoake, the British Reformer.

"ENGLAND WORSE OFF THAN IRELAND."

"Room for the English Farmer in America."

PROGRESS OF THE COLONY AID MOVEMENT.

"SINCE the Norman conquest, never did England see such a state of things as to-day. Think of two hundred farms lying vacant in the rich, thrifty county of Norfolk, as fat as her world-renowned turkeys! Think of forty farms lying vacant on the estate of the Prince of Wales at Sandringham! Think of the tenants of Tatton Sykes, hitherto the most popular landlord in the 'tight little island,' threatening to step out of their holdings if he doesn't reduce their rents; and the movement has only begun, sir."

This from Mr. George Jacob Holyoake, the noted British Reformer, to the writer, in a cozy sitting-room in the Hoffman House. Mr. Holyoake is a fresh, bright, earnest, elderly gentleman, with features of a benevolence that would fairly entitle him to be taken into partnership with the Cheeryble Brothers, of glorious memory.

"I had better tell you who I am," exclaimed Mr. Holyoake, "and what I have come to this country to do. I am a member of the Central Co-operative Guild in England, appointed for the purpose of regulating the organization of a thousand societies in that country, and that I took an active part in promoting the co-operative scheme in London, which concerns itself not merely with the principle of co-operation as at present applied and understood, but with co-operative colonization. And now we come to the point!" rubbing his hands gleefully. "We venture to think that co-operative colonization is a need both for England and America—because in England, at the present moment, we have hundreds of farmers who cannot afford to live in England, and hundreds of laborers depending in turn upon the farmers—and you, in this country, have many millions of acres which are altogether uncultivated, and, therefore, it is evident that there is plenty of room for the English farmer to come here, and, depend upon it, you will be all the richer for the outcome of his steady and honest work."

HON. CLARKSON NOTT POTTER, LATE DEMOCRATIC CANDIDATE FOR LIEUTENANT-GOVERNOR OF NEW YORK. FROM A PHOTO. BY BRADY.—SEE PAGE 202.

Mr. Holyoake took two or three brisk turns up and down the room, ere he resumed:

"The movement which is now being promoted by the Co-operative Guild will do much in the direction of regulating the tide of English emigration to this country. To-day hundreds of men are dissatisfied with their conditions, and have resolved to start life again over here. They will cross the Atlantic, stop in a seaboard town, and there they will remain. They will fail to get work, and will become an incubus to the taxpayer or the benevolent, and a nuisance to the general community. The Guild wishes to remedy this in the interest of the men themselves, and it proposes to be thoroughly informed as to the localities where men are required, or where communities can be established, and to regulate the emigration accordingly. A representative of the society will see that the emigrants are well cared for on the voyage, and another will meet them at this port and take them to the region of their future homes. I do believe," exclaimed Mr. Holyoake, with intense earnestness, "that one cause of the non-success of emigration is, that when it is attempted by single families or by a very few persons, they dread the dreariness, the isolation, and suffer from the blindness and ignorance that must always attend their friendlessness in a foreign land; and there is no reason whatever why there might not be an application of co-operative principles to emigration whereby numbers could be gathered together, and many families might be associated."

"Is the English farmer an earnest agitator?"

"The English farmer is the most revolutionary being in existence. Talk of your *sans culottes*, your workingmen—they are nothing to the English farmer. He is terribly in earnest when in earnest. It was only at a meeting recently held in the London Chamber of Commerce that the public learned for the first time that the farmers were disturbed in their minds, and at that meeting the farming element spoke out, demanding an immediate alteration in the land laws. In a word, they wanted tenant-right and to own the land."

"What was the outcome of that meeting?"

"The House of Commons appointed a select committee, called an Agricultural Commission, to inquire into it; and you know, sir, that when our legislature wants to shelve any question, the Government is moved for a select committee, and they grant it. The farmers say, 'We must either fight or run away,' and, as fighting will do them but little good, they must needs adopt the latter alternative."

"Are the eyes of the distressed English farmers turned to this country?"

"Why, of course they are. The country is

NO. 4.—OUR ARTISTIC CORRESPONDENT INTERVIEWING GEORGE JACOB HOLYOAKE, THE DISTINGUISHED ENGLISH REFORMER, ON THE LAND QUESTION IN GREAT BRITAIN, AND THE COLONIZATION OF BRITISH FARMERS IN THE UNITED STATES.

ILLUSTRATED INTERVIEWS WITH EMINENT PUBLIC MEN ON LEADING TOPICS OF THE DAY.

Digitized by Google

abundant, the climate charming, and the only question to be settled is that of location, and this will be very speedily disposed of through the operations of the "Colony Aid Association," an association formed here in the City of New York for the purpose of colonizing certain districts of this country. The Co-operative Guild in London are now engaged in discussing this question of colonization."

"Will you please state definitely what are the objects of this Colony Aid Association?"

"Certainly. We propose to purchase land and lay it out as a colony. We will create and establish in each colony co-operative stores, maintain schools and public libraries, the expenses to be assessed on every share, and when each colonist's share is paid up he will be the possessor of his land."

"Then each colonist will purchase, or will be advanced, a share in the colony on terms to be agreed upon?"

"Precisely; and when I return to England immediate steps will be taken to complete the organization of the Colony Aid Association, and the bonds put upon the market."

"How do you propose to raise the original stock to purchase the land?"

"By bonds, just as in the case of a railway. Thirty thousand dollars have been already subscribed in New York alone. Some of the colonists will pay up at once, as the English farmer, as a rule, has money; and for the people who have no money, we propose to erect temporary houses and furnish them with provisions until their crops come up, when they will commence to repay us."

"Is the association or company to be run as a speculation?"

"We are colonists, and will work neither for charity nor for profit. We do not propose to be sentimental, either; the colony is to pay its expenses—that's all."

"Will the bonds bear interest?"

"Yes; a moderate interest. There is nothing Utopian in this. There are enough of financial Samaritans in the world who will aid us in doing this by reflecting, 'We don't mind risking so much in the experiment, and we don't want profits—we want to get our own back, while at the same time aiding in a good work.'"

"Is this Colony Aid Association organized solely in the interest of the distressed or discontented English farmers?"

"Oh, dear, no. We hope to help the poor Irish farmers, and the branches of our Co-operative Guild at Cork, Tipperary, Kilmallock, and Limerick are to be used for the dual purpose of co-operation and colonization. We propose to offer facilities for colonization to all peoples, and expect numerous applications from your American cities."

"Have you in any way decided on location yet?"

"Not yet; but our colonies will all be located near some centre of civilization. All the States will be bidding for us, and hence immense facilities will be afforded us."

"Will you have to go to Parliament for permission or power?"

"No; if we had we should be beaten, so strong is the territorial influence in the Commons as well as the Lords. We can incorporate under existing acts."

"In what way does the present condition of England compare with that of Ireland?"

"At present England is worse off than Ireland. Ireland has a free church and compensation to tenants. In England we have neither. Our farmers are rapidly verging towards a revolutionary state of mind, and the only means of allaying the existing and rapidly increasing upheaval is a repeal of the laws of primogeniture and entail."

"Do you consider the present condition of things a crisis in the history of feudalism?"

"I consider that feudalism has received its death-blow."

"Scarcely! Surely the territorial proprietors will return to protection; that is, they will impose a duty on the importation of corn, and thus save the farmers from being wiped out and their own institutions."

"Yes," replied Mr. Holyoake, with a light laugh. "I will exemplify what protection will amount to. It means this, that it will double the price of the poor man's loaf in order to increase his comforts. This we shall never see."

"Surely England is not going to stand still and allow the bone and sinew of the land to leave it for ever."

"There is nothing else for it. We cannot compete with you in corn, and must turn our farms into grazing. Once the English or Irish farmer feels the inexpressible delight of owning his own farm, as he will do under our colonization scheme—and such land!—his feeling of independence will call upon those he has left behind as with a trumpet blast. No English farmer, and no Irish farmer, has ever felt this, and the moment the sensation is experienced adieu to crouching at the feet of landlords, which two years ago was, figuratively speaking, the attitude of the English farmer when farms were at a premium."

"Has not the British farmer been adjusting himself to the crisis by changing the condition of agriculture?"

"To a small extent, yes."

"In what way?"

"In turning his farm into grazing."

"Have you any idea of the decrease in the number of acres—say of wheat?"

"Yes. For the present year there is a decrease of 328,000 acres."

"Have any practical remedies been suggested for dealing with this crisis?"

"A good deal of advice has been given. The farmer has been advised to grow what his soil, climate and vicinity to his markets will produce to advantage. He is urged to confine himself a good deal to his pasture rather than to his arable land, so as to have an undisputed monopoly of potatoes, milk, meat and hay.

"We can export every one of these articles. I see that the returns for the year show an increase of 33,000 acres in potatoes, and a total increase of grain crops amounting to 63,000 acres, while in permanent pasture there is a rise of 255,000 acres.

"The farmer must be relieved of his antiquated land system, and the results of the Royal Commission are being anxiously looked to by those who know nothing of the working of such Government machinery.

"I have advocated," continued Mr. Holyoake, "and shall continue to advocate, that all education among the working classes in Great Britain should be an education for immigration, and that every child should receive an education that would make immigration easy. Immigration, instead of being regarded in the light of a penal banishment, will be looked forward to as the practical means towards a much-to-be-desired end, and the aspiration of each emigrant should be to make the adopted country glorious and great through the medium of industry."

Mr. Holyoake recorded the "owre true tale of the Rochdale co-operative movement, the struggles of the promoters, the difficulties which they encountered, and the gradual development of the youthful sapling that was so soon to become like a giant of the forest.

"Let me say a few words on the subject of co-operation, and in a general way tell the readers of FRANK LESLIE'S ILLUSTRATED NEWSPAPER what we have done and what we are doing," said Mr. Holyoake. "We began by establishing stores and selling at market prices. We didn't undersell the shopkeeper; we were not guilty of underselling our neighbors, but treating others according to the golden rule, and we never sold except on the highest market rates. Then we said we would go on the principle of paying our way and have no debts, and neither give credit or expect it. If a man offered us credit we treated his offer with respect, but if he tried to force it upon us, we bade him good-by. Our ambition was to owe no man anything. We gave fair weight and honest measure in our stores, and if we knew of anything to the prejudice of our goods we bound ourselves to declare it to the purchaser. We did more—we said that we would sell pure food, and in order to be enabled to do this we had to train buyers and even to buy them, for to be able to buy food with judgment is a gift of nature. Such experts have a priceless faculty. Our buyers go into Scotland, Ireland, Holland—all over Europe. They come to this country; we have one in this city, we have them in various parts of America, and we have two vessels constantly coming to this country and carrying away the produce we purchase. We have spent a heap of money in experimenting upon the opening of the mouth of the river at New Orleans, so that we can strike the produce of the Mississippi, and by that road convey it to England, and we are prepared to expend millions on it if we see success as a background to our efforts. We commenced in a small, miserable den—our object was to supply means for ourselves only, but that the state of things in which the man hiring himself for labor should be done away with, and he should become his own employer. To-day, we come into the markets of the world with twenty-five millions of ready money, and take no credit, and want none. I would say a great deal more to you," added Mr Holyoake, "but your space is limited and so is my time. You see what co-operation has already done; and, depend upon it, the principle of co-operation as extended to colonization is bound to prove an immediate and an abiding success."

As I was about to take my leave, "One word more," said Mr Holyoake, "on the moral effects of co-operation. You may preach and you may pray, but you will not have a moral people while you have a starving people. We have done this: we have supplied ordinary wants in a substantial way, and have increased the earnings of the people by putting into their hands a money-making scheme. And we have given these people more than money, my dear sir, we have given them character. We have made them more honest, and we have made them open their eyes to the fact that the best policy is to pay."

"What are your estimated profits?"

"We make ten per cent profit upon every pound sterling expended by members of the store. The money is saved for him. At the end of the first year he receives £5, or $25; at the end of the second year, £10, or $50. For the first £5 we give him five per cent., so that at the end of the second year he has £10 and 10 shillings interest, and so on. A man by this system actually acquires the art of saving, and there are instances of men coming into our society who have begun on the expenditure of three pence. The best of the system is—and I made them laugh at the Cooper Institute the other night when I stated that—the larger a man's family the more he saves, because he spends more in the store."

"Do the savings of some accumulate to any considerable amount?"

"Yes; we have frequently to tell a man to take his savings out on account of their having grown so large. At the Rochdale store, for instance, we advised the members, as we could not afford to pay more than five per cent. for the money, to take it out and invest it in something paying a higher rate of interest."

"What do political economists say?"

"They may say what they like of the scheme, but they have nothing to offer that is in any way equal to it. Your political economist says that if a man buys for tenpence that for which he ought to pay a shilling, he can save the twopence himself. He can, my dear sir, but he doesn't! By the innovation we brought out, we save the money, and he needn't exert himself in the least, in fact he is getting rich while he takes his forty winks."

"John Bright is one of the approvers of this co-operative movement?"

"Yes; he resides in Rochdale, the little town where our store is, and he saw it grow under his own eyes. In the House of Commons he has bestowed upon it the noblest eulogy. That little Rochdale store has grown to such an extent that we get $200,000 a year profit from it, and of this a half per cent is devoted to education. We have a library which the hall of the Cooper Union would not hold, and the printing of our catalogue of books cost us not long ago no less than $3,000. Now we are growing every year, and we would have extended our operations to America, but you are too opulent to need any help of the kind."

After a charming eulogy on the country, its climate, and its glorious sunlight, the interview with Mr. Holyoake ended.

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF MINE."

INTRODUCTION.

"ALL night long—all night long, dragging that hideous weight over the stairs! No rest, no rest! Will there be no rest hereafter? Is this my doom for ever and for ever?"

Thus, with a low cry of anguish, a woman talked to herself, folding her hands one over the other with a spasmodic action that denoted a troubled mind, a burdened memory. She had been very fair. Her hair, in its golden, waving beauty, fell over the pillow, over her snowy night-robe; her eyes, hollow, yet wonderfully blue and bright, rolled restlessly in their sockets. Upon her pallid face were impressed the unmistakable signs of death.

"Mamma, what is it? What is it that was so heavy in the night?" and a child moved round to the bedside. The setting sun, coming in through the western window, almost transfigured the little one, glorifying the dark, abundant masses of curls, the liquid eyes, the fine, marble-like whiteness of the brow.

"Great heaven! you here, Sylve!" burst from the trembling lips.

"I've been here a long while, mamma. What was the heavy thing?"

"Nothing dear—only a dream; be quiet, and you may get my jewel-box—she must never know," she added, as the child ran gleefully away. Presently she returned. Round her neck she had fastened a superb cross and circlet of diamonds, a long necklace of pearls of such transparent purity that they seemed almost beyond price, a string of amber drops, and an emerald chain. Pearls were thrown carelessly over her tresses, each tiny arm was loaded with bracelets, and round the waist two or three gold chains were twisted, hanging with lockets and watches almost to her feet.

"I'm an empress, mamma. Am I not an empress?" she asked, gayly.

"Yes, better than that to me," said the sick woman.

"And you'll get up by-and-by, and put some of these on."

"Perhaps, if I can. Will my little Sylve do me a favor?"

"Oh, yes, mamma!"

"Then she will take the jewels off, and put them away till to-morrow, and call Mrs. Bimley."

"Yes, mamma," and the child, quickly, dexterously, and with a certain degree of care, divested herself of the rainbow things, put them away in their boxes, and left the room. Presently she returned with the hostess. Sylve withdrew at her mother's request, and Mrs. Bimley sat down by the bedside.

"You see, I suppose, how fast I am going?" said the sick woman.

"Oh, madam, I hope not!"

"Don't hope—I am quite aware of my condition. You will keep the child till somebody comes for her. If it is for weeks—nay, months—you will keep her. You shall be well paid."

"Indeed, I'll keep the dear, sweet little angel."

"Don't—it pains me to hear you say that. Sylve is not an angel; she has had but little care—she is willful, spoiled, but she is my all!" Her lips worked. "If she torments you beyond endurance, tell her that I am looking upon her. I think that will be sufficient. All my boxes up stairs must be sent wherever she goes. My jewels, they will be sealed and carried away by my man of business—but—come nearer."

The woman obeyed.

"Under my pillow are some papers—will you draw them out? Thank you! That package I intrust to you, and, as you hope for mercy in the day of judgment, you must send them by some trusty messenger, to the place to which they are directed. They must not go by mail. Do you understand? Can you do this?"

"I think I can," was the reply. "My son will take them himself."

"Thanks; you will allow me to bear the expenses of the journey. You will be sure to impress upon him the fact that to no other hands but those for which the papers are designed must they be given, neither must they go out of his keeping until they are safely deposited. My child's whole future depends upon the fidelity with which these directions—commands, rather—are carried out."

"I think you may trust me, madam."

"And, now, I want my child."

The woman hastened to call her, and presently Sylve sat upon the bed, smiling into the pale face and prattling in her childish tongue, happily unconscious that when the morning sun arose she would be motherless.

CHAPTER I.—READING THE LETTER.

"—— *Virginia*, ——, 187–.

"DEAR MR. FORESTER: I have just learned that the Washata tract, some twenty miles from Memphis, has been attached, and claims set up against one De Latude for violation of contract, and that the person interested has received judgment for $70,000. That tract, as you know, belonged to my father, Ferdinand Lacy, and came by will to me. It was of me that De Latude bought the property, *for which he never paid.* He did violate his contract to settle and build upon the place. If I could tell you all my history, it would be sad enough. My mother, as you remember—and once, I am sure, you were interested in the beautiful Anne De Rousselle—neglected her family for other claims, drove my poor father out of his head, and deserted me. For years I was tossed upon the ocean of life like a weed—turned now to this one's cold care, now to that. Of course I grew up with many faults. I never knew the meaning of the word home. De Latude was an adventurer. I don't think you ever met him. Ah, he was so handsome! When I first saw him I was twenty-two, and had refused many lovers. He had the faculty of winning hearts. Being some ten years older than myself, he approached me on business. For months he was kind and respectful. As for me, I would have given my soul into his keeping, so infatuated was I with his handsome person and his winning ways. At that time I was rather well off, in my own right. My father had often talked about the wild Washata tract. It was all his theme when his mind was gone. I have over a hundred plans which the poor man made, in the fond hope of seeing it a flourishing city. At that time it was little thought of by capitalists, lying so far from civilization. But De Latude went into raptures over it. He made many promises. He was to build a large hotel, as there were springs on the land of great value.

"*Wednesday, May 23d.*

"A week has elapsed since I wrote the above. Severe illness has so prostrated my strength that at one time I feared I should die without telling you my story. Some might say, why write to a comparative stranger? I answer, because my father loved you. Rivals though you were for the hand of the same woman, after an honorable adjustment of the matter, you were still friends. My poor, crazed father often talked of you. When your photograph came I thought the joy of seeing it would kill him. How noble your face! I have it before me now, and the sight of the mild, broad forehead and the sweetly-sad eyes, nerve me to my self-appointed task. I say to myself—though I have a dark story, a story of *crime* to unfold, yet those benignant eyes will not turn from the recital with a look of scorn. How white your hair is! whiter than snow—white as silver sun-lighted—no, white as the light of a river over which moonbeams drift. You loved my mother most passionately. I am very like her. Sylve—my little Sylve is more like her than I am, at least I think so at times."

The reader of this very diffusive letter paused for a moment. A smile crept round the corners of his mouth. His hair was by no means silvery—very far from it, being that rich red-brown that artists love to paint; and he could not have seen more than twenty-four Summers. The striking feature of his face was the large, soft, dark eye, in which we read both passion and power. Self-control seemed indicated by the fine, firm lines of his face; his mouth was remarkably beautiful. A tender, tranquil life might be safely predicted as the *summum* of his desires; and yet, with such a face, greatness is attainable. He smiled, and looked towards a portrait hanging on the opposite wall, which he greatly resembled. It was that of his father, who had been dead for two years. His were the white, flowing locks, to which the writer had alluded in terms so poetic.

"So, there is an episode in your life which you never referred to, father mine? How many loves did you have, I wonder, since I am the son by a second marriage?" He turned to the letter again and smoothed it out, as he still spoke to himself, thoughtfully: "Is it best for me to be the depository of these secrets? Yet, since my father is dead, who else should be? I am very thankful I took the precaution of reading for myself; it would have troubled my mother. And it seems that *crime is more than hinted at.* Crime! Some small peccadillo—it can be nothing more—which the woman's conscience has magnified. Well, it's a long document. I must on to the bitter end, seeing I have begun." He took up the closely-written manuscript, and commenced where he had left off:

"Pardon the vanity of a poor dying creature, but could you see my Sylve now I am sure you would love her. For one year she has been in the keeping of strangers, and this hotel life is not good for her; yet she is an affectionate, loving little thing. My window looks out upon a garden. A fountain plays in its midst; and just back of the silver-dripping shower stands Sylve, a very Undine. Such eyes, such hair, such a complexion!"

"I wonder how old she is," murmured young Forester, beginning to take more interest in the narrative, his eye kindling a little at this soft image of beauty, his cheek flushing. "But I must turn to other subjects," the writer continued. "It is for Sylve's interests that I must work in these my last moments. I have left her the remnant of my fortune, enough to clothe, feed and educate her till she is twenty, but long before that I hope and trust that this business will be settled. I have asked my lawyer's partner to forward all the papers; perhaps I should say that my lawyer, who was a warm personal friend, is dead, and I do not like his partner. I have not, till within the past year, put it into legal hands, blindly imagining that I could at any time prove my right to possession; but within a few months I saw it would have to be done. As you are an advocate of very high standing, I choose to commit everything to you, knowing you will see justice done to the poor little grandchild of poor Anne de Rousselle.

"And now I am going to tell you a secret

Digitized by Google

known only to heaven and myself. De Latude wished to purchase that land, as I have told you. The man who sets up the claim for violation of contract was a party to the sale. I know him well; his name is Pelt. He is determined to get Washaba, and what can a poor, dying woman do?

"There are so many things to say that my mind grows confused, but I think I shall be able to tell my story clearly, quite to the end, so that you will understand me. De Latude, while settlements were in progress, proposed for my hand. I thought I had found a prize, and I consented to marry him. Let me make this part of my story as brief as possible. Shortly after our marriage, De Latude began to show his true character. He took advantage of his possession of the deeds of Washaba tract to worry me for money, and at last grew unendurable, adding to his other bad qualities that of drunkenness. I soon became sure that he had married for a home, that to wear his name was a disgrace, that he had never felt a particle of love for me, and the knowledge maddened me. Sometimes, when he was in drink, he threatened to strike me. At such periods, so overpowering was my hate, that I contemplated the possibility of his death with complacency. Of course, you will say that to feel in that way was to be in heart a murderer. God forgive me! The fact was too true; I could have murdered him, and at last——

"*Thursday, 24th.*

"Again I was obliged to lay aside my pen, with no definite hope of ever resuming it again. And the reason for my tardiness of confession no doubt you comprehend. I am fast nearing the grave—a young woman not yet thirty-three years of age. My little Sylvo was born two years after my marriage with De Latude. He often threatened the life of my child, and, when I was sick once for several months, did succeed in conveying her away from the house; but, in a season of penitence, had her returned to me, after which his fits of anger were not so frequent. Indeed, he was at times almost too good-natured to be natural. He still, however, repeated his threats, and said he had put it out of my power to provide for my child. Continued ill-health made me irritable, and continual indulgence in drink threatened to destroy what little mind De Latude possessed. At last we had a terrible quarrel. We had moved to Savannah, and taken a handsomely furnished house. My servants were hired by the day and did not sleep under our roof. If you know anything of that city, you are aware that the houses are detached, some of them located in the midst of lovely gardens. Our place was a villa surrounded by beautiful grounds. The trees and shrubbery were so thick on all sides as completely to shut out the view of neighboring dwellings. Indeed, our neighbors on the right and left had closed their houses and gone away for the season. I had but recently recovered from sickness, and still thought myself very weak and languid. Doctor de Latude and myself had not spoken for several days. I remember the evening was very still. With the exception of the clear notes of a mocking-bird, there was nothing to be heard. The air was loaded with the fragrance of flowers. It was moonlight, and so bright and clear outside that we needed no light within. The child had been playing for hours by herself, and had come in tired and fretful. She went up to her father for comfort, but he was in an irritable mood and repulsed her. I tried to coax her to my side, but she was perverse and would remain with her father. At last he told her very crossly to leave him, but she persisted in remaining, and finding that coaxing and threatening did no good, began to tease him by pulling his hair and pinching him. At last with an oath he struck her. That roused me, because the blow was a heavy one upon the head. I told him he could not treat my child in that way, that a man's hand should never touch a girl. He became very abusive and denied that Sylvo was his child. That made my blood boil and my anger gave me great strength. I went up to him, and—God knows what I said—for I do not. He answered me with insolent words, declaring that he had put it out of my power to do anything for myself or the child with the Washaba property, and so insulted me that I was maddened. He lifted his hand, as I thought, to strike me, when I turned upon him like a fury. Only once with clinched hand did I strike him—where, I did not see—for my rage and despair blinded me, but at that one blow he fell heavily to the floor. For full five minutes I must have stood over him, not daring to think, scarcely to breathe. Near him little Sylvo had raised herself to a sitting posture, and was sobbing with pain. I felt my heart leaping with great beats; my tongue was hot and dry with fright. My eyes seemed starting from their sockets. Why did he not move? What meant that awful silence—a silence so fateful that it seemed as if the whole sentient being of the world had stopped breathing. The child was terribly frightened at the fall and forgot her own suffering. She crawled to the face, looking so ghastly in the white moonlight, and screamed with fear: 'Why don't papa wake; is papa dead?' She was very fond of him, cruel though he had been to her more than once. She had often called him her pretty papa, and I think it was his beauty that had attracted her childish heart. It would not do to let her be heard. Instinct suggested that if the worst had happened, it was best to keep it from the little girl, so I caught her in my arms and bore her up-stairs, where I comforted her with the belief that poor papa had only been drinking too much wine, and that was why he fell. At last I soothed her to sleep, and I laid her upon the couch in my own room. His room led from mine. It was a large, handsomely furnished chamber, at the back of the house. After I had put the child down, I went to the door and glanced fearfully in. Ghastly white looked his bed with its high pillars. 'It is all right,' I said to myself, again and again. 'I shall find him conscious when I go down, and I had better wait a while.'"

CHAPTER II.—FOUND DEAD.

"TO wait a while meant to give him the chance to recover. It was impossible, I said to myself, that one light blow of mine could have been fatal. I sat down at the window and buried my face in my hand. How well I remember the fragrance of a certain flower that grew up to the sill, and how at the moment I hated it, and have hated it ever since. Suddenly I became aware of my solitude. Myraids of tiny insects hummed and chirped about me, but there was no other sound. Light! I must have light! I groped round for the matches, found them, and quickly touched two or three wax tapers that stood on a shelf near my bed. My fingers shook, my hands felt numb with an icy-cold sensation. How to get down-stairs again, alone, and find him lying there still! I persuaded myself that he had risen—that he must have risen; it was impossible that the one dread thing had happened—the thing that more than once I had caught myself contemplating with pleasure—in the time that had passed. But if it had happened it would not do to have him seen there in the morning by the servants; my agitation would certainly betray me. It was now nine o'clock. There was no fear that visitors would call, for I was acquainted with no one there. The servants were only too glad to get their nights home—I did not fear their coming till morning. I thought of these things while I was going slowly down-stairs, clinging to the side-rails, and fighting against an almost deathly faintness. All the terror and despair of the murderer tugged at my heart; and yet, I argued, I did not mean to kill him. I never dreamed that the force of my puny hand could inflict a mortal wound—for something told me that Francis de Latude was dead.

"At last I was on the threshold of that room. The light of the moon was waning, and I held my candle far before me, that I might be enabled to see more clearly. Yes, the body had not moved. It lay in exactly the same position—the long, dark, curling hair massed upon the left temple and cheek. My blood curdled at every movement, but go forward I must. I called him by name, first softly, and then in a voice sharpened by frenzy. Would my reason fail me? I placed the candle on a table, and pressed both hands to my head to still the horrid beating in my temples. Then I gathered courage to draw slowly nearer. What was it but an inanimate body, after all? What harm could it do me? Ay! but I had been its murderer! My hand had sent the soul, brutal and unprepared, out of the world. The man had once been my idol; up-stairs his child slept, unconscious of the awful tragedy below. Presently I found courage to draw yet nearer—to kneel down, to touch it, to examine the pallid, changed beauty of the face. And then came remorse. The chiseled features had settled into the serenity of death, and it seemed as if the lips smiled. I threw the heavy locks aside, touched the forehead, lifted one of the hands. The old affection came rushing back, and I forgot all his sins against me and the child. I had killed him; there was no doubt of the fact now. I looked carefully for a trace of the blow—none was to be seen; and yet there he was, stretched dead before me, and my hand had done the deed. My hand! I clinched it and struck myself several blows upon the head and face. I scarcely felt them—it seemed like the touch of a feather. Then I arose and sat down to think. The whirl of ideas, of feeling, of tumult, soon subsided, and I was stony-calm. The deed was done; speculation was impossible, knowledge was tyrannical. Now, how was I to avert auspicion—for I determined that for the sake of my child I would not be suspected.

"One plan after another I formed and rejected. Once I had donned my wraps and walked as far as the garden-gate, determined to seek a physician, and tell him that my husband had fallen as he was in the act of rising from his seat. His habits would account for the suddenness and fatality of the attack. But could I have told my story unfaltering, just then? Oh, no! Time! time! I must have time! The sound of passing footsteps made me a gasping, shivering coward. I dared not go, but hurrying back through the thick, perfumed shrubbery, I entered the house again, and for some moments walked back and forth in the hall, trying to think, to plan. At last I had resolved what I would do. Every sense revolted at the act, but there was no other alternative. Alone and unaided I must get him up-stairs into his own bedroom—must there undress and put him in the bed—giving him as natural and life-like a position as possible—and when breakfast-time came, send Paschal, a light negro, who acted as his valet, to summon him. Of course he would find him insensible, would raise a hue-and-cry, and that would stave off the attention of the others from me. De Latude was not a heavy man, though the beautiful symmetry of his form made him appear larger than he was. I understood the horrible responsibility, and fairly dragged him over the stairs and into his room. It seemed as if I had the strength of a tigress, in my determination to escape censure. Ever since then it has been my nightly penance to drag that man over the stairs to that old scene of horror. Sometimes the dreams are diversified—I am struggling up the rocky sides of precipices, or curiously twisted ladder made of rope, whose strands divide and subdivide, threatening to launch us both together into the abyss of death."

"Flix!" cried a voice at this point of reading. "Flix!" and a sweet face looked in.

"Mamma, you are very welcome, as you know you always are, but I am exceedingly busy," said the young man, rising, as a graceful figure came down the long room.

"Which means that though I am exceedingly welcome, my absence would be quite as agreeable," said Mrs. Forester, laughing. "Well, as lunch has been waiting for nearly twenty minutes, and you are punctuality itself, I thought I would look in upon you. What odd manuscript! A new case?" she asked, brightly.

"In relation to a new case—but is it possible that lunch is ready? I had no idea time was passing so rapidly. I think my appetite has failed to come to time."

He consulted his watch, then gave his arm to his mother, threw a newspaper over the batch of papers with which he was still busy, and accompanied her into the dining-room. This apartment was light and cheerful, and looked out through glass doors upon a pretty flower-garden. A few exquisite paintings adorned the walls, which were laid in panels of rare wood. Many a souvenir of art, rare and costly, met the eye as it was lifted from the pretty old china service that boasted at least a hundred years of use. This room had been a favorite of the elder Forester, because of its cheerful outlook. Mrs. Forester, not yet forty-five, with a fair, spiritual face, and dreamy dark eyes, made a pretty picture at the head of the table. She was devoted to her son, and the great dread of her life was that he should marry unworthily. To prevent this possibility she bent all her energies, and really with her beauty and grace, her tact in giving select little entertainments that included no dangerous young ladies, made his state of single blessedness so attractive, that as yet he had seldom thought of marriage. Felix, or Flix as he had always been called, could scarcely compose his mind to the duties before him. Lunch with his mother was usually the pleasantest meal of the day, but Mrs. Forester noticed a change in his manner, and began to banter him a little.

"Your letters have not conduced to your good spirits," she said, laughing. "I never saw you looking so pale and so fagged. Don't work too hard; and remember *I* am here, and your father often called upon me for a little aid now and then, though I acknowledge in matters of law, women are not of much assistance."

"Aspasia decided questions of war, and Phryne obtained a statue of gold in the temple at Delphos between two kings," said Flix, absently.

"Pray what great work did Phryne do to obtain that distinction?" asked his mother.

"I don't know—killed her husband or something—didn't she?" said Flix, chipping the cheese, his thoughts still dwelling upon the extraordinary avowal he had been reading.

"Mercy on us! Well, I shouldn't wonder—some of these old Athenian women were vixens—but it couldn't have been that, for which she was immortalized in gold. Take a croquet, dear, you have scarcely eaten a thing, and these are your favorites. I assure you I have seen women whom I thought quite capable of killing their husbands, and many a man is murdered by inches. I really dread to see a young man married to one of the belles of our day—but you're not going so soon?"

"Indeed, mamma, I have most important business on hand—and it is in a lady's interest—or, rather—yes, yes, a lady I should say—you really must excuse me."

(*To be continued.*)

THE AMUSEMENT SEASON.

AND yet another "Pinafore"—the real Simon Pure this time, however—with Gilbert stage managing and Sullivan conducting, and the most *piquante Josephine* in the world, and a countrywoman to boot—Mrs. Blanche Roosevelt, *née* Tucker. Messrs. Sullivan and Gilbert have come to reap, or rather to glean, such ears of financial corn as may have been left on the theatrical field by the many managerial reapers who have gathered in their harvest. If America has not paid for "Pinafore" in meal, she has done so in malt. America recognized the grotesque situations, the funny libretto, and the catching music, while England remained coldly passive. Then sped the news across the "pond" that we had gone "Pinafore" crazy, and, lo! our cousins wake up from their lethargy and go "cranker nor we." *En revanche*, we shall have the first of the new opera now in preparation, and voices in the air whisper that it is "awfully fetching." This visit of Messrs. Gilbert and Sullivan is well-timed, and we anticipate golden results all round.

"French Flats" at the Union Square is intensely amusing, and "draws like a blister." The house is packed every night, and many have to limp homeward, fairly exhausted from the effects of having to stand and laugh during the entire performance. The play is cast to the full strength of the company, and as a result the ensemble is admirable.

At Daly's, "Wives" commands enormous audiences. This comedy-drama is unique in every respect; the happy blending of two of Molière's masterpieces producing one glitter of "word catch" from the rising to the falling of the curtain. The period—Louis XIV.—admits of superb costume effects, and the ballet, felicitously introduced, adds additional charm to the sparkling whole.

The "Tourists in the Pullman Car" have blocked the sidewalk leading to Haverly's. The grotesque fun, the *bizarre* situations, the inimitable "gag" of this extraordinarily funny performance will not admit of criticism. The "Tourists" should be seen to be appreciated, and as their stay is a remarkably short one, those who want a "huge guffaw" should lose no time in securing seats in the next car.

Mr. J. C. Fryer opened the Broadway Opera House, the new, and, we trust, abiding name of the bijou theatre near Broadway and Thirtieth Street, with Gorman's Church Choir Pinafore Company. The performance was admirable in every respect, and a good earnest of what Mr. Fryer means to give his patrons in the future. This opera house is to be devoted to bright musical specialties.

AT HOME AND ABROAD.

—WITHIN the last five years the acreage of cereals in the United States has increased from 74,000 000 to 92,000,000.

—FROM October 26th, 1867, to September 30th, 1879, the church property sold by auction in Italy yielded $100,000,000.

—THE French revenue for the ten months of the present year ending with October exceeds the estimates by 123,000,000 francs.

—IT is estimated that the farmers of the Northwest have made from $70,000,000 to $100,000,000 by the rise in the price of grain this Autumn.

—A FIGURE of Sesostris, carved on a rock in Asia Minor, and minutely described by Herodotus, was recently discovered by the English Consul at Smyrna.

—THE Russian missionaries in Japan having succeeded in converting 4,000 Japanese to their faith, a bishop is to be sent to Jeddo by the St. Petersburg Synod.

—GEOLOGICAL explorations have shown the probability that Russia contains beds of phosphate of lime of sufficient extent to supply Europe for an indefinite period.

—THE war-ship *Pyramus*, which was captured by Admiral Nelson from the Danes in one of his famous engagements, and which served as a training ship, has been sold for $7,000 at Halifax.

—SIX hundred Bulgarian orphans, who lost their parents during the last Turko-Russian War, were taken to Russia, where they were instructed gratuitously at the expense of the Government.

—NEARLY all the cane mills and evaporators now used by sugar-makers in the West Indies, South and Central America, the Sandwich Islands and Australia, are furnished by American manufacturers.

—THE German Admiralty is making surveys for a canal between the Ems and the Jade, so that coal, war material, and other articles may be conveyed from East Friesland to Wilhelmshaven without fear of blockade.

—THE merchants of St. Louis have organized a movement for the erection of a spacious and permanent exposition building, like those of Chicago, Louisville and Cincinnati. It is intended to finish it for next Fall.

—THE wool transactions in Connecticut this year have been larger than for any preceding year for a decade back, the sales for one week in Hartford recently amounting to 1,500,000 pounds. The price has advanced fully 25 per cent. since last April.

—THE President of the California State Viticultural Society has reported 60,000 acres covered with vineyards, numbering 45,000,000 vines, and representing, with the land, a capital of $30,000,000. Another complete report is to be made ten years hence.

—THE experiment of lighting the reading-room of the British Museum by electricity began on the 20th of October, and is to continue until March. There are four lamps of 5,000 candle-power, and the brilliancy of the illumination is said to excel that of daylight.

—THE linen mills in Greenwich, Washington County, New York, have been purchased by a firm of manufacturers from Guildford, Ireland, who will give employment to seven hundred hands. If successful, the firm will transfer their entire business to this country.

—A DISPATCH from Berlin says the understanding between Germany and Austria extends to the Egyptian question. It is announced that the two Governments will proceed conjointly in whatever measures are taken for the protection of the interests of the Egyptian bondholders.

—THE Choctaw nation, which numbers about 17,000 people, has forty schools and two academies. It also pays for the college education of twenty-two students in the States. The office of Superintendent of Education is elective, and has been held by a Choctaw for four years.

—MR. DE BLIGNIERES and Major Baring, the French and English financial representatives of their respective Governments, have returned to Egypt. The present Khédive expressed the desire that the former gentleman should not return, but said that he would not refuse to receive him.

—THE earning power of some locomotives is somewhat remarkable. Burlington and Missouri River, in Nebraska, show the average earnings of twenty-nine engines in 1878 to be $56,000 per engine, and it is said the Southern Pacific has shown an average by forty-three engines in eleven months of $100,000.

—THE Municipality of Vienna has resolved to take into public care the tombs of the great composers who repose outside the city walls. Beethoven, Schubert, Haydn, Mozart and Gluck are among the names read by the wanderer through the cemeteries of Vienna, and not a few visitors to those memorable shrines have been pained to observe the neglected aspect of some of them.

—TEN years ago there were only one or two places in London where American canned goods were to be obtained, and those few places were patronized almost exclusively by Americans themselves. Now all this is changed; and the thousand and one canned articles, for the putting up of which America has become famous, may be purchased as readily, and almost as cheaply there, as in Philadelphia or New York.

—THE coffee trade of New Orleans is steadily on the increase, and promises to be as large as in any year since the war. The total import of Rio at that port in 1878-79 was 144,471 bags. The *Times* says: "We have this year imported since the 1st of July 58,858 bags, and there are now afloat, due within the next thirty days, about 50,000 bags. It is thus absolutely certain that our imports of Rio coffee will be largely in excess of last year's. The receipts of Mexican during 1878-79 were 3,468,048 pounds, equal to 26,272 bags."

—DURING the past few days an emigration scare has taken possession of a large proportion of the miners of Durham and Northumberland, in consequence of the receipt of most unfavorable news from their brother miners who recently emigrated to New South Wales, and who have been utterly deceived by the promises of profitable employment there. This news will considerably check emigration schemes. Large numbers of miners who left England during the recent great strike in Durham are now returning without having struck a pick.

—THE largest tramway corporation in England is the North Metropolitan, which owns over thirty miles of line. Until about eighteen months ago the company's vehicles were horsed by the London General Omnibus Company at a cost of 6½ pence per mile run. When the contract expired the Tramway Company determined to purchase their own horses, and sent an agent over to America for that purpose, who bought and shipped 3,000 fine animals. At the time this purchase took place the relations between the English and Russian governments were, in diplomatic parlance, "strained," and some busybody spread the report that agents of the British Government were in America buying up all the cavalry horses they could lay their hands on.

A SQUIRREL.

WHERE yonder stately chestnuts, blent in one,
Hide cool aerial archways from the sun,

You roam on agile feet, in furry guise,
With bounteous wisp of tail, black beads of eyes.

Though colored like the inert brown branches' hue,
The spirit of their light leafage lives in you!

And while you gambol amid their breezy dark,
Fantastic revelet with delight I mark

The alert, shy head, the nimble leap and pause,
The chattering voice, the restive click of claws,

The idyllic ecstasy, the buoyant power,
The elusive grace, until you seem, this hour,

Like some strange wingless bird whom heaven has lent
A shadowy forest for its firmament!

EDGAR FAWCETT.

"WE PARTED BY THE RIVER-SIDE."

CHAPTER IV.—BARBRA SPEAKS.

IT is five weeks since Annah went away—only five weeks, and yet it seems an eternity. I have been so lonely without her; I have missed her more than she will ever know. I am sitting here under the willows, now, in my favorite retreat, feeling blue and miserable, because I have not seen her to-day, as usual.

I always come here when I am blue and in trouble—always, no matter what that trouble may be—and sit and listen to the lazy night-wind whispering to the shut flowers, and the swaying trees, and to the murmuring of the river in its sleep; and somehow it soothes me, and I am at peace.

But to-night I am not so blessed. Some vague, unpleasant, troublesome foreboding haunts me, like a nightmare, and will not be banished. What was that? It sounded like some one hurrying along the gravel-path. And so it is. A dark figure is coming this way. It parts the branches and enters. Why—why, it is Annah! Annah, with a face white as lily-leaves, and great, troubled, miserable eyes. She flings herself downward on the soft, thick grass, and a low moaning cry reaches me. I start forward to go to her, but before I can do so the branches are parted a second time and Mr. Chesterleigh steps into the scented gloom.

Good heavens! how white his face is, and how furious! I shrink back out of sight, with my heart beating frantically. What does it mean, their sudden appearance here, at this hour and in this strange manner?

Between the two great wide spreading willows there is a little opening, and I turn to it and gaze through the space, like one bewitched.

When he discovers the prone figure on the grass all his fury is gone in an instant. He kneels down beside her, in fierce haste.

"Annah!" he calls, tenderly, bending low.

Annah, indeed! How dare he address my sister so!

At the first sound of his voice she springs to her feet and puts out one small hand and motions him to keep away from her.

"What brings you here? Why—why have you come?" she falters, in a voice that I can scarcely hear.

"Why have I come? I came because I could not stay away. You have driven me mad with jealousy," comes the answer, quick and sharp.

"Driven you mad with jealousy?" she echoes. "I? How?"

"You know how. This afternoon I invited you to come to your sister's with me and you refused me. Afterwards, when I had gone, you sent for Doctor Dean and asked him to bring you."

"How do you know that? Who told you?" she demands, hastily.

"Doctor Dean told me. You see you cannot deny the fact," he says, bitterly, regarding her averted face with an angry sort of triumph in his eyes. "I met him as he was going, and—and I had a suspicion, and so I forced the truth out of him."

There is an ominous silence for an instant. Even the river is not laughing, or, if it is, the laughter is so low that I do not catch it.

His voice, gentle and sweet as only a man's can be when speaking to the thing he loves, breaks the silence.

"Why did you do it, Annah?"

She turns towards him suddenly. The moonlight falls across her face like a spell, and makes the whiteness of it more ivory-colored.

"I did it because I desired to come. I have left your house, and I do not mean to return."

"Do not mean to return?" he pants. "Why?"

There is no answer. Annah's lips are mute.

"Why?" he reiterates. "Ah, I know why you are silent. I understand why you do not answer." And in his voice there is a ring of unutterable joy. "To-day I betrayed myself. You saw my heart in my eyes, and learned from it the love it holds for you. If you had not been so blind, sweet, you might have seen it long ago. And you learned something else besides, Annah. You learned that you loved me, and so, little coward, you were afraid of yourself and of me. You considered that safety lay in flight, so you ran away and hid, or tried to hide from me. But you did not succeed—you never could. My love would find you out, no matter if the great ocean rolled between us; so never try to leave me again, sweet, for I never mean to let you go. All my life I mean to hold you so—so!"

To my horror he folds his arms about her. With his hand he forces her pretty head down upon his shoulder, and lays his flushed cheek against her quivering mouth.

I understand my strange, haunting forebodings now. Dear God in heaven! She loves this man, whose arms are about her, as she never loved any thing mortal before. How will she stand this bitter temptation? How put away her happiness and live her life without it! How withstand his pleading and his prayers? My heart has ceased to beat, I think. It lies in my bosom like a stone. But I need not tremble for Annah—my dear, noble girl!

For one instant she remains in his embrace, then struggles free, and stands before him with a white, resolute, dauntless face, and shakes her head slowly.

"Why do you shake your head?" he cries, wildly. "What does that mean?"

"It means that you are talking like a man who has lost his reason. It means that, after to-night, I shall never see you again," she says, gently but firmly.

"Never see me again? But—but how can you live in my house and be a mother to my baby, and yet never see me again," he questions, looking with shining, impatient eyes at her bewitching face.

"Ah, I *could not*, therefore I must remain away. I can never go back with you—never, never!" she repeats, with bitter agony in her soft, young voice.

"Annah," he says, catching her two hands excitedly, and breathing hard, "Annah, you do not mean it. You are only trying me. Tell me, love, that you do not mean it;" and in his voice there is a world of fond pleading.

She lifts her deep fringed lids and looks at him with eyes that are brimming with tears. But the resolute expression is there still, and she will not falter in her duty.

"I cannot tell you that. It would be untrue. I do mean what I have said."

He flings her hands away from him suddenly.

"Oh, God! I feel that you do mean what you say, and my misery is greater than I can bear. Oh, Annah, Annah, how can you be so cruel! You have taken my happiness, my soul, my life away from me. How shall I manage to exist—how, how! What is there to care for any more ——"

Annah's soft voice interrupts him.

"You have your wife and your child to care for. Have you forgotten them?"

"Forgotten them? I have a child, Annah, but no wife. You know that. Ah! your look of astonishment reminds me that you do not know the history of my married life. What a fool I have been not to have told you of that before. Come and sit down, and I will tell it to you now. When you have heard, you will not refuse me the only boon I crave in life. Come and sit down, beloved."

He takes her slender hand and leads her to the rustic bench, and they sit down upon it. He is silent for a moment, gazing into her face with intense, bitter longing, then he sighs impatiently, and begins.

"Annah, you have lived under my roof for five weeks—ah, how well I know that; I have counted them, every one—and in that time you must have discovered that I possess no love for the woman who is my wife. Do not interrupt me, as I see you are about to do. I know what is in your mind. You would ask why I married her, not loving her? Be patient, dear, and I will tell you.

"My mother and her mother were cousins. They grew up together and were as fond of each other as sisters could be. They were married on the same day, in the same church, by the same minister, and, strange to say, their children were born on the same day, also—I in the morning, and Estell at night. It was considered rather a remarkable coincidence, I believe; so our romantic mothers decided that we should be man and wife when we were twenty-one (if we lived). Well, unfortunately we *did* live, and when we were old enough, we were informed of their wishes. While I was a boy I did not care about the fact, other than to feel rather important at being engaged, but when the time drew near, I realized how foolish the thing was that they were about to do. I did not love my cousin Estell, as I wanted to love the woman I married, and I frankly told my mother so, and begged her to release me from the engagement, but she would not do so. She said it would be a mean, dishonorable act, an injustice to Estell, and she would not listen to it.

"I was exceedingly annoyed about it, and was determined not to be forced into marrying my cousin if I could help it. So one day, shortly before the time appointed, I went to her and told her that I did not love her, and asked her to release me from an engagement that I had had no hand in making. What do you think she said, Annah? What would you have said? But you need not answer, love. I know what a noble reply yours would have been. But she was made of different stuff. I was, and *am* a wealthy man. She knew all that, and she could not give up the Chesterleigh estate and the family diamonds. They were far too glittering a prize, so, like a female Shylock she held me to the letter of my bond, and—well, you know the result. We were married.

"But I know I have not been as attentive and good a husband as I should have been. I did my best, my very best, though, but a man does not greatly care for the fruit that falls at his feet, you know. He prefers to stretch his hand up in the sunshine and choose. So, until my boy came, there was not a more unhappy, restless, dissatisfied, moody wretch in existence than I was; but with his coming, you came, and my soul found a bitter-sweet solace. I—I loved you from the first moment I saw you—Doctor Dean knows that. He read me like a book that day and begged me, as a favor to him, to give you up, and let him find some one else in your stead, but I—refused him. I made up my mind then, that you should come and live in my presence and make my happiness. When I resolve to do a thing I do it, and so you came, oh, my beloved, and my bliss began. Always, whenever I had the opportunity, I used to stand where I could see you putting my baby to sleep, and ——"

"Do not say any more—do not, I entreat you! You make my duty an agony to me—go, go, go! In heaven's name, leave me," cries my sister, burying her face in her fair, little hands, and sobbing aloud.

He springs to his feet and stands before her.

"Do not cry, Annah. Your tears hurt me like a stab. I will go, love, willingly, if you will come with me. Hush! Do not cry. Come!"

Her sobs cease suddenly. She takes her hands away from her face, and looks at him with the most reproachful, pitiful, longing eyes I have ever gazed at.

"Ah, dear God! I thought you *did* love me. I believed you when you told me so, but—but the truth comes forth at last. I read your heart now if I never read it before. In it there is only a shameful passion—a passion that would drag me into the dust of the street to be spurned and trampled on by you, and all the world besides. You would strip me of my honor and rob me of my self-respect. You have insulted my womanhood. Leave my presence, I command you!"

She stands before him with lifted arm, her graceful head thrown proudly back, like some outraged queen. Her tender mouth no longer quivers. It is like a mouth carved in stone, and her eyes are no longer reproachful. They flash and dazzle like blue lightning.

With all my soul I pity the man before her. She has done him a cruel injustice. His colorless face and honest, startled eyes prove that to me beyond a doubt.

He goes down on his knees in front of her; he flings his arms about her beautiful body, and lifts the white misery of his face up to her. His soul shines from his eyes and trembles in his clear, truthful voice, as he speaks:

"Look at me—listen to me, and, oh, love, believe me. As there is a God above us you do me grievous wrong! Here, on my knees, at your dear feet, I swear it! Ah, I have been so blind, but your words have brought me light. I see now where my selfish madness has carried me. I understand how you looked upon it. Once more I entreat you to believe me when I say that I would not harm one hair of your pretty head, nor injure you in any way, if one of God's angels should come down from heaven and bid me do it or be for ever doomed. Sweet, do me justice. Believe me and forgive me," he pleads, still with his fond arms clinging about her.

She frames his up-looking face in her two soft hands, and, stooping over him, she kisses his hair and eyes, cheeks and mouth, with her eager lips.

"I believe you, and I forgive you. God bless you always. Farewell!" she says, in a voice sweet and solemn, and unutterably sad, as the cooing of the gentle dove.

Her caresses seem almost more than he can bear. He hides his face in the folds of her gown, and great, dry, heart-broken sobs burst from his lips and shake his strong body like a wind-blown reed. It is only for an instant that his heart's agony masters him. After that he struggles to his feet; he bends his dark head down and covers her white, slim hands with kisses; then, with one yearning, lingering look at her face, he staggers out into the moonlight, and is gone.

To my astonishment, she does not turn to look after him. She only lifts her hands (that his lips clung to so fondly but now) before her and gazes at them, motionless for a little, then they flutter wildly, and she falls forward to the ground, in a dead faint.

I rush to her instantly, and, with the gardener's help, carry her to the house.

* * * * * * *

It is an hour later. I am seated at Annah's bedside waiting impatiently for the first signs of returning consciousness. I have used all the restoratives I know of, so now I sit and rub and slap her hands and arms smartly. Ah! At last my efforts are crowned with success. A faint color steals into her wan face; her eyes flare open and gaze blankly at the ceiling for an instant, then she calls my name weakly.

"Yes; I am here. What is it, dear?"

"The willows are gone. I do not see their waving tassels any more, Barbra," she says, regretfully.

"No, dear; you are in the house now—in your own room—don't you see?"

"In my own room?" she echoes, dreamily. "Yes, so I am," gazing round as though trying to remember things. "Barbra," she breaks out, suddenly. "Barbra!"

"Yes, Annah," I answer, leaning over her.

She lifts her arms and lays them about my neck, while great tears crowd into her eyes, and her lip trembles painfully.

"Barbra, you were right—you always are, I think—and I was wrong—all wrong. You did not want me to go to——" a spasm crosses her face—"you know where; but I would, in spite of you, and so now I—I have got my punishment, Barbra. I have seen him for the last time; I have bidden him good-by. 'We parted by the riverside.'"

The long lashes sweep down over her eyes, and Annah lies still.

CHAPTER V.—THE AUTHOR SPEAKS.

"In a cottage by the sea."

"ANNAH, do you know how many months we have been here?"

It is Barbra who asks the question—Barbra, sitting in a pretty vine-clad porch, doing her utmost to make herself blind with lace-making. Her sister sits a little way off, in a low basket-chair, a pile of bright worsted in her lap, and in her hand a crimson-and-gilt volume of Tennyson's poems. She lets it fall, folds her hands over the colors in her lap and looks across at Barbra.

"How many months have we been here? I have not the remotest idea. It *seems* like a century to me, but, of course, it is not that long—*certainly* not!" she exclaims, laughing slightly.

"Of course not, Annah. How idiotic you do talk!" cries Barbra, impatiently. "We have been here just eight months to-day. And you have grown much better and appear well contented here!"

"Yes, I *am* contented here. I could live here all my life. I've grown fond of this dear little cottage. I like to sit here in this easy-chair and listen to the ocean thundering against the rocks, or the sweet, low music it makes when it sings to them. Yes, I am quite contented here," and she leans her pretty head back and looks with wide eyes, filled with unutterable yearning, at the blue, cool sea.

"But—but, Annah, do you not think that we ought to go home again now that you are so much improved?" Barbra ventures to ask.

The young woman rolls her head almost restlessly from side to side, and an expression of pain crosses her face.

"Oh, no, Barbra! I do not think so. I have a horror of the thought. How can I ever go back there? Can I ever walk about the garden or sit under those willows again? I do not think I can. I should always see *him* as he looked when he left me that time. Ah, I could not endure that, Barbra," and she gets up and begins to pace up and down the cool porch, hurriedly.

Barbra says nothing. She works on.

Suddenly Annah pauses, with her two hands clasped upon her bosom, and her head turned as if listening. Her face is white with excitement, and her lovely eyes shine like stars.

"Barbra," she calls, pantingly. "Barbra."

Barbra gets up quickly and goes to her.

"What is it, dear?" she questions.

"Some one is coming, Barbra. My heart is keeping time to their footsteps—feel how it races! Look and see who it is—quick!"

Barbra does as she is told. She leans forward, parts the vines and looks out.

Yes, some one is coming, sure enough. A tall, dark, handsome man is hurrying across the sands.

Barbra gazes for an instant like one who doubts her senses, then she turns to her sister.

"Come with me, dear. It is some one you do not care to see—come."

"Barbra, Barbra! *I know who it is!* My heart has told me, and *I* do care to see," and she pulls her arm from Barbra's grasp, and stands like some statue, with radiant, unspeakable joy over all her face.

In another second Earl Chesterleigh springs up the steps and stands before them. He opens his arms and holds them out to Annah, and, without doubt or hesitation, she goes into them.

There is utter silence for a little, except the music the sea is singing to the rocks.

Then Mr. Chesterleigh lifts his lips from Annah's hair and speaks: "Barbra, dear girl, do not look so shocked. I am doing no wrong. I am free. Do not think me wicked, or that I rejoice and am glad, but—my wife is dead. She died six months ago, and as soon as I could I came for Annah. I love her and she loves me, Barbra, and we will never part again so long as we both shall live. To-morrow, if Annah is willing, we will be married here in this cottage. Look up, sweet, and tell me if you are," he urges.

She lifts her face, over which a cloud of pink has drifted, and smiles her own soft, dimpling smile once more, and says, shyly:

"Yes, I am willing—could you doubt it? To-morrow I will become your wife, in this dear 'cottage by the sea.'"

HON. CLARKSON N. POTTER.

CLARKSON NOTT POTTER, late Democratic candidate for Lieutenant-Governor of New York, was born at Schenectady, in this State, in the year 1825. His father was the Right Rev. Alonzo Potter, D.D., for many years prior to his death Bishop of Pennsylvania; his mother, Maria, the daughter of Rev. Eliphalet Nott, D.D., President of Union College for over half a century.

At a very early age, Mr. Potter graduated at Union College, and subsequently at the Rensselaer Polytechnic Institute at Troy. For a short time thereafter he acted as a surveyor in Wisconsin. He then studied law, and, upon being admitted to the Bar, commenced practice in the City of New York. He speedily built up a large and lucrative business, and had charge of many important litigations involving not only large amounts, but grave questions of law of wide, general interest. Among other causes, he argued before the Supreme Court of the United States the cases in which that court held the "Legal Tender" Act to be unconstitutional, and, when that question was re-heard by that court, he was selected to discuss it with the Attorney-General.

Mr. Potter has been a life-long and consistent Democrat, but has never held any office except that of Representative in Congress. He was elected to the Forty-first Congress, re-elected to the Forty-second and Forty-third Congresses, declined a nomination for the Forty-fourth Congress, and, in 1876, was re-elected to the Forty-fifth Congress. During the session of that Congress, he was made chairman of the House Committee to investigate the so-called Electoral Frauds, and conducted the inquiry upon that subject.

Mr. Potter was almost the only man in Congress who opposed the Bill demonetizing silver. He insisted that it was unwise and dangerous to change then the existing standards of value. Nevertheless, he thought that since this injury and injustice had been consummated, the legislation for silver last Winter would not be of any advantage to the people. During the Forty-fifth Congress he secured the passage of a Bill by the House which forbids the consideration by Congress of any private or personal claim, until a public judicial examination of the facts by the Court of Claims has first been held. In his public course he has been governed by the conviction that free government can only be preserved by limiting legislative power, by leaving the people of the localities to decide local affairs, and by the prevention of monopolies and privileged classes. He accordingly has always insisted upon preserving vested rights and maintaining justice, and has steadily resisted granting special privileges or favors to any person or classes, and earnestly opposed all measures of further centralization; the chartering by Congress of private corporations; the extension and reissue of patents; all land grants and subsidies; the continuation of the franking privilege; the exclusion of foreign-built ships; and the back-pay, St. Domingo and all kindred schemes. With the like views he proposed amendments to the Constitution prohibiting Congress from interfering with the vested rights or passing any

Digitized by Google

law impairing the obligation of contracts, or from chartering corporations to do business in the States; and for limiting the Presidency to one term of six years, and restricting Congress to perennial sessions.

When the Democratic Party determined upon the renomination of Governor Robinson, Mr. Potter's name came into prominence for the post of Lieutenant-Governor, it being felt that he could strengthen the party ticket, and the strong vote received by him on the 4th instant fully justifies that confidence.

Mr. Potter is one of a family of brothers, each of whom has achieved very great success in the several lines of life chosen by them. His brother Howard is one of the members of the great firm of English bankers, Brown Brothers & Co. His brother Robert served with great distinction during the war, and was in command for some time of the Ninth Army Corps. His brother Henry has for many years been rector of Grace Church, one of the most important parishes in this city. His brothers Edward and William are architects, under whose plans many important buildings in various sections of the country have been erected. The latter was lately the Government supervising architect. His brother Eliphalet is President of Union College, in the same position as that in which his grandfather passed the greater portion of his long and useful life.

THE LATE ZACHARIAH CHANDLER.

(*Continued from front page.*)

Funeral services were held in the hotel on Sunday, the Rev. David Swing officiating; after which, the remains were taken, under an appropriate escort, to the depot, and thence to Detroit, where the last tributes were rendered on Wednesday, Nov. 5. At an early hour in the morning the remains were conveyed, under the escort of a detachment of the Metropolitan Police, from his residence on Fort Street to the City Hall, where the Committee of Arrangements and a detachment of the Light Guard received the body and placed it in the centre hall, at the head of the main staircase, where it lay in state until 1 o'clock. At 8:15 o'clock the Fort-street entrance to the City Hall was opened, and a great crowd of people poured in. As they entered the south corridor they were separated into pairs, and as the casket was reached every person, bending over, gazed upon the face of the dead Senator. The casket was of black-walnut lined with white satin. Its exterior was covered with black silk velvet, relieved with a drapery of gros-grain silk. At each end, facing the coffin, stood a soldier of the Detroit Light Guard, with a rifle and fixed bayonet at parade-rest. Overhead was a canopy of red, white and blue streamers, intermingled with folds of crape, descending in graceful lines to the four corners of the intersection of the corridors.

Many prominent Republicans and men of distinction from all parts of the country were present. Among these were Senators Blaine, Don Cameron, Burnside, Ogiesby, Logan, and ex-Senator Cameron, Secretary of the Senate Burch, Sergeant-at-Arms Bright, Governors Croswell of Michigan, Cullom of Illinois, Foster of Ohio and Smith of Wisconsin, the entire Michigan Congressional delegation, numerous civic and military companies. The body was removed to the Fort Street mansion a little after 1 P. M. Religious services were conducted there by the Rev. Dr. Pierson, who pronounced a glowing eulogy upon the character and life of the departed Senator, who, he said, sacrificed himself on the altar of patriotism. The address was followed by a brief and eloquent prayer.

The pall-bearers were twenty-five in number, as follows: Ex-Governor Henry P. Baldwin, James F. Joy, Alanson Sheffy, George V. N. Lathrop, Christian H. Buhl, Theodore Romyn, Charles T. Gorham, Governor Croswell, John S. Newberry, William A. Moore, S. Dow Elwood, Alexander Lewis, John Owen, General Alger, Judge James V. Campbell, A. H. Dey, Thomas W. Palmer, Benjamin Vernor, C. C. Trowbridge, Sullivan M. Cutcheon, A. B. Maynard, Judge H. B. Brown, Judge Swift, A. C. McGraw and Frederick Buhl.

At 3 P. M. the coffin was carried to the hearse. The Secretary and Sergeant-at-Arms of the Senate, according to usage on such occasions, wore white sashes and followed the pall-bearers. The entire line of march to the cemetery was densely lined on either side with citizens, although a blinding snowstorm prevailed at the time. All public buildings, stores and dwellings along the line of march were profusely draped in black, and while the procession was passing the City Hall the immense bell was tolled.

BICYCLE RACE FOR THE WORLD'S CHAMPIONSHIP.

BICYCLING in this country has received a new impetus by the visit of several professional representatives of England and France, and the liberal challenges offered in their behalf to American masters of the two-wheeled vehicle. As we have heretofore stated, the exercise has of late years been almost confined to Boston and its vicinity. The organization of bicycle clubs and the publication of a semi-monthly journal devoted to their interests gives an indication of the growing popularity of this exhilarating exercise.

After a variety of contests, there was opened in a large, oblong tent on Huntington Avenue, Boston, on November 5th, a four-days' race for the championship of the world. The names of those entered for the contest are Charles Terront, the French champion; William Cann, the English champion; Thomas Harrison, of Boston, Robinson, of Philadelphia; George Harrison, of Boston; Murphy, of Worcester, and Lowder, of Somerville.

The race began during each of the four days at 9 A. M., and closed at 12 P. M. That is, the men had fifteen working hours a day, or sixty hours to make the most number of miles in they can. The English and French bicyclists gave the Americans odds of 10 miles in every 100. The prizes were $500 for the man making the most miles, $250 for the second best, and $100 for the third winner. To the other competitors, $40 were offered to those making 500 miles, $30 to those making 550, and $60 to those making 600 miles.

Women and Medicine.

THE Massachusetts Medical Society has at length voted to bestow the professional sanction upon women upon the same terms as upon men—a tardy recognition of the capacity of women to practice medicine. This step is a logical consequence of the opening of medical instruction to women. Since Massachusetts opened the first "female medical college" in 1848, nearly every country in the world has admitted women to medical training. An interesting paper in the *International Review* for October gives the successive steps by which this has been accomplished in different countries. A canvass of the Massachusetts State Society last year showed that 72 per cent of the physicians were in favor of some recognition of female practitioners, and no other recognition is worth while but the same as that extended to men. The New York Medical Society already admits women. The Review concludes that the question whether women should practice medicine is settled in her favor by the fact that she does practice already. One great field for woman physicians is among the Hindoos of India. Missionary teaching is being every year carried into homes where it could never penetrate but for the medical skill which is its introduction. The religio-social régime of the wealthy classes in Asiatic society will not admit a male physician to the bedside of invalid women, and woman must minister unto woman. The missionary seed thus planted is small at first, but large in its consequences. The economical value to the civilized world of the foreign missions of Christianity is as yet but feebly recognized. But woman has also a great work in the practice of medicine at home, and in the inculcation of more rational habits of life, dress, food and bringing up of children.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The New Theatre at Geneva.

The cost of this splendid temple of Thespis has been defrayed from the proceeds of the Duke of Brunswick's legacy, and, including the value of the land on which it is built, exceeds 5,000,000 francs. It is, of course, the property of the City of Geneva, and for a year at least will be managed by the Municipality, in order that they may ascertain by actual experience the extent to which it will be necessary thereafter to subsidize the lessee. It is one of the handsomest and largest structures of the sort in Europe. In beauty and extent it ranks next to the opera-houses of Paris and Vienna. In external appearance it greatly resembles that of Paris, being built in the same style of architecture, while the decoration and arrangement of the interior are as perfect as lavish expenditure and artistic taste can make them.

Floating the Last Popular Loan in Paris.

Three months ago the Crédit Foncier of France negotiated a popular loan of 500,000,000 francs, and the excess of subscriptions over the amount required was so large, that in October books were opened for another series of the low-interest bonds, limited to 900,000,000 francs. The proverbial thrift of the French people has never been so practically exhibited as in the rush to purchase the bonds issued by the Government since the great war with Germany, and although the sums of money drawn from the hiding-places and stocking-beds of the people have aggregated a stupendous sum, our illustration of the floating of the last popular loan shows that there is no falling off in the pecuniary interest of the masses in the financial stability of the Republic.

Torpedo Experiments at Portsmouth.

A mimic battle was fought between the British torpedo fleet and the forts at Portsmouth, on the night of October 16th, when thick darkness prevailed. The electric light projected from Fort Monckton swept the water for some time before discovering any signs of the "enemy," but at length it fell upon a boat which had managed to elude detection, and had affixed a charge of dynamite to the great timber boom by which the channel leading to the harbor was protected. The attacking party had not only blown up this barrier, but had also fired a magazine on shore, but the plucky little craft being discovered within the range of the gun, was, of course, placed *hors de combat*, and a like fate afterwards befell most of the other torpedo boats, so that when the contest was over, the defenders of the fort were held to be the victors.

Zulu Chiefs Signing the Peace Stipulations.

This ceremony took place on September 1st, the scene being a square formed by the headquarter encampments, in the centre of which the Union Jack waved aloft. When Sir Garnet appeared the assembled Zulus greeted him with loud "Hurrahs," pronounced very harshly; and after the delivery of his speech, which was interpreted sentence by sentence, each chief in his turn arose as his name was called and approached the table on which lay the document he was required to sign. He was then desired to hold the tip of the penholder, while Mr. T. Shepstone made the mark and wrote the name of each chief as he came up. The meaning of this form was explained to them. After this ceremony they were told that the "udabe" had come to a close. The chiefs all rose as one man, crying "Inguse," and thus ended one of the closing scenes of the last act of the sad and awful drama of the Zulu War.

Great Britain's Flag in the Mediterranean.

The recent appearance of the British fleet under Admiral Hornby in Mediterranean waters caused such apprehension in Constantinople that Sir Austin Layard was requested officially to explain the movement. In response, he informed the Porte that the squadron would remain at present at Voulah, but eventually might proceed to some other Turkish port, as England would not tolerate the oppression of Christians in Asiatic Turkey. Our illustration shows the fleet entering the narrow entrance of the harbor of Jero, in the Island of Mitylene. In parts it is not more than two ships' lengths across, and about four miles in length, where it opens out into a most beautiful harbor, and one of the finest in the world. The hills on either side are covered with olive trees, which give it a very refreshing appearance. After visiting the barren islands of the Archipelago, it was a pretty sight to see the gigantic ships composing the fleet winding their serpentine course through those narrow waters, led by the flagship *Alexandra*.

Employment of Women in Telegraphy.

The employment of women in the telegraphic service in France on a large scale has now begun at Paris, where 240 girls are undergoing an apprenticeship of three months on trial. They are cheaper than men, getting only $200 a year, whereas men get $300 and $400. The girls are not expected to do night-work. Our engraving represents the manner in which the apprenticeship is being conducted, under the direction of the Minister of the Post Office and the Telegraph Service. Thorough instruction is given the aspirants for engagements, and daily tests of their efficiency are made.

Caffre Women at Pietermaritzburg.

The British province of Natal, which has a native African population of nearly 300,000, and scarcely 20,000 Europeans, may be considered rather as a Caffre and Zulu protectorate, than as a colony of the Crown. The native people in general, throughout the up-country districts, living in associated tribes under their own chiefs, and possessing herds of cattle with ample pasture, will not take employment from European farmers or planters. In and about the towns of Durban and Pietermaritzburg, however, the Zulus are disposed to take light household and street work, though they will not toil in the fields. A very large number support themselves by dealing in pieces of sugar-cane, which is greedily sucked by their own people, who throng the towns on the occasion of the weekly visit of the Caffre women.

SCIENTIFIC INTELLIGENCE.

Through the Exertions of Mr. A. J. Ten Brink, a Geographical Society has recently been founded at Samarang, in Java, which already numbers upwards of 100 members.

The British Sanitary Institute has decided to establish a school of hygiene in London, which will be open to all classes and to either sex. It will be opened during November.

The Railroad from the Naples Observatory to the foot of the cone of Vesuvius will be opened early next year. A steam engine at the summit will draw the cars up by a windlass.

Professor Klinkerfües, of the Observatory of Goettingen, is said to have invented a telegraphic device by which eight telegraphic messages may be sent by one wire at the same time, and printed separately and simultaneously by means of an apparatus at the receiving end.

In a Letter addressed to the French Academy of Sciences, the Minister of Agriculture and Commerce desires that body to indicate a practical means of detecting the adulteration of olive oil with oils having very different sources. This fraud has become so common that it is prejudicial to the cultivation of the olive.

The French Association for the Advancement of Science has just commenced the ninth year of its existence. From the beginning it has enjoyed the largest measure of prosperity, being patronized by the leaders of science and the educated public. Financially, the association stands upon the most satisfactory basis.

The Winter Garden which the King of the Belgians has had constructed in the park at Laeken is the largest structure of the kind in Europe. The immense cupola of iron and glass is sixty metres in diameter and thirty metres in height in the centre. It is supported by thirty-six columns of white stone, each being one metre in diameter.

General Tedtleben, who, like General Kaufmann, is in constant communication with scientific institutions in Germany, which he regularly informs of important geographical discoveries, has presented three camels to the Zoological Gardens in Berlin, which have likewise been the recipient of several handsome donations from General Kaufmann.

According to a Report recently made to the Anthropological Society of France, there is a race of wild men, not much superior to monkeys, inhabiting the island of Andaman in the Indian Ocean. Their way of counting is to slap the nose for units, and to pull down the corners of the eyes for tens—as to hundreds they can scarcely compass that amount of mathematics.

Mr. Rhodes, who accompanied Captain Eaton to the borders of Lake Nyanza, while wandering in a ravine near Florence Bay, discovered small pieces of a black substance which proved to be coal. The savages also recognized it as being the same material as was burnt on the steamships. A closer examination of the locality revealed a true vein of excellent coal. This discovery will be of great importance to the steam navigation of Lake Nyanza, and possibly to the development of the industry of the country. The vein was more than three feet in height, and was situated four hundred feet above the level of the lake.

The Acclimatation Society of Paris has received three Turkoman greyhounds of great beauty, the first specimens imported into Europe. The animals are employed in their native country in catching horses. They are of noble aspect, and have great strength of muscle, their head is remarkably long and delicate in form. The hair on the body is short, but the ears (which are very long) are covered with long, silken hair. Their legs are also covered with well-developed hair, and the contrast of this with the upper smooth part of the body is surprising at first sight, the dogs appearing as if they had large, waving pantaloons, or remarking one of some kinds of fowl. It is among this breed that the slop greyhound, described by Hamilton Smith, is found so trained that when a whole pack of them is in pursuit of a doubling hare, a stick thrown before it instantly produces a general halt, and one only is then signaled out to pursue the game.

The Science of Man.—Dr. Edward B. Taylor, in his address before the Section of Anthropology, at a meeting of the British Association, says that the science of man, though concerned with the later forms of being belonging to times which geologists treat as almost modern, has nevertheless to deal with periods of time extending far back beyond the range of history and chronology. Looking back 4,000 to 5,000 years, what is the appearance of mankind as disclosed to us by the Egyptian monuments and inscriptions? Several of the best marked races of man were already in existence, including the brown Egyptian himself, the dark-white Semitic man of Assyria or Palestine, the Central African of two varieties, which travelers still find as distinct as ever, namely, the black or negro proper, and the copper-colored negroloid, like the Bongo or Nyam-Nyam of our own time. Indeed the evidence accessible as to ancient races of man goes to prove that the causes which brought about their differences in types of skull, hair, skin and constitution, did their chief work in times before history began.

A Correspondent proposes the following plan to awaken persons without disturbing other occupants of the room: Take a couple of Smee's Cells, No. 1 size; fill the cells ready for use and attach the wires insulated; let part of the wire, bare, be fastened to the person's arm or leg, and then have a clock close by, with the face punched with small holes to fit the wire; these holes are made at each hour or half-hour, as desired; one end of the wire is then fastened from the inside so that the end protrudes just enough for the hour-hand to touch it, yet the minute-hand does not; the other end of the wire is attached to the hands or the rod on which the hands revolve. Now, then, say the person wishes to be awakened at 3 A. M., and it is 10 P. M. as he is retiring. Let him put the wire in the hole over 3 and attach the wire to himself and retire. Of course, the minute-hand cannot touch the wire at figure 3, so that no connection is made until the hour-hand comes in contact with it at 3 o'clock, when, the instant it touches, the current is closed and the shock given the person will awaken him out of the soundest sleep.

Twenty-four Years Ago a gentleman in the neighborhood of Manchester, England, packed several eggs in a box of oats, and put them in an out-of-the-way place in the attic of his store, with the intention of testing their condition at the end of a year's time. Forgetting all about them, nearly a quarter of a century had passed when, in overhauling the contents of the attic, he came upon the box in its hiding-place. Upon breaking the eggs, the shells of which appeared sound, the whites were found to have totally disappeared, while the yolks remained dried and quite hard. The oats in which the eggs were packed were sound as the day when they were put in the box. In the box was found a memorandum giving the date on which the eggs were deposited. The case is a peculiar one. There must have been something about the locality favorable to the slow evaporation of the eggs and of the absorption of the moisture as fast as it was given off. There are companies in New York and St. Louis who manufacture dried eggs and sell the contents in a pulverulent form. They perform the drying very rapidly by means of a vacuum generated by an air-pump, which removes all moisture as soon as it escapes from the albumen, on the same principle that vacuum pans are used in sugar refineries.

PERSONAL GOSSIP.

THE Rev. Matthew Hale Smith, a well-known lecturer and *littérateur*, died in Brooklyn, November 7th, aged 69.

SENATOR CHANDLER left an estate worth about $3,000,000. While a merchant in Detroit he gained the nickname of "Old Yardstick."

IT is said of General Eli Warren, of Perry, Ga., that he has been engaged on one side or the other in every murder case that has been tried in that county during the past fifty years.

GEORGE AUGUSTUS SALA, the well-known journalist and author, is about to start for a four months' tour in America, principally in the Southern States, his object being to avoid bronchitis.

IN Melbourne, Victoria, Bishop Moorhouse has created a sensation by heading a deputation to the Minister of Education to urge the teaching of the historical events of the Bible in the State schools.

THE Prince of Roumania has conferred upon Archibald Forbes, the famous newspaper war-correspondent, the order of the "Star of Roumania" for his participation in the Russo-Turkish campaign.

WALTER HASTINGS, recently deceased, left the bulk of his fortune, after the decease of his wife, to Harvard College. It is estimated at $300,000. This is the largest donation ever made to the college.

THE Earl of Aberdeen has a distinction unique among earls—he is the sole owner of a railway, the entire cost of which came out of his own pocket. It is ten miles in length, runs chiefly on his own property and cost $275,000.

THE decoration of "The Golden Flower of Siam" has been sent by the King to the Hon. Thaddeus Fairbanks, of St. Johnsbury, Vt., inventor of the platform scale. This is the first time this distinction has ever been conferred on an American.

ON October 25th Sir Moses Montefiore celebrated the ninety-fifth anniversary of his birthday, and according to annual custom he forwarded to the congregational authorities of the synagogue a sum of money to be distributed among ninety poor persons.

AN historical picture by Paul Delaroche, representing the carrying off of the keys of the Bastille after its capture, will be set up in the Hotel de Ville, at Paris, when the work of restoration is finished. The picture has always belonged to the city, but has never been well exhibited.

SIR GEORGE BUCKLEY-MATHEW, an Englishman who had, many years ago, diplomatic posts in this country, and who was from 1867 until the present year British Minister in Brazil, has just died. His third wife and widow was Miss Gerard, daughter of Mr. J. W. Gerard, of this city.

FIVE young ladies, the Misses Prideaux-Brune and Miss Nora O'Shaughnessy, have just received from the British Lifeboat Institution five silver medals in acknowledgment of their intrepid services in rowing their boat through a rough sea and saving, at considerable risk of life, an exhausted sailor from a boat capsized in squally weather.

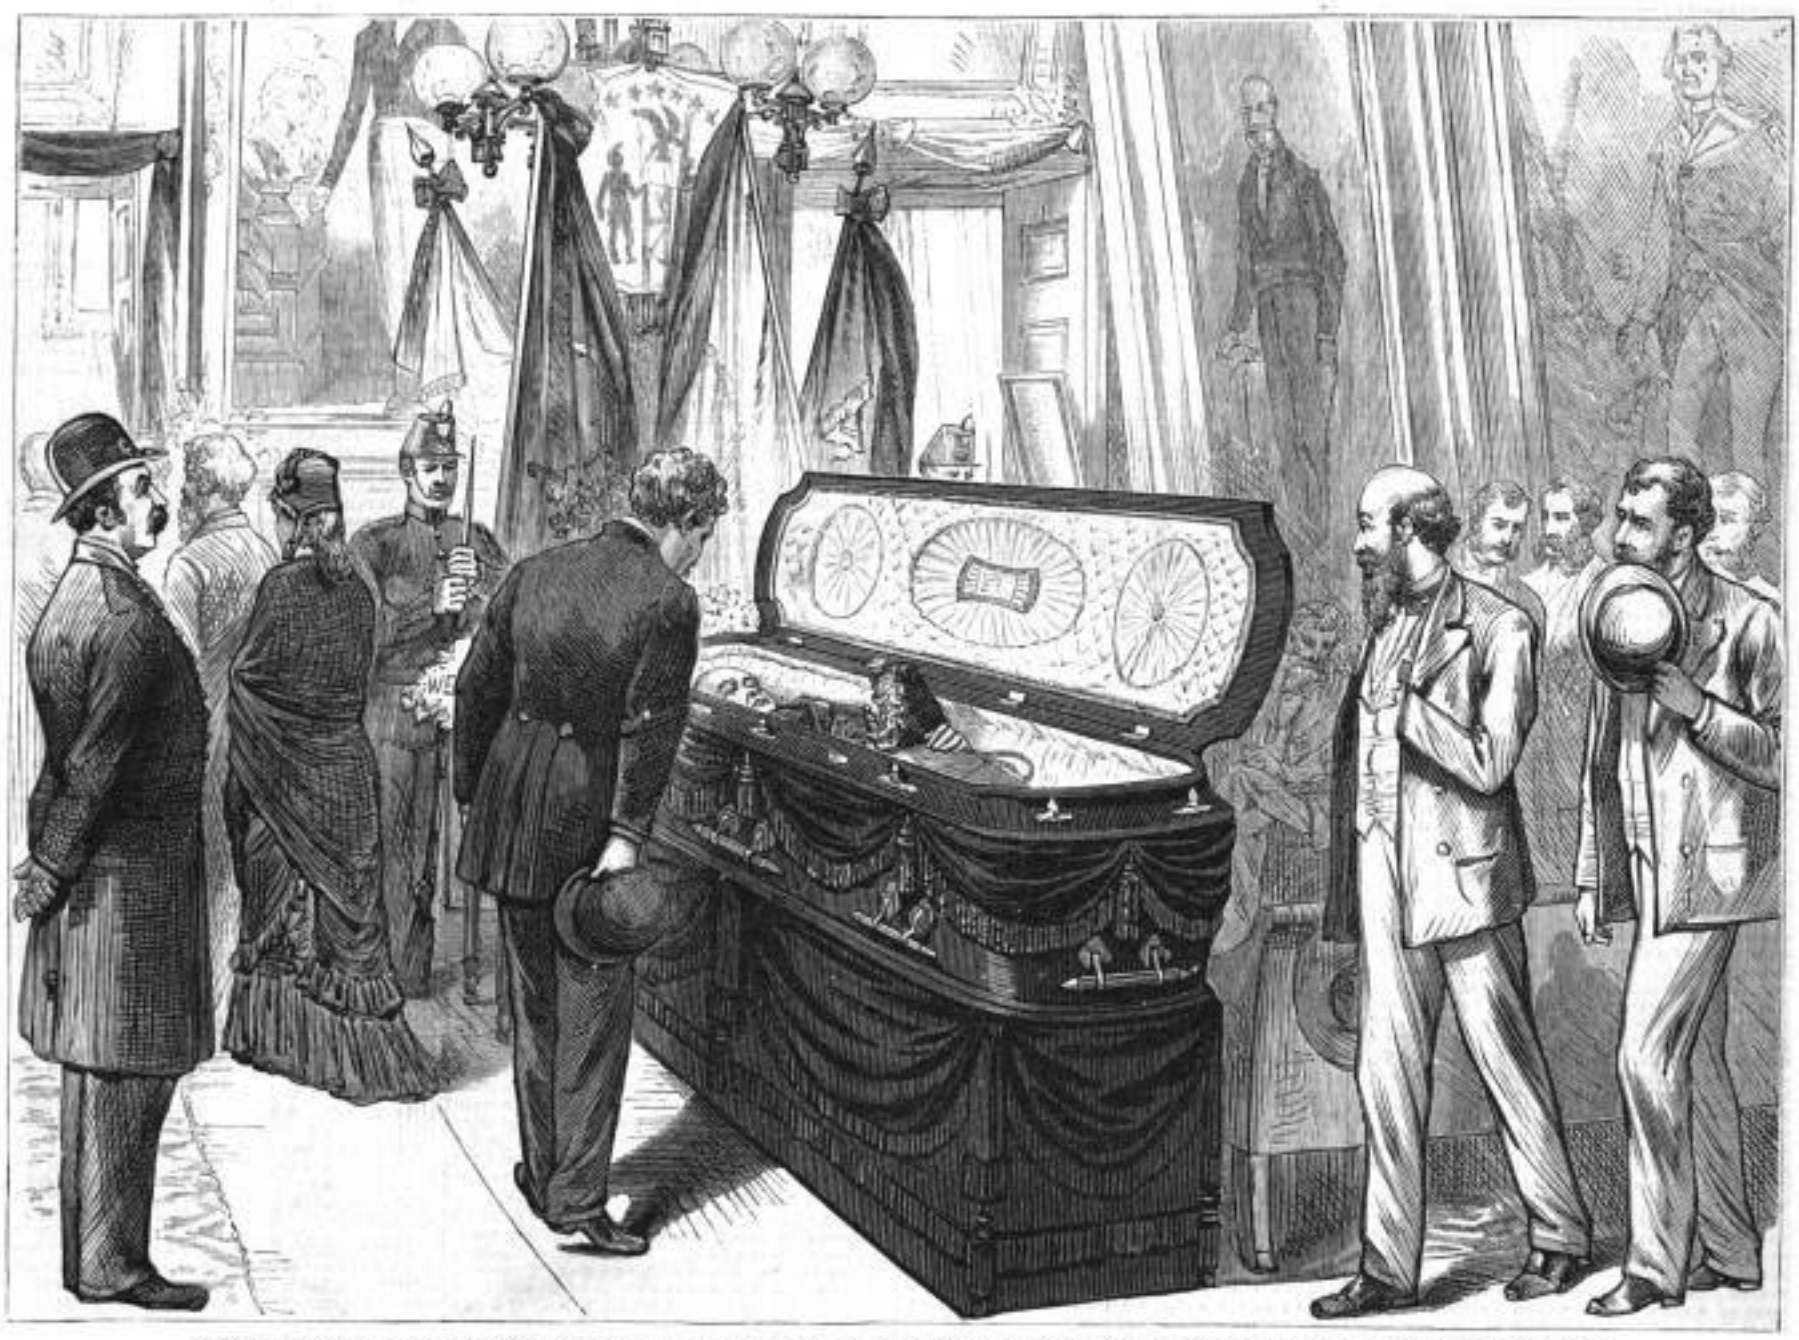
IN the Spanish Chamber of Deputies, November 4th, the Minister of Finance read a Bill granting to the future Queen £16,000 annually, and $10,000 annually in case of her widowhood. There was no debate on the measure. The Opposition members will not oppose the grant. The house was very thinly attended. The Royal marriage is fixed for December 1st.

A HANDSOME compliment was paid to L. H. Cramer, Esq., the Receiver of Taxes and Assessments at Saratoga, N. Y., on election day, when he was re-elected for a term of three years by a majority of 475, and that in a town that is usually Republican by 200. He is the only Democrat elected in Saratoga County, and his success is but a fitting recognition of his capability, fidelity and widespread popularity.

IT is said that the post of Foreign Secretary, made vacant by the death of Herr von Bülow, has been offered to Prince Hohenlohe, the present German Ambassador to Paris, who would simultaneously be appointed Imperial Vice-Chancellor. It is understood that Herr von Stolberg, the present Vice-Chancellor, concurs in this arrangement, but it is not yet known whether Prince Hohenlohe will accept.

SCHELLING, the Dresden sculptor, has completed his gigantic model of the bronze memorial statue, which it was decided soon after the Franco-German war should be erected on the Niederwald, near Bingen, as a lasting emblem of Germany's dominion on the Rhine. When put together the figure will be thirty-two feet nine inches in height, or a little more than one-half of the height of the famous "Bavaria" in the Theresa meadow, near Munich.

AN unexpected success has followed the project of the late Mgr. Dupanloup, Bishop of Orleans, for the decoration of Orleans Cathedral with ten painted windows representing scenes in the life of Joan of Arc. In a short time $25,000 was subscribed, and a competition, open to all glass painters in France, has resulted in the acceptance of a design possessing, it is said, remarkable merit. The successful artist has been commissioned to execute the work.



BARON ROTHSCHILD, of Vienna, has a favorite horse, for whose accommodation he has had a special loose box built at the cost of $12,000. This elegant room forms a part of a new stable, which cost $60,000, and which has marble floors; encaustic tiles painted by distinguished artists; rings, chains and drain-traps of silver, and walls frescoed with splendid hunting scenes from the pencils of eminent animal painters. The Baron's annual income is fortunately $1,600,000.

GENERAL ADAMS, who did such good service in rescuing the Meeker ladies from the Indians, says that he thinks about twenty-five head men will be convicted of having induced the young men to enter into the war and massacre, and that they will be executed. Chief Ouray has organized a commission to detect the guilty ones, has ordered the hostiles to report to him in ten days, and declares that if his summons is not obeyed he will join in the war against the Utes who resist.

IN a speech at Burlington, Iowa, November 4th, General Grant said: "I believe that if there ever is another war in this country, it will be one of ignorance against intelligence, and in that conflict the State of Iowa will achieve a great victory. Furthermore, I think that war will be one of ignorance and superstition combined against education and intelligence, and I am satisfied that the children here will enroll in the army of intelligence, and wipe out the common enemy, ignorance."

THE United States Consul at Tien-Tsin, China, in a dispatch to the Department of State, reports that two English physicians have had remarkable success in their practice in the royal family, leading to an immediate practice among the common people. The Viceroy has established a free dispensary, and placed one of the doctors at its head. The whole expense is borne by the Viceroy. He has also noticed favorably Miss Howard, M. D., an American lady, who holds high rank among the physicians of Peking.

NEW YORK CITY.—THE LATE MAJOR-GENERAL JOSEPH HOOKER—VETERANS OF THE WAR VIEWING THE REMAINS IN THE GOVERNOR'S ROOM, CITY HALL, NOVEMBER 5TH.

FUNERAL OF GENERAL HOOKER IN NEW YORK CITY.

THE remains of the late General Joseph Hooker, who died at Garden City, L. I., on October 31st, were brought to New York on November 4th, and placed upon a catafalque in the Governor's Room, City Hall, where they lay in state until the 5th, the day of the funeral services.

The flags throughout the city were at half-mast during the day. Soldiers from the Regular Army were on special duty in the Governor's Room, two standing continually at the head of the coffin, on which rested the dead man's hat, sword and belt. At the head of the catafalque was a pillow of white flowers, with the following words in violets: "California Pioneers. We will meet over the divide."

Shortly before noon the pall-bearers assembled in one of the apartments adjoining the Governor's Room. They were as follows, nearly all being in full uniform: General Winfield S. Hancock, General Ambrose E. Burnside, Rear-Admiral S. D. Trenchard, General Silas Casey, General Daniel Butterfield, General Charles K. Graham, General Alexander H. Webb, General Arnold, General Crittenden, General Anson G. McCook, General George H. Sharpe, General Sweeney, General J. B. Kiddoo, General Gresham Mott, General Wood, John Jacob Astor and Charles L. Tiffany.

The procession consisted of a platoon of mounted police; Major-General Shaler and his staff, mounted; Separate Troop A, and Troop A Third Regiment of Cavalry of the National Guard; Battery C Light Artillery of the United States Army; Seventh Regiment, with arms reversed; the pall-bearers; the hearse, escorted by the special detail from Governor's Island; field and staff officers of the Seventy-first Regiment of the National Guard; veterans of the war; detachment of the Grand Army of the Republic, under command of Senior Vice-Department Commander Jacob Wilsing, including the Association of the Veterans of the Mexican War, commanded by Colonel W. L. Tidhall, with Captain Charles J. Murphy as marshal, and among whom was ex-Governor Parker of New Jersey; and details from the First and Eleventh Massachusetts Volunteers, General Hooker's old regiments.

Appropriate services were held in the Madison Square Presbyterian Church, the Rev. Dr. Adams officiating, and at the close the body was transferred to Jersey City, where a detachment from the Soldiers' Home at Dayton, Ohio, took charge of it.

At Cincinnati, the remains and escort were received by General Dickinson, Mayor Jacob and other members of the Committee of Soldiers and Citizens. Lieutenant McNeil, United States Artillery, with his guard, who had accompanied the remains, was relieved by Lieutenant Buckhardt, of the Thirteenth Infantry, with eight men from Newport Barracks. The remains were taken to the Second Presbyterian Church, where they were in state until one o'clock on Friday, the hour fixed for the burial. The church prepared for the reception of the remains with draped flags and floral offerings.

HON. ALONZO B. CORNELL,

GOVERNOR-ELECT OF THE STATE OF NEW YORK.

HON. ALONZO B. CORNELL, Governor-elect of New York, was born at Ithaca, on the 22d of January, 1832, and received his early academic education in that town. At the age of fifteen years he began active life as a telegraph operator, and, in 1848, went to Cleveland, Ohio, as manager of the office there, where he remained several years. From Cleveland he came to New York, and from 1855 to 1859 was the manager of the principal telegraph office in this city. From 1864 to 1869 he was Cashier and Vice-President of the First National Bank of Ithaca; afterwards he became First Vice-President of the Western Union Company; he is now the chief officer of the American District Telegraph Company, and has various other business connections with telegraphic enterprises.

Upon the formation of the Republican Party in 1854, he identified himself actively with its fortunes, and has, during his whole career, been an earnest supporter of its principles.

Mr. Cornell's first political office was that of Chairman of his County Committee, which he held from 1859 to 1866. In the latter year he became a member of the State Committee. In 1868 he was placed on the State ticket as a candidate for Lieutenant-Governor, but, with his party, was defeated.

HON. ALONZO B. CORNELL, GOVERNOR-ELECT OF NEW YORK.—FROM A PHOTO. BY SOUARDI'S.

In March, 1869, when General Grant became President, Mr. Cornell was appointed Surveyor of this port, which office he filled until the Fall of 1872, when he accepted a nomination for the State Assembly. President Grant offered Mr. Cornell the office of Assistant-Treasurer of the United States in this city during the year 1870, but the appointment was declined. In the same year Mr. Cornell first became Chairman of the Republican State Committee. Upon his election to the Assembly he was made Speaker, quitting the position with a high reputation for integrity. In 1876 he was appointed Naval Officer of New York, and he held that office until removed by President Hayes, whose civil service order Mr. Cornell had violated by his active connection with the party organization while holding his position as a Federal officer. This offense, however, seems to have been forgiven by the Administration, its leading members having, in his late candidacy for the Governorship, given him their active support.

Mr. Cornell's nomination for Governor was resisted by a small element of his party on the ground that he represented "the machine" in politics. But his high personal character and acknowledged ability commanded for him the enthusiastic support of the great body of Republicans, and there is no doubt that the same qualities, joined to his experience in public affairs and his thorough knowledge of the State and its wants, will secure for his administration the respect and confidence of the great mass of the people.

REV. THOMAS A. STARKEY,

BISHOP OF THE PROTESTANT EPISCOPAL DIOCESE OF NORTHERN NEW JERSEY.

THE Rev. Dr. Thomas A. Starkey, who has just been elected Bishop of the Protestant Episcopal Diocese of Northern New Jersey, is about fifty years of age, and a gentleman of refined manners and dignified presence. He was born in Philadelphia, and educated at the start for the calling of a civil engineer. He abandoned that business for the ministry, and in 1847 was ordained as a deacon, and in 1848 as a priest, by the Rev. Bishop Potter, late of Pennsylvania. He was Rector of Christ Church, Troy, from 1850 to 1854. In 1854 he succeeded Bishop Kip as Rector of St. Paul's Church, Albany. In 1859 he became Rector of Trinity Church, Cleveland, and ten years later he was elected Rector of the Church of the Epiphany in Washington, D. C. In April, 1877, he became Rector of St. Paul's Church, Paterson, where he still officiates. Dr. Starkey is a divine of marked ability, and is beloved by all who know him. He is inclined to High Church views, but is not a ritualist in the broad sense of that term.

BARON VON HAYMERLE.

BARON VON HAYMERLE, Count Andrassy's successor as Chancellor of the Austro-Hungarian Empire, was born at Vienna in 1829, of a rich and elegant, but not noble, family. He was educated at the Oriental College, where he became complete master of the seventeen languages spoken in the monarchy, and entered public service as an assistant in the Foreign Office. Here he won the confidence of Count Beust, and was rapidly promoted. In 1867 he was made a baron, and sent to Athens as Ambassador; in 1872 he was transferred to The Hague, and in 1877 to Rome. That which gained him the favor of Count Beust was his pronounced antipathy to Prussia. Count Beust, who for many

Digitized by Google

years had been one of Bismarck's bitterest enemies, in 1866, by the battle of Sadowa, was driven from his place as Prime Minister of the Kingdom of Saxony, undertook the reorganization of the Austro-Hungarian Empire, and in Haymerlé he found a man after his heart. A dismal speculation in Turkish railway stocks afterwards sent Count Beust as Austrian Ambassador to London. Thence he was transferred to Paris, and now, since the alliance between Germany and Austria has become an accomplished fact, he has determined to retire into private life altogether. In the meantime, under the influence of Count Andrassy's convincing arguments, Haymerlé changed his feelings towards Prussia and Bismarck, and during the Congress of Berlin, at which he was present as second delegate from Austria, he found an opportunity to make his conversion known. He has the reputation of being a prudent and sagacious man, but he has never taken any part in parliamentary life.

THE HIDDEN WITNESS.—"SHE CRAWLED TO THE FACE LOOKING SO GHASTLY IN THE WHITE MOONLIGHT, AND SCREAMED WITH FEAR."—SEE PAGE 198.

PERILS BY RAIL.

EARLY on the morning of November 4th a train on the New York and Greenwood Lake Railroad, consisting of the locomotive and tender and one passenger-car, was precipitated in the Hackensack River, through an open drawbridge, at Snake Hill, a point about four and a half miles from Jersey City, N. J. It appears that the draw was at the time open to allow three or four small craft to pass, and the danger signal was in its place aloft, but the engineer, from some cause, failed until too late to stop his train before discovering that the draw was open. He reversed his engine, when about one hundred feet from the chasm, and jumped off, and striking on his head and shoulders, was instantly killed. The fireman jumped over the bridge into the river, and in spite of the intense cold of the water succeeded in swimming to the shore. The baggage-master saw the fireman leap into the river and instantly rushed to the front platform and jumped into the water. Three passengers escaped from the rear of the car into the water, leaving the conductor, the brakemen and sixteen passengers in the car. When the locomotive left the bridge it leaped nearly across the open space, fifty feet in width, and sank to the bottom of the stream, which is said to be fifty feet in depth at this place. The tender was dragged with it, but fortunately the coupling between the tender and the car broke and the trucks became detached, leaving the car with its human freight to float on the surface. The scene which followed was a wild and distressing one.

The bridge-tender at once set to work helping the men out of the water. The baggagemaster and the others were taken out nearly exhausted and suffering greatly from the cold. In the meantime the cars had settled in the water nearly up to the ventilators, and the men inside were standing on the seats and hanging to the racks to keep their heads above the water. A boat and an ax were procured, and with the ax a hole was made in the roof of the car. Through this the nearly drowned inmates were taken out. Many of them were bruised but not seriously injured, and they suffered more from the cold drenching than anything else. We illustrate the scenes below.

NEW JERSEY.—THE RAILROAD ACCIDENT ON THE HACKENSACK RIVER. SCENE IN THE CAR BEFORE THE RESCUE.

COOKERY IN COMMON SCHOOLS.

THE School Board in London, England, is resolved that in future girls shall have both a theoretical and practical knowledge of cookery. In 1877 it was made a rule of the Board that "one or more of the mistresses in every girls' school must be competent to teach cookery," and all head and assistant mistresses of girls' schools, if not already competent to teach this branch of education, were strongly urged to attend a course of lessons on the subject. These lessons are given at four cooking centres, and are available to all the teachers in London. The instruction is both theoretical and practical, and none are admitted to examination in the practical department till they have passed an examination in the theoretical. When mistresses have successfully passed both examinations they receive a certificate. These examinations are of no fancy character, but are confined within the limits in which it is required that instruction shall be given to scholars. One can have a very good idea of the nature of the instruction imparted from the following questions, which, among many others, must be answered satisfactorily before any one can pass in theoretical cookery:

"Name and explain briefly the six commonest ways of cooking meat. Give a full recipe for preparing a piece of meat in any one of the ways you mention." "Name six of the most valuable fresh vegetables used in this country. Give recipes for boiling old potatoes, for boiling cauliflower and serving it with melted butter." "What are the general rules to be observed in roasting meat? How long would it take to roast seven pounds of beef, and how would you set about it?" "How would you make leg of beef soup?" "What are the different methods of preparing beef tea? Give two of the recipes." "How would you make a quartern of flour into bread?" "Give the recipe for a meat pie." "What is the difference between the flesh of white and oily fish? How would you stuff and bake a haddock?" "What is pot-au-feu? How would you prepare it with six pounds of beef? What beef would you use, and what other ingredients?" "Mention some ways of re-cooking old meat." "What dishes can you prepare with Australian meat? Give the recipe for one." "Give the rules for boiling meat and the time allowed." "How would you prepare an Irish stew?" "How would you prepare a dish of beef a la mode?" "What utensils are necessary for a small kitchen?"

This is surely practical teaching and examining, and the knowledge implied ought to be within the range of even the humblest mistress of a cook-stove.

The scheme of teaching adopted by the London Board is to give to the older girls in certain schools at least twelve lessons on "Food and its Preparation," and also twelve on practical cookery. The practice lessons are given on one half-day in each week. They are supplied by a competent instructor appointed by the Board, who is paid £99 a year as salary. This, however, is only the beginning of what is intended. It has been resolved to provide kitchens in twenty-one schools in London, selected in districts the most convenient for the children attending. Five of these are already in active operation, and attendance on them is popular. It could scarcely be otherwise. Such instruction brings girls into a perfectly new world, and yet one strangely familiar. It is like "playing at house," while it makes the little women actual missionaries of tidiness and culinary skill to many an humble and ill-managed home. For, be it remarked, these kitchens are not fitted up with all the indispensables of a gentleman's cooking establishment. They have nothing but what is suitable to an ordinary artisan's home. The food cooked is generally sold, so that there is no waste incurred. As yet only a comparatively small number can be admitted to the benefits of the system, but it is gradually extending.

IN THE COILS OF A BOA.

ONE of the most intrepid wild beast tamers in Europe, Karolyi, a Magyar of colossal stature and extraordinary physical strength, has recently fallen a victim to a dread contingency of his perilous profession. He was performing before a crowded audience in Madrid the other day one of his most sensational feats, which consisted in allowing a huge boa constrictor, over twenty feet in length, to enfold his body in its tremendous coils, when a piercing cry escaped him, which was greeted by the public with a round of applause under the supposition that its utterance constituted a part of the performance. It proved, however, to be the outcome of a strong man's death-agony. The gigantic snake had tightened its coils and crushed poor Karolyi's life out of him with one terrific squeeze. As his head fell back and his eyes became fixed in a glassy stare the plaudits died away, and were succeeded by the stillness of utter consternation. The snake and its lifeless victim swayed for a second or two of inexpressible horror and then toppled over on the boards of the stage; but the boa did not in the least relax his grip upon the corpse, which remained for more than an hour imprisoned in its hideous thraldom, nobody daring to approach

NEW JERSEY.—THE RAILROAD ACCIDENT ON THE HACKENSACK RIVER—EXTRICATING THE PASSENGERS FROM THE FLOATING CAR.

Digitized by Google

the lithe monster, of whose powers such appalling proof had been given. At length it occurred to one of Karolyi's attendants to place a bowl of milk in a cage within sight of the mighty serpent, which slowly unwound itself from the dead body and glided into its den irresistibly tempted thereto by its favorite dainty. A post-mortem examination of the unfortunate athlete's remains discovered no fewer than eighty-seven fractures of his bones effected by the constriction of the serpent's coils. His death must have been almost instantaneous, as the spine was disarticulated in several places.

RECENT PUBLICATIONS.

THE CHILDREN'S BOOK OF POETRY. HENRY T. COATES. Philadelphia: PORTER & COATES.

RARELY indeed does the reviewer come upon a volume containing so much that is worthy of his attention as is contained in "The Children's Book of Poetry." It opens in the nursery and ends in the library. We commence with Baby Days, and, by a charming and gradual process, arrive at the highest efforts of poetic imagination and creative power. This work has been compiled for the purpose of interesting and instructing children between the ages of six and fourteen years. The mental capacity of the child is treated with a dainty and winsome gentleness, nothing being admitted into this volume which takes too high a flight, while the double vein of triviality and insipidity has been carefully eliminated.

Story-telling is, and ever must be, one of the greatest pleasures of childhood, and the most effective means of inculcating great truths and carrying instruction to the youthful mind; and when a charming story is told, in charming verse, the impression on the child intellect is sure to be deep and lasting. The poems have been arranged under appropriate subject-headings, such as "Baby Days," "Play Days," "Lessons of Life," "Animals and Birds," "Trees and Flowers," Nature," "Religion," "Christmas and New Year," "Old Tales and Ballads," and "Some Famous Poems for the Older Children." The volume opens with—

"Only a baby small
Dropped from the skies;
Only a laughing face,
Two sunny eyes;
Only two cherry lips,
One chubby nose,
Only two little hands,
Ten little toes,"

and closes with some of the best bits of Pope, Scott, Burns, Leigh Hunt, Tennyson and Browning. The get-up of the book is admirable, and when we mention that it is profusely illustrated with two hundred engravings by Gustave Doré, Harrison Weir, J. E. Millais, George H. Thomas and other distinguished artists, we have said enough.

"ALL QUIET ALONG THE POTOMAC," and other Poems. By ETHEL LYNN BEERS. Philadelphia: PORTER & COATES.

The authoress, in her preface, utters: "If some gentle heart shall find within this sheaf some treasured wait or song remembered, or if words yet unfamiliar bring to me one new friend, I have not rhymed in vain." Mrs. Beers has not rhymed in vain. The workmanship is artistic, an air of culture hangs over all, and there are palpable evidences of some genuine inspiration. The bright gilts of the poet are not claimed, still the voice is musical, if not fervent, and the authoress introduces us in this agreeable volume to old friends, and not a whit the less agreeable for being old.

"THE PRE HISTORIC WORLD," BY ELIE BERTHET. Translated from the French by MARY J. SAFFORD. Philadelphia: PORTER & COATES.

This is a romance based upon the scientific research which has disclosed to us the doings of mankind anterior to that period at which history has commenced, and in three tales are summed up the discoveries of the scientists of all countries, including Cuvier, Durcher de Perthis, Le Hon, Lartet, Lyell and G. de Mortillet. The first, "The Parisians of the Stone Age," is "a study of the inhabitants of Parisian soil, who were the contemporaries of the mammoth and cave bear." In "The Lacustrian City" the action lies in the intermediate age of Polished Stone; and the third tale, "The Foundation of Paris," is relegated to the Age of Metals. To those who belong to the learned tribe of "ists," this book will prove an absorbing treat.

FUN.

OLD LADY (on donkey): "Boy, boy, isn't this very dangerous?" *Boy:* "Werry dangerous, indeed, marm; there was a lady a ridin' up here last year, and the donkey fell, and the lady was chucked over the cliff and killed." *Old Lady:* "Good gracious, was the donkey killed, too?" *Boy:* "No, marm; that's the werry donkey."

"WILL the angels come down for me with a chariot and horses when I die?" asked a little boy of his Sunday-school teacher. "I guess so, if you are a real good boy," said the teacher. The little fellow's eyes sparkled with anticipation as he eagerly exclaimed: "And, oh, do you think they'll let me sit on the front seat and drive?"

A COLORED man was once asked why he did not get married. "Why, you see, sah," said he, "I got an old mudder, an' I hab to do for her, ye see, sah; an' if I don't buy her shoes an' stockin's an' bread an' butter, she wouldn't get none. Now, ef I was to get married, I would hab to buy dem tings for my wife, an' dat would be takin' de shoes an' stockin's an' bread an' butter, right out o' my mudder's mout."

MANY a man sits up nights five weeks at a stretch, Sundays included, composing a communication for the press on a slate, and then, having spent another week copying it until it might be mistaken for a piece of engraving, he walks into the editor's office and remarks, with very badly assumed carelessness that wouldn't deceive a wooden cigar-sign Indian: "There's something I just scrached off that I thought you might use."

REPRESENTATIVE DOGGETT of Nevada got very angry, the other day, with the overland railroad people, because he was forced to pay a large sum for extra baggage. He says that he is going to get even with the company by sending his public documents to and fro, as he can do under the franking privilege and under the Government contract with the company, which must take the documents for nothing. He says: "I'll put my trunk on 'em and ship 'em to Matt Carpenter, in Wisconsin, and he'll frank 'em and send 'em back, and I'll frank 'em again and re-direct 'em to him; and these books—two tons of 'em—will go back and forth over that blasted road, free, until the next session of Congress, when I'll get hold of some more and start them along, too."

A FUNNY old gentleman enters an omnibus and, without consulting any of the other passengers, at once lets down all windows. *Old Gentleman* (looking round complacently): "A cold morning this, but I must say I like air!" *Fellow-passenger* (gruffly): "It seems to me, sir, that, under the circumstances, it might probably suit you better, and would certainly be more comfortable for us, if you would get out and sit on the roof!"

SOME women never can be satisfied. The other night when Gallagher was reckoning up his accounts, his wife spoke to him several times and receiving no answer said: "You treat me cruelly. I fear you no longer love me!" and Gallagher replied: "I love you passionately, devotedly, frantically, madly: but if you don't hold yer jaw till I get these figures added, I'll give you a clip in the eye." And in spite of his protestations of love, she was not satisfied.

"JERUSHER," exclaimed her true love, "Jerush, what'll you take for that gold ring o' yourn?" "Well, I don't know, Jeremiah," said she; "you know it is 18 k." "Just let me have it," pleaded Jerry, "and I'll send you a diamond for it to-morrow. As good a one as there is anywhere." "Honest Injun, Jeremiah?" "No mistake." He captured the ring, and just before he started for Texas next morning, he sent her a pack of diamonds, bearing the inscription: "This is the best diamond out."

A GREAT MEDICINE in small vials—Dr. Pierce's Pellets (little pills). No cheap paste-board or wooden boxes that allow waste of strength. Sick headache, dizziness, rush of blood to head, bad taste in mouth, bilious attacks, jaundice, internal fever and nettle rash. Sold by all druggists.

ITALY'S REPRESENTATIVE MUSICIANS AND CRITICS ON WEBER'S PIANOS.

F. Pacio, Director of the Music and Conductor "La Scala," to Campanini:

MILAN, September 18th, 1879.

MY DEAR CAMPANINI:

I have seen and examined the superb Grand Piano you have just purchased from WEBER, of New York, which for beauty and robustness of tone, as well as for elegance of design, is truly remarkable, and must be classed among the foremost Pianos of our day. Present my compliments to Mr. Weber for his admirable work, and you I congratulate on your enviable acquisition. M. PACIO.

G. Lucca, the eminent musical critic and publisher, to Campanini:

MILAN, September 24th, 1879.

ESTEEMED FRIEND CAMPANINI:

I have seen your magnificent Grand Piano from WEBER, of New York, which you have lately purchased, and congratulate you on the possession of such a splendid instrument.

Please tell Mr. Weber I have found his Piano superior even to my high expectations, and, as soon as I have room for one in my house, will be glad to give an order for a similar one.

With kind regards, yours, G. LUCCA.

SAVE YOUR HAIR.—If you wish to save your hair and keep it in a strong and healthy condition, use *Burnett's Cocoaine*. It will stimulate the roots of the hair, and restore the natural action upon which its growth depends.

CUTICURA REMEDIES.

MESSRS. WEEKS & POTTER have never doubted the specific properties of CUTICURA, CUTICURA RESOLVENT, and CUTICURA SOAP for the speedy, permanent, and economical cure of Humors of the Blood, Skin and Scalp. They are, however, astonished at their universal success; for it was to be expected that in the hands of some they would fail solely from spasmodic or ignorant use of them.

They are enabled to say without fear of contradiction that no remedies ever achieved, in the short space of one year, the number of wonderful cures performed by the CUTICURA REMEDIES.

HALFORD'S TABLE SAUCE.—Best relish in use. For family use preferable to all others.

THE celebrated Model Printing-Press, which is now used in almost every country on the face of the globe, proves itself so indispensable to business men generally in making known their business to the surrounding community, that we would not be surprised to see it introduced into every store and business office in the land. The manufacturers are thoroughly reliable men, and it gives us pleasure to refer our readers to fuller particulars in an advertisement in this paper.

DON'T physic, for it weakens and destroys, but use HOP BITTERS, that builds up, up!

SUDDEN changes of the weather often cause Pulmonary, Bronchial and Asthmatic troubles. "*Brown's Bronchial Troches*" will allay irritation, which induces coughing, oftentimes giving immediate relief.

SLIPS AND FALLS happen to all; for help in repairing damages, insure in THE TRAVELERS.

USE WALTER BAKER & CO.'S CHOCOLATE if you desire the best in the market. The verdict of experts, both in Europe and America, has for many years testified to its great excellence.

THE skill and watchfulness which have been characteristic of the management of the ST. NICHOLAS Hotel, in New York, have made it the most perfect example of its kind which one could select to illustrate competence in a profession. This great institution, in its table, rooms, and general conveniences, is known far and wide, and its reasonable charges cannot but increase its great patronage.

PHYSICIANS of all schools use and recommend HOP BITTERS; take their advice.

BENEDICTS' DIAMONDS, pure white gems, are now getting to be as popularly known as "Benedicts' Time"; and certainly their display of diamonds is magnificent. Benedict Bros. are also agents for the Waltham Watch Company, and they still occupy the old landmark so well known to all New Yorkers—171 Broadway, cor. Cortlandt Street.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, Dr. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

A Welcome Visitor at Every Fireside!

The Most Complete Work of its Kind.

THE

Fireside Encyclopædia

OF

POETRY,

Collected and Arranged by HENRY. T. COATES.

Illustrated with Fine Engravings on Steel.

Imp. 8vo Cloth, ex., gilt side and edges, $5; Half Calf, gilt, $7.50; Half Morocco, antique, gilt top, $7.50; Turkey Morocco, ant., full gilt edges, $10; Tree Calf, $12.

This work has now become a standard, and has been pronounced by many of the most prominent literary men the best and most complete collection of poetry published. It contains nearly 1,400 poems, representing 424 authors—English and American. Each poem is given complete, and great care has been taken to follow the most authentic and approved editions of the respective authors. The book contains an Alphabetical Index of the names of the poems, one of the authors, and also one of the first lines, thus making the means of reference very thorough. All lovers of poetry who desire to possess, in a handsome and compact form, the cream of English poetical literature will gladly welcome this superb volume. For sale by all booksellers, and sent by mail, postpaid, on receipt of the price.

PORTER & COATES, Publishers, PHILADELPHIA.

WITH

FIVE DOLLARS

YOU CAN BUY A WHOLE

IMPERIAL AUSTRIAN

100 Florins Government Bond,

ISSUED IN 1864,

Which bonds are issued and secured by the Government, and are redeemed in drawings

FOUR TIMES ANNUALLY

Until such and every bond is drawn with a larger or smaller premium. EVERY bond MUST draw a Prize, as there are NO BLANKS.

THE THREE HIGHEST PRIZES AMOUNT TO

200,000 FLORINS,
20,000 FLORINS,
15,000 FLORINS,

And bonds not drawing one of the above prizes must draw a Premium of not less than **100 Florins.**

The next drawing takes place on the

1st of December, 1879,

And every bond bought of us on or before the 1st of December is entitled to the whole premium that may be drawn thereon on that date.

Out-of-town orders sent in REGISTERED LETTERS, and inclosing $5, will secure one of these bonds for the next drawing.

For orders, circulars, or any other information, address,

INTERNATIONAL BANKING CO.,
No. 150 Broadway, New York City.
Established in 1874.

N. B.—In writing, please state you saw this in the English Frank Leslie.

☞ The above Government Bonds are not to be compared with any Lottery whatsoever, and do not conflict with any of the laws of the United States.

A Fortune Quickly Made.

Money has been made more rapidly within the last few months in Wall Street than at any period since 1873. Immense profits have been realized from small investments. The following affidavit explains itself:

Personally appeared before me, George A. Payne, of 134 West 49th Street, New York City, to me known, and, on being duly sworn, says that on an investment of $25 placed with Thatcher, Belmont & Co., Bankers, and by them operated for a period of two weeks, I had returned to me by the said firm $972.85.

(Signed) GEO. A. PAYNE.

State of New York, City and County of New York, } ss.

Sworn before me this 22d September, 1879.

J. B. MORSE, Notary Public, 91 Duane Street, New York.

Thatcher, Belmont & Co. accept subscribers on their 1 per cent. margin or in their consolidation of capital, whereby a number of small sums, from $10 upwards, are aggregated and stocks operated. Latest Wall Street information sent free upon application by Messrs. Thatcher, Belmont & Co., Bankers, P. O. Box 1307, or 48 Broad St., New York.

$1000 REWARD For any case of Blind, Bleeding, Itching, Ulcerated, or Protruding **PILES** that DeBing's Pile Remedy fails to cure. Absorbs the tumors, gives immediate relief, cures cases of long standing in 1 week, ordinary cases in 3 days. **CAUTION** Some genuine as this yellow wrapper on bottle. Also perfumed on it in Black a *Pile of Roses and Dr. J. P. Miller's signature, Phila.* $1 a bottle. Sold by all druggists. Sent by mail by proprietor, J. P. MILLER, M.D., S. W. cor. Tenth and Arch Sts., Phila., Pa. Advice free.

THE RESCUED UTE CAPTIVES.

WE give on this page the portraits of Miss Josephine Meeker, and of Mrs. Price and her two children, whose recent terrible experiences among the Utes have made them objects of national interest. Miss Meeker was the daughter of the Indian Agent, and it was to her heroism that the escape of herself, her mother, of Mrs. Price and children, from death, at the hands of the Indians, was chiefly due.

Miss Meeker was a teacher at the Agency, and popular among the Indians. Among her most promising pupils were Douglass and son. While at the Agency she had several proposals for marriage from chiefs and prominent bucks, and became well acquainted with their language.

On one occasion Douglass threw down blankets and compelled Miss Meeker to dismount, saying that they were going into camp. He then said that they were going to stab them, and exhibited the butcher knives to be used for the purpose. Then he placed a musket to her forehead and said: "Indian going to shoot." The courageous girl never flinched, and laughed at the burly savage. He asked her if she was afraid, and her ready response, "I am not afraid of Indians or death," elicited the admiration of the Indians. They turned upon Chief Douglass with derision, and he slunk from the presence of the brave woman.

Soon after this they were placed in charge of Chief Johnson, and through the instrumentality of Johnson's squaw their condition was very much improved and further indignities prevented.

After their rescue by General Adams, their condition was made still more comfortable. Their costume, as they appeared on their arrival at Denver, October 30th, after a journey of five hundred miles by stage or ponies, is thus described by the *Tribune* of that city: Miss Josie's costume was the most striking. Her dress was made of an Indian blanket, plain skirt, and long jacket-waist with tight sleeves. The blanket stuff was dark-brown, the broad yellow stripes in the goods acting as a border around the bottom of the dress and the flowing waist. Her feet were incased in moccasins, and by her side lay a broad white sombrero. Miss Meeker, though by no means a handsome young lady, is bright and attractive in appearance. She is a blonde, and naturally of fair complexion, though now sunburned. Her hair is cut short to the neck.

Mrs. Price is a young lady yet. Though but twenty-three years of age, she has been married several years. She is naturally bright and active, but just now the death of her husband and her terrible experience has saddened her. Mrs. Price was dressed in a plain woolen dress, which she said she wore when taken captive. She, however, exchanged it for a "blanket" dress similar to that worn by Miss Meeker, and saving it, reassumed it when she reached Alamosa. Mrs. Price also wore a sombrero.

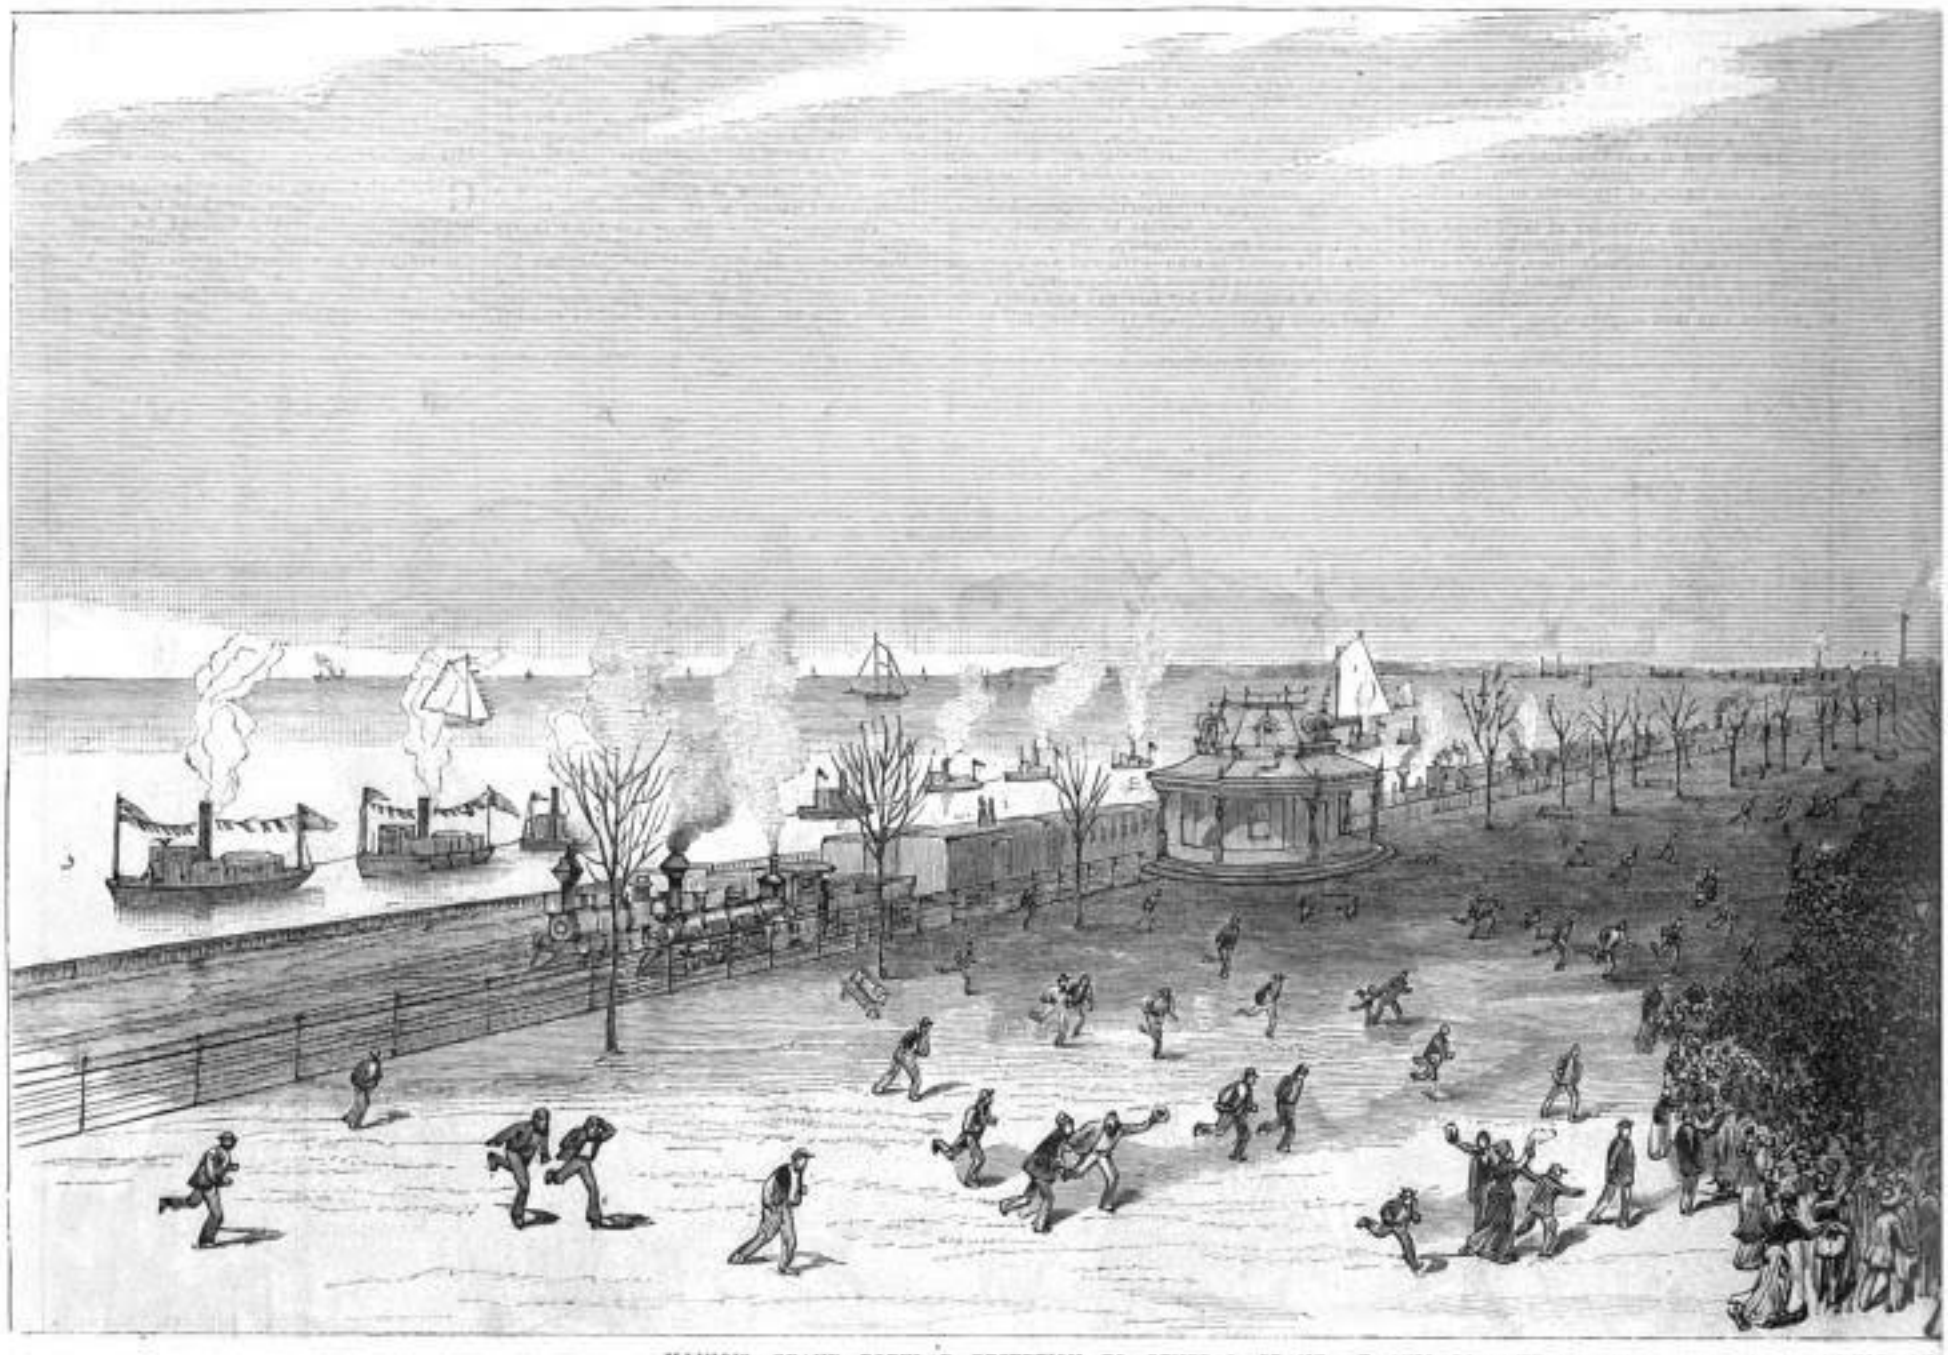
Mrs. Meeker wore, when she arrived, a long wrapper and a hood, with which she was provided at Los Pinos. The two little children, May and Johnnie, were their agency clothes, sadly tattered and torn.

The "blanket" suits of Miss Meeker and Mrs. Price were made by them while in camp on Grand River, the captors furnishing the material, thread, needles, etc. Our illustrations are made from photos. taken by Bates & Nye, the leading photographers of Colorado.

COLORADO.—THE LATE UTE OUTBREAK AND MASSACRE AT THE WHITE RIVER AGENCY—MISS JOSEPHINE MEEKER, AND MRS. PRICE AND HER TWO CHILDREN, IN THE COSTUMES WORN BY THEM WHEN CAPTURED.—FROM PHOTOGRAPHS BY BATES & NYE, OF DENVER.

The history of the prisoners during their captivity forms a most pathetic chapter. After the killing of Agent Meeker the women attempted to escape into the brush from the burning buildings. Mrs. Meeker was fired at with the result of a flesh-wound in the hip four inches in length. Miss Meeker and Mrs. Price were called to: "Indians no shoot white women. Stop! Indians no hurt." They were then mounted—Miss Meeker, with Mrs. Price's eldest child, four years old, tied behind her; Mrs. Price, with her infant in her arms, and Mrs. Meeker, who is sixty-four years of age, and lame from her wound.

When they struck the camp at midnight, Mrs. Meeker was dismounted, and fell to the ground un-



GENERAL GRANT'S WELCOME HOME.

HIS RECEPTION AT GALENA AND CHICAGO.

GENERAL GRANT having made the tour of the world, receiving everywhere the most distinguished honors, finally reached his home at Galena, Illinois, on the afternoon of November 5th. His reception was in every respect remarkable, being characterized by evidences of the most cordial affection on the part of his townsmen and neighbors. A vast concourse of people assembled to welcome him, and as he descended from the railway-carriage, and was escorted to his place in the procession, he was greeted with the strains of "Auld Lang Syne" and hearty cheers from the multitude. On the route of the procession every building was decorated, and elaborate arches were erected in several streets. In front of General Grant's family church a concourse of schoolchildren sang "America." Finally, the procession stopped at a platform where a formal greeting was extended by State Senator McClellan, in answer to which the ex-President said:

"CITIZENS OF GALENA.—It is with some embarrassment that I reply that your welcome is exceedingly gratifying to me; but it is difficult for me to

reply to what I have just heard, to what I have seen. Since I first left here, eighteen years ago, it has always been the greatest pleasure for me to return to Galena; and now, after an absence of two and a half years from your city, during which time I have visited almost every country in the world, it is a pleasure to be greeted in this manner by you. During my travels I received princely honors, but they were all due to this country and to you as citizens and as sovereigns of so great a country. When I saw during my absence, especially in the Far East, how hard the inhabitants had to toil even for a maintenance, I realized more than ever the greatness of our country, where want is scarcely ever known, and where the question of sustenance is not daily considered. I will only add that I thank you again for your reception."

This speech was received with tumultuous cheering. Subsequently, the General held a reception at the De Soto House, which was densely crowded. In the evening the town was illuminated, presenting a brilliant spectacle. General Grant dined with his family at his residence, which he found finely fitted up for his reception. From half-past eight until ten o'clock there was a continuous stream of people on foot and in carriages, all intent upon paying their respects to the General and Mrs. Grant, who received them in the most hospitable manner.

While General Grant's wonderful trip around the world, and through his own country, was theoretically completed at Galena, Ill., there were left a number of short trips to other places on very special occasions which will probably keep him "on the wing" until early in the Spring. He is not yet positive of his ability to attend the meeting of the Society of the Army of the Cumberland, which takes place in Washington, D. C., on the 19th and 20th instant, and which will be marked by the unveiling of the statue of the late General George H. Thomas. Invitations to visit various cities are pouring in upon him from every direction, and, did his mind so incline, he could keep up the round of festal travel for months to come. It appears likely now that after the demonstration in Chicago, and possibly in Washington, he will return to Galena and remain until the second week in December, when he will start on his journey East. He proposes to stay over at but few places, including Indianapolis, Louisville, Cincinnati, Pittsburg, New York and Philadelphia.

After remaining a few days in Philadelphia and New York, the General will leave for Cuba, where he will spend the Winter. From Cuba he intends visiting the City of Mexico. From thence he will return either to Galveston or New Orleans, and thence home to remain until the hot weather, when he will occupy his residence at Long Branch until the advent of cold weather, when he will again come to Galena, home.

As to his future movements, his answers to a correspondent may give some indication:

"I shall not be able to do much more than call Galena my home after a while. It is a good place to live now, as on my income I can live there much cheaper than in a large city, and live better than most of my neighbors then. My income is not large enough for me to live as I would like, and I will have to find something to do after a while. I have two farms near St. Louis, and some real estate in Chicago, which if I could sell I would feel better off. My land in Chicago is thirty-one acres, just outside the western limits of the city. Eleven years ago I was offered $1,500 an acre for it, and now, after paying taxes on it all that time, I couldn't get $250 an acre for it. But I did better in some other investments, or I could never have traveled abroad as long as I have."

It was truly said that his reception at San Francisco and Sacramento, and his trip up the coast, were the most brilliant social affairs that has ever transpired on the Pacific Slope. The magnificence of his welcome home at the Golden Gate, and the lavish entertainments that were prepared for him in San Francisco, successfully rivaled the splendors of his Oriental travel. As the day on which the people of California united to do him honor was the greatest of its kind in their experience, so the great popular reception in Chicago, on the 12th, and the hospitalities showered upon him on the 13th, may be esteemed the most marked honors that the city has ever paid to any American citizen. Committees had been at work for several weeks, bringing the ten thousand plans to make the occasion memorable into practical form. Citizens, clubs, theatres, local and Federal soldiery — indeed, representatives of all manner of interests, were eager in their own distinct lines to contribute to the general éclat of the reception.

With what success all these efforts were directed may be judged from our illustrations of the grand procession through the streets, particularly Michigan Avenue, and the review of the enthusiastic masses at the Palmer House. His visit being happily timed so as to enable him to attend the annual meeting of the Society of the Army of the Tennessee, added greatly to the brilliancy of the reception.

The city was crowded with people.

The harbor was alive with screeching tugs and steamers, while the shipping, the streets, the hotels, public and private buildings were fluttering with flags, banners and streamers, and resplendent with all the pleasantries of the floral art.

Col. Fred. D. Grant has furnished the following memorandum of General Grant's engagements during his visit to Chicago: On Nov. 12, after the reception at the train, the march through the streets and the review of the procession, he will dine at Colonel Grant's at 6:30 o'clock, and at 7:45 leave the house for Haverley's Theatre. On Nov. 13, at 12 o'clock, he will lunch at the Hon. E. B. Washburne's, receive the public at Palmer House from 2 to 5 P. M., and at 9 appear at the banquet given by the Army of the Tennessee.

On Nov. 14, from 12 to 4 o'clock, he will receive his friends at Colonel Grant's house, at No. 781 Michigan Avenue, dine at 6, and take position again as "receiver" at 8 o'clock, at the Chicago Club.

On Nov. 15, at 12 o'clock, he will receive, at his son's house, the Mexican veterans in a body, and from 2 to 5 P. M. will shake hands with the public at the Grand Pacific, winding up the afternoon with a dinner with about thirty of his personal friends at the same hotel, and spending the evening at a reception to be given at the north side residence of Mrs. Potter Palmer.

On Nov. 16 (Sunday), he will probably attend church, and not be at home to callers.

On Nov. 17, from 12 to 3, he will receive the school-children of the city at the Exposition building, and at 3 o'clock will witness an exhibition drill by Bullwinkle's fire patrol, and wind up the evening with the reception at the Calumet Club.

On Nov. 18, if he should survive this dreadful ordeal, he will return to Galena to recuperate his wasted energies.

Nothing in the memory of her past has equaled this exhibition of Chicago's patriotic admiration.

FRANK LESLIE'S
ILLUSTRATED
NEWSPAPER

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,261—Vol. XLIX.] NEW YORK, NOVEMBER 29, 1879. [PRICE, WITH SUPPLEMENT, 10 CENTS. $1.00 YEARLY. 13 WEEKS $1.00.

THURLOW WEED.

HIS EIGHTY-SECOND BIRTHDAY, NOVEMBER 15TH, 1879.

FEW men have played a part so really important in public affairs as Thurlow Weed, who, on the 15th of November, entered upon his eighty-second year, and whose portrait, from a photograph taken not many days before, is given on this page. Though in the strict sense of the word Mr. Weed has never held any public office, there has been scarcely a time for more than forty years when any position short of that of President of the United States could not have been attained by him, had he chosen to seek for it; and since, about fifteen years ago, he chose to retire from active political life, there are few other men who have so honorably connected themselves with subjects of social and municipal welfare. The life of such a man, even while living, deserves some mention.

Thurlow Weed was born at Cairo, Greene County, New York, on the 15th day of November, 1797. While quite young he became an apprentice to a printer in the neighboring town of Catskill. The War of 1812 broke out; young Weed entered the army as a private, and afterwards rose to be quartermaster-sergeant. Peace came; there was no more soldiering to be done, and he made his way to New York, where, in 1816, we find him working as a journeyman printer in the office of a Mr. Seymour, in John Street. Two of his fellow-workmen in this office deserve to be named. They were James and John Harper, not very long after to be the founders of a great printing and publishing establishment. Thurlow Weed and James Harper were "pressmen," and two taller and stouter young men it would have been hard to find.

Thurlow Weed did not long work as a journeyman printer in this city. Not long after he became of age he thought he saw an opening to a wider sphere, and he established a paper called the *Agriculturist*, put forth in a rural district in the State of New York. Before long it came to be pretty well assured that he had in him the making of the editor of a political newspaper; but in the meantime such a newspaper had to be established, and the future editor had slowly to feel his way into the field of work which it lay in him to occupy. Of the various newspapers which he edited during the next ten years it is not now worth while to speak, further than to say that the last of them, the *Anti-Masonic Enquirer*, was published at Rochester, N. Y.

(*Continued on page 219.*)

HON. THURLOW WEED, DISTINGUISHED JOURNALIST AND POLITICIAN, WHO CELEBRATED HIS EIGHTY-SECOND BIRTHDAY ON SATURDAY, NOVEMBER 15TH.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, NOVEMBER 29, 1879.

The Illustrations of the Grand Reception in Chicago, and of the Chandler Funeral in our last issue, made from sketches by our special artists, elicited wide appreciation and a heavy sale in that city, and elsewhere throughout the West—single copies commanding fifty cents. We are gratified at this evidence of popular appreciation, and, in order to deserve it in the fullest sense, shall take care that no event of real public interest—any where in the Union—shall elude the pencils of our artists.

We give in the present issue the fifth of a series of illustrated interviews with eminent public men, which it is proposed to continue as a special feature of FRANK LESLIE'S ILLUSTRATED NEWSPAPER. *The present interview, with Senator Bayard, of Delaware, embodies the views of that distinguished statesman as to several of the leading questions of the day, and will be found of special interest at this time when Mr. Bayard's availability as a Presidential candidate is being widely discussed.*

We also give in this number an illustrated interview with Colonel Mapleson, in which the sidelights are thrown upon the daily life and experiences of an impressario, *and a good deal of entertaining information is furnished as to the business of opera.*

AN UNTOWARD RESULT.

THE result of the recent election in Virginia would seem to indicate, contrary to our first suppositions, that the "Readjusters" have carried a majority of the Legislature over the "Debt-payers." As the "Debt-payers" were the avowed supporters of what is known as the "McCulloch Compromise," which was itself a readjustment of the debt of the State, devised for the purpose of effecting a composition between the State and its creditors, as also for the purpose of extending the time and facilitating the conditions on which the debt may be ultimately extinguished, it follows that the Readjusters, in repudiating that compromise, are pledged to clamor for some future arrangement still more "favorable" to the State and still more disadvantageous to the interests and rights of the creditors. In a word, the finances of Virginia, which it was hoped had been moored to a safe and expedient proposition which saved the honor without impoverishing the revenues of the commonwealth, are at sea again, and that, too, on a turbulent sea, vexed by the storms of an angry political controversy.

The mischievous nature and consequences of such a result are not to be measured simply by the decline which has taken place in the quotations and value of the Virginia securities—if indeed it be proper to speak of "securities" at a time when a majority of the representative population of the State are doing their utmost to shake the public confidence in the security of the State's public stocks. When we consider the historical place which Virginia holds not only among her Southern sisters but in the Union at large, to which, in the earlier days of the Republic, she was the fruitful "mother of States and of Presidents," it can scarcely be regarded as otherwise than a national calamity that this once great and magnanimous commonwealth should now allow—or seem to allow—her financial honor to be trailed in the dust.

We are not, indeed, without our hopes that the meditated wrong will be arrested in time to save the good people of Virginia from the mortification of seeing a permanent stigma left upon the credit of their State. It is well known that Governor Halliday is inflexibly opposed to the schemes of the Readjusters, and as the majority of the latter in the Legislature is small, he will be sure to interpose his Executive veto for the purpose of preventing the passage of any law which shall have for its object the repudiation of the State debt. The whole subject, therefore, will be again remitted to "the sober second thought" of the people, and if, as Mr. Van Buren was wont to say, that sober second thought "is always right," we may still hope for such a final solution of the question as shall be in keeping with public justice and with the hereditary renown of the "Old Dominion."

It is to be remembered that the debt which is now drawn in question and submitted to the hazards of a popular election was contracted before the outbreak of the late civil war, and was deliberately contracted, for value received, by the lawful and acknowledged representatives of the people of the State. It is not at all in the position of those fraudulent obligations which, during the period of Reconstruction, were foisted upon some of the Southern States by the "Carpet-bag" adventurers who preyed upon the public revenues as upon so much booty of war. The State of Virginia was saved from the domination of these political harpies, not only by the prudence of the conservative classes, but with the direct co-operation of the Administration of President Grant. If malversation of the public funds by alien politicians imposed on the people from abroad, and with the connivance of the Federal Government, be pleaded as an excuse for repudiating projects in South Carolina and Louisiana, it is patent that no such excuses can be urged in defense of a similar agitation in Virginia.

It is said, in further extenuation of the untoward result that has been reached in Virginia, that it does not represent the moral or political sense of a majority of the white voters in the State, and is due to the ignorance and credulity of the colored voters who have been entrapped by the sophistries of the Readjusters into the support of an evil policy. A correspondent of the New York *Times* represents, on the authority of Governor Halliday, as an instance in point of this statement, that the unscrupulous advocates of the Readjusters' schemes did not hesitate to say, in their appeal to the negro voters, that there was only one way in which the plans and purposes of the Debt-payers could be carried into effect, "and that was by selling the negro into slavery" and applying the proceeds to liquidate the debt of the State! It is hence argued by the *Times* correspondent that the Republican Party of the nation, in giving suffrage to the negro before he was capable of exercising it intelligently, "must bear some part of the responsibility for the triumph of dishonesty in the recent election."

It must be conceded that there is some force in this observation, but not so much perhaps as the writer is tempted to suppose. The *argumentum ad hominem*, even when, as in this case, it involves the *argumentum ad invidiam*, is never a conclusive style of reasoning. For ourselves, we are somewhat at a loss to say, in the presence of such a statement, which of the two seems to us more worthy of disfranchisement, the ignorant negro who is deluded by such arrant impostures, or the white demagogue who is dishonest enough to employ them in the game of politics. But since it is equally idle to look for the disfranchisement of the colored voter on the ground of his ignorance, or of the white voter on the ground of his dishonesty, it is obvious that the first and highest duty of all good men in Virginia calls them to labor for the mental culture of the negro voter and the moral improvement or the condign censure of the white tricksters who assume to be the leaders of the populace. There is hope at least of some success in the former of these directions—the education of the colored population—and if there is not much hope of moral reform in the case of a trading politician who uses the language cited by Governor Halliday, there is still good reason for believing that the forces of truth and righteousness will ultimately combine with the just indignation of all honest men in Virginia to redeem her politics from public reproach and her financial credit from public dishonor.

PERSECUTING A PUBLIC OFFICIAL.

SOME three weeks since the *Evening Telegram*, of this city, published an article severely arraigning the management of the Female Lunatic Asylum on Blackwell's Island, and instancing three specific cases of alleged neglect and cruelty on the part of the medical superintendent, Dr. W. W. Strew. One of the charges was to the effect that one Emma Morrison, an inmate of the Asylum, had been treated inhumanly in being confined in a strait-jacket while *enciente*. Another charge was that a female patient had been permitted to die of starvation, while a third charge alleged that another patient had died from poison which the lax management of the institution had left within her reach. The Commissioners of Charities and Correction at once appointed a Board of Physicians to inquire into the truth of these charges, and the report of that Board was last week made up and given to the Press. As to the case of Emma Morrison, it says: "The camisole, or strait-jacket, was *very properly placed upon her to prevent her destructiveness*—to protect her from constant nakedness, and to keep her from eating her bed-linen and clothing. The Board was unanimous that the use of the camisole was proper and humane. Dr. Strew, the superintendent, and Dr. Kingston, the assistant superintendent, under whose medical care she was, did not know of Emma Morrison's pregnancy until after the birth of the child. This Board unanimously censures them in not knowing the condition of Emma Morrison, but sustains their action in causing her to wear the camisole."

The statements here made do not give the whole truth in the case. If the Commissioners had made a thorough and impartial inquiry, they would have discovered that the medical superintendent's ignorance of this woman's condition was perfectly natural and justifiable. The facts are that the woman was in the care of a nurse, a married woman, who has had fifteen years' hospital experience, that she had bathed the entire person of the patient for days, and had failed to detect the slightest evidences of her pregnant condition; and that her surprise was quite as great as that of the physicians when a child was suddenly ushered into the world. Obviously, the superintendent could not be supposed to know a fact which an experienced nurse, herself a married woman, had not discovered in the close relations of the bath. Further, a full inquiry would have shown that within ten minutes after being notified of the facts in the case, Doctor Strew had the patient under his care, and, also, that she was not only safely delivered, but that both mother and child are now in robust health. Why Doctor Strew should, under these circumstances, be censured, can only be explained upon the supposition that the Board had its instructions in advance that conviction was expected. The fact that the gentlemen constituting the Board were appointed upon the suggestion of a physician who has control of another insane asylum, and is recommended by this Board as a proper person to take charge of the Blackwell's Island Institution, certainly justifies the belief that the inquiry was rather an inquisition than a fair, impartial and unbiased scrutiny of the whole case.

As to the second charge, the alleged starvation of Caroline Well, "the Board finds that it had no foundation in fact. The story originated in malice towards her attendant (Dr. Pitken) upon the part of some one connected with the medical staff or nurses of the institution." After describing the treatment given her, the report goes on to say: "This case is most glaring, having been given to the public press without any semblance whatever of truth, with a fell and malignant design to injure a conscientious physician and honorable gentleman." Touching the case of Alice Day, who died from a dose of rat poison, "the Board finds that one of the nurses was so careless as to leave a pan filled with rat poison in an unlocked closet, to which access was had by the unfortunate patient, who, unobserved, ate of it in such quantities as to produce death. Every effort to avert the catastrophe was made by the superintendent and the medical staff, but they were uninformed of the fact until it was too late." The Board censures the nurse in charge of the ward, but as she had already been dismissed no recommendation for future action is made. This conclusion is undoubtedly just, but why was not the nurse in the case of Emma Morrison, who was equally guilty with this one, censured for neglect, instead of Dr. Strew, who, as we have shown, was altogether innocent of fault.

The Board in concluding their report "recommend the removal of Dr. Strew, not on account of these cases, which they declare episodical, nor because they doubt his attainments or his intention, but because they think him unfit for the position. They exonerate him from all allegations of dishonesty or cruelty." That is to say, finding no evidence whatever in their partial investigation of the truth of the original charges brought against him—no proof of inhumanity, cruelty, dishonesty or incapacity—the Commission deliberately stab Dr. Strew with the epithet "unfit," and propose to send him adrift with a stigma upon his name, simply that some partisan end may be served or some professional jealousy satisfied.

We protest against a piece of injustice so absolutely unscrupulous and indefensible. Dr. Strew, when he assumed the superintendency of the asylum, abandoned an honorable and lucrative practice, in order that he might devote his entire time and his best energies to the responsible duties imposed upon him. Before his appointment, he had, during the war, won an honorable fame in connection with the Government hospital service at Lexington, Ky. In the position he has occupied on Blackwell's Island, it has never, until now, been pretended by anybody that he did not display a high degree of efficiency. Indeed, it is within our own knowledge that one of the Commissioners of Charities has, within three months past, expressed, in the most glowing and emphatic terms, his approval of Dr. Strew's management, declaring that it was a genuine pleasure to visit the asylum, which no longer presented an array of wretched faces of inmates skulking in dark corners, but was illuminated by the bright and cheerful faces of patients inspired by the genial manners and intercourse of the superintendent. It is plainly due to Dr. Strew that he should have an opportunity to vindicate his official and professional reputation, and if this opportunity shall be denied him, it can only be concluded that the persecution to which he is exposed is in some way an outcome of the late elections and indicative of a determination to subordinate our public institutions to exigencies and supposed necessities of partisan politics. It goes without saying, that with such a rule once adopted, neither capacity nor integrity will be able to stand against the clamors of prejudice and passion, and the public service will be debauched as never before.

THE MISSISSIPPI JETTIES.

IT is now a little more than four years since Captain Eades, a noted engineer of St. Louis, began what was then considered the doubtful experiment of making one of the mouths of the Mississippi completely and easily navigable. The value of such a project, were it only possible to carry it out, may be estimated from a recent well-digested statement that the region tributary to the Mississippi "has an area of one and three-quarters millions of square miles, and is more than equal to the whole extent of Europe, leaving out Russia, Norway and Sweden." It is also declared that this tributary region contains a population of twenty millions, and each year produces a billion bushels of grain, two millions bales of cotton, and over two hundred thousand hogsheads of sugar. That the water outlet to such a possibility of commerce should be obstructed by bars, so that often a single vessel choked up one of the three channels of the delta, and the entire navigation of the mighty Mississippi had to wait till it could be disengaged from the sands, is certainly one of the most singular illustrations of neglect of internal improvements. It is true that for forty years efforts have been made at least to diminish the evil. The channels of two of the passes have been deepened from time to time; temporary jetties have been constructed, and dredging-boats have been brought into service. But these have only been methods of temporary relief. No broad, comprehensive plan of permanent improvement had been attempted, until that of Captain Eades, to create a channel that would for all time serve its purpose, was broached, and, after much contention, was accepted by Congress. That plan was to construct permanent jetties near the mouth of the Southwest Pass of the delta; thus to confine and deepen and strengthen the river current; to avail himself of that current to dig out for itself a deeper channel; and to prolong this channel far enough into the Gulf to penetrate the sand-banks, and enable the river current to wash its sediment so far seaward that the Gulf currents would catch and distribute it at safe depths beneath its waters. Many scientific objections were urged against his project, but he overcame them all, and only asked to be judged by the result of his work. In undertaking this, Captain Eades had a memorably successful model before him in the jetties of the river Maas, in Holland. The channel of that river had been obstructed by bars, to which it ever added by washing up its deposits; the system of jetties had converted it into one of the most easily-navigable rivers in Europe. He stipulated that he should obtain in the Southwest Pass a final channel depth of thirty feet, which should become established and permanent by means of the substantial and resisting jetties which he proposed to construct.

Of course Captain Eades has had many obstacles and difficulties to encounter. The nature of the river banks near the mouth of the pass rendered the work of establishing the jetties at times a discouraging one. It was necessary to lay them at once parallel with the river currents and rectangular to those of the Gulf, and to so lay them that they would be at once most effective in narrowing the volume of the stream—thus deepening it and increasing its velocity—and least open to its undermining action. Hydraulic problems of no little perplexity often arose, and measures had to be taken to secure the stability of the works. It is unnecessary to describe the works in detail, or the methods by which every desired result was sought to be obtained by the engineers. It will suffice to say of the jetties themselves, that they consist of elaborately constructed embankments parallel with each other and with the current, built of sections of fascines of willow (at once strong and slightly yielding), stone, gravel, concrete and lumber.

This great work is fast approaching its completion, but commerce has not been forced to await its completion before taking advantage of the access which, even in its unfinished state, it affords. The exports of the vast tributary region of the Mississippi have already begun to seek an outlet in the vastly improved Southwest Pass. The shipments of cereals through the jetties have increased from about 200,000 bushels, in the year before the works were commenced, to between five and six millions of bushels annually now. The detention of vessels at the bars athwart the improved Pass seems practically a thing of the past, and it is confidently stated that the jetties, in 1878, saved the country a billion and half of dollars in the item of the reduction of cotton

Digitized by Google

freights alone. What effect the new channel of the Mississippi will have upon the great railroad freight enterprises of the West remains to be seen. It erects a new competing route for the increasing productions of that most fertile region, and brings a new competitive carrying element into the vast field of American enterprises. If we may indulge in a forecast, however, we would say that the development of Western agriculture and industries is likely to fill every avenue of export as fast as it is opened, the prospect being that there will rather be an overflowing than a scantily filling production. The competition of railways may become sharper, and freights be scaled down—a good thing both for producer and consumer—for a while; but the rising tide of industrial prosperity is likely to fill to the brim every channel of outlet to the world beyond which needs its products. Certain it is, at least, that Captain Eades, when his work is quite done, will be deserving of the credit of having achieved one of the mightiest internal improvements of the age.

ELECTRIC LIGHTS AT SEA.

IN discussing the recent collision of the steamship *Arizona* with an iceberg, the New York *Herald* says:

"Had the *Arizona* on the night when she collided with the iceberg in the Atlantic been provided with a tasimeter and an electric light, the collision would not have occurred. The former would have detected the presence of the approaching mass of ice long before danger was imminent, and the latter would have distinctly revealed its dimensions and location, even in the darkest night and miles away."

What is here said as to the use of electric headlights by ocean steamships was said by FRANK LESLIE'S ILLUSTRATED NEWSPAPER six years ago, when we illustrated the whole subject, and indicated the precise precautions which seemed to us to be necessary for the prevention of casualties like that of the *Arizona*. Mr. Leslie, having been a passenger on the Cunard steamer *Java*, which in August of 1873, in mid-ocean, ran into the bark *Assaia*, causing her to sink almost immediately, carrying down eleven of her passengers and crew, was strongly impressed with the insecurity of ocean travel, and at a meeting of the *Java's* passengers presented resolutions, which were adopted, declaring substantially that an electric light ought to be carried at the masthead of every steamer; that a buoy, with a port-fire at the top, ought to be hung at the stern of every vessel, so that it might be fired and dropped into the ocean the moment any accident occurred, for the purpose of marking the spot; and that a more efficacious method of lowering boats should be provided on all passenger ships. Subsequently, pursuing his investigations of the subject, Mr. Leslie, in a letter to the *Herald*, dated December 4th, 1873, strongly reiterated his argument in favor of the use of the electric light, fortifying it by a statement of the result of his experience in the use of such a light in his own establishment, then the only one of its kind in the country. As a matter of present interest, we reproduce in this issue the illustrations then published of the method by which it was proposed the light should be employed.

Time and experience have fully confirmed the correctness of the views thus expressed six years ago. Indeed, they are now accepted by almost every one who has given any thought to the subject. Professor Proctor, in a recent lecture in this city, strongly urged the use of the electric light and the tasimeter on ocean steamships, and men of science generally express amazement that, while scientific methods are freely employed to promote the comfort and safety of passengers by land, they are only rarely invoked, or, at best, to only a limited extent, against the perils of the sea. Many of the marine disasters which have involved such waste of life and treasure in recent years might have been averted by the employment of the electric light; and now that public attention is once more called to the subject in a vivid way, it is to be hoped that, by legislation or otherwise, shipowners may be compelled to employ this and all other available scientific methods for the protection of human life against all avoidable hazards.

EVENTS ABROAD

INDICATIONS multiply that Russian influence at Constantinople is steadily increasing. We noted last week that the British Ambassador at that court had demanded the immediate introduction of reforms in Turkish affairs, and had added a hint that unless this demand should be complied with a British fleet would be dispatched to Turkish waters. Subsequently the British Channel squadron was ordered to proceed to these waters, and it it is now announced that the Sultan has, with unusual boldness, asked the Ambassador to explain the meaning of this movement. The statement is accompanied by another, which probably explains the decisive attitude of the Sultan, that the latter has been gained over to the views of the Grand Vizier and Minister of War, who advocate a close understanding with Russia, and that there is a strong tendency on the part of the Turkish Cabinet to enter into an actual alliance with that Power. It would seem to be quite certain that, in the struggle for precedence in the Turkish councils, England has so far been worsted by Russia, and so long as the present Cabinet, with its Muscovite sympathies, shall continue in power, this advantage will be decisively maintained. Meanwhile, grave financial difficulties threaten the early and complete collapse of the authority of the Porte.

Apparently, Russian diplomacy does not confine itself to Constantinople. The statement is made, but lacks confirmation, that a treaty of alliance has been concluded between the Balkan Principalities, ostensibly against foreign intervention in the affairs of the Balkan States, but really against Austria. The treaty is said to stipulate that, in the event of Austria extending operations beyond Novi-Bazar, Servia will furnish 120,000 men, Montenegro 20,000, and Bulgaria 90,000 to form an allied army, and that Servia will advance Montenegro 750,000 ducats for military expenses. The appointment of a commander-in-chief of the allied force is left open, but it is believed that the appointment of a Russian general was originally contemplated. If such an alliance as this has really been made, it is quite safe to conclude that Russia has inspired it, and should Turkey come into it, as it is intimated she may, the encroachments of Austria, even if supported by Germany and England, will be very effectually thwarted.

The Czar, in accepting the resignation of Count Schouvaloff as Ambassador to England, has conferred upon him the order of St. Vladimir in recognition of his public services. Count Schouvaloff's social position in England has been exceptionally high, and it is due to his ability and tact, very largely, that the friendly relations between that country and his own have remained so long unbroken. It is said that in the recent conferences concerning Afghanistan, Lord Beaconsfield met Schouvaloff directly, putting Salisbury aside and manifesting "effusive friendliness," and it is hinted, as a result, that "when the time comes for the Afghan *coup de grace* England and Russia are to settle the difficulty in the friendliest way possible." Possibly the outcome may not justify this cheerful prediction.

The Russian Government betrays a stolid perversity in dealing with the Press, which is simply amazing. Recently all the principal newspapers in St. Petersburg were warned that they must not discuss the Imperial policy as to France, Germany or Austro-Hungary, while any reference to England must be "judicious"; and now it is announced that the Government, in its determination to control public opinion in its own way, proposes to establish a new official journal. No other civilized country in the world would tolerate such an arbitrary interference with the rights of the Press as Russia politically practices, and it can scarcely be expected that, so long as this system of repression is acquiesced in, there will be any possibility of a healthful popular sentiment upon which to reconstruct the national life in harmony with the progress of the age.

There are some indications that the estrangement between Germany and Russia is giving way. The Emperor William is reported to have assured the Czar, in a special private letter, that neither he nor his son would ever make war against Russia, and cordially invited the Czar to visit Berlin. In response to this invitation, the Czar being personally unable to accept, it is understood the Czarevitch will go to Berlin with his wife after his visit to Vienna.

The distress in Ireland is increasing, owing to the absence of peat fuel and the failure of the potato crop.—The number of Austrian troops in Bosnia and Herzegovina is being reduced.—It is said that the next imperial Budget will contain estimates for a considerable increase of the German army.—The Pope has established, and issues from the Vatican, a daily newspaper, "as an authoritative exponent of his views."—There have been no events of importance in Afghanistan, beyond the capture of a town and a large quantity of arms in the Chardeh Valley, and the defeat of a body of 1,000 hostile Afghans by a British column.—Abd-el-Kader, the famous Algerian chief, died recently at Damascus at the age of 72.—The National Liberals in the Prussian Diet favor the proposition for the purchase of the railways by the Government.—King Alfonso's marriage is definitely fixed for November 27th. The Archduchess Marie Christine is expected to reach Madrid on the 24th.—M. Henri Martin, the distinguished historian and opponent of monarchy, has been formally received by the French Academy as the successor of M. Thiers.—The Zulus are not yet altogether subdued; one of the chiefs shows a disposition to further resistance.

IT is said that a Bill will be introduced in Congress at the next session to reduce the salary of the President to $25,000 per annum after 1881. Such a Bill ought not to pass. The country has no right to ask that the President shall support the dignity of his office at his own expense. There is no sort of justice in the policy which reduces the Executive office to a level with the presidency of a railroad or insurance company, and compels the incumbent to practice a mean and niggardly hospitality, or none at all.

THE criminal statistics of California indicate an abnormal condition of society. On the 30th of September there were 1,531 convicts in the State Prison, which, considering that the population of the State is less than 1,000,000, is certainly exceptionally large. But the ratio of increase is still more remarkable, the number of convicts having in two years increased from 1,318 to 1,531, or at the rate of sixteen and one-tenth per cent. During this period the population of the State increased less than five per cent. The San Francisco *Chronicle*, commenting on these figures, says:

"No other State in the Union, no country in the civilized world, shows nearly an equal proportion of convicts to total population with this exhibit. The cause cannot be ignorance, for more than 72 per cent. of the 1,531 can read and write, and our educational system is better than that of most the other States. Some allowance must be made in our favor for the circumstance that there is a much greater per cent. of adult males—who make up more than 90 per cent. of convicts in all countries—than in any other State. But this is not enough to account for the difference between the proportion of criminals to total population here and in the other States.

AS WE go to press the announcement is received of the death, at Galveston, Texas, of Colonel John S. Thrasher, on November 10th. The deceased was well-known in the North, and particularly in this city, where he resided for many years. He was one of the most delightful gentlemen, earnest, hearty, courageous and intensely sanguine. By the Cuban sympathizers his death will be especially lamented, by reason of his advocacy of and participation in movements designed to place the inhabitants of the beautiful island under a more liberal form of Government. Colonel Thrasher co-operated with Lopez in promoting the insurrection which cost the latter his life. Both were arrested, and after Lopez had been garroted, Colonel Thrasher was sent to Spain in chains. Through the intervention of the United States Government his life was spared, and he returned to this country. About 1859 or 1860 he established in this city the *Noticioso*, in which he resumed the energetic advocacy of the liberal cause that had distinguished him in Cuba before the Lopez insurrection. He subsequently became editor of *Frank Leslie's Ilustracion Americana*, the Spanish illustrated weekly newspaper, with which he remained until after the breaking out of the last long insurrection. Marrying a lady of means, he settled in Galveston, and devoted himself to the care of a large property. He was a tall, broad-shouldered gentleman, with a smiling, ruddy face, fringed with whitening whiskers.

THE result of the late election in this State cannot be regarded as much of a triumph for Senator Conkling. It is true that Mr Cornell, in whose hands the patronage of the State will, for a time, be lodged, represents more or less directly the Conkling "machine," so called, but the vote for the Governor-elect falls many thousands below that of all the other candidates on the Republican ticket, and it cannot be doubted that this fact is due more to the growing repugnance among Republicans to Senator Conkling's methods than to any popular distrust of Mr. Cornell personally. The fact that Mr. Conkling, after Mr. Cornell's nomination was secured, did little or nothing in the canvass—making only two speeches in all—is now very justly commented upon as depriving him of all right to claim any measure of credit for the victory achieved; and there are Republicans who do not hesitate to say that Mr. Blaine, Secretary Sherman and others, upon whom Senator Conkling had no sort of claim, contributed more by their efforts to the success of the Republican State ticket than he did, and if the voice of the party can find honest expression in the next National Convention, it will probably declare quite as loudly for some other candidate for the Presidency as it will for the arrogant New York Senator.

EITHER letter-writers are growing more careful, or the efficiency of the postal delivery service is increasing—the returns of the Dead Letter Office showing that, while the number of letters mailed last year was much larger than the year previous, the number received at that office was about 190,000 less. This decrease was, no doubt, partly due also to the "return request" system, the extent of which is illustrated by a statement that of 354,696 letters mailed in a single day in New York, Boston, Philadelphia and Baltimore, 193,879 bore upon the envelope some clew by which they could be restored to the writer if undelivered, without the intervention of the Dead Letter Office. But with all the postal precautions, there is still a vast amount of criminal carelessness among patrons of the mails. Of the dead letters opened during the year, 13,775 contained drafts, checks, etc., of the value of over $1,100,000; about 64,000 contained money or stamps of an aggregate value of about $34,000, and, aside from many thousand other letters containing papers, etc., of more or less personal value, there were found in 38,306 letters and parcels, jewelry, books, clothing, merchandise and miscellaneous articles in endless variety

NEWS OF THE WEEK.

Domestic.

THE Indian school at Carlisle, Pa., now has 118 pupils, and is getting along finely.

A FIRE at Napoleon, Ohio, last week, destroyed a third of the business part of the town.

THE Chamber of Commerce at Cincinnati has voted in favor of holding an exposition in 1880.

ALL hostile Ute chiefs, except Jack, are at the Los Pinos Agency and are willing to surrender.

THERE has been a rainfall averaging about two inches in that part of California south of San Francisco Bay.

THE New York Board of Education last week refused to elect a woman to the office of Assistant Superintendent.

COLONEL JOHN HAY has been appointed Assistant Secretary of State, in place of Frederick W. Seward, resigned.

CHIEF OURAY is positive that he will have power to punish the guilty Utes when he is satisfied of their guilt.

HANLAN and Courtney have agreed to row a race for $6,000 on the Potomac River, near Washington, December 9th.

THE Southern Historical Society, representing ex-Confederates, will unite in the reception of General Grant at Louisville, Ky.

A LARGE number of lottery dealers were arrested in this city last week, and a vigorous effort is to be made to break up the business.

SECRETARY SHERMAN bought $10,000,000 six per cent. United States bonds, last week, for the Government, at 106, his own price.

IRISH citizens of Boston are arranging for a reception to Mr. Parnell, Member of Parliament, who is expected to arrive in that city in December.

THE United States Senate sub-committee on the Kellogg-Spofford case have gone to New Orleans for the purpose of prosecuting their investigations.

THE shore end of the new French cable was successfully landed from the *Faraday* at North Eastham, on the Massachusetts coast, November 16th.

THE Central Pacific Railroad Company last week made a cash payment of $220,520 on account of its indebtedness to the Government under the Thurman Act.

GOVERNOR CROSWELL of Michigan has appointed ex-Congressman Fernando C. Beaman as United States Senator to fill the unexpired term of the late Senator Chandler.

MAYOR COOPER last week nominated Arthur B. Graves for Police Commissioner, Charles H. Truax and George H. Deane, Jr., for Police Justices. The nominations were not confirmed.

POSTMASTER-GENERAL KEY has issued an order to the Postmasters at New York, Louisville and New Orleans, directing them to return all postal orders received for certain lottery concerns, in order that the money may be paid back to the senders.

SENATOR BAYARD, of Delaware, had an enthusiastic "welcome home" at Wilmington, Del., November 11th, from his foreign tour, the population turning out en masse in his honor. There was a procession, with a speech from the Senator, and the city was gayly decorated.

A FIGHT took place, November 15th, in the State of Chihuahua, Mexico, between 200 Indians and fifty men from New Mexico, in which thirty-two of the New Mexicans were killed and eighteen wounded. It is said these Indians have killed 200 persons within the last seven weeks.

A FIRE in a Cannon Street tenement, in this city, early on the morning of November 14th, resulted in five deaths. Two women and two children were suffocated in their rooms on the upper floor, and a man was killed by leaping to the ground. A woman also jumped from a window and was seriously injured. Other persons were hurt, including an heroic fireman.

THE stock speculations in Wall Street last week amounted to a genuine "craze." On Tuesday nearly 450,000 shares changed hands, and the day following the business reached a point never before attained in the history of the Stock Exchange, the recorded transactions aggregating 623,592 shares. The largest previous day was 153,000 shares. As may be imagined, the dealings were attended with great excitement.

THE latest official returns of the election in New York show that Mr. Hoskins, Republican candidate for Lieutenant-Governor, has defeated Clarkson N. Potter by over 1,000 majority; that Mr. Carr, Republican candidate for Secretary of State, and Mr. Wadsworth, Republican candidate for Comptroller, will have an increased majority over that of Mr. Hoskins; and that Mr. Ward and Mr. Wendell, Republicans, are also elected as Attorney General and Treasurer. The majority for Mr. Horatio Seymour, Jr., Democratic candidate for Engineer and Surveyor, will be towards 10,000.

Foreign.

THE American demand for Scotch iron has decreased.

RECOGNITION of Roumania by the United States has been delayed at the request of the powers.

IT is reported that offers of arms and money have been made to the Irish farmers by persons in this country.

THE Sultan has ratified a scheme of reforms for the European Provinces of Turkey and Asia Minor, and has consented to recognize the principle of Ministerial responsibility.

THE death rate in certain sections of Russia, caused by diphtheria, is so great as to be a cause of special anxiety. Of the deaths of children in Odessa alone, since May last, 75 per cent. were caused by the disease.

THE organic complaint from which Prince Bismarck is suffering is said to be an incipient stage of fatty degeneration of the heart, as yet but slightly developed. There is no immediate cause for apprehension.

PISAGUA, an important town in Peru, has been captured by the Chilians after a desperate engagement, in which the latter had 300 men killed and wounded. The Chilians are now trying to starve out the Peruvian garrisons at Arica and Iquique.

THE insurrection in Cuba has caused great excitement in Spain. A military force of 10,000 men is to be sent to Cuba. The Cortes is to suspend sittings until after the King's wedding, when the Government's Bill for tariff reform and the abolition of slavery in Cuba is to be taken up.

THE ALTAR.

HE built an altar unto wealth, and laid
His heart thereon as first best sacrifice.
Then followed it with Peace, the lowly maid
Who long had been his friend, as sweet as wise.
All humble joys, and that white pearl, Content,
Like jewels from a coronet were rent
To give new lustre to the altar flame,
And in one strife to make that flame leap higher.

His useless, selfish seasons went and came.
But when all men beheld the light of gold
That blazed and dazzled from the mighty fire
And marveled at its brilliancy, the old
And lonely man who kindled it sat cold,
And knew at best 'twas but his funeral pyre.

ELLA WHEELER.

THE GARRISON BALL.

"STABLE-CALL" had sounded, and the men were busily grooming their horses, as a little party emerged from Major Austin's cottage to set out upon a visit of mercy.

It was a charming morning, quite Indian Summer weather; a warm haze rested upon everything.

"I declare it makes one feel quite languid and Spring-feverish," said the stout lady, who was Mrs. West, sister of Major Austin, commander of the post.

The younger lady, tall and very beautiful, smiled.

"You are beginning to think better of our social life at a military post on the frontier, Aunt Joe. I told you it had its attractions."

"I hope I shall be able to discover them, dear. Between the Indians, the intense cold, the absence of theatres and libraries, and the thousand other ills——"

"The Indians never do much worse than steal our horses, and we have an abundance of firewood, occasional private theatricals, boxes of books from the East, and to-night we have a ball, and, altogether, I think we might be much worse off. I like it, Aunt Joe," said the handsome girl, sturdily; "the liberty, the adventure, the scenery—it is all grand!"

"Well, if I were younger, Nina, I might share something of your enthusiasm," returned Mrs. West, with a sigh, as they closed the cottage-gate and set forth to cross the parade-ground; "but at my time of life people have learned the fact that of all sorts of romance there is no situation so romantic as that of perfect ease. Roughing it, we have discovered to be the most painful of illusions. I should, in New York, enjoy reading about this garrison life on the frontier; but the actual realization is another thing. Your reveille wakes me from my morning-nap; the hourly drumming and bugling I consider a nuisance, and the drilling and guard-mounting I view as cruelty to animals."

The third member of the party was Lieutenant Miller. He listened to these heresies with polite forbearance, but could not appear to subscribe to them even to the extent of a smile. Miss Austin, however, was really amused, both at her aunt's freedom of speech and at the lieutenant's secret vexation.

Thus abreast, the three slowly crossed the smooth sward, and passing the sentinel, who saluted stiffly, arrived at the row of cottages on the north side.

There was something odd in the appearance of things—at least to the unmilitary eye of Mrs. West—men in uniform sweeping the porches, others, visible through the open windows, making beds, one feeding a bird and cleaning its cage, and, in fact, stalwart fellows engaged in various labors, highly inappropriate, according to conventional notions; and Mrs. West scrutinized the scene through her glasses with mingled surprise and disapprobation. She might have even delivered a brief, comprehensive discourse upon the general arrangements, had not the party now arrived at the cottage of Captain Dill, who lay ill with fever within.

So they entered. A bright light broke over Dill's face when he saw Nina, so that Doctor Nolan, and Lynch, the nurse, who had not heard the door open, instantly turned round. Nina seemed the least bit embarrassed and turned a little pale; but she crossed the room and took the sick man's hand. And he looked so happy—with his splendid eyes fixed upwards on her beautiful face, he murmured:

"Nina!"

"He is better, doctor?" inquired Mrs. West.

The lieutenant—was it delicacy, or what?—had gone to the window as the greeting took place, and stood looking out. He also was strangely agitated; but Dill was his bosom-friend, and was said to be in great danger.

Nolan spoke with encouragement—rather vague, indeed; but still, clever physicians do not like to prophecy positively any more than clever astrologers.

"I sha'n't be able to dance with you to-night, Nina," said Dill, with a wan smile.

"No," she laughed, with a sort of uneasiness and without exactly meeting his gaze; "but we shall have balls frequently and you will soon be well."

"Miller may take my place. There are so few of your sex here that he is the only man in the garrison I dare trust."

"But something depends upon me, doesn't it?"

"A great deal, indeed, Nina," he returned, with a sigh, sinking back again upon the pillow.

"We know, of course, that you two people are engaged and very love-sick," broke in Mrs. West, bustling forward good naturedly; "but I really protest against sentimental exchanges on the present occasion. You must apply your mind to recovery, captain, and not allow yourself to get jealous of Nina and worry over the imaginary rivals she is waltzing with. I promise that she shall dance with no man to-night but your friend Lieutenant Miller. Now, let us talk about something else."

So they did chat of many things, for there is a great deal to talk about even at a far-away frontier fort: of how the Indians had got past the sentinel two nights before and penetrated the fort, and carried off two horses without discovery; of yesterday afternoon's baseball match, and last week's theatrical performance, and Sergeant Robbons's wonderful success in "Box and Cox" and "Poor Pillicoddy," and it was generally admitted, as it always is about amateur actors, that the sergeant was much cleverer than any living professional comedian, and need only go into the regular business to astonish the world.

The day of a ball is always one of great excitement even in civilized communities, and how much more so in those distant military quarters where nothing is achieved without difficulty. The unparalleled number of a dozen ladies had been secured to grace the festivities, including the "army ladies" or female relatives of the officers; and among the belles of Wyoming was to be Miss Bess McKinney, daughter of the scout, and a famous huntress herself, who rode better than a circus equestrienne and had been through volumes of adventures; and she also was to bring friends. Poor Dill would miss something, indeed; there had been many dancing-parties during the Winter, but this promised to surpass them all.

Nina Austin was, of course, extremely busy; but Aunt Joe thought her just a little strange to-day; she was restless and absent, and several times sat at the piano and sang short snatches from her vocal *répertoire*—nothing sad or sentimental, but those wild and fierce melodies breathing cynicism and mockery, which composers have made in some of their own strange moods.

Lieutenant Miller was the handsomest man at the post, and beautiful and admiring eyes watched him as he marched and countermarched on parade that lovely evening, the band playing and the banners fluttering. And at last, as the drill ended, and the soldiers with light springing step strode away to quarters, and the music, the nation's hymn, died away in the twilight air, the lieutenant left them and crossed the smooth lawn to his own private territories.

It is two hours later now, and the ball has begun. The lieutenant, with a last glance at his toilet, leaves his rooms and betakes himself to the cottage of his sick comrade Dill. That faithful fellow Lynch is still at the bedside.

Dill's face, pale and sunken in the yellow lamplight, brightens instantly.

"I am so glad you have come, Frank. Sit by me."

Miller flushes, but instantly obeys, and Lynch, with quick Irish intelligence, leaves the two comrades together and passes into the adjoining chamber.

"Frank, you will dance with Nina to-night—no one else, old fellow; the thought, as I lie here, of another man's arm about her waist would almost drive me mad. It may be a sick fancy, but I don't think she cares for me as she did; there is something between us—a cold shadow—not to be seen, but chilling as those spectral icebergs that hover in the neighborhood of a ship at sea."

"Nonsense, Dill; you must not encourage those morbid notions if you wish to get well," says Miller, with his head turned away.

"She has promised me her love, Frank; if she were to change I would come back from the grave to reproach her. Ha! there goes the band," and he started up, his dark eyes bright with the light of fever—"the 'Horse Guards Quadrille,' which I have danced so many times;" and the merry music sounded in the distance. "Tell her so, Frank—warn her—that I will come back from the grave! Go now, old fellow; they are waiting for you."

"After a while I shall drop in again, Dill. Good-night."

The lieutenant on his way out passed through the adjoining room, where sat Lynch reading a sporting-paper two months old, and half in a doze over Tommy Sawyer's sensational rowing-match. The artilleryman stood up stiffly at "Attention!"

"How has he been, Lynch, during the afternoon?"

"Not so well, sir, I am afraid. He was out of his head, I fancied, at times. Something is on his mind, sir."

"You have attended him faithfully, Lynch, and he will not forget it when he recovers. You really must be worn out!"

Lynch blushed and made a stiff bow, standing with his arms folded after the fashion of artillery soldiers.

"Don't speak of it, sir; everybody likes the captain, and would do a good deal for him, sir. I don't mind losing a little rest, sir."

Miller nodded and went out. Beautiful was the night, as the day had been; no moon, but hosts of stars; and the music swelling on the soft breeze gave the hour and scene a romantic character that roused a responsive chord even in the breast of this stern soldier, who was not often moved by such things.

He crossed the quadrangle and entered the ballroom. The scene to our eyes would have been a strange one; the decorations, the flags festooned along the walls, the fanciful figures made by the sabres and rifles; and among the dancers, all the gentlemen in military dress, and the ladies in costumes of all sorts, from pretty nearly the latest fashion of Worth to absolutely the latest conception in frontier art. But a West Point dancing-party could not have exhibited more of that peculiar quiet which we are accustomed to associate with the enjoyments of really high-bred and fashionable people.

Frank Miller's gaze traveled across the heads of the dancers until it rested upon the one face that had an interest, wild and guilty though it was, for him; and his heart thrilled within him. Beautiful Nina Austin was not in the cotillion; she was, by some accident, standing alone, and instantly he threaded the busy crowd and reached her side.

She colored and looked frightened, and began to trifle with the fastening of her glove.

"I am a little late," he said; "but I—I was detained. Have you not danced?"

"I walked through several of the quadrilles. My round dances, I believe, belong exclusively to you."

Their conversation subsided strangely with those few words, and nothing more was said until the bugle sounded for the next dance, which was a polka, and Miller extended his gloved hand, and in a moment they were whirling among the throng.

There was a little rest, and then followed the stormy "Midnight Waltz," a wild and intoxicating composition, with curious drum and trumpet accompaniment, made for those Vienna ballrooms where waltzing rises to the height of genius. The soldier's erect carriage makes him the most picturesque, if not the best, of waltzers, and West Point is famous as a dancing school. With Nina in his passionate embrace, Frank Miller became the central object of attraction in the room; and round and round they went, seeing nothing but the wild glare of the lights, and hearing nothing but the rythmical surge and ebb of the orchestra. It was like one of De Quincey's opium dreams.

At last it ended, and both staggered giddily from the crowd.

"Let us go into the open air," whispered Nina, as he released her from his passionate grasp.

The night was still lovely—not a cloud, and a faint south breeze blowing. Side-by-side they walked for a little way, the fort all in darkness, and no sound except the faint tramp of a sentinel's footstep somewhere in the distance, and the rattle of his musket as he wearily changed it from one shoulder to the other.

"Oh, Nina!" cried Miller, breaking forth suddenly. "May God forgive me! but I can be silent no longer. I love you! I am the most wretched man in this wide world! How is it to end? Is there no hope for me?"

She was silent; he had again taken her hand.

"Nina, the future cannot go on like the past. My guilty passion, which has grown up in spite of me, is still irresistible. I have watched you, and since the last few days have dreamed things that have nearly set me mad. I am not mistaken—you do care for me, and for me only. Speak, Nina; will you be my wife?"

"He—he is dying," she gasped, with white lips.

"I do not know; but what if he should recover? My darling, no promise can bind a woman to a course that will make her whole life a misery. This is the cardinal point of our destinies—answer me."

"Yes."

He pressed her hand almost convulsively, and, without anything more, they turned to go back. As they did so they were confronted in the path before them by a figure that both, with a freezing horror, recognized. It was Dill—tall and shadowy in the starlight—with a white, shroud-like garment about him, with a finger raised in a sort of menace, and upon his ghastly face a look of awful prophecy and reproach.

Nina uttered a stifled shriek, and would have fallen had not Miller caught her in his arms; but when he looked again the spectre was gone.

She murmured a frightened prayer, and begged to be taken back to the ballroom. Miller, utterly confounded and unnerved, obeyed, and when he had seen her safely to the door, he hastened across the quadrangle to the sick man's quarters, with a dismal foreboding at his heart.

Just as he entered the cottage he was met by the artilleryman, Lynch, in great agitation.

"Has anything happened, Lynch?"

"He is dead, sir—not two minutes ago. He has just breathed his last, and I was coming for you, sir."

Miller stood for a while stupefied. He had read of such experiences, and, like most people, had discredited them; but here was proof as strong as Holy Writ, that no man could disbelieve who had faith in his own senses.

Silently he walked in, followed by the trooper, and the two stood by the bedside. It was quite true—poor Dill lay there with the dreadful stare which comes in the moment of the change, still fixed in his pale countenance, one arm hanging down and the fingers touching the floor.

A few days afterward, with funeral march, and arms reversed, and a volley over the grave, the soldier was left to his rest.

Nina Austin, the next month, went East, without exchanging a word with Miller, except a formal good-by in the presence of others, and a lonely life was his. He wrote to her, and the reply was cold and guarded. Then came the Summer, and an Indian outbreak, and a short, perilous campaign, without wounds or distinction, but with all the miseries of military operations on the border; and between these and his own secret troubles, his health languished and he was given leave of absence.

He went to his sister's New Hampshire farm, and, after a little, wrote to Nina again, who was still with Aunt Joe, in New York.

The answer was something like the other; but between the lines he read a heartache like his own. And, as he walked back across the fields from the village post-office, he made up his mind to go to New York.

Nina did not deny him: but alas! she saw him in the presence of Aunt Joe. His feelings, I fear, were not friendly toward that excellent but formidable woman as she so determinedly maintained her place in the room. Tactics could not dislodge her; she was as good a strategist as himself, and had, moreover, the firmness in holding a position of the late distinguished Stonewall Jackson. He despaired and sulked openly, and showed his misery so plainly that Aunt Joe, who was in reality a tender-hearted soul, deliberately betrayed her ally by suddenly getting up and saying:

"Dear, dear! I left the door of our room open, Nina, and I am afraid that horrid gray cat will get in at the bird."

Nina glanced after her with an imploring reproach; but she vanished, and the young lady was left to the mercies of the enemy.

Miller instantly rose and crossed the room.

"Nina, this cannot go on. We must have an understanding of some kind. Upon what you say to-day depends the future happiness or misery of the man who adores you. My leave is almost out, and I wish to know how I am to go back. Do you retract the answer you gave me that night when I asked you to be my wife?"

"Don't speak of that night," she said, with a shudder. "You know what we both saw. It was his spirit that came to us at the moment of the parting of body and soul. Many such things are told in books, as well authenticated as this; but I should never have believed them but for my own experience. Here is a fact we cannot pretend to doubt. We both saw him."

He was silent—denial impossible, and discussion almost as much so. But at length he said:

"Well, it was a remarkable circumstance; but I see no more in it. Our friend appeared to us at the moment of dissolution—a proof that death is not extinction—and that is all there is in it."

"He came to reproach me for my treachery," she answered, resolutely, "and might come again. Socrates had his friendly spirit—I might be followed through life by another kind."

"I did not know you were so superstitious. I saw something that I cannot explain; but I am still skeptical even of my own senses, which, believe me, are not always final tests. Our eyes deceive us about colors, and we cannot be sure that they are not equally unreliable about forms."

"I know nothing about metaphysics; but I can never change my attitude while this apparition remains unexplained. I thought for a time that some trick might have been possible; but that theory is hopeless, as a moment's reflection shows."

At this point Aunt Joe returned. Miller took his leave with the understanding that he was to have five minutes some time later in which to make his adieus; and, as he walked back to his hotel he was, as may be supposed, bewildered and miserable enough.

In his weakness he was tempted to consult some spiritual medium. "There may really be communication with the dead; how can I doubt it when I have seen a spirit myself, and might have conversed with it? The objection is, that the medium would demand money, and from what I know of poor Dill it does not seem to me that he would exhibit himself for pay."

So that idea expired. He ate his dinner, and while over the dessert, the waiter brought him such mail as had accumulated in his absence—two letters and some newspapers. Miller took them up to his room, and after another long period of rumination, deigned them an examination.

One of the letters ran as follows:

"FORT STANTON, WYOMING.

"LIEUTENANT MILLER—I feel it my duty to write to you to make a confession about a circumstance in the past that has given me much anxiety of mind. You have not forgotten the melancholy death of your friend, Captain Dill, which, though not altogether unexpected, was still sudden. I now come to relate the facts of that occurrence, which I have not hitherto had the courage to do.

"I consider myself in some measure responsible for the suddenness of his dissolution, although the doctor has repeatedly assured me that he could never have recovered. However, but for my involuntary neglect he might have been spared a few days longer, and, knowing that fact, I have never ceased to reproach myself. On the night of the garrison ball you may have observed, sir, that I was completely tired out. I had been sitting up for almost a week, catching only a cat-nap when I could. Well, sir, sitting by the bedside, trying to keep him quiet, for he was a good deal out of his head, Nature overcome me and I sank into a stupor. While I was in this condition the captain got up, as I suppose, and stole out of the room into the open air. How long he was gone I do not know, but just as he came back I awoke. You may well believe I was frightened, for I saw by his face that the chill and damp of the night had struck through him and he was a dead man. And so it proved; for he had no sooner tottered to the bed and fallen there than his spirit took flight. Horror struck, sir, I was just on my way to give the alarm when you entered at the door. I was too much agitated to tell the truth then; but my conscience has reproached me ever since, and I now make this confession in the hope of relief. Trusting, sir, that you will consider all the circumstances in the proper light, and not think too hard of a man who has always tried to do his duty, I pen you these few lines, detailing a fact hitherto known only to heaven and myself, and which, but for this confession, might always have been concealed. I remain, lieutenant, with much respect, your obedient servant, PATRICK LYNCH, Private."

Frank Miller read this letter with a throbbing heart. The mystery was at an end, and that which he and Nina had seen was no ghost. So, perhaps, might be explained away many such apparitions. Without a word of comment, he remailed Lynch's letter to Nina, and a few days afterwards received a message bidding him come to her. He obeyed, and as he en-

tered the room, she advanced and gave him both hands.

"You are satisfied, dear Nina?" he said, wistfully. "Nothing stands between us now?"

"Nothing."

THURLOW WEED.

HIS EIGHTY-SECOND BIRTHDAY, NOVEMBER 15TH, 1879.

(*Continued from front page.*)

During the anti-masonic excitement, which ran high in Western New York in 1826 and 1827, Mr. Weed fully identified himself with the party opposed to the Masonic organization, and was twice elected to the Legislature. By this time his great capacity as a political organizer had come to be manifest. Political parties had fallen into a chaotic state, and some one was wanted to educe order out of confusion. A newspaper called the Albany *Evening Journal* had been established in the interest of what was then known as the "Anti-Jackson" party, and of this journal Mr. Weed became editor in 1830, a position which he retained until 1862. During this whole period he, more than any other man, may be fairly considered the manager of the "Whig" and "Republican" parties. He aided largely in securing the successive nominations of Harrison, Taylor and Scott for the Presidency. In 1856, he earnestly advocated the election of Mr. Fremont, and in 1860 he was no less earnest in urging the election of Mr. Lincoln, although he had done his utmost to procure the nomination of Mr. Seward for the Presidency.

In 1861, Mr. Weed was sent to Europe on a mission, nominally semi-diplomatic, but really of more importance than that confided to any regularly accredited ambassador. When the history of our diplomatic complications during the early part of the Civil War comes to be written, this semi-official mission of Mr. Weed will be shown to have been of no little importance.

In 1865, Mr. Weed formally gave up his connection with the Albany *Evening Journal* and took up his abode in the City of New York. His residence, in Twelfth Street, is not in what would now be termed an aristocratic part of the city, but it is pleasantly located, and is in every way fitting the home of a man of ample means and with an abundance of friends. During the fifteen years of his residence here no man has borne a more prominent part in social and municipal reforms.

It would not be easy for the writer of this sketch to recall a more pleasant interview than that held by him with Mr. Weed on the morning of his eighty-second birthday. His cheerful greeting, clear intelligence and ready recollection, belongs rather to a man of less than three-score than to one of more than four-score. We speak of "declining into the vale of years." In a sense, it is indeed a decline; but few men have made it so nobly and gracefully as Thurlow Weed has done. Few men who have played so large a part in politics have been exposed to so little obloquy, and even that little he has bravely outlived. We believe that there is among us no other person whom men of all parties hold in deeper respect and reverence. Those who saw him on his eighty-second birthday, have good reason to hope and believe that he will witness many more like anniversaries.

CHAPEL OF ST. CHRYSOSTOM.

THE Chapel of St. Chrysostom, erected by the corporation of Trinity Church, on Thirty-ninth Street and Seventh Avenue, was dedicated October 30th, by Bishop Potter, assisted by the founder of the mission, Bishop Neely, of Maine, and about twenty-five clergymen of local churches and chapels.

St. Chrysostom's Church was begun fourteen years ago with a missionary meeting of six poor persons, led by Bishop Neely, then an assistant of Trinity Church. He felt the necessity for church operation in a western quarter of the city, and, therefore, began by holding meetings in a small way, and the work grew and transferred itself to larger quarters and a better place in one year. The next step was to build the Chapel of St. Chrysostom. It has been in use for some years, but only recently had its interior beautifully and appropriately finished. The mission outpost of so small beginning is now a church whose almsgivings have amounted to nearly $30,000. The chapel has two beautiful colored windows, and its architecture throughout, both exterior and interior, is ecclesiastical, harmonious and effective.

GENERAL GRANT'S RECEPTION IN CHICAGO.

THE reception of General Grant by the authorities and populace of Chicago, on November 12th, referred to in our last number, was marked by an enthusiasm and cordiality which words cannot adequately portray. Never before had Chicago seen so great a day. The decorations of the city were the most elaborate ever attempted, and have scarcely ever been equaled. The Palmer House and State Street in its vicinity were, of course, the centre of attraction. An immense banner hung over the street, with the words "Headquarters of the Army of the Tennessee," and a flag with a portrait of Grant and the word "Welcome."

The procession itself was immense. It consisted of three divisions, and was of such length as to require over two hours to pass a given point. General Grant rode in a carriage, built expressly for the occasion by Schoonmaker, of Michigan Avenue, and drawn by six horses, furnished by Mr. Richard Payne, of the Palmer House stables, and guarded on either side by a platoon of police—the Society of the Army of the Tennessee acting as his escort. The streets were densely packed with eager multitudes, and at almost every crossing the guest of the day was compelled to rise in his carriage and acknowledge the ovation tendered him.

After the review, General Grant was formally welcomed by Mayor Harrison, in the rotunda of the Palmer House. General Grant, in his reply, after conveying his thanks for the reception given him, referred to his cordial greeting abroad, and added: "Our country stands differently abroad in the estimation of European and Eastern nations from what it did a quarter of a century ago. At that time it was believed we had no nation: it was merely a confederation of States tied together by a rope of sand, and would give way upon the slightest friction. They have found it was a grand mistake. They know that we have now a nation; that we are a nation of strong and intelligent and brave people, capable of judging and knowing our rights, and determined on all occasions to maintain them against either a domestic or foreign foe; and that is the reception you, as a nation, have received through me while I was abroad."

In the evening a reception was given the General by the Army of the Tennessee, at Haverly's Theatre, which was magnificently decorated. The immense building was crowded with an audience which, upon the arrival of General Grant and staff, broke into hearty applause. Upon the stage were seated many of his prominent officers, including Generals Sherman and Sheridan. Governor Cullom welcomed the Army of the Tennessee and General Grant to the State of Illinois, General Sherman speaking in response. After some further remarks, General Grant was called upon, and, after some hesitation, spoke at some length, reading from a manuscript. We quote a portion of his remarks as follows:

"I am glad these society meetings keep up so long after the events which, in a sense, they commemorate have passed away. They do not serve to keep up sectional feeling or bitterness towards our late foe, but they do keep up the feeling that we are a nation, and that it must be preserved—one and indivisible. We feel and maintain that those who fought, and fought bravely, on the opposite side from us have equal claim with ourselves in all the blessings of our great and common country. We claim for them the right to travel all over this broad land, and to select where they please to settle, to become citizens and enjoy their political and religious convictions free from molestation or ostracism either on account of them or their connection with the past. We ask nothing more for ourselves, and would rejoice to see them become powerful rivals in the development of our great resources, in the acquisition of all that should be desirable in this life, and in patriotism and in love of country."

On the evening of the 13th General Grant was entertained at a banquet, given by the Army of the Tennessee, at the Palmer House. Six hundred persons were present. The bill of fare was printed on a card shaped into the likeness of a tent, adorned with battle scenes. Speeches were made by Generals Hurlburt, Logan, Schofield, Garfield, Woodford, Pope, and the guest of the evening, with several others. On the 14th, General Grant spent the day at the house of his son, Colonel Frederick Grant, where he held a private reception in the afternoon. The following afternoon he held his first public reception at the Grand Pacific Hotel, lasting from 3 to 5 o'clock.

General Grant, overwhelmed as he was by hospitalities, seemed to have found a special delight in revisiting the conspicuous points of interest in Chicago with which he has long been familiar, including South and Lincoln Parks, in which he sought an airing on several occasions, as shown in our illustrations. His programme for the future is thus announced: Leaving Chicago about November 20th for Galena, he will remain there for three weeks. He will then go to Chicago and proceed thence, December 9th, for Indianapolis, making only an hour's stop at Logansport, and arriving in Indianapolis at 2 o'clock P. M. He will stay there one day, being tendered a reception by the State Soldiers' Reunion. Thence he goes to Louisville, stopping one day; to Cincinnati, stopping two days, and in turn to Columbus, Pittsburg, Philadelphia and New York, wintering in the South, possibly in Havana.

Our artists and correspondents who were present at the great Chicago reception, learned from intercourse with representatives of all the Western States, that business is everywhere reviving, and the tide of prosperity is every day acquiring additional volume. The business revival is strikingly shown by the pressure of freight upon the New York Central and its Western connections, as well as upon some other of the Trunk lines. This great four-track line which holds such an important relation to the prosperity of New York, commands not only a vast share of the freight traffic between the West and this port, but enjoys also an immense passenger business, the increase in which is no less a significant evidence of our recuperation from the depression of the last few years.

GRAND FAIR OF THE SEVENTH REGIMENT.

THE new armory of the Seventh Regiment of the National Guard, State of New York, on the block bounded by Fourth and Lexington Avenues and Sixth-sixth and Sixty-seventh Streets, is now the scene of the most unique fair that has been held in this city since the famous one for the benefit of the Sanitary Commission in 1863. This imposing structure is divided into the main drill-room and the administration building. The dimensions of the former are: Length, 300 feet; width, 200 feet; height, 75 feet to the iron trusses, and 100 feet to the peak of the arched roof, the polished pine ceiling of which is very richly and tastefully frescoed with shields and other national emblems. Distributed over the floor of the drill-room are the ten booths, or tables, conducted under the supervision of the respective companies and their lady friends. In the northwest angle of the room is the booth erected by Ninth Company (F), a structure built in the Persian style of architecture. Adjacent to that, on the northern side of the room, is a triangular establishment, remarkable for the variegated brilliancy of its embellishments in the way of bunting, wherein a miscellaneous assortment of fancy wares are on sale under the supervision of Second Company (B). Directly opposite to it, and close to the northern wall of the armory, is a stand erected by Colonel Kent, of the State Ordnance Department. Fifth Company (E) have erected a handsome marquee midway on the northern side. One of the most striking features of the fair is a square Egyptian structure, richly draped, to be conducted under the supervision of Eighth Company (H). Near by is a smaller stand, ornamented with red bunting. This is superintended by Tenth Company (K), while Seventh Company (G) is represented by a unique "Chinese Gate," which has been constructed near the southeastern angle of the large compartment. Fourth Company (D) have built a handsome castellated edifice, whose turrets and walls are of carved wood. Over the entrance is the legend, "1806—Fourth Company." A Venetian tent, gorgeously adorned, stands midway on the drill-room floor, not far from the southern wall, belonging to Ninth Company (I). Occupying the central position is the great floral temple, which is of circular shape, and surmounted by a cupola, whose highest point is forty-five feet from the ground. First Company (A) have erected a Byzantine temple, while Third Company (C) put up a Moorish temple at the southwestern angle of the room. For the ulterior object of raising money to pay for the furnishing of the vast building an admission fee of 50 cents will be charged at the door. This fee will constitute the sole expense of visiting every part of the fair, except the picture gallery, to which the admission will be 25 cents, and the 10-cent fee demanded for admission to the Punch and Judy show, and the Stereopticon shows and the "Old Curiosity Shop." The rooms in which these amusements are to take place are so small that it is considered an act of charity to those who most desire to see them to charge a small admission fee. The fair will continue for two weeks, and for the benefit of those who wish to go early and often season tickets are to be had for $3. The Art Committee has made itself responsible for $400,000 worth of pictures. The paintings are 190 in number. There will also be exhibited the Claybern collection of engravings, and the New York Yacht Club will make a display of yacht models in one of the rooms. The rooms occupied as a picture gallery are the gymnasium, the band-room, the drum corps' room, the cadet corps' room, and the band rehearsal room. They are handsomely decorated for the purpose of an art gallery, and are lighted from above. In the basement is the shooting gallery, with six targets and an underground range 300 feet long, besides a covered passageway for the markers.

The formal opening of the fair took place on Monday afternoon, November 17th, the doors being opened to the public at 2 o'clock. At 3 o'clock the regiment, in its full strength, marched from the armory to the Fifth Avenue Hotel, where it received President Hayes, Secretary Evarts, Mayor Cooper and George William Curtis, and, after a brief halt, escorted them to the armory. The line of march was up Fifth Avenue to Sixty-eighth Street, thence to Madison Avenue up to the Park, and thence down to the armory on Fourth Avenue, between Sixty-sixth and Sixty-seventh streets. At the opening ceremonies in the armory the President and party occupied the gallery at the Fourth Avenue end of the drill-room. Mayor Cooper presided and made a brief address. The exercises were opened with prayer by the Rev. Dr. Weston, chaplain of the regiment, after which an address was made by George William Curtis. President Hayes did not deliver a speech, but formally declared the fair to be open.

Flower-farming in California.

FLOWER-FARMING is about to be introduced in Santa Barbara and also in Alvarada County, California, for the extraction of scents. California is prolific in flowers above all other growth. Every day in the year has its varieties, and very cheap husbandry would be required to make perennial croppings, because children can be largely employed. Roses yield 2,000 pounds to the acre, value $375; orange-trees 2,000 pounds, $200; violets, 1,600 pounds, $800; farnarian acacias 900 pounds, $450. Geraniums yield 2,000 ounces distilled perfume, $1,000, and lavender $150. Besides these there are bergamot, tuberose, orris root, peppermint, verbena, lilac, jasmine, lemon-grass, citronella and patchouli, all of which can be grown in that State. At present they import all natural scents, much adulterated, at enormous prices.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

New Mission Station on Lake Nyassa.

Livingstonia is the name given to a Mission Station of the Free Church of Scotland, founded in 1875 on Lake Nyassa. The district, which four years ago was quite deserted by mankind, has been peopled, and the station is now the centre of a thriving population of about four hundred, who assemble in large numbers on Sabbath mornings for religious services, and whose children are being taught in the learning and customs of civilized nations. Two sub-stations have lately been established 150 miles further north on the lake.

The Red Cross in Peru.

Intelligence has been received of the first land engagement in the present South American war, in the form of a telegram from Valparaiso, dated November 7th. According to this, a combined attack by the Chilian land and sea forces had been made on the Peruvian port Pisagua, which, after a bombardment of five hours, surrendered. A determined resistance was made, and the victory is said to have cost the Chilians a loss of 500 men killed and wounded. Following close upon the capture of the famous ironclad ram, the *Huascar*, the loss of Pisagua will have a very dispiriting effect upon the Peruvians. As an evidence of foreign sympathy, we give an illustration of the Red Cross Ambulance Corps, organized in Lima, with material volunteered by the Benevolent Society of Spain, showing the simplicity of equipment for field service.

New Royal Infirmary, Edinburgh.

The opening of the fine range of buildings constructed, at a cost of £240,000, for the Edinburgh Royal Infirmary, took place on October 29th. The foundation-stone was laid nine years ago by the Prince of Wales. It is like St. Thomas's Hospital, London, planned on the system of separate blocks; but whereas in St. Thomas's Hospital there is one range of blocks, in the Edinburgh Infirmary there are two, comprising four distinct blocks in each range. Another point of contrast is the difference of material. The St. Thomas's Hospital is built mainly of brick; the Edinburgh Infirmary is built, externally, entirely of stone, and therefore presents solid masses of masonry which possess an architectural character of a special kind. The infirmary will accommodate between 550 and 600 patients. The sum of £340,000 includes the cost of site, buildings, and furniture, of which, after the sale of the old buildings, £25,000 remain to be provided. It is the largest hospital in the United Kingdom, and probably the best planned.

Land Troubles in New Zealand.

For a long time peace has reigned in New Zealand between the Maori and the Pakeha, and it was hoped that the two races would hereafter live at peace together. Of late, however, there has been considerable danger of a renewal of the old hostilities. At the end of the war in 1860, large portions of native lands were confiscated, and most of them were occupied without delay. There was, however, one large tract, the fertile Waimate plains, situated south of Taranaki, which the Government until quite recently never deemed it advisable to occupy, and to which the natives had never relinquished their claim. Lately, however, the Government determined to throw open for selection and purchase a large tract of fertile land which had for many years been the forbidden fruit of the settler. Accordingly a survey was begun, and the land advertised for sale. The Maoris resented these proceedings, and in April last twice turned off the surveyors, and bundled them, tents, theodolites and all, across the Waingoro river, the boundary of the block. Then a small party began plowing up the property of a settler near New Plymouth, and continued to do so for several days in spite of the remonstrances of the Civil Commissioner. Old settlers feared a renewal of the bloody wars of former days, a large force of the armed constabulary were brought from Wellington and Waikato, and bodies of volunteers were organized in the different settlements. Meanwhile, as the plowmen did not desist they were arrested, committed for trial, and shipped to Wellington Jail. Fresh men, however, took their places, until there were 160 under arrest. They made no resistance whatever, some even held out their hands for the handcuffs.

The Great Floods in Spain.

Our foreign news of last week gave some account of the disastrous floods in the south of Spain, chiefly in the provinces of Murcia and Granada, caused by sudden rain-storms, beginning on the 14th of October, which swelled the mountain torrents of the Sierra Segra and the Sierra Nevada. The river Segura, flowing from the first named range eastward to the Mediterranean coast, through Murcia and part of Valencia, overflowed its banks, and the inundation submerged a fertile and populous district. Murcia, the capital of a province of that name, San Benito, San Lorenzo, Lorca and Orihuela are the cities and towns which experienced the greatest damage. The damage done in Orihuela was even greater than at Lorca, as a suburb was entirely under water for two days. More than five hundred houses were either destroyed or had to be abandoned by order of the authorities. Nearly two thousand five hundred persons were left homeless, having saved nothing but what they had on when taken away from their houses by the boats and barges manned by sailors and civil guards. The Governors and members for Murcia, Alicante and Almeria believe that more than three thousand human beings have perished, while three millions sterling would not cover the material losses of towns and wealth. All ranks and classes in Spain, from King Alfonso and the highest grandees and prelates downwards, are engaged in the work of providing and dispensing relief to the distressed people. The French Government has sanctioned a lottery of 2,000,000 francs to be organized by a committee of journalists for the benefit of the sufferers by the floods. The Emperor of Germany has sent 12,500 francs for the same purpose, and the press of Paris has organized a grand *fête*, the proceeds of which will be handed over to the Relief Committee.

AT HOME AND ABROAD.

—IT is estimated that in England there is at least twenty million dollars invested in private yachts, giving employment to five thousand sailors.

—AS many as 21,992 vessels, with a tonnage of 164,000 tons, and manned by 82,431 sailors, were engaged in the French fisheries in 1878.

—A LARGE party of Germans have arrived in Florida and have settled upon a rancho near Pensacola, and gone extensively into the sheep-raising business.

—THE United States Consul at Odessa, Russia, reports to the State Department that the wheat crop of Russia will fall far short of the usual harvest, and that American wheat must be in good demand there.

—THE reading-room of the British Museum contains three miles of bookcases eight feet high. The dome whence the electric light irradiates the vast room is next to that of the Pantheon at Rome, the largest extant.

—THE descendants of the Walloons, or foreign refugees, in the Kentish capital, enjoy the curious and anomalous privilege of celebrating non-conformist service in the crypt of Canterbury Cathedral, the use of which for this purpose was granted in 1561.

—AN association of ladies in Pennsylvania have purchased the house which General Washington occupied as his headquarters at Valley Forge, and began a movement to buy the 2,000 acres adjoining, in which the old breastworks are still in good preservation, and erect a soldiers' home there.

—NOVA ZEMBLA has been inhabited for a year by a Russian family, who have experimentalized on the practicability of forming an Arctic colony. The settlers, who dwelt in the northern island, had good health, notwithstanding the inclement weather. The Samoyeds, however, died in large numbers.

—A NEW occupation for the young men who are filling up Western Texas, seeking their fortunes, is to start "goose ranches." One ranch has 3,000 geese, whose feathers are plucked every two months. Each goose averages a pound and a half a year, the feathers being worth 50 cents a pound.

—NORFOLK, Va., did an export business last year of $10,000,000, and with her cotton returns now ranks as the second cotton exporting port in the United States. It is the first peanut port in the world, receiving the entire crop of Virginia, which is much larger than the growths of Tennessee and North Carolina.

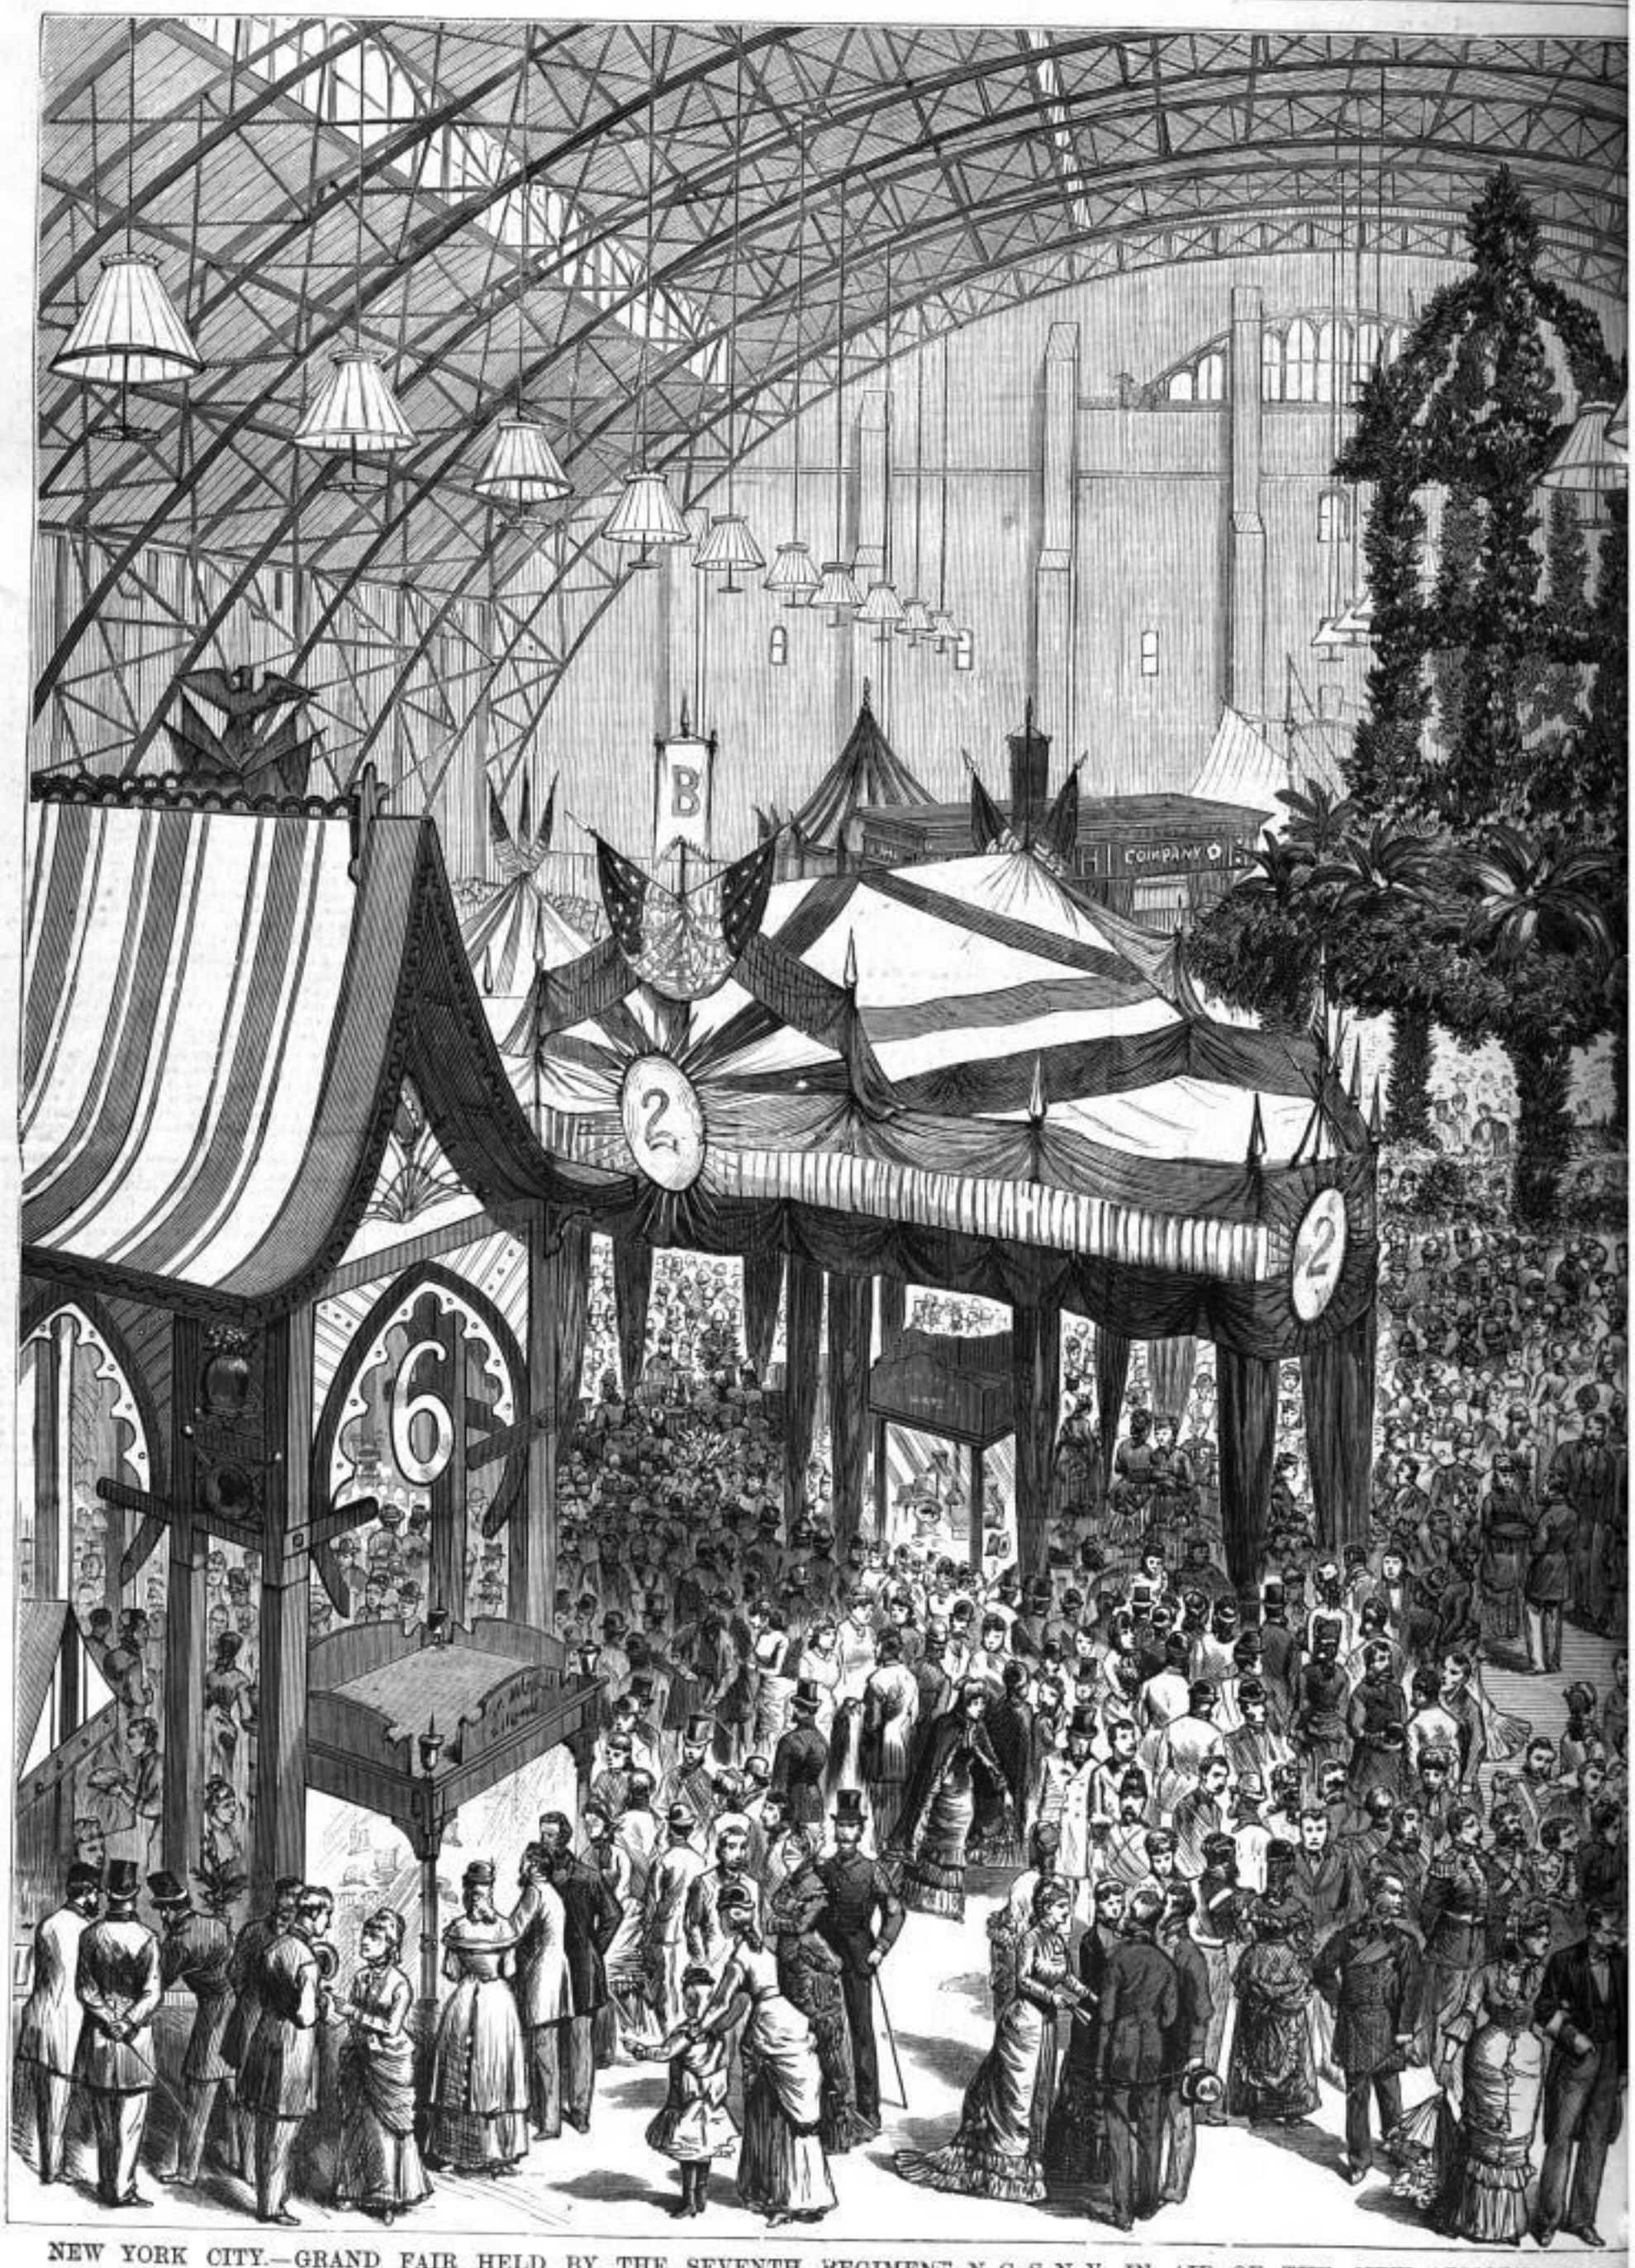
—IT turns out now that the famous brigand chief Gasperone is not dead, as was reported by mistake at Milan; he is still alive at Abbiategrasso, where he was interned in 1871, and is highly tickled over the newspaper accounts of his death and grand exploits in the days when brigands counted for something in the world.

—IT is estimated that there are 15,000 carriage manufacturers in the United States, who employ upward of 100,000 hands and pay out $25,000,000 to $30,000,000 for labor annually. Cincinnati takes the lead in the West in the carriage industry, eight firms having manufactured 63,000 carriages and buggies the past year.

—UPWARD of 2,000,000 of acres of land have been taken by settlers in Manitoba during the past two years, and 1,500,000 more acres have been surveyed. It is evident that this is the most promising portion of the Dominion, and as it contains 275,000,000 acres of arable land, it offers abundant room for all the emigrants Canada can attract for some centuries to come.

—APPALLING distress is prevalent in Upper Hungary, where upwards of 200 communes are without bread. The inhabitants would gladly emigrate en masse to America had they means of undertaking a journey which would, as they think, lead them to a land of promise as compared with the arid soil of their own country. The Government is taking active measures to provide for their actual wants.

—A BUST of the Empress Eugenie has become transformed into that of the Republic in a small town in the centre of France. It is placed in the communal schoolroom above the master's desk, but has received the addition of some Republican insignia. This is said not to be a solitary example, some tradesmen with a stock of busts of the ex Empress on hand having probably taken that means of disposing of them.



—THE amount of grain received at Chicago during the month of October was larger than for the corresponding month of any previous year, and 8,918 car-loads more than in October, 1878. During the last month there were 23,405 cars of grain inspected, and 1,020,760 bushels received by canal and lake; while the out inspection amounted to 16,977,700 bushels. The amount of grain received at Chicago during the year ending October 31st, 1879, was several million bushels more than that received during the previous year.

—THE researches on the site of the ancient Pergamos, now Bergama, in Asiatic Turkey, undertaken by a German engineer, have resulted in the discovery of over 200 statues and pieces of sculpture belonging to the best period of Greek art. Most of the statues come from a temple to Athena on the site of the Acropolis, and include the altar, a colossal Laocöon, figures of Eros, of two sleeping female figures, of many Roman ladies, of satyrs and tritons, as well as a higher ornamental frieze and base of a pedestal supporting a statue of Zeus, and adorned with representations of the deities of the elements.

—THE effect of the passage of the Arrears of Pensions Act will be brought forcibly to the notice of Congress this Winter by an application for $2,000,000 additional for the additional annual appropriation for the payment of pensions. It seems that the Act developed an overwhelmingly surprising number of hitherto unheard of pensioners. Last year's appropriation, amounting to $29,089,000, was about $2,000,000 short. This deficiency must be met. Commissioner Bentley's estimate for next year will be $32,404,000.

—UP to the close of last year the ravages of the *Phylloxera vastatrix* in the vineyards of France had extended over more than 1,600,000 acres, the vines in 700,000 of which had been totally destroyed. The appearance of the insect is now reported from the centre of the most famous of all the viticultural districts of France—namely, the Médoc. The aggregate value of the Médoc vineyards, the whole of which are comprised within a narrow strip of land some twenty miles in length, amounts to many millions sterling.

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF MINE."

SYNOPSIS.

I.

This striking romance opens with the death-bed of Mrs. de Latude, who is tormented with remorse for accidentally killing her husband by an involuntary blow as he was striking their little daughter Sylve, a beautiful child of some six Summers. Feeling her end approaching, the dying woman sends her child to summon the lady, Mrs. Bimley, in whose house they are living. When that lady appears Mrs. de Latude consigns the care of her daughter to her, and charges her to transmit to her friend, Mr. Forester, the private papers she would find under her pillow.

II.

The next scene shows the son of the dying lady's friend, who is reading the manuscript. It details the life of the dead lady, and relates that, infatuated by the personal appearance and plausible manners of De Latude, she had married him. It was not till they had been married some months that he revealed his true character. He was a drunkard, and ill-used her. At last, one evening, he struck their little daughter, and in her rage she struck him with her clinched hand. To her horror and surprise he fell—he had struck his head in his fall—unwittingly she had killed him. Yes, Francis de Latude was dead.

His wretched wife was in despair. Her first idea was to denounce herself as the murderess; but the thought of her little daughter deterred her. She would not that her child should be looked on as the child of a murderess. She therefore dragged the dead body to her husband's room, placed it in his bed, and left it to be discovered in the morning, when his valet, Paschal, a light negro, went to call him to breakfast.

As Mr. Forester is reading this confession in his office, he is interrupted by his mother, who comes to call him to lunch. He hides the manuscript, and follows his mother to the lunch-room.

CHAPTER III.—AN AWFUL DISCOVERY.

"A LADY! I wonder if it's a young lady?" soliloquized Mrs. Forester, as she left the dining-room alone. "How very strange and undecided he was! I don't think I ever remember seeing him so curiously absent-minded. Now, I dare say there's a trap laid for him somewhere; and he was pale, too; drank his chocolate instead of sipping it; altogether there's a mystery in the air. I must try to solve it. No one shall lay siege to my Flix unless I know it. Where is the woman good enough for him, I wonder? Like all silly boys, though, there's a chance for him to be fooled, and the more innocent and unsuspecting he is the more liable to be deceived."

As Mrs. Forester slowly wended her way to her own sitting-room, Flix entered the study, and, turning the key to insure himself against interruption, he resumed his reading.

The letter opened again at another date, and the writer professed to find herself in better health and spirits than she had enjoyed for years.

"It is strange," she commenced, "but I can write with calmer nerves since my last attack. No doubt this freedom from pain and clearness of intellect denotes coming dissolution, and I cannot but welcome death, particularly as the burden which threatened to cloud my mind is lightened by confession. It may be that when you read this I shall be looking over your shoulder."

Flix started at this, and, almost unconscious of the action, looked behind him. A little stir of the paper under his tense clutch, a shred of wood falling from the fire, gave sound and almost form to the illusion that somebody was there, and Flix laughed nervously at his own morbid fancy, and resumed his reading.

"I can scarcely find the heart to go back to that old story, life and all nature is so beautiful this afternoon. The mossy draperies of the trees before my window flutter like gossamer spirits, and the yellow buds of the jasmine star all the grounds far and near, opening its sweet buds to its sister the sunshine. Such wonders of vegetation as one sees in this Southern land make death seem less desolate. For one cannot but feel that every day and every night these fresh sweet flowers will be breathing and talking over one's grave. But to go back to that fatal night. As I said, I arranged everything to the very smallest item, such as hanging his suspenders where my husband always hung them, for he was precision itself in such small details—putting his socks in his shoes, laying a handkerchief under his pillow, and then as the necessity for exertion became less imperative, and the sight of that fixed and deathlike face smote upon my very heart, I flew with sobs of despair to my own room, and lying beside my child, drew her to my arms and hid my head in her little warm bosom. One more horror remained in store for me. I awoke in the dead of night standing beside my husband's bed. In my sleep I must have risen, as I often have since, and my soul, intent upon this horrible deed, wandered to the place of all others that, waking, I must have shunned. When I found where I was, the walls of a charnel house could not have been more terrible. With a shriek of despair I rushed into my own room and turned the key. There was no more sleep for me—indeed, I marvel that I lost myself for a moment, so wakeful and tense had been all my faculties. My great effort now was to conceal my own complicity. For my child's sake, I was ready to peril my soul. I knew that Mart, my cook, always came very early in the morning. She was the slave of a Colonel Fuller, and lived but a short distance away.

"Paschal was more tardy, knowing that De Latude was a late riser, and last of all came Kate, the chambermaid. She and Paschal were cousins, and both were owned by one master. Mart alone had the key of the house. It seemed to me through those awful hours that morning would never come. How I watched the faint gray flashes, my eyeballs emitting stronger fire than they, for it seemed as if my brain was burning. Should I could I keep a natural composed demeanor? It seemed as if all the guilty blood in my body rushed to my face at the very thought of facing Paschal. I unlocked the back bedroom-door, not daring to look in, knowing by that dread and awful silence that there had been no change—that the hand so warm but yesterday was ice now; that the brow and the lips were rigid. More and more imperative became the necessity for self control—more and more superhuman seemed the effort that I was called to put upon myself, not to cry out—not to madly denounce myself. Why should I? There was no wound, no bruise, no sign. Might not his death have been caused by violent anger acting upon a diseased, nervous system, ruined by stimulants? I tried to think so—indeed, in that way only could I keep my reason from playing me false. I had often to look at my child, to press her to my heart. It was in her defense that I had done this thing, and, strangely enough, the thought made her doubly dear to me.

"At last I heard the click of the gate-latch. I stole to the window. Mart's great, swinging, portly figure was coming up the garden-path. How I envied the dull, stolid creature her unembarrassed stride, her fearless glance! And now the key was in the lock—she was in the passage; she might, probably would, go in the parlor, or look in, to see that everything was right. Had I been careful to conceal all evidences of the night's work? Was there nothing left behind? I sat there trembling like a criminal, till all at once I remembered, by her opening the window below, that one thing had been forgotten.

"'Nice folks dey is,' I heard her mutter, 'lebe dese yere shutters flyin' open. Wonder if dey tinks dar ain't no dishonest persons in Savan'? Hah, yah! Well dat some ob our folkses didn't know ob dis yere.'

"True enough; we had been in danger all night. Doctor de Latude had always been very careful to see to the fastenings. I had forgotten the shutters, and I trembled for the result. Might there not be something in this fact that would convict me? I sat there trembling and wondering how I should act when the final test came. My Sylve slept long past her usual hour. She looked pale, and I imagined the blow her father had given her—how it kindled my anger afresh as I thought of it!—was the cause of her unnatural slumber. Should I waken her? I should be less lonely, even if the child were fretful, and then I could occupy myself in dressing her. I did not foresee the probable consequences of her last night's experience. I kissed and worried her out of her heavy sleep. She was very angracious at first, and I scarcely knew what to do with her irritable mood. She didn't want to dress; she didn't want to get up, and, finally, she wanted to see papa. I had not thought of this, but the child idolized her father.

"Did papa hurt him, and when did he come up-stairs, and where was he? I explained to her that papa was in bed, that he did not retire till late, and that he must not be disturbed. It did not pacify her. The child seemed literally possessed by an evil spirit. She pounded at the door, she called him at the top of her voice, she shrieked, she struck at me till I could have shaken the rebellious spirit out of her determined little body.

"At last I thought of my diamonds, and gave her all the jewels I possessed for playthings, and these quieted the child, who, adorning herself with necklaces, bracelets, watches and chains, looked in the sunlight like a living rainbow. And I, meanwhile; ah! what tortures possessed me! How I longed yet feared to hear the tripping steps of Paschal, who was every inch a dandy, from his elaborate necktie to his polished boot toes. At last he, too, came, and the fragrance of the chocolate began to permeate the atmosphere. Doctor de Latude always took his morning cup of chocolate in bed. The test was drawing nearer. Inwardly I raved for strength—prayer it could not be called—and gathering my fingers together, I literally drove the nails into my palms. All at once Sylve ceased playing with her jewels, and began crying for chocolate and papa. I promised that when Paschal came up, she should go in and see papa, but that I knew he was not stirring yet. She put the jewelry aside, for Paschal's step sounded at the foot of the stairs. I felt a spasm cross my face, and held both hands over my heart.

"'What is the matter, mamma? What makes you look so white?' asked the child, and began to fondle my hands and my hair. I could not speak—could scarcely breathe. Paschal knocked at the door; Sylve opened it. To this moment I see Paschal's pyramid of hair, his red waistcoat, faultlessly white shirt-bosom and ivory teeth. Indeed, it seemed as if he looked at me like a Nemesis. By one mighty effort I regained the command of my nerves.

"'Paschal,' I said, 'as soon as the master has drank his chocolate, you may bring Sylve up some. She has taken a fancy to chocolate. I believe I will go down and get a cup myself.' All this time he was nearing the door, laughing down at little Sylve, who was a great favorite with him. I tried three times to clutch the handle of the door which he had just shut, but my hand only fell heavily on the knob, making it rattle. At length, with one desperate effort, I opened the door. I must be down-stairs, or, at least, on my way there, when that terrible discovery should be made. At every downward step I felt as it sinking fathoms and fathoms. I knew Paschal had gone into the room, but all was yet still. I tried to smile at good-natured old Mart, who began the first thing to scold me, in her unique way, for allowing master to leave the shutters open.

"'Might a-knowed yo was strange here,' she said, showing her white teeth. 'Ketch Savan' folks bein' dat ar careless. Why, missee, you'se as white as a sheet!'

"'Some chocolate!' I gasped, and then added something about fearful dreams.

"'Deed, missis, and I dreamed 'bout you, too—had your head all bound in black and white rags, honey, and dar was blood a drippin' from 'em. Lord de massy, wha's dat?'

"It was Paschal flying down the stairs, with mouth and eyes distended; it was the agonized shriek of Sylve up-stairs, crying with grief and fright.

"'Oh, my papa! my papa! my papa!'

"'What has happened to my child?' I cried, and turned to the door.

"'Don't go up dar, missis,' gasped Paschal, his brown cheeks livid—'don't you go up dar, for your life's sake! Cook, hold her!' I stood back, looking at him like one petrified. Sylve had come down the stairs and was flying towards me.

"'Can't you speak, you yaller piece?' cried Mart, as the man tried to form the words that would not come.

"'I tell yer, don't yer let her go up dar—Masser de Latude is choked to death in his bed. He's dead as—as—Moses!'

"'Don't believe it, yer fool!' said Mart. 'Missis, don't go to bein' scart—he's on'y yaller, him ain't reliumble like we black ones.'

"'What can he mean? What does he mean?' I repeated. 'My strength is all gone.'

"'I means what I says,' Adolphe muttered, angrily—'you jest ask de chile.'

"'Oh, mamma, papa is stone-cold!' sobbed Sylve.

"'Stone-cold—papa! Mart, come up-staire with me. I am frightened.'

"I must have acted my part well, for Mart sprang forward with a cry of consternation to catch me; then in a moment or two we slowly went up-stairs. Need I tell the rest? Of course physicians were sent for. The verdict was given—Death by the visitation of God! Can you guess what that meant to my guilty soul?"

CHAPTER IV.—THE MENTION OF A DREAM.

THE papers that followed contained only directions, notes of deeds, memoranda, invaluable to a lawyer, and a solemn request that he would take Sylve into his own household, the writer believing that she was communicating with the elder Mr. Forester. It gave a personal description of the child who, to Flix's intense chagrin, was not yet ten years old, and a solemn charge to destroy the record of her mother's crime.

If it was found impossible to receive her in his own home, would not he be her guardian and find her a suitable boarding-house? This plea for an orphan child was not quite lost even upon the heart of twenty-four. If for a time the idea of harboring the child of such a mother was repugnant to his sense of delicacy, it seemed, on the other hand, cruel and unmanly to thrust the little girl into careless hands because her real dower was disgrace.

He was the sole person in the world possessed of this secret—it never need go farther. He found in his heart an appeal for this poor, neglected little creature. A philanthropist by nature, he further felt great love and compassion for little children.

"I wonder what mamma would say?" he murmured, locking his papers in his desk. "I have heard her say she always wanted a daughter."

He left his seat and entered his mother's sitting-room, which was just across the hall. The gentle face lighted up at sight of him, a chair was quickly drawn forward, an afghan of many colors thrown over it, making a luxurious seat.

"You will spoil me," he said, throwing himself back; "here am I, while other young men are sowing their wild oats, tied to mamma's apron-string."

"The string is not very strong," she said, with a look in her eyes that went to his heart; "still, I trust, it is stout enough to keep you from gathering your wild oats. It might be a sorry crop in the end."

"Yes, that's true, mother—by-the-way, haven't I heard you say that if a first-class opportunity ever came in your way you might be induced to adopt a child—a little girl I mean."

"Flix, what are you talking about?" exclaimed his mother, a look of surprise in her soft, dark eyes.

"Why, you see, there's a lot of land that I've got to fight for, a whole township, in fact, worth no end of money, and the sole heiress is a little girl, not yet in her teens."

"A little girl!" the sweet voice lingered lovingly on the words; "and has this little girl no mother?"

"Both mother and father are dead," replied Flix, throwing himself yet further back in his seat, and watching the delicate play of color in the handsome face opposite.

"Poor child! where is she?"

"At present in Virginia."

"Then, of course, she has friends."

"Oh, yes; such friends as a hotel affords." The woman shivered.

"Dear me, it's very sad," she said, and her sewing fell to her lap. "I wonder, now, if the child is anything pretty?"

"Uncommonly beautiful, I should judge," said Flix, dreamily; "but children are all pretty much alike, you know—a great care and burden, especially girls."

"You saucy fellow!" half laughed Mrs. Forester, intent upon her work again, "as if girls, the right kind of girls, were not the very angels of a household. I have often imagined to myself what comfort it might be to have one of my own, a pretty little, useful thing gliding about one's knee, sitting by one's side. Oh, dear, it must be such a pleasure!"

"Very well, then, here's your chance," said Flix, sleepily; "don't take me into the account at all. Sometimes I think it would be pleasant to see a fair little face at the fireside, and that during my long sessions of work I should think of you with less regret as being provided with a companion—but then"—and he yawned—"there's the care and trouble—and it might be cross and unpleasant—or we might spoil it, there's no knowing."

"Spoil it? I spoil a child! Why, Flix, you're a living monument of my parental discipline. Have I spoilt you, sir?"

"Not to my knowledge," replied the young man, opening his eyes again, a slow smile settling round his lips, and presently he was asleep or appeared to be. And while he slept the seed that had fallen into the ground of his mother's tender heart took root. She busied herself with fancies that made her dark eyes more and more luminous as she sat with crossed hands thinking. A little girl to love, and to teach to love her. An orphan whom she could call her very own, endow with her name if she pleased, take into her very heart. Nor was the consideration of money without its due effect. Mrs. Forester had always been the child of luxury. She hated poverty, and I fear she felt no love for people without the pale of good society. She had always been tormented with a haunting fear that Flix might marry some pretty nobody, just from the force of contrast—some oppressed sewing-girl—some beauty in need. She had read a good deal of that sort of thing, and it had become a mania of hers at one time to torment herself with visions of such a calamity, so that Flix had once said, when she commenced for the hundredth time on the subject, that if she ever warned him or talked to him about the matter again, he would go on the spur of the moment and offer himself to his laundress's daughter, a handsome, showy and ignorant girl.

But there loomed up before her now a new possibility—that of raising for herself a rich and charming daughter-in-law. "She would be just the right age," she murmured almost audibly in the security of her cogitations—for, of course, Flix was asleep. "A beauty and an heiress, brought up by me! Why, the thing seems really practicable, the more I think of it. I wish I could see a picture of the girl—I think that would decide me. At any rate," she added, aloud, "she might come here for a time."

Flix opened his eyes.

"Did you speak, mother?" he asked. The face before him flushed prettily. Like most people of her age, she hated to be caught talking to herself.

"I was just thinking of that poor child," she said, in soft low tones.

"Well, what does the thinking amount to? Any definite mode of action?" he answered.

"Flix, would you like it?" she asked.

"Would I like what, please?"

"Would you like me to take that little girl?"

"Well—if she would not be too much trouble—I rather think—yes," was his slow reply, as he raised himself from his brilliant couch.

"How should we get her here? What steps must we take?"

"Well, I should have to take a few steps southward, that is, as far as old Virginia."

"Oh, dear, must you go?"

"Haven't you got over that old fear of losing me?" laughed Flix, lifting himself with a graceful yawn—if a yawn can be graceful.

"But a long journey—and of course you'll go on horseback."

"If possible—to be sure on horseback. Still harping on my daughter, eh?"

"Oh, Flix? I shall never forget that dream I had! The place was so dark and lonely, and you—ah! heaven grant I may never see you as I saw you then! I don't see, Flix, why you need to go. Who is the child? What sort of folks is she with? Can she not be sent?"

Flix stood there before her, looking smilingly down on the sweet-faced little woman. It was an event in her domestic calendar that brought her curiosity out in full force, and, on the whole, he thought it might be best to gratify it.

"Mother mine, how many times do you suppose my father was in love during his lifetime?" he asked, cautiously.

"Oh, I know all about that," was the quick answer. "He told me everything—of course he did. Now I fancy I see what is coming. He was such a generous man, and must have made some romantic promise. Come, now, isn't it so?"

"But you haven't answered my question," persisted her son. "How much do you remember, and how much do you forget?"

"Remember, everything; forget, nothing. Catch a woman's memory treacherous on such subjects. Your father had three love affairs before he met me. He told me all about them. I wouldn't let him rest till he did," she added, naively.

"Do you remember the name of De Roosevelt?"

"Bless you, yes; he had that creature's picture. But you should hear him congratulate himself upon his lucky escape. She was a very improper person; ran away from her husband."

Flix shrugged his shoulders and wished he had held his tongue. He had not expected such an answer, not dreaming that all the particulars of this little love drama had been wormed out of the old judge by cross-questioning that would have tasked the ingenuity of the most honest witness. But he had gone too far to recede.

"I hope," said Mrs. Forester, looking up in his face, while the faintest suggestion of a frown marred the smoothness of her brow, "this child is no connection of hers?"

"She happens to be her grandchild," said Flix, desperately.

"Oh! And he, Judge Forester—could he have entered into any arrangement that I——"

"He never even knew of the existence of the child," said Flix, hurriedly, and determined that he would concede no further information. "The mother, a daughter of this woman, had, I suppose, heard of Judge Forester through her father, who was one of papa's dearest friends, and, presuming on that friendship, she asks help in the guardianship of the child. Really, after all, the child should not

Digitized by Google

suffer for the sins of her grandmother, should she?"

"Why, no," hesitatingly replied Mrs. Forester; "only one's antecedents are sometimes awkwardly thrust in one's face. I should always be fearful. What do you think your father would have said?"

"He would have said what I say to you now, dear mother—it shall be exactly as you wish."

This delicate compliment brightened the soft eyes that were looking up into his.

"I really do believe," she said, musingly, "that training is everything. Even if there is a taint in the blood, science tells us that care and management will keep it low, and, perhaps, banish it altogether. Well"—reflectively—"I don't know as it would do any harm to let the poor child come here; very likely she has not had a congenial home. We could dispose of her in some way if she should prove disagreeable."

"Certainly," said Flix, gravely, and the matter was settled. Flix was to set out on the following Monday, and his mother was full of work and anxiety, not lessened much by the few reveries she allowed herself to indulge in, wherein she pictured the newcomer in the various aspects in which childhood occurs to imaginative people who have forgotten their own; and Flix, looking forward to the journey with vague but pleasant surmisings, occupied himself with putting his business in order much as if nowadays he were contemplating a voyage to Europe.

CHAPTER V.—THROWN BY BLACK JESS.

HOW he had been thrown he never knew—only there he was, behind a clump of trees in a hollow, fortunately dry, for it was the bed of a stream, and the weather had been intensely hot, and the water had ceased to filter through its mossy outlet. He felt no pain, though unable either to move or speak. He tried to remember what had started Black Jess, but could not. He wondered where she was, and then thought of his mother's dream. He had no means of judging whether it was morning or noon—his brain felt hot and confused. Above sailed a few specks of fleecy cloud in the deep bright blue of the midsummer sky. Around him droned the little creatures who live under grass and mosses—around him grew bushes that shut in his sight on either hand.

"So much for trying to do a charitable deed," he said, to himself, groaning inwardly—for the power of expression seemed denied him. It was a hard fate, shut out from every means of recognition. He had passed but few houses that day, and they were scattered widely apart. The road was one of those narrow, little used Virginia trails, for they are scarcely more in the interior. He had chosen it in preference to the main road, because the landlord at the little country tavern where he had spent the night had spoken of a famous old haunted house that travelers sometimes turned aside to see. And here he was on his back, and helpless, destined to lie there, perhaps, till death came, and no one would ever know how he died. He began thinking over the contents of his pocket and purse—tried to remember if anything in his possession bore his name, so that a stranger might be able to help his friends to identification. No, there was no letter, no paper, but on his shirt and gold sleeve studs were stamped his initials, F. F. To break the seal of the torpor that held him he would have almost given life. To be able to halloo, to sigh, to groan, but all these human aids were denied him. His tongue grew parched. He was conscious of extreme thirst. Louder and louder sounded the hum of the insect world. The sun seemed losing its power—his eyes grew dim, or else the day was drawing to its close. Eagerly he strained his ears to catch perchance the step or the neigh of his treacherous companion, but there was no sign or sound of Black Jess. The thought came like agony that he should be obliged to spend the night in that terrible place. Home, mother, all the sweet accessories that he had looked upon as natural to his state, and as only ordinary comforts, grew very precious in the retrospect. He wondered he had not thought more of them—his lip trembled and the water pressed to his eyelids. His poor mother, whose idol he was, if he could only see her now! He pictured her, sitting at home contented and happy, yet at times anxious, for she had more than once prophesied evil of Black Jess, and could never be induced to like the horse. Slowly he began to realize that the night was coming on. What efforts he made to move, to speak—but the power was gone. He could only think, looking up into the darkening sky.

His utter solitude was the most terrible thing of all to bear. If only he could have heard some voice or foot passing by it would have seemed like a boon from heaven, though it was gone the next moment. Flix had for years thought himself a good Christian, but he could not think of a single prayer or collect, though he racked his memory to find one; he could only rely upon his own mental ejaculations for help and mercy, and perhaps they were better. Slowly came on the night. His tongue was parched and burning, sometimes he shivered like one in an ague fit, but he was not cold; if shivering would only burst the fearful bonds that held him in this strange, semi-paralysis! A cool wind came with the falling shadows; it was very grateful to him since the fever had attacked him. And yet the dread of night was not to be overcome. If only he could have slept—but no, every sense, every nerve was alive and alert. He imagined that slimy insects were crawling over him, that they would reach his flesh, and yet he would have no power to brush them off. Such thoughts and fancies made for him a torture such as only a Dante could picture—it was infernal. He shut his eyes—that power was not denied him; it seemed that only the larger muscles were inactive, for he could move his head a very little to the right, and back again, that was all. Perhaps in time this terrible palsy would pass off; he would try to be patient.

Slowly and solemnly rose the moon. It made his heart jump when it occurred to him that the moon rose early. There was some chance for him yet, though it might be long before its beams crept into his hollow, and there was next to no possibility of any one passing the road after dark. Fortunately his couch was an easy one, and his position gave him no disquiet. Indeed, all feeling seemed dead within him, save the power of the thirst that consumed him. Gradually the darkness took outline. The bushes grew silvery at their edges, never had the light seemed so heavenly welcome. Here and there a faint star-point appeared on the black background of sky, then that clear luminousness so distinct from every other light lifted the vail of the atmosphere and diffused itself over the face of the world. Flix tried to be patient, tried to think of old hymns and fragments from the authors he loved. If he could only have spoken he would have conquered night and loneliness.

"That poor child will wait in vain for my coming," he thought. Strange that his destiny should have become so curiously involved with hers. He thought of the letter. If there was anything in the writer's suggestion and prophecy, she could see him now—why could she not help him? It was for her sake that his life was thus imperiled to give a home and a name to the poor friendless orphan. Suddenly there was a sound that caused him to hold his breath with joy and terror; joy that his prayer was heard, terror that as he was still bound—as it were hand and foot—there was no hope that he might be recognized. He heard footsteps.

CHAPTER VI.—MOONLIGHT AND MURDER.

HEAVY, quick, imperious—"the tread of a man of business," he said to himself, and the other—for there were two of them—more quiet, less self-reliant, more, perhaps, like that of a man who liked his ease. Again Flix made almost superhuman efforts to move, to speak, for the sound of voices acted almost like an electric shock upon his nerves.

On they came, the low, curious monody of their tones changing into inflexions—the mumbling into words.

"We must be half-way there," at last Flix heard, and judged that they were opposite his prison.

"Suppose we stop here and take a bite and a sup," replied the other—"that was a villainous supper at the tavern. I'm not used to meals fixed up in any shape; it don't agree with me. If it wasn't that I carry some of my own crackers with me and a little prime brandy I should starve when I come this way."

"They'll look about for water," gasped Flix to himself, "then they'll find me."

"Thanks," said the first speaker, whose voice, owing to some physical defect, had a slight wheeze in its tone that would have made it odd among hundreds of voices, as would also the lisp that accompanied it. "I won't take the brandy, but I will sit down. I have traveled a good distance to-day, and all for the sake of seeing a child—a baby-faced girl: what do you think of that?"

"That many a man has gone on a worse errand. Is the child yours?"

"Well—I have reason to believe so," said the other, with a coarse laugh, "though I suppose there are two or three who would be quite ready to dispute the guardianship with me. But they may have it—I don't want her, only as I am on the point of leaving the country, I was curious enough to wish to see her once more. How far are you going?"

"Well, I haven't decided yet," said the other, "Mine is a roving life; sometimes I have definite routes, and then I go as fancy prompts. I've a good deal of money about me to-night, that's why I didn't stop at the Crescent; somehow, I never did like the looks of the landlord. If you had not decided to go on, however, I might have staid."

"You are scarcely prudent, I should think, in risking the assertion that you carry money," said the other.

"I never do unless I'm sure of my company," replied the one who Flix thought might be a peddler of jewelry or some such convertible goods. "Highway robbery has gone out of fashion, and, besides, I always go armed. It would be a hardy rascal who could take me by surprise. What a lovely night it is!—so much the better for traveling than the hot day."

Flix wondered what they were sitting on; it could scarcely be the ground, for their voices seemed to him to be high up in the air, almost directly over him. The moon was so bright now, he thought, that if they were on a fence or rock, they had only to turn their heads and see him. He made sundry spasmodic efforts to turn his head so as to rustle leaf or stick, that they might hear, but his poor manœuvring came to nothing, and he could only listen, sick at heart. How long would this continue, and must he, lying there, feel that, after all, his hope was utterly forlorn? Of romance and enthusiasm he had a large share, and he remembered, in his suffering, how often he had fancied himself the hero of some adventure—though surely not of this sort. In even the small and ordinary calamities of life one cannot always or often choose the part he is forced to play; and Flix, too, helpless even to groan aloud, looked forward now only to death, and wrestled with himself for calmness to bear the possible calamity.

There was a short silence after the last speaker had ceased, and then the grateful smell of cigar smoke saluted Flix's nostrils. Oh, what would he have given for that most ordinary of privileges—smoking. In his cigar-case he had some choice Havanas, a present from a Spanish merchant. If he could only have lifted his hand, torn the case from his pocket, and flung it over to them, swift and certain rescue would have resulted. But all his limbs were weighted like marble. He ground his teeth in utter powerlessness, and forced himself to listen, when the voices began again.

"So you'll have none of my brandy," said the peddler.

"I never drink brandy," replied he of the lisp; "here's a match for your cigar. Have you been long in the business?"

"Only four years—that's longer than I ever stuck to anything else—and I intend to give it up after this year. You see, I'm one of the lucky ones, though money don't stay by me long—but it's no trouble for me to make it. Literally it drops into my pouches, for they say I've a winning way with the ladies, and they are mostly my customers. Now, in this jewelry line, all you've got to do is to prevail upon one of them to try on the article and the deed is done. The homeliest of them can stand any amount of effective speeches about their good looks, their bright eyes, their red lips, etc. It gives me a civil tongue to go over the world gallivanting, so to say. And as to the darkeys, why, bless you, I never found the poorest of them without a little money, and I have known a few masters when they were mellow, buy finger rings—pinchbeck of course—for the whole crowd, from Topsy to the oldest darkey on the place, and literally clear out my stock. Trading is my life. I've carried it on ever since I was eleven years old, when I cheated the Chinese shopkeepers and made splendid bargains. Why, there's scarcely a part of the world I haven't seen. My life would read like a romance. I've been nearly murdered by Malays, fished out of the water twice, narrowly escaped assassination from the hands of a Spanish Jew—been poisoned once by a jealous woman—Lord, Lord, I couldn't begin to tell you the narrow 'scapes I have had by land and water."

"But you never died and were buried, I presume," said he of the strange voice and the lisp.

A short silence followed, during which Flix, who heard every word of the conversation, fancied that he saw the blank look of consternation that came into the peddler's face

"Died and were buried," he reiterated; "well, I should rather think not. Dead men tell no tales."

"Only when they come to life again," said the other with a saturnine laugh.

"You talk in riddles, sir," said the other.

"Do I? Well, if your life has been a romance, what do you think of mine? I have been dead and buried."

Flix heard a movement as if the peddler, fancying himself in company with a lunatic, had moved away.

"You say your life is a romance: what would you say to mine?" repeated the other. "I was felled to the earth by the hand of a woman, taken up for dead, mourned over, buried in the Southern fashion as soon as my body was cold, exhumed the same night, carried to a certain medical hall as a cadaver, stretched upon a marble table, and at the first touch of the knife I roared, so they say, for my senses had been suspended as well as my faculties. Well, of course, there was a scare. Gray-haired seniors and whiskered juniors alike fled howling. When I came to, I found myself sitting upon a marble slab, and only one man left to take pity upon my new and painful birth into life, and he had the face of a woman, but the nerve of an old Roman. Well, here I am."

"And do—do your friends know it?" queried the peddler.

"I hope you don't take me for a fool," rejoined the other; "why should they, and the world before me where to choose? No, I thank you, one bondage is enough in a lifetime, and for a man who has been through such an experience as mine, liberty's the highest boon. And yet, strangely enough, I've a hankering after a baby face sometimes. I half think I like the child, if I hated the mother."

"What did you marry for?"

"Oh, well, we won't talk of that. I'm not the first man snared and done for by a pretty face. Pardon, something dropped from your coat-pocket as you stooped then, I——"

Flix held his breath. He had been conscious of a dull muffled sound, very like a blow following the last word, and then of a fall. A deep, hollow groan succeeded, then another, and another, and Flix, in the horror of a suspense that nearly drove him mad, felt that murder was being done. Presently something fell over the hedge or rock and lighted close to his face. By the rustling as it came, he fancied it must be paper. His blood curdled in his veins. Surely now God would help him to assert himself, but even if he could, would it be safe for him to interfere? Meantime the tragedy of bitter and unexpected death might be going on above. Who had given the blow? Which hand had dared to lift itself against a human life? He fancied that the man with the sinister voice and the lisp must have been the aggressor, for somehow his instinct had recognized something brutal in him. He had scarcely believed his story, and, as he thought of it again, he was still more disinclined to credit it; and yet why should it have thrilled him so? Struck by a woman's hand, apparent death from so slight a cause, the hurry of sepulture in a warm climate. He could fancy with a curdling horror what was now going on under the light of the fair moon. The rifling of the poor wretch, the perhaps final blow, that death should be certain; and for a moment he loathed his kind, and thought with something like serenity of his own, perhaps, fast approaching fate. Only one word more was spoken, and that was an oath, but the voice and the lisp assured the listener of the identity of the murderer. If he should be allowed by a good Providence ever again to mingle with his kind, he would know that voice among a thousand. And now the deed was done, and the man had moved away, not on in the direction in which he had started, but back again as if to retrace his steps. Night would soon cover his deed and the darkness; for the light of the moon was waning. To be left alone with the dead was still more horrible than his former solitude. The thirst yet tormented him, but he lay fast bound as in iron gyves, and only the pitying angels looked down. He was not superstitious, but felt strangely enough as if the man, the echo of whose cowardly footsteps had died out, was in some way, at some time, to cross his path, should he ever recover. Oddly enough he was mixed up with the woman at whose solicitation he had undertaken this journey, with the child he was on his way to claim. Midnight came on, and so did a dull, heavy stupor, that was neither sleep nor rest, though it brought him a sort of repose.

(To be continued.)

PERSONAL GOSSIP.

QUEEN VICTORIA has commissioned eight premiers and outlived all but Lord Beaconsfield.

MR. TENNYSON, Mr. Froude and Professor Tyndall have just been elected Honorary Fellows of Trinity College, London.

YOUNG Mr. Byron, the eighteen-year old son of the dramatist, has entered the theatrical profession under the stage name of Harryson.

FRASCUELO, the departed bull-fighter, used to wear in the arena a set of diamond studs worth $10,000, which Queen Isabella had given him.

THERE is a general expectation that when the time comes for Prince Leopold to wish to be created a royal duke, he will choose as his title that of Kent.

THE Prince of Wales has promised to visit Cornwall next year, to lay the foundation-stone of Truro Cathedral. There will be a great Masonic demonstration on the occasion.

THE oldest postmaster in the United States is said to be Roswell Beardsley, of North Lansing, New York. He has held the office at that place since June 28th, 1828.

PRINCE BISMARCK is not only suffering from his old neuralgic complaint, but symptoms of a constitutional malady have appeared which his robust constitution will probably overcome, but which cause some apprehension.

IT is said that Lord Rosebery won about $100,000 in the fourth week of October on the turf, and Sir Beaumont Dixie about $20,000. A young guardsman scored $10,000 on La Merveille, and lost it the same evening at écarté.

CARDINAL JOHN HENRY NEWMAN is to be presented with a golden salver from the Catholics of New South Wales. A Latin inscription upon it speaks of the Oratorian's singular genius, intellectual subtlety, felicitous imagination, and "learning which nothing of human value has escaped."

LORD WENTWORTH, whom Miss Fletcher, the author of "Kismet," is to marry, is the eldest surviving son and heir of the Earl of Lovelace and the only surviving grandson of Lord Byron. Miss Fletcher's mother, a lady of rare intellectual gifts, was the daughter of one of the most distinguished ministers of Geneva, in Switzerland.

DR. JAGER, of Stuttgart, Germany, has been making a fresh investigation into the subject of the human nose. He finds that the human nose is the seat of the human soul, and that the workings of the latter are recorded on the surface of the former; also, that by the use of certain volatilizing chemicals in the nostrils specific traits of character can be produced or changed.

PRINCE ALEXANDER of Bulgaria is rapidly winning general sympathy. Though good natured to a degree, he has a will of his own, and a great capacity for work. His manner is rather shy and quiet, he is cautious and economical, too; in fact a German. He is, however, no mere formalist; allows one to breakfast with him in morning clothes, gives quiet little dinners, and talks very freely on public affairs.

LIEUTENANT-GOVERNOR TABOR, of Colorado, has, it is reported, bought an estate near Chicago of 6,400 acres. It comprises what is known as South Chicago and Stony Island, with land contiguous to those suburbs. The property lies about ten miles from Chicago, and has on it factories and stone quarries and other wealth-producing works. Mr. Tabor—who is graphically described as "a bonanza king"—is reported to have paid $1,000,000 for it.

ONE of the first novelists in Austria, Kurnberger, died a fortnight ago in Munich, where he was staying on a visit to the family of Kaulbach. He was an entirely self-made man, having began his career as a poor village lad. His writings were so popular that every newspaper was eager for contributions from his pen. But with his fame grew also his arrogance, which long before his death made him many enemies. His opinions upon literary matters were held in high esteem, and in this direction he again proved to be a rare genius.

THE obituary record of the past week included the names of Mrs. Margaret L. Eaton, widow of General Eaton, Secretary of War under President Jackson, aged 84; Hon. Richard Schell, of New York, aged 69; Rev. Lorick Pierce, D. D., of Sparta, Ga., the well-known Methodist minister, aged 93; Rear Admiral A. H. Kilty, United States Navy, at Baltimore, aged 73; the wife of Senator David Davis, at Stockbridge, Mass.; Mrs. Van Lumberg, at Florence, Italy, daughter of the late Lewis Cass; and Prince Almayon, son of the late King Theodore of Abyssinia, aged 19.

THE late Walter Hastings, of Boston, has directed in his will that the trustees he appoints shall erect upon the grounds of Harvard College a building to cost not less than $200,000, and not more than $250,000, this building to be called the "Walter Hastings Hall," in memory of his father, grandfather and great-grandfather, all of whom graduated at Harvard College. Upon the death or marriage of his wife, and the death of his adopted daughter, the residue of the trust fund and all accumulations of income he bequeaths to the college as a trust fund, to be called the "Walter Hastings Fund," the income of which is to be used at the discretion of the president and fellows of the college; suggesting, however, that the education of the sons of American parents who may be in indigent circumstances would be a most proper method of expending this income. The amount which will finally accrue to the college will be about $200,000.

THE OCTOBER GALES AT SEA.—THE INMAN STEAMSHIP "CITY OF BRUSSELS" STRUCK BY A CYCLONE OFF SABLE ISLAND, OCTOBER 29TH.

OCTOBER GALES AT SEA.

WHILE the past month maintained its reputation as a breeder of storms on the ocean, the casualties and damages, so far as heard from, were far below those of former years. Shortly after eight o'clock on the night of the 29th ultimo, when the Inman steamer *City of Brussels* was about fifty miles off Sable Island, she was caught in a cyclone which raged with terrific force for four hours, the waves breaking completely over the high bulwarks of the vessel. The officers were obliged to cling to the railings of the bridge to escape being swept overboard. The steamship *State of Georgia* encountered a storm on the 28th off Newfoundland, in which Captain Smith was obliged to heave-to until the next day. Fourteen days were occupied by the North German Lloyd steamship *Weer* in making the trip from Southampton to this city, the passage being an unusually stormy one throughout.

Officers of the steamships *Abana*, from Cardiff; *Bristol*, of the Hull line; *Britannic*, of the White Star line; *Mercator*, of the Belgian line, and the British steamer *France*, reported strong gales on the 26th, 27th, 28th, 29th and 30th, and very difficult passages, but no serious losses. Nearly all the sailing-vessels that arrived at New York last week reported similar experiences. Captain Higgins, of the bark *Julia*, from Marseilles, says on October 28th, off George's Banks, a heavy westerly gale set in and lasted for forty-eight hours. In the meantime the vessel was hove-to under low topsails and staysail. The seas were very heavy, and the bark shipped great quantities of water. One of the topsails was blown away before it could be taken in. The ship *Harvester*, from London, was sixteen days on this side of the Banks of Newfoundland, with head winds. On October 30th, in latitude 40 degrees and longitude 60 degrees, a terrific gale was met. The wind came from the west, and the gale continued without any abatement for twenty-four hours. The wind and sea then went down somewhat, but a hard gale was still blowing, and it lasted for three days. Captain Pennell, of the brig *Beatrice*, from Rio Janeiro, says that he was nine days north of Cape Hatteras, beating his way against heavy head gales. During the last ten days of her passage the bark *Haste* mainly met with nothing but a succession of strong Westerly gales. The schooner *J. P. Robinson*, from Rouen, was nineteen days west of the Banks, with severe westerly storms. The ship *Sardis*, from Liverpool, experienced a cyclone on September 23d, which was so violent that the lower sails, set at the time, were blown from the bolt-ropes. Although the upper sails had been snugly furled, they were blown from their gaskets and lost. The steamships *Zeltweg*, *Frisia*, *Croft* and *Vaderland*, which arrived on November 4th, met with heavy weather.

UNVAILING THE THOMAS STATUE.

THE equestrian statue of General George H. Thomas, unveiled in the City of Washington, November 19th, with imposing ceremonies, under the auspices of the Army of the Cumberland, is the sixth bronze equestrian statue of heroic size which has been erected at the National Capital. The location selected for the latest addition to the group, the Thomas statue, is, perhaps, the most conspicuous spot for such a purpose in the city. At the Fourteenth Street Circle, so-called, four avenues intersect, opening up in eight directions vistas which extend sheer to the circle of hills which surround Washington. In one direction only is higher ground than the site of the statue visible within the city limits. Looking south, down Fourteenth Street, the view is unobstructed for fully fifteen miles. Three miles away runs the Potomac, and beyond that, too far to be distinctly visible, but in a direct line, stand the spires of Alexandria, while the crest of the Blue Hills of Virginia forms the horizon. The open space within the building lines at the intersection comprises an area of three or four acres. In the centre an inclosure of greensward dotted, in the season, with flower beds, fills about one-third of the whole, and in the middle of the inclosure rises the granite pedestal, twelve feet high, upon which the Thomas statue rests. Within plain sight, less than fifty rods away, stand the equestrian bronze statues of Scott and McPherson, both erected within the last four years. Immediately surrounding the circle and within pistol-shot of the site of the new statue are the mansions of a dozen prominent Senators and other dignitaries of national reputation, while for a half-mile in all directions the richest and most tasteful private residences for which the National Capital is becoming famous are thickly clustered. It was on the spot occupied by this statue that five hundred guns were fired in celebration of the downfall of Richmond; and later, five hundred guns in honor of the close of the war. The name of the site, hitherto known as the M Street Circle, will be changed to the Circle of Victory. The statue faces towards the south, overlooking the Hills of Virginia, the native State of this distinguished soldier. It may not be remembered that General Thomas was the only officer of high reputation from the South who remained true to the flag of his country.

The statue itself, the latest work of the eminent sculptor, J. Q. A. Ward, of New York, bids fair to rank as the triumph of his life. The figure of the rider is nearly ten feet high, and the horse is proportionately colossal. The general, in reconnoitring the position of the enemy, has ridden his horse over the ground between, and brought him to a stand on the summit of a gently rising ridge. He holds the reins lightly in his left hand, and, warmed by the brisk exercise,

DISTRICT OF COLUMBIA.—EQUESTRIAN STATUE OF THE LATE GENERAL GEORGE H. THOMAS, DEDICATED AT WASHINGTON, NOVEMBER 19TH.

Digitized by Google

has removed his hat and holds it in his right hand, the arm hanging straight at his side. His forward calm but eager gaze is directed towards the right, so that his body is gently swayed in that direction, and the horse, excited by the stop and by the new horizon, snuffs the air with uplifted head and dilated nostrils. Repose and dignity come from the solid planting of all four of the horse's feet upon the ground and from the quiet seat of the rider in his saddle, while animation and picturesqueness are gained by the upward swing of the lines in the horse's body, and the alert intelligence of his head. The entire work is relieved of stiffness, the attitude of the horse is novel, and the portrait of the lamented rider faultless.

The programme of the unvailing ceremonies provided for both a military and naval display, the military consisting of companies of infantry, troops of horse, and batteries of artillery belonging to the army, regiments of the National Guard of New York, Pennsylvania, Maryland, and the District of Columbia, members of societies of the armies of the Cumberland, the Tennessee and Potomac, and ex-volunteers of the late war. A fleet of United States ships-of-war was ordered from Hampton Roads expressly to participate in the salutes. The following is the programme arranged by the committee in charge of the ceremonies at the site of the statue: (1) Prayer; (2) Music, "Hail to the Chief," and (3) Music, "Star Spangled Banner," by the chorus with the Marine Band and Drum Corps, and artillery accompaniment by Battery A, Second United States Artillery, under direction of L. C. Gannon; (4) Unvailing of the statue, salute of thirteen guns at Fort Whipple and by Hanneman's Battery; (5) Grand Hymn, words by Herbert A. Preston, music by Max Mueller and a chorus of 100 male voices, supported by the full Marine Band, Drum Corps and artillery, under the direction of Professor Mueller; (6) Oration by the Hon. Stanley Matthews, and the presentation of the statue as an offering from the Army of the Cumberland to the nation; (7) Acceptance by the President in behalf of the people of the United States; (8) Re-formation of the procession and march to the Executive Mansion, the Society of the Army of the Cumberland and the column passing in review before the President.

THE HIDDEN WITNESS.—"'DON'T GO UP DAR, MISSES,' GASPED PASCHAL. 'COOK, HOLD HER!' I STOOD BACK, LOOKING LIKE ONE PETRIFIED."—SEE PAGE 222.

NARROW ESCAPE OF THE "ARIZONA."

ONE of the most marvelous escapes from a wholesale destruction of life occurred on Friday night, November 7th, when, without a moment's warning, the new Guion steamship *Arizona* ran into a huge iceberg, three days after sailing from New York for Liverpool. Including the officers, crew and passengers, the vessel had on board 300 persons. The weather had been so fair that Captain Jones felt justified in running his ship at full speed, making an average of fifteen miles per hour.

On Friday, at dinner time, the vessel was in latitude 47 degrees north, and longitude 53 degrees west. After dinner the ladies sat in the saloon and whiled away the hours with gleeful song, while a number of the gentlemen occupied "Social Hall" [the smoking-room], and amused themselves selling pools on the run at auction. Captain Jones quit the bridge at nine o'clock, leaving the ship in charge of the officer of the watch, John Wynn Jones. All was then safe, and as the night, though overcast, was not dark, no danger was apprehended. Ten minutes later the ship, going at topmost speed, plunged head-on into a mountain of ice. The huge ship trembled like an aspen-leaf and recoiled, but again advanced and struck the iceberg, but fortunately with diminished force.

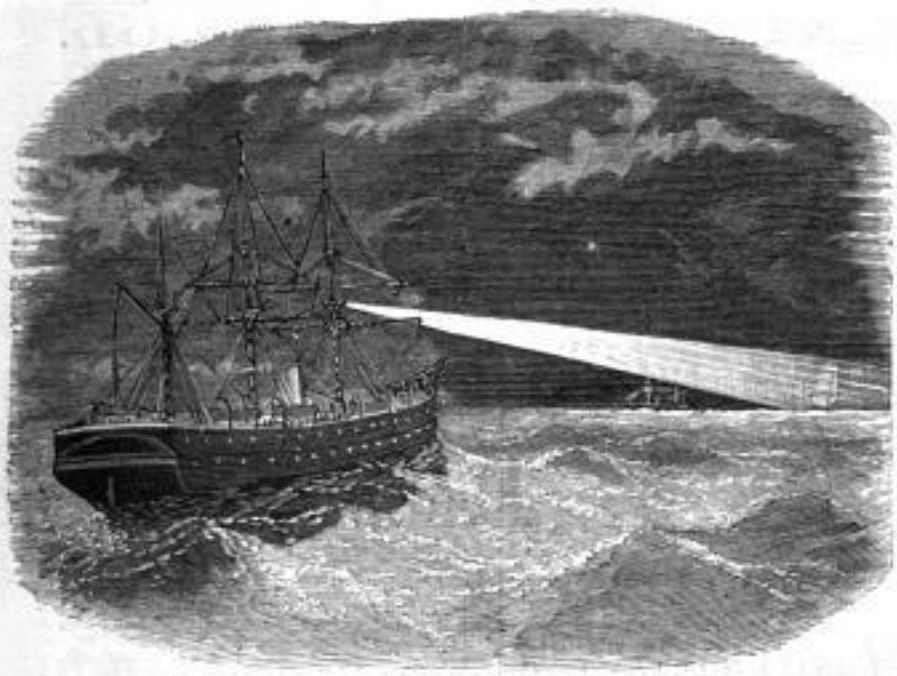
The first blow had stove in her bows, crushing them as though they were made of cardboard. Tons of ice fell upon the decks or were forced through the gaping hole in the bow. Full fifteen feet of the ironwork had been broken, bent, twisted and forced inward, leaving an awful chasm, through which the waves dashed. It was as though a huge cutter had chopped off the bows, leaving the hull exposed. The shock of the collision was felt in the saloon even more severely than on deck. At the moment it occurred, Miss Goelet was playing the accompaniment to the glee, "See Our Oars with Feathered Spray," which was being sung by some ladies and gentlemen. In the midst of the song, the shock threw the occupants of the saloon violently from their seats.

On deck the scene was full of terror. Groups of silent passengers were gathered, expecting every moment to be engulfed in the dark waters. Towering above the vessel's prow was the huge, shadowy mass of the monstrous iceberg. It extended some five hundred feet across the bows, and three tall pinnacles rose to the height of sixty or seventy feet. Should one of these ice-steeples topple over, the fate of the ship and passengers would be sealed. The crash of the collision, the rush of the passengers to the deck, had occupied but a minute. Captain Jones had not retired, and immediately rushed to the bridge. His first words were:

"My God, men, where were your eyes?"

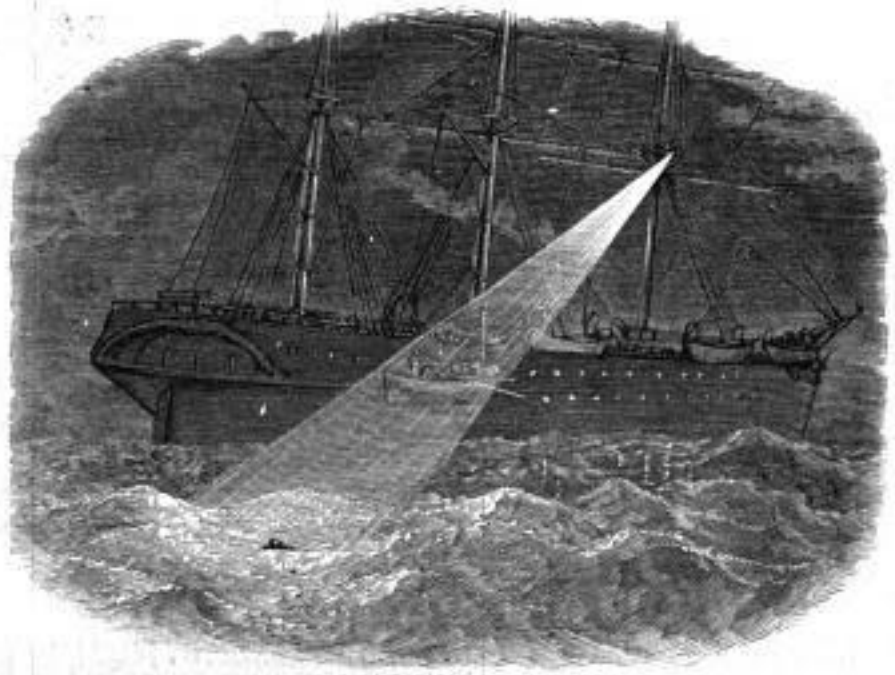
He was perfectly cool, and at once gave orders to back the engines, and, calling all hands on deck, ordered the helm to be put hard to starboard. A few moments later the ship parted company with the iceberg, which floated away with its three tall pinnacles distinctly visible against the night sky. As it faded into the gloom it presented the appearance of a phantom three-masted vessel.

The ship was hove-to for the night, and a thorough examination of the fore-hold showed the *Arizona* to be water-tight. This fact considerably tranquillized the minds of the passengers, and gradually they returned to the saloon. When they were all assembled the Rev. J. M. Ross rose, and, in a few feeling words, suggested that prayers should be offered to God in thanks for the mercy He had so graciously shown. Scarcely had the suggestion been uttered when the assembled passengers knelt and joined in appropriate prayer. Then the hymn "Praise God from Whom all Blessings Flow" was sung with an impressive earnestness but seldom witnessed in cathedral aisles. Heartfelt sobs mingled with the chant, and tears stood in strong men's eyes.



The *Arizona* was headed for St. Johns, Newfoundland. She reached the harbor on Saturday night, and went to wharf under pilotage on Sunday morning.

The first detachment of the *Arizona*'s saloon passengers embarked at five o'clock on the afternoon of November 11th, on board the steamship *Caspian* of the Allan line. There were thirty-four adults and three children in the party. When the *Caspian* arrived in port she was greeted with cheers by the distressed Arizonians. The freight and the remainder of the passengers will be taken by the *Nevada*, of the Guion line, which has been ordered to St. Johns for the purpose.



Not a life nor a particle of baggage or freight was lost by reason of the collision. The damage to the ship is so great that it will be several weeks before she can be put into a seagoing condition.

THE NEW PRESIDENT OF HAYTI.

GENERAL SOLOMON, who was elected President of Hayti, October 23d, 1879, is a native of Aux Cayes, on the south side of the island. He first

THE EFFECTS OF THE LIGHT IN MID-OCEAN AT A LONG DISTANCE.

came into notoriety some years ago on account of the conspicuous part he took in connection with a movement of the blacks against the white inhabitants of the island. During the reign of Soulouque (Faustin I.) he held the post of Finance Minister, and in Salnave's time he was sent as Minister to Paris and London. He was kept in exile by President Saget Dominique, and for some time by Boisrond Canal, who, however, permitted him to return, but had again to exile him. After having spent nearly twenty years in exile, in Europe and Jamaica, he landed at Port au Prince a short time ago and was made a Member of the Provisionary Government. At the National Assembly, held October 23d, he was elected President by an overwhelming majority, having obtained 81 votes out of 87. General Solomon is a tall, black man, over 70 years of age, and is married to a white French lady. By the blacks he is regarded as their champion, and it is hoped his administration will bring peace and prosperity to the Republic of Hayti.

FUN.

WHEN is a wolf most dangerous? When he feels sheepish.

"AH, me," sighed a pawnbroker's wife, "what a loan-sum life we lead."

WHY is a moth fluttering round a candle like a man getting off a horse? Because they are both going to a light.

A WELL-KNOWN *littérateur* and humorist modestly says that his chief literary acquirements are the books he has borrowed and never returned.

"DO you see that spring over there?" said a settler in Arkansas to a stranger. "Well, that's an iron spring, that is, and it's so powerful that the farmers' horses about here that drink the water of it never have to be shod. The shoes just grow on their feet nat'rally."

THE use of whisky for rattlesnake bites in Texas has increased so enormously during the past year that the overworked snakes have resolved to leave the State unless the board of immigration reinforces them strongly. They work on double time, and yet can't do half the biting that is demanded by the consumers. One snake who does business at Port Lavaca is six weeks behind his orders, and three of the clerks are sick.

NEW SYSTEM OF EDUCATION.—*First Mamma:* "I see that your children paddle?" *Second Mamma:* "Yes. Don't yours?" *First Mamma* "No; I've managed to make my three boys believe that it is vulgar and ungentlemanly either to get their feet wet, or sit in a thorough draught, or bolt their food, or eat goodies between their meals, or go to juvenile parties, poor dears. They're rather soft, perhaps, but they're twice the size of any other boys of their age, and they've never had an hour's illness in their lives.

LOSS OF VITAL FORCE.

As is well-known, the tendency in all acute or chronic forms of disease is towards *debility and loss of vital force, which always retards convalescence, and renders a return to health uncertain or impossible.* After medicine has done its work of breaking the disease, and the physician leaves, as he must, to nature the business of repair and restoration, he too often finds that *nature acts so feebly, and builds again so slowly,* that the period of convalescence is frequently prolonged through many weary months, while in many cases *the old vitality is never restored* and the patient sinks into a state of *permanent invalidism.* To meet this condition of low vitality, the "Compound Oxygen," which acts directly on the great nervous centres, rendering them more efficient, vigorous, and active, and capable of generating more and more of the vital forces, which are *life and health,* offers an agent of help and restoration *which acts promptly and surely.* Our "Treatise on Compound Oxygen," its nature, action and results, gives the amplest information in regard to this new treatment for chronic diseases, which is being rapidly introduced in all parts of the country. This Treatise is sent free. Address DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

BLOOD AND SKIN HUMORS

SPEEDILY, permanently, and economically cured by the CUTICURA REMEDIES when all other known medicines and methods of treatment fail.

BURNETT'S FLAVORING EXTRACTS.—*The superiority of these extracts consists in their perfect purity and great strength.* They are warranted free from the poisonous oils and acids which enter into the composition of many of the factitious fruit flavors now in the market.

SIXTY thousand acres, containing forty-five million vines, are devoted to wine-growing in California. Only in the light of the statistics does the American wine industry appear in its true proportions. The house of A. WERNER & Co., 308 Broadway, have done much to make popular in this market the standard brands of CALIFORNIA WINES, and find the demand constantly increasing. The merits of the wines are their best recommendations, and on these they find steady and assured popularity.

THERE are more cures made with HOP BITTERS than all other medicines.

HALFORD LEICESTERSHIRE TABLE SAUCE—No gentleman's table should be set without it. A genuine relish.

COCOA is known the world over for its great nourishing and strengthening properties. The CHOCOLATES and COCOAS of WALTER BAKER & Co. having stood the test of a hundred years, are highly recommended for their excellence and purity and are for sale everywhere by grocers.

FOR Catarrhal and Throat Disorders "*Brown's Bronchial Troches*" are renowned and marvelously effective, giving immediate relief in most cases.

YOUR physician will recommend you to use COCA BITTERS made from the Peruvian Coca leaf.

$1,425.50 PROFITS IN 30 DAYS.

$10 to $100 invested in legitimate Stock Speculations in Wall St. pays immense profits. Pamphlets explaining everything sent free. HEATH & Co., Brokers, 1227 Broadway, N. Y.

DYSPEPSIA is positively and effectually cured by COCA BITTERS. Try it!

THE PROOF OF THE PUDDING IS IN THE EATING.

GROCERYMEN and storekeepers pay 3 to 5 cents a pound extra for butter made with Gilt-Edge Butter Maker. It increases production 6 to 10 per cent.; reduces labor of churning one-half; gives a rich golden color the year round. Sold by druggists, grocers and general storekeepers. Send stamp for "Hints to Butter-Makers." Address, Butter Improvement Co., Buffalo, N. Y.

EDUCATION AND TRAVEL.

PRESIDENT W. S. CLARK, of Amherst, MASS., respectfully solicits correspondence and interviews with persons interested in the liberal education of young men of means, in order to present for their consideration the advantages of an expedition now preparing for a tour around the world. Students of the floating institution of learning, which it is hoped may become permanent, will enjoy the society and instruction of accomplished professors, the use of all necessary books and apparatus, and the privilege of visiting, under the most favorable conditions, the principal cities and most important localities of various countries during the two years occupied in circumnavigating the globe.

The Patron of this enterprise is able and willing to do whatever may be necessary to insure success, provided a sufficient number of students should apply. Address,

President W. S. CLARK, Amherst, Mass.

IF you need a tonic take COCA BITTERS. It will do you good.

THE location of the ST. NICHOLAS HOTEL in New York makes it by all means the most desirable place to stop for the commercial or business visitor. It has perpetuated the traditions of the past in the admirable style of its management, and the pride of New Yorkers in this noble establishment need not be less than when it was the subject of a furore twenty years ago.

ASK the nearest agent, and in ten minutes he will write you an accident policy in THE TRAVELERS.

ITALY'S REPRESENTATIVE MUSICIANS AND CRITICS ON WEBER'S PIANOS.

F. Fucio, Director of the Music and Conductor "La Scala," to Campanini:

MILAN, September 18th, 1879.

MY DEAR CAMPANINI:

I have seen and examined the superb Grand Piano you have just purchased from WEBER, of New York, which for beauty and robustness of tone, as well as for elegance of design, is truly remarkable, and must be classed among the foremost Pianos of our day. Present my compliments to Mr. Weber for his admirable work, and you I congratulate on your enviable acquisition, M. FACIO.

G. Lucca, the eminent musical critic and publisher, to Campanini:

MILAN, September 24th, 1879.

ESTEEMED FRIEND CAMPANINI:

I have seen your magnificent Grand Piano from WEBER, of New York, which you have lately purchased, and congratulate you on the possession of such a splendid instrument.

Please tell Mr. Weber I have found his Piano superior even to my high expectations, and, as soon as I have room for one in my house, will be glad to give an order for a similar one.

With kind regards, yours, G. LUCCA.

WHEN the brain is wearied, the nerves unstrung, the muscles weak, use HOP BITTERS.

The Secret Key to Health.—"The Science of Life, or Self-Preservation," 300 pages; price, only $1. Contains fifty valuable prescriptions, either one of which is worth more than ten times the price of the book. Illustrated sample sent on receipt of six cents for postage. Address, DR. W. H. PARKER, 4 Bulfinch Street, Boston, Mass.

THE MANAGER

OF THE

Cosmo-American Colonization

AND

General Improvement Bureau

Safe investments with ample profits will be insured. Full particulars furnished. Call on or address

ANDREW J. ROGERS,

President and Manager,

No. 24 PARK PLACE, New York.

A Fortune Quickly Made.

Money has been made more rapidly within the last few months in Wall Street than at any period since 1873. Immense profits have been realized from small investments. The following affidavit explains itself:

Personally appeared before me, George A. Payne, of 134 West 49th Street, New York City, to me known, and, on being duly sworn, says that on an investment of $25 placed with Thatcher, Belmont & Co., Bankers, and by them operated for a period of two weeks, I had returned to me by the said firm $972 53.

(Signed) GEO. A. PAYNE.

State of New York, } ss.
City and County of New York, }

Sworn before me this 22d September, 1879.

J. B. NOSES, Notary Public,
91 Duane Street, New York.

Thatcher, Belmont & Co. accept subscribers on their 1 per cent. margin or in their concentration of capital, whereby a number of small sums, from $10 upwards, are aggregated and stocks operated. Latest Wall Street information sent free upon application by Messrs. Thatcher, Belmont & Co., Bankers, P. O. Box 1207, or 48 Broad St., New York.

The Christmas Cabinet.

FIVE NEW ARTICLES AT ONE-HALF THEIR VALUE.

[48 cts.] USEFUL, AMUSING, AND INSTRUCTIVE. [48 cts.]

No. 1.—Japanese Magnetic Fish.—Five varieties, consisting in neat box of Japanese wood, with painted bamboo rod, silk line, and magnetic hook. The fish seize the hook, and the lucky fisherman draws them out of the water. A quaint and curious toy.

No. 2.—No Plus Ultra Pocket Knife.—Warranted best quality cast steel. Sharpening cannot get clogged nor wear the pocket, being entirely contained within the handle, which is one solid piece; latest invention in cutlery, elegantly finished, first-class every way.

No. 3.—Pocket Comb.—Made of finest horn, length and durable, in a neat case; cannot spoil the pocket. Suitable for ladies or gentlemen. A handy, useful article.

No. 4.—Pinafore Card Game.—Two games in one, the latest out. Funniest, jolliest, and most original ever published. Capable of endless changes, for any number of players; has no equal as a social pastime. The 108 cards, including Question, Answer, and Forfeit Cards, will keep the liliest parties and social gatherings in roars of laughter for an entire evening.

No. 5.—Japanese Crepe Pictures.—Representing elegantly dressed Japanese ladies, beautiful landscapes, and artistically drawn figures, transferred in indelible colors to Japanese Elastic Crepe of the finest texture. They make beautiful and brilliant sashes for backs of chairs and lambrequins, centrepieces for table covers, etc.; are very fashionable, and will be admired and favorably commented upon by your friends.

No. 6.—Our Illustrations show but four of the articles in Cabinet, and those on a greatly reduced scale. (Crepe Pictures not shown being difficult to Illustrate.) We furnish the entire list, of 6 articles in all, in a strong case, by mail, post-paid, for only 48 cents, or 10 three-cent postage stamps. This offer is made for the purpose of introducing our goods in new localities, and to procure new names for our Holiday Catalogues. We will send 3 Cabinets for $1.25. No further reduction. Send us clean postage stamps of any denomination, as we prefer them to silver. Don't send pennies or nickels. Address all orders to

Eureka Trick and Novelty Co.,

P. O. Box 4614. 39 Ann St., New York.

This advertisement will not appear again.

CATARRH Is a Terrible Disease. Its fearful effects—corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, disgusting odors, nasal deformities, and finally consumption. From first to last it is ever aggressive. Ordinary treatments are worse than useless. If neglected while a cure is possible, it may rapidly develop into quick consumption. The most thorough, successful and pleasant treatment is

Dr. M. W. CASE'S

CARBOLATE OF TAR INHALANT

It does not require ten minutes to demonstrate the value of Carbolate of Tar, *the most healing remedial agent known to science.* Balsams and Cordials of the most healing and soothing properties are so combined with Pine Tree Tar, that the mere breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. **No heat, no hot water,** simply *inhaling or breathing* it, and you feel its healing power **at once.** This treatment is endorsed by physicians everywhere, and highly commended by thousands, who have used it with perfect satisfaction. **FULL TREATMENT** sent. *SATISFACTION ALWAYS GUARANTEED.* Address,

(When writing for circular, name this paper.)

A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE

CHICAGO, ROCK ISLAND & PACIFIC R. R.

IS THE GREAT CONNECTING LINK BETWEEN THE EAST AND THE WEST!

Its main line runs from Chicago to Council Bluffs and Omaha, passing through Joliet, Ottawa, La Salle, Geneseo, Moline, Rock Island, Davenport, West Liberty, Iowa City, Marengo, Brooklyn, Grinnell and Des Moines, (the capital of Iowa) with branches from Bureau Junction to Peoria: Wilton Junction to Muscatine, Washington, Fairfield, Eldon, Belknap, Centreville, Princeton, Trenton, Gallatin, Cameron, Leavenworth and Atchison: Washington to Sigourney, Oskaloosa and Knoxville: Keokuk to Farmington, Bonaparte, Bentonsport, Independence, Eldon, Ottumwa, Eddyville, Oskaloosa, Pella, Monroe and Des Moines: Des Moines to Indianola and Winterset: Atlantic to Audubon, and Avoca to Harlan. This is positively the only Railroad, which owns, controls and operates a through line between Chicago and Kansas.

This Company own and control their Sleeping Cars, which are inferior to none, and give you a double berth between Chicago and Council Bluffs, Leavenworth, or Atchison for Two Dollars and Fifty Cents, and a section for Five Dollars, while all other lines charge between the same points Three Dollars for a double berth, and Six Dollars for a section.

What will please you most will be the pleasure of enjoying your meals, while passing over the beautiful prairies of Illinois and Iowa, in one of our magnificent Dining and Restaurant Cars that accompany all Through Express Trains. You get an entire meal, as good as is served in any first-class hotel, for seventy-five cents; or you can order what you like, and pay for what you get.

Appreciating the fact that a majority of the people prefer separate apartments for different purposes (and the enormous passenger business of this line warranting it), we are pleased to announce that this Company runs the PALACE SLEEPING CARS for Sleeping purposes, and its PALACE DINING CARS for Eating purposes. One other great feature of our Palace Cars is a SMOKING SALOON where you can enjoy your "Havana" at all hours of the day.

Magnificent Iron Bridges span the Mississippi and Missouri rivers at all points crossed by this line, and transfers are avoided at Council Bluffs, Leavenworth and Atchison, connections being made in Union depots.

THE PRINCIPAL R. R. CONNECTIONS OF THIS GREAT THROUGH LINE ARE AS FOLLOWS:

At CHICAGO, with all diverging lines for the East and South.

At ENGLEWOOD, with the Lake Shore & Michigan Southern and Pittsburg, Ft. Wayne & Chicago R. Rds.

At WASHINGTON HEIGHTS, with Pittsburg, Cincinnati & St. Louis R. R.

At LA SALLE, with Illinois Central R. R.

At PEORIA, with P., P. & J. (P., L. & D.); J. B. & W.; Ill. Midland; and T., P. & W. Railroads.

At ROCK ISLAND, with Western Union R. R. and Rock Island & Peoria Railroad.

At DAVENPORT, with the Davenport & North-Western R. R.

At WEST LIBERTY, with the Burlington, Cedar Rapids & Northern R. R.

At GRINNELL, with Central R. R. of Iowa.

At DES MOINES, with D. M. & Ft. Dodge R. R.

At COUNCIL BLUFFS, with Union Pacific R. R.

At OMAHA, with B. & Mo. R. R. R. (in Neb.)

At COLUMBUS JUNCTION, with Burlington, Cedar Rapids & Northern R. R.

At OTTUMWA, with Central R. R. of Iowa; St. Louis, Kan. City & Northern and C., R. & Q. R. Rds.

At KEOKUK, with Toledo, Peoria and Warsaw; Wabash, and St. Louis, Keokuk & N.-W. R. Rds.

At BEVERLY, with Kan. City, St. J. & C. B. R. R.

At ATCHISON, with Atchison, Topeka & Santa Fe; Atchison & Neb. and Cen. Br. Union Pacific R. Rds.

At LEAVENWORTH, with K. P. and K. Cen. R. Rds.

PALACE CARS are run through to PEORIA, DES MOINES, COUNCIL BLUFFS, ATCHISON and LEAVENWORTH:

Tickets via this Line, known as the "Great Rock Island Route," are sold by all Ticket Agents in the United States and Canada.

For information not obtainable at your home ticket office, address,

A. KIMBALL, Gen'l Superintendent.

E. ST. JOHN, Gen'l Tkt. and Pass'r Agt., Chicago, Ill.

NEW CHAMPION

SHOT GUN.

Retail Price.—Plain Barrels, 12 bore, $14.00; Plain Barrels, 10 bore, $16.00; Twist Barrels, 12 bore, $17.00; Twist Barrels, 10 bore, $18.00. The frame and mountings of all these guns are Nickel Plated. This gun possesses many advantages over any single breech-loading gun yet produced in this country. It has a patent side-snap action and a safety contrivance, by means of which it can be opened only when the gun is at half-cock, thus preventing perfect safety in loading. The workmanship and materials used are first-class; no gun being allowed to leave the factory until it has been thoroughly inspected. We take great pleasure in offering this gun to the public, and feel safe in say it is the best apparent Single Breech-Loader yet produced. Send stamp for Illustrated Catalogue of Guns, Rifles, Revolvers, and Sporting Goods.

Address JOHN P. LOVELL & SONS, Gun Dealers, Boston, Mass.

The war on the lotteries is growing. The Postmaster General has reached the conclusion, based upon the evidence obtained in this city, that the business even of the most respectable lotteries is fraudulently conducted, and has ordered that letters and other mail matter addressed to persons and firms known to be engaged in the lottery business shall be returned to the senders through the Dead Letter Office. Postmasters will be forbidden to cash money orders forwarded by ticket-buyers to the dealers.

THE LOTTERY FIEND.

UNCLE SAM—"*I'd like to close up that man, but I'm afraid it's a hopeless task unless I can get a bigger muzzle than this. Maybe Father Key can suggest a remedy.*"

TALKS on TIMELY TOPICS.

ILLUSTRATED INTERVIEWS WITH EMINENT PUBLIC MEN.

—No. 5.—

SENATOR BAYARD AT HIS HOME.

His Views on Political Issues.

WHAT HE SAYS OF THE FINANCIAL QUESTION.

The Present Tariff Needs Readjustment.

THE NEXT NATIONAL CAMPAIGN AND WHAT IT INVOLVES.

"I DO NOT LIKE TO SPEAK ABOUT MR. TILDEN."

BI-METALLISM—THE NATIONAL PROSPERITY—THE AGRICULTURAL DISTRESS IN ENGLAND—MR. GLADSTONE, ETC., ETC.

"DID the action of the special session on the so-called Southern Question operate, in your opinion, unfavorably to the Democrats?"

"I am scarcely in a position to reply to your question, I have been so long away and am so poorly posted; and, to be frank with you, I was glad to be able to take a distant view, since a distant view is likely to check the mistakes a man may be led into when a busy participator and in the thick of the fray. I never read a speech made, and my information is of the most meagre description, picked up in telegraphic summaries and badly boiled down reports. I was one of those who opposed the special session, my own view being that the Appropriation Bills for the Government are things that should be passed without question, and that any disputes concerning items should be the subjects of future discussions. I don't think that the business interests of the people of this country ought to be held in abeyance for want of means to carry on the Government, because the departments of the Government get themselves into a wrangle on the items of an Appropriation Bill."

This was Senator Bayard's reply to my question, as we stood on the piazza of his cozy, old-fashioned mansion, situated on a "goodly hill," about one mile from the thriving City of Wilmington, Delaware, the clink of whose thousand hammers, and the whirr of whose rotary saws faintly reached us, the hum of the human bees in the teeming hive below. Away in the near distance stretched the Delaware, silver gray, dotted here and there with snow-white sails, or "dabbed" with the coal-black hulls of ocean steamers, while as a background the woods, still clad in their mantles of russet-and-gold, leaned softly against the keen, full-blue sky. Wilmington, built of bricks, blood-red as those in vogue when Queen Anne ruled these realms, lay at our feet, its ship-building yards blocking the little Christiania, whose waters meet those of the Brandywine to pay mutual tribute to the Delaware, and a fairer prospect than that of the flourishing city and its surroundings of dimpled hills, bathed in the hazy sunshine of Indian Summer, mine eyes—and I have traveled much—have never rested upon.

The stalwart man beside me is a superb specimen of Delaware breeding. He is six feet high, with broad shoulders and a back as straight as a "Corporal of the Guard." His forehead is strongly *en évidence*, and a pair of bushy eyebrows overshadow keen, gray eyes, that in some light come out blue. His mouth is expressive if not emotional, and his teeth are "white as the driven snow." He shaves closely, discarding whiskers, mustache and beard in favor of the thick crop of irongray hair that adorns his shapely head. His manner is a calm intelligence; his voice rich, full and musical. He was dressed in an unmistakably English-made suit of tweed, fitting him "like the paper on the wall."

Senator Bayard is not a rapid talker. He carefully selects his words, and, if he wants a particular word, his sentence hangs fire until the truant is discovered. In talking he knits his brows until they form a rugged fringe over his eyes. He speaks with the consciousness of grappling with his subject, but that consciousness is so sympathetic that it causes his listener to follow every idea as though the listener were engaged in working the problem to a solution. If statesmanship is a science, Senator Bayard is a professor *ad unguem*. If he is playing for the highest stake on the political board, his game will be *finesse* of the subtlest order, while every move will be made where "caution marks the guarded way." He is not a man to lose a chance, but I imagine that the chance must prove more substantial than "airy nothing," and possess a "local habitation and a name." Senator Bayard gives one the idea that a waiting race is a winning race, and that the rush should be withheld till almost within whispering distance of the post.

"Would you regard it as wise for the Democrats to renew the agitation as to the reduction of the Army, and as to the presence of troops at the polls?" I continued.

"I do not consider such an issue now exists. It was not as to the size of the Army that we differed upon; it was as to the means to which it would be put. That question does not now exist."

"As to the financial question. What, in your opinion, will be the attitude of the two parties in the next national canvass?"

"The American people, or, rather, those politicians who assume to be the political leaders of the American people, have become so sensational, that everything seems now turned into a nine days' wonder, and lasts no longer; and it is quite impossible to predicate what new excitement may spring up and be forced into the shape of issues between now and next year."

"Will either party commit itself to the sound policy of retiring the greenbacks?"

"It is impossible to say when that feature in financial policy will be distinctly made. Much will depend upon the decision of the Supreme Court as to the constitutionality of the power in Congress to make anything not gold or silver a legal-tender for the payment of debts."

"Do you suppose that the results of resumption are likely to be imperiled by any attitude which either party may assume?"

"I can scarcely suppose that the American people will ever deliberately consent to the use of an irredeemable paper currency, and that implies that specie payment is to be a settled law of the land. I cannot imagine that the losses and sufferings our people have undergone by departure from specie payments will ever again be willingly encountered."

"As to the tariff question, Senator, is Congress likely to make any modifications in the existing laws?"

"I believe it is a fact of very general acceptation, that the readjustment and reduction of our tariff duties to something like a revenue system and principle ought to take place. Our manufacturers themselves are fully alive to the importance of this, and of their being in this way better enabled to compete in foreign markets with their rivals in other countries."

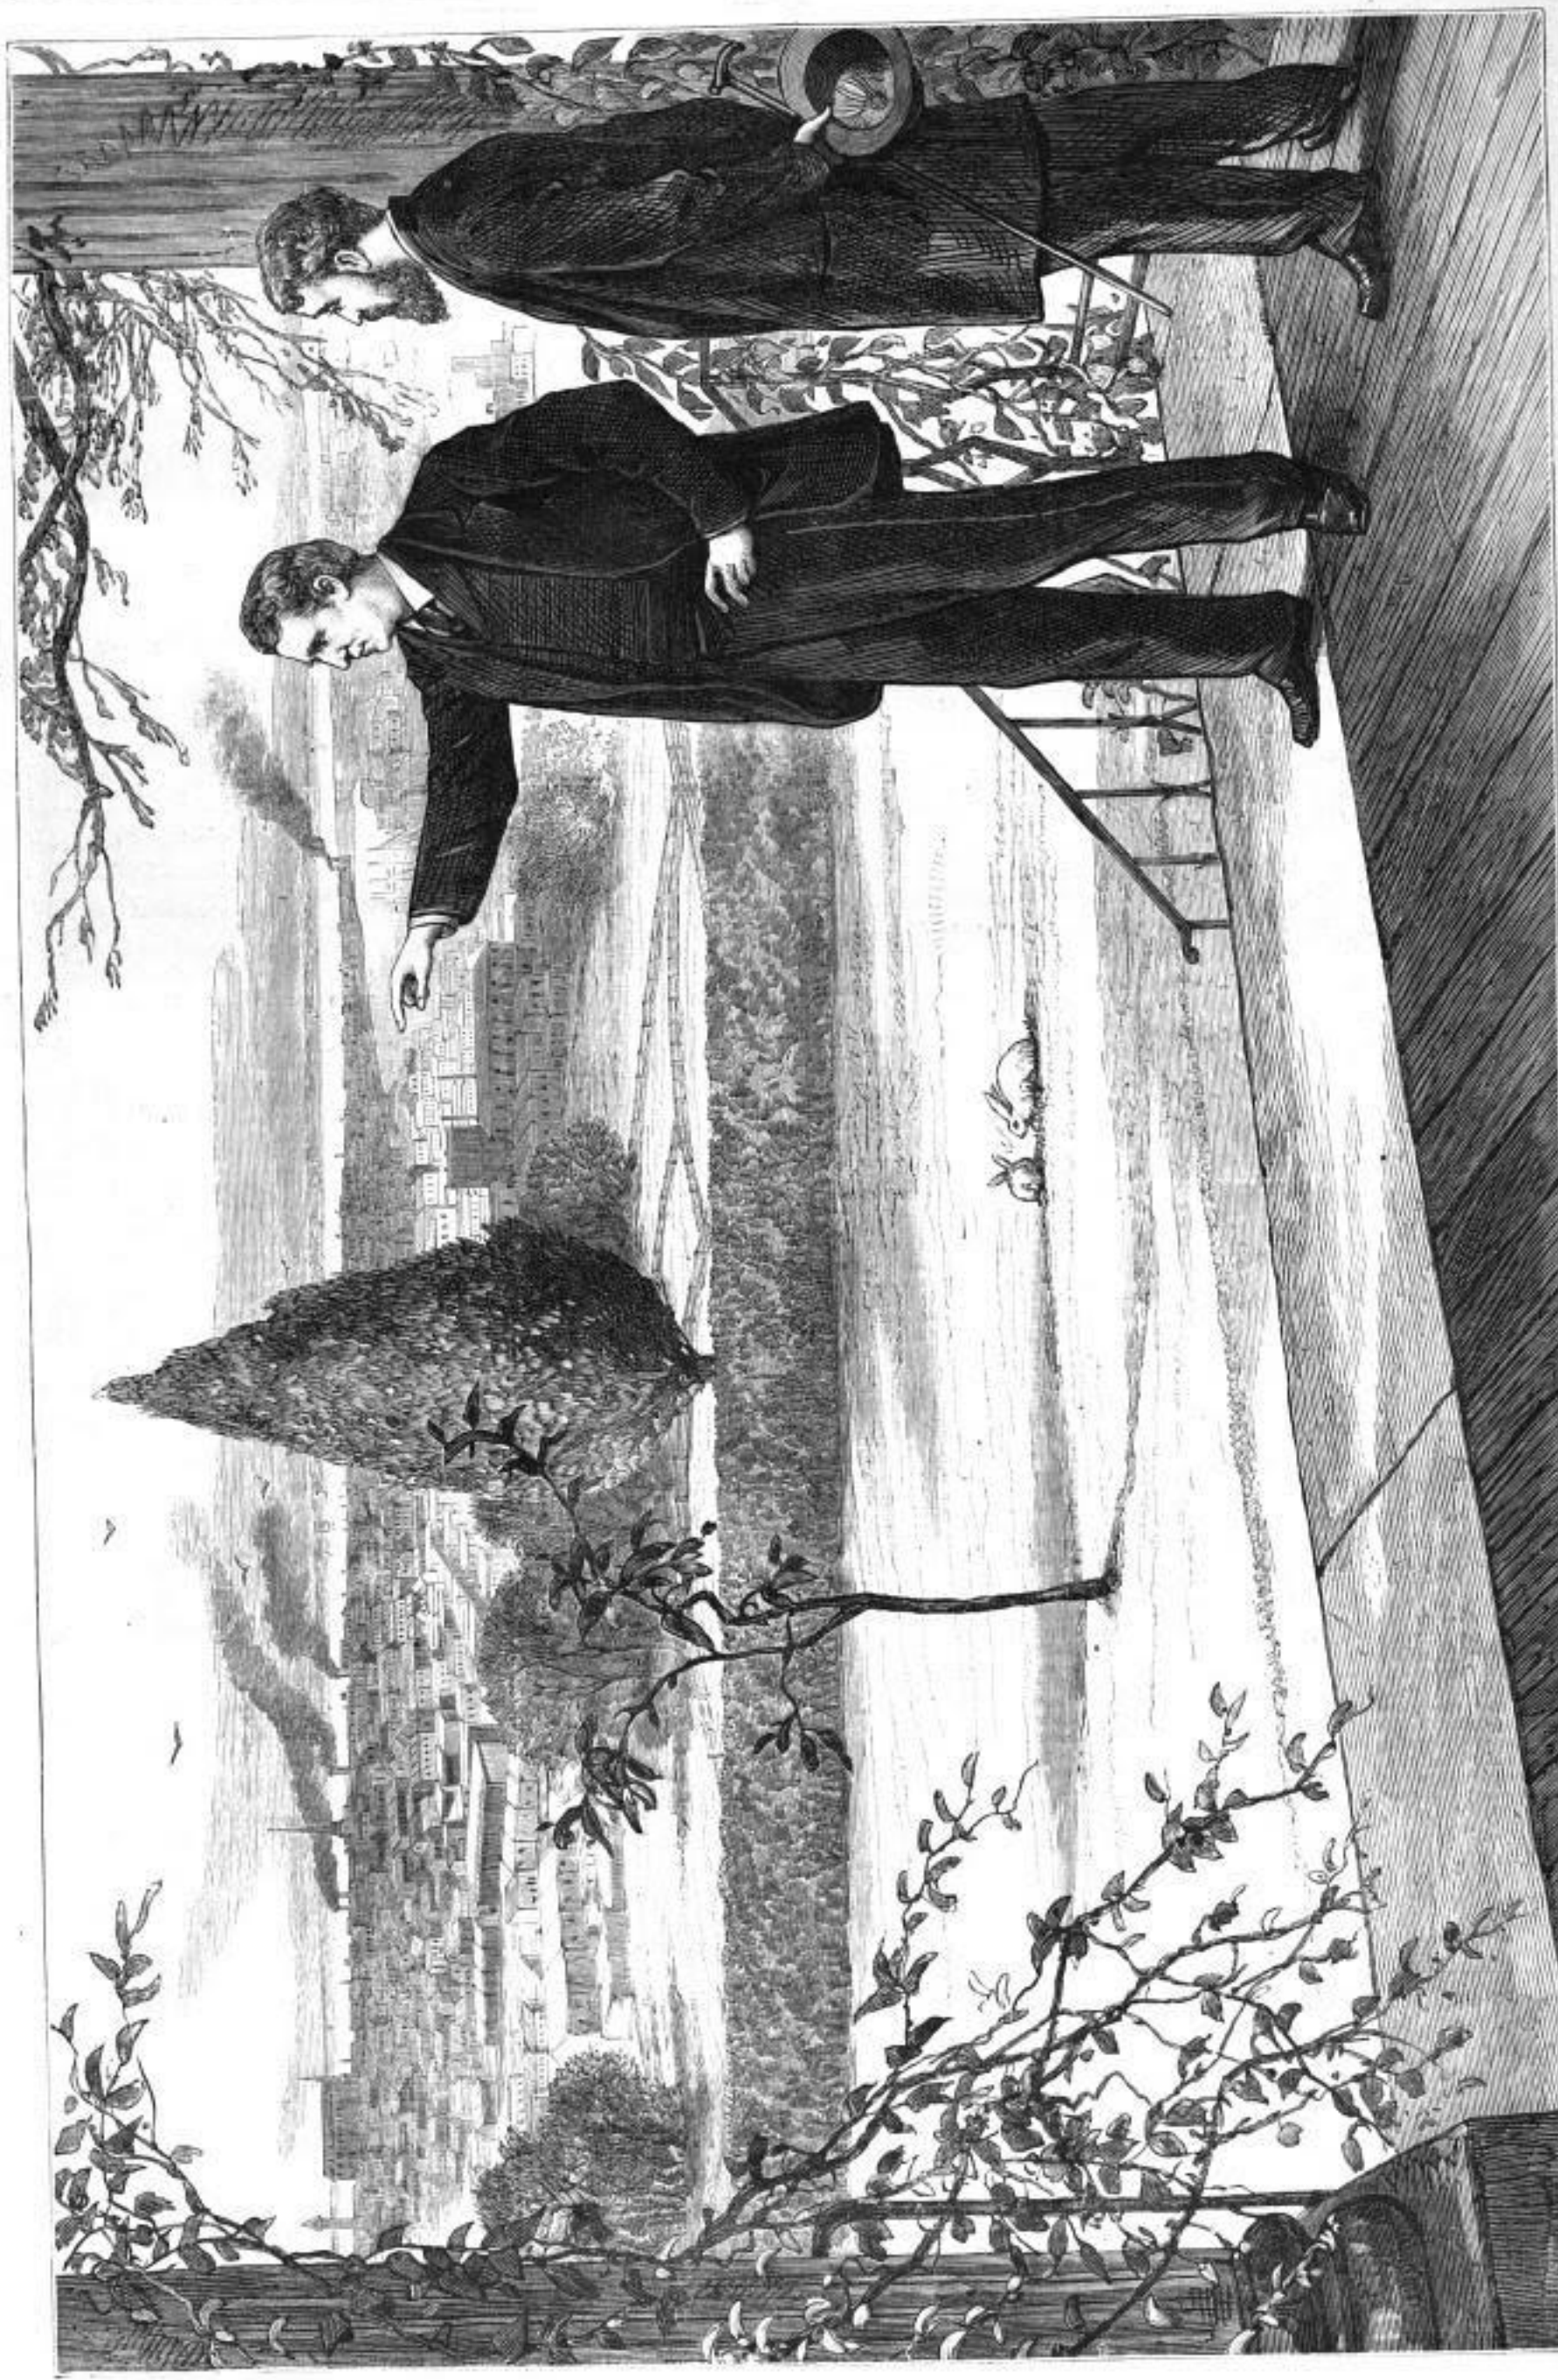
"What is your opinion of the existing tariff?"

"I think our present tariff needs readjustment and reduction. Manufacturers will be so hampered by a series of increased duties upon the ingredients of their products that they cannot provide for that wide market of the world which America's manufactures must have. I think the people will realize in this country the great and simple truth that trade and commerce means to buy as well as to sell, and that there is nothing in the world but a system of exchanges between nations and countries. It is not a question of favor. It is not a question of beneficence—it is the question of convenience and necessity. A man buys a thing because he has need for it. He pays for it in those things which his vender needs in *his* turn. The balance is in value between the two parties, and is to be paid in money, but that forms an infinitesimal portion of trade."

GENERAL SOLOMON, NEWLY-ELECTED PRESIDENT OF THE REPUBLIC OF HAYTI.—SEE PAGE 225.

"What item of the tariff is most severe in this country, Senator?"

"It is impossible to select a portion, but very remarkable illustrations could be given in certain articles; but when you have two thousand five hundred articles subject to taxation, a manufacturer who may employ a score of them finds himself at a terrible disadvantage."



"Do you suggest any mode of grappling with this evil?"

"A well-selected board of commissioners who could, after a full and thorough examination, present a moderate, just, and, above all, a

gradual scheme of reformation in the tariff would prove of signal service."

"Is such a board likely to be created?"

"It is very probable that it will be authorized."

We now adjourned to the library, at this hour of writing littered with literary *impedimenta* picked up by Senator Bayard during his recent European tour, comprising valuable engravings—an admirable one of Dr. Arnold, Head Master of Rugby School, a man held in high estimation by the Senator—photographs, alpenstocks, geological specimens, Tauchnitz novels and guide-books in half a dozen different tongues. Some fine old engraved portraits adorn the walls of this sanctum. Notably one of Bayard, that knight "*sans peur et sans reproche*."

"I found great difficulty in obtaining that portrait," observed the Senator; "the print is an exceptionally rare one, and I may say my only regret in my recent tour was my inability to visit the Château Bayard in Dauphiny," adding, with a bright smile, "the castle of my ancestors."

"Do you claim to be descended from yon peerless knight—a knight who was even proof against the death-dealing charms of Lucrezia Borgia?"

"Well, although the direct line perished with Petrus, we are of that family, and, as you are aware, Bayard was not utterly insensible to female charms, as he left a daughter behind him. This engraving, also very rare, represents the scene of his death."

At this juncture a number of the Senator's friends burst into the library to bid him welcome, after a genuine and hearty fashion, gratifying and somewhat novel to behold, since the conventionality of the latter end of the nineteenth century would seem to imperatively call for ice. When his well-wishers had departed the Senator called for arnica and water to bathe his right hand.

"I got such a shaking and squeezing last night at the reception tendered to me," he laughed, "that I can scarcely move my right hand. I am not a man to wince, but there were moments last night when I could have fairly howled."

Whilst the hand was being bathed, I continued:

"Will the Southern Democrats, in your opinion, unite solidly in supporting a candidate in the next Democratic Convention?"

"It seems to me that the course of the Republican Party is such as to compel the Southern Democrats to vote in favor of almost any man who is nominated in opposition to the Republican Party."

"How do you construe their action?"

"I cannot construe the action of the Republican leaders as being intended for anything else but to force the South into a unanimity of opposition, in order that they may be enabled to secure a solid section of opposition in the North."

"Do you feel at liberty to say whether Mr. Tilden, if renominated, would, in your view, be as strong before the people as in 1876?"

The Senator was silent.

"I do not like to speak about Mr. Tilden, or to be personal in any way," he said, at length. "As to candidates, I look upon them as much less important to the country than the broad question of the policies of the Government, which ought to be pressed. What we want is to make this a Union in fact as well as in name—to make it the happy home of a free and a united people."

"Whom do you regard as the strongest Republican candidate?"

Here Senator Bayard again grew reticent.

"That depends," he said, after some deliberation, "upon the character of the issue on which the contest is to be waged. If sectional animosities, hatred, suspicion and distrust of the South are to be the basis of the canvass, then the candidate who best represents such passions and seems the most likely to gratify their indulgence would be the strongest man; but if, on the contrary, great measures of economy, reform, and plans for general welfare are fortunately to be brought forward for consideration, it would necessitate the presentation of a very different kind of candidate than one who is a representative of nothing but the 'bloody shirt.' And whether the people of the United States really desire the earnest work of advancing their prosperities and setting at rest the passions and contentions which have so long stood in their way, is the great question for the thinking men of both parties to consider and decide. Upon that decision depends the character of the next canvass and of the candidate to be elected."

"Would it be the policy of the Democratic Party to renominate Governor Hendricks for Vice-President if Mr. Tilden should again head the ticket?"

"I do not want to speak of Governor Hendricks or Mr. Tilden either," laughed Senator Bayard.

"Blaine?"

"No."

"Conkling?"

"No."

"Do you think General Grant wants the Republican nomination?"

"I don't think he knows whether he wants it or not—but, my dear sir, I do not wish to talk personally. My opinion would be but a personal one at best, and I prefer to discuss measures to men."

"Touching the question of bi-metallism, Senator?"

"Bi-metallism is a question of great gravity, and I cannot contemplate with approval, according to my present lights, any plan that would leave us without the aid of both metals as money. Either silver or gold alone would be insufficient, and I should greatly fear that reliance upon one would so enhance the value of that one as to create infinite injustice and great distress if all debts were compelled to be paid in it. But it is a question of such magnitude as that the legislation of any one government will be ineffectual to regulate."

"How do you propose to deal with it?"

"Very slowly and with great circumspection. We must rely upon the great agencies of the world's trade and commerce to assist us in adjusting a ratio of value between the metals, upon the basis of which they may universally be accepted."

"How is the English financial mind affected towards bi-metallism?"

"The English mind, always sluggish in regard to changes, is gradually consenting to entertain the question of the recognition of silver as an alternative standard with gold. The continued depression of prices since 1874 is causing a serious examination as to its causes, and not a few attach especial weight in this connection to the strain brought upon the world's stock of gold by making it a sole standard of value. Thus far I have seen, and heard of, nothing very encouraging on the part of the British Government to lead us to hope for any immediate expression of her willingness to co-operate with this country in fixing a governmental ratio for the use of the two metals."

Having reverted to the prosperity of the country, the Senator remarked:

"Truly we are a favored people, and in the full tide of that prosperity that seems fairly to have set in, we must, while availing ourselves of it, keep a sharp eye upon the dangers of over trading and wild speculation, from the results of which we have so lately suffered."

"Do you consider that, in the face of what has happened, we shall over-trade again?"

"The sanguine temper of the American people makes them peculiarly liable to the temptations and dangers of trading. Processes of life and affairs here are so quiet and informal that there is a very great danger that people may forget that reaction is bound to come."

"But do you not consider that prosperity has come to stay?"

"I see no reason to suppose that the prosperity of America is not based upon the most permanent causes, because it is based upon enormous power, for the creation of values and wealth in this country is almost limitless; the only thing is, that our people have to learn that there are conditions, and that self-control and patience are absolutely necessary."

"When in England, did you note her agricultural distress?"

"Yes; and it only shows to what a country can be brought by three successive years of bad harvests, when a country so rich as England is in such a deplorable condition."

"Are not the English farmers coming here *en masse*?"

"In large numbers, yes, and we will benefit immensely by their skilled labor, but the English farmer has much to learn yet, despite how near perfection farming is carried on in that country. He has to assimilate his operations to the changed condition of affairs, and if corn don't pay he is too able, too vigorous, too self-reliant not to try something that will pay."

"*Apropos* of corn—as you met Mr. Gladstone and many of the leading minds in England during your recent visit, do you think there is any chance of a return by that country to protection?"

"Not the slightest," exclaimed the Senator, energetically. "There is not the faintest idea of such a thing. I never heard the subject mooted. England is not to be tested on the present condition of things. She is bound to right herself, and this agricultural depression is merely a passing cloud."

Senator Bayard does not think there will be a general election in England until this present Parliament dies out.

"In England, just now, there is a storm brewing. The issues, I should say, especially as to the foreign policy, are assuming most serious proportions. They almost amount to a question whether the imperial system which British conquests have built up shall be wholly abandoned or not. The speeches of Mr. John Bright and Lord Hartington, in Mr. Gladstone's presence, would seem to involve a reversal of the entire Conservative programme."

"Did you meet Mr. Gladstone, Senator?"

"I did, and he is looking very old and worn. He seems, like most men of his age, to be keeping himself in bounds and husbanding his resources."

"Did he speak of this country, and her grand future."

"Well, you see, it was at a private dinner-party that I met him, and I do not feel at liberty to repeat the conversation."

Senator Bayard is enthusiastic on the subject of Oxford and Cambridge, and dwells with unfeigned pleasure on hospitalities received within the walls of *alma mater*. He also extols the British Museum, at South Kensington, dilating upon the advantages of the electric light used in their reading-rooms.

Senator Bayard dearly loves the land of his nativity, and her laws and her institutions.

"This Summer I have been looking across the Atlantic, thinking of the country I could not see; contrasting what I did see of the daily lives of men and women in other lands with that of my own, and when so often I heard 'Labor with a groan, and not a voice,' and realized the abuses and injustice of class privilege, whereby the insidious bar of humble birth was kept and fastened on men from the cradle to the grave, I turned, as if for pure air, to the American States, where the noble equities of humanity are acknowledged and respected, where the one great and essential equality, the equality of opportunity, is secured to all. And experience and reflection, with increased opportunity for comparison with other countries and systems of government, can bring me only to a higher appreciation of the generosity, justice and moral grandeur of the principles upon which our own was founded."

Once more we repaired to the piazza.

"There is New Castle," exclaimed mine host, extending his arm to the right. "It is the centre of the twelve-mile circle given by Charles, Duke of York, to William Penn. Over right opposite is New Jersey, and we shall have a big fight next session over the twelve-mile jurisdiction in that direction." As he walked with me to the gate, "Here," affectionately patting an old piece of ordnance, "is a relic of 1812. Colonel Davis, who owned this place at that time, was in command of a detachment who took it from the British when they landed at Lewiston. There were two balls jammed in it until 1876."

As we parted I laughingly asked him if we were to meet at the White House.

"That's very hard to say," laughed Senator Bayard, as we shook hands.

A TALK WITH COL. MAPLESON.

The Troubles of an Impressario.

JEALOUSIES AND DIFFERENCES OF ARTISTS.

The Prices Paid to Singers.

THE OPERAS WHICH PAY THE BEST.

What Gerster's "Derangement" Cost Colonel Mapleson.

MARIMON AND HER SUPERB VOICE.

THE ACADEMY SALOONS AND PROPERTY ROOMS BY DAYLIGHT.

A LINE of elegantly appointed carriages were *en queue* at the Academy of Music, depositing daintily befurred and bevelveted dames in quest of the very best seats for "Aïda," as the artist and I presented ourselves to a lynx eyed janitor at the portal giving upon the little world of Her Majesty's Opera. Around this door were congregated, in various attitudes of hope and expectation, a number of select specimens of that strange race of beings known as "dead-heads," who, under the flimsiest of pretexts and the thinnest of excuses, were engaged in besieging the *impresario* in a frantic endeavor to obtain tickets for that, or, indeed, for any performance that might take place during this or any other season. Being possessed of the "Open Sesame," we passed the lynx-eyed one, and crossing the lobby—we could perceive Arditi, through the polished glass doors, gesticulating in the fiercest of dumb show to a dimly-lighted orchestra—we found ourselves at Colonel Mapleson's private office.

Colonel Mapleson was calmly seated at his desk, an expression of beatific martyrdom adorning his handsome face, while a lurking smile might be detected peeping round the corners of his clean-cut mouth. A lady attired in sealskin from head to heel confronted him, and, with tears in her voice, was endeavoring by the sublime force of unnerving feminine logic to carry some point in connection with her operatic duties; but if La Signora had studied Lavater she would not have tarried a second in the sanctum of the *impresario*, so rigid was the "No" written upon his lips.

Colonel Mapleson is over six feet high, and has the shoulders of a Life Guardsman. He is pre-eminently a handsome man, and his smile is electric light. He wears a mustache and side whiskers of the pattern known as mutton-chop. He is the very picture of rude, robust, superb health, and, indeed, seems to possess energy sufficient for half a dozen ordinary men. His manner is cut and thrust while in business; outside of it, full of a keen enjoyment, which bubbles forth at every turn of the conversation. He sees fun in everything, even in having been compelled to expend $35,000 on Mademoiselle Marimon. He is decision itself, and "yes" means actual affirmative, while "no" is absolutely negative. How he gets through the mass of detail that falls to him is a marvel even to those who are intimately associated with him. His sharp eye detects a flaw wherever it exists, while during a performance he is absolutely ubiquitous.

His office at the Academy of Music is a lofty-ceilinged but small apartment furnished with two library-desks, a table and four or five cane-bottomed chairs. Upon the left of Colonel Mapleson's desk are electric bells, connected respectively with the box office, ladies' wardrobe, orchestra, scene-painters' room and stage, while a speaking-tube also connects with the stage. His desk is piled with telegrams, bills, letters, tradesmen's accounts, photographs, hotel guides, railway-guides, etc., etc. In the window looking into Irving Place is the table upon which lie half a dozen leather dispatch-boxes. Mr. Charles Mapleson, the second son, a stalwart, handsome, unmistakably Saxon young fellow, occupies the second desk, while in a sort of alcove, and commanding the door, sits the *impresario's* private secretary.

"Sit down, sir," exclaimed Colonel Mapleson, as soon as the lady had taken one step downwards. "Give me one second—what's this?" taking up a slip of paper presented to him by his son, Mr. Charles Mapleson. "Oh," reading aloud, "'To making a boat to carry six persons across the stage, $60.' This is for 'Aïda.' By Jove, that's a stiff price! Two pounds a passage—you could cross from Dover to Calais for less. I give an order under my own hand for everything new, *everything*—even for the macaroni for 'Don Giovanni,' and I'll tell you why. Lido had a toothache at Foston, last season. There was a doctor who had the run of the theatre there. What was his name, Charley? Never mind! Lido mentioned her toothache. I said, 'I saw so-and-so, mentioning the doctor's name, behind the scenes a few minutes ago; I'll send him to you.' I met him, and told him, and, by Jove, he sent me in a whacking bill for services rendered to me—to me, mind you, arguing that in attending Signora Lido he benefited me.

"Some one," continued the Colonel, "has written a letter to the *Herald* about the Castle Garden performers in 1852. Why, that was thirty years ago, and thirty years ago the Indians were in Central Park. Singers are now getting six times what they got in those days. Lablache and Tamburini, on the pay-sheets of Her Majesty's Theatre, figured for many years at £30 a week, and Grisi had but £40, which ran up to £50, and she never complained. A good soprano commands £200 a night. Why, my dear boy, Campanini's salary is worth the sum total of what the whole lot who sang at Castle Garden got—the whole lot, sir!"

"The first indication of Gerster's *dérangement* cost me $35,000," resumed the *impresario*; "and during six days my cabling cost me $500. I likewise packed off a special agent to Italy, and cabled him $500 for his expenses. I packed off another to Paris to engage Nilsson or Marimon."

"Where did Marimon make her *début*?"

"At a little bit of a theatre called the Athenée, near the Grande Hotel in Paris, in a piece called "Une Folie à Rome." She was scarcely noticed. A friend of mine suggested my hearing her. I heard her, and instantly engaged her for the next season, and she made one of the greatest hits in "La Sonnambula" since Patti. This was in 1872. The second night was a "Lind" night, but after that the English climate affected her, and for eleven nights she dare not sing, while I was turning away hundreds of people, as she was always announced. The Duke of Wellington saved me a big row one night that the audience were going to cut up rough. He mounted on a chair in the Grand Vestibule, and, being well-known, a silence fell on the excited audience. 'I have come here eleven nights running,' said the Duke, 'to hear Marimon, and have been disappointed; but I would come eight nights more if I were sure of hearing her in the month.' The Duke is no end of a brick, and has always stood my friend."

A trombone-player here craved audience, and was admitted. This gentleman stated that he was not to be allowed to continue to play, although he had done so from the beginning of the season, because he was not a member of the Musical Union.

"That Union again!" cried the Colonel. "Why, they'll want to take Campanini from me next and put him in the chorus. Go back to the orchestra, sir, and take your place. I say it!"

"*Revenons à* Marimon, sir. Her receipts exceeded those of any other singer since Lind. She drew me immense receipts wherever she went. She is unmarried, and very much liked in society."

"In what condition is her voice now, Colonel?"

"Superb! It is at its very best. Not a particle of a flaw in it. This climate will exactly agree with her. There are seven or eight hundred opera houses in Europe and in South America and elsewhere, consequently there is a very fierce competition for the services of artists of whom but a limited number exist. Of these New York has the lion's share, and it is not from the temporary disappointment of a single artist that the opera is to be thrown up in despair."

"How do you find our public?"

"Your public is always inclined for excitement, no matter what that may consist of. I find it a most intelligent public, although attracted by any loud sensational note of any soprano, or tenor, or baritone, rather than by the general effect; but that will rub off in time, and the public taste will be more sound and solid when it does. In England the *ensemble* is the opera, and also in Paris, but in this country, for want of knowledge or want of having it properly put before them, the public would seem to prefer a single star with a trill or a *staccato*."

"Does this apply to the Upper Ten?"

"Not by any means. The good sense of the Upper Ten has been exemplified by every box being occupied, as they thoroughly understand what they are listening to; and the people who travel, being of taste and refinement, are just as necessary to the opera as the music itself. Therefore, the Upper Ten form one of the component parts of the opera, and it is their patronage which gives *ton*, and through their support that we will get over the present difficulty. It is very encouraging to see the attention bestowed by them nightly upon our performances, just as is bestowed upon the performances of the Philharmonic Society, whose season, by-the-way, promises to be of exceptional brilliancy. The Philharmonic do not depend on a star, they have no scenery or effects. It is the *ensemble* they have to depend upon, the pure musical effects mated by the even balance of sound and perfection of execution. It is rather hard lines that, because of the absence of one popular star, the entire establishment, that has been going on for 150 years, should be damaged. The public are the most exacting of task-masters. They are ruthless. No one is allowed to be ill, and if ever so faint a hoarseness"—imitating the effect—"comes, which, mind you, may wear away, and generally does, during the evening, the critics are down upon the luckless artist who writhes beneath the criticism. Why, my dear boy, the production of an opera may cost $20,000, and if a border or a flat falls to work, the audience commences to hiss. I'll give you some idea of what has to be done in getting up an opera as soon as I get rid of this fellow."

A somewhat prosy but earnest personage was now admitted, who was exceedingly desirous of getting up a performance at Newark.

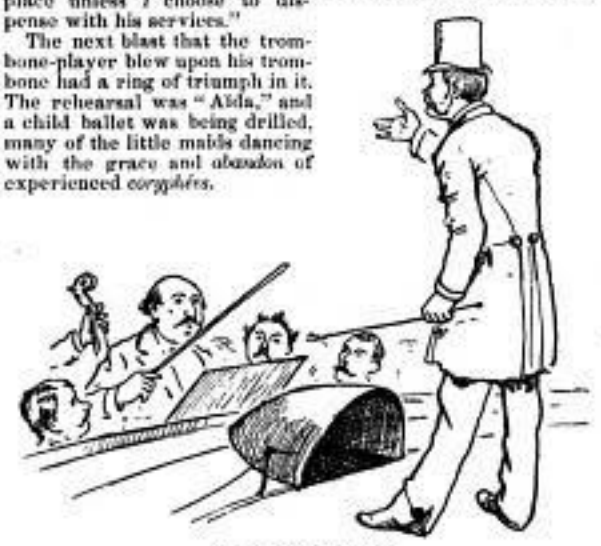
"SIGNOR ANGELO RUSHED IN AND REPORTED A ROW IN THE ORCHESTRA."

The next moment Signor Angelo rushed in, and, in vigorous language and still more vigorous pantomime, informed the *impresario* that there was a row in the orchestra, and that Arditi required his presence *instanter*.

"Come along," cried Mapleson to me, "and you'll see a bit of fun."

Upon our arrival on the stage, Signor Arditi, gesticulating frantically, hoarsely exclaimed:

"Dees is too bad!" Then followed a series of gutturals. "Dat trombone he no allow to go on. I not stop him!"



The cause of this disturbance stood instrument defiantly in hand.

"What's the meaning of this row?" exclaimed Colonel Mapleson, standing close to the prompter's box.

One of the members of the orchestra rose and commenced: "The Musical Union——"

"Oh, the Union again," interrupted the colonel. "Now, listen to me, every one. I am master here. I recognize no Union. My word is law. Any performer who has played in that orchestra from the beginning will keep his place unless *I* choose to dispense with his services."

The next blast that the trombone-player blew upon his trombone had a ring of triumph in it. The rehearsal was "Aïda," and a child ballet was being drilled, many of the little maids dancing with the grace and abandon of experienced *coryphées*.

"I AM MASTER HERE."

"I have brought six of those little things over from London," observed the colonel, adding, "and here is more of it. I have a ballet-school with one hundred and seventy-six pupils, and the Princess of Wales is the patroness. I take them from three years of age, and every one of them are paid. Five per cent. is deducted from their wages to form a sinking fund. This fund is increased annually by the exhibition at the annual presentation of the gold and silver medal for dancing. I charge three dollars a head for admission, and everybody comes. Each class gives an idea of what it can do. Each girl who marries will, by consent, get fifty pounds, that's—let me see—ay—two hundred and fifty dollars. We bury such parents as die, providing one set of mourning; and five dollars a week is allowed to each member for life who may become disabled through illness or through accident received in the theatre. Any misconduct on the part of a member expels her, and she loses all benefit. The gold medal wins an annual sum of ten pounds—fifty dollars—for life, and little Marie Müller, who was here last season, won it this year."

"Who takes charge of the children you brought over from London?"

"An experienced and careful governess, who brings them to the theatre and fetches them home again; so that those who spoke last year of "cruelty" to children did not know what they were talking about."

"What about their general education?"

"Why, that is compulsory, my dear boy. The School Board of London sees to that, and pop down upon us with inspectors from time to time. Two of that lot," pointing to the pirouetting, pinafored children, "send money home, and actually keep their parents, instead of being mere gutter-children."

"Have you many applications for admittance to the school?"

"Have I? Two hundred applied last August from all parts of Lancashire, and it took Katti Lanner, the eminent *première danseuse*, three days at the Alexandra Theatre, in Liverpool, to go through them, and she only brought me two out of the entire lot."

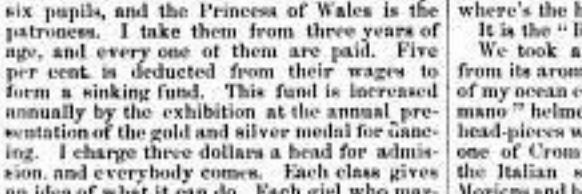
"How many rehearsals do you give a new opera?" I asked.

"Ah, now I can tell you something that the public know nothing of. A man of the crutch-and-toothpick school, after I've put on, let me say 'Aïda' at a cost of $10,000, will come to me and say, 'Aw, I've seen "Aïda" twice; when are you going to give us something new?' And the poor manager has to smile, and mount something equivalent to it immediately. Rehearsals! *For example.* This is the sixth full-band rehearsal for the orchestra alone—drilling for two and three hours—to get the light and shade of the *pianissimo* and *forte*. After some more band rehearsals—the slight alterations in the score by Arditi kept four copyists at work all last night and until daybreak—the principal artists rehearse about twenty times with the piano; then comes a full rehearsal with band, the artists seated all round the stage on chairs; then the property-man has to have his rehearsal. The carpenters now come in for their rehearsals, with scene-framers, etc. Then comes the first stage rehearsal, with everybody without the scenery, and then another with the scenery; later on again with the properties and the business, and *then* it is fit for public representation. Then a languid swell will tell me he has seen the opera twice, and will want to know when I am going to give something new."

An attendant here brought the colonel his letters, over which he hastily glanced.

"Here is a letter from the Prince of Wales," he exclaimed, showing me the note, dated Hotel Bristol, Paris, October 22d. "It's in reference to his omnibus box at Her Majesty's. While I am free for a moment from my den, just take a tour of this place. I'll act as guide, philosopher and friend. I'd like you to see what's going on, and to let the public know what a herculean task it is to run old operas, let alone producing new ones."

We strode across the stage and plunged into a cavernous passage, to emerge on a staircase and into a property-room.



"What dummy is this?" demanded the colonel, administering a kick to the decapitated form of a buxomly-proportioned female, "and where's the head?"

It is the "Rigoletto" corpse.

We took a peep into the armory, which, from its aroma of oil, painfully reminded me of my ocean experience. Here were the "Talismano" helmets, Oriental of design; here the head-pieces worn in the "Puritani," reminding one of Cromwell's crop-eared knaves; here the Italian so well known in "Trovatore." Morions and breastplates and shields were here, and matchlocks of ancient pattern, with guns of the Martini-Henry design.

"Do you see these guns?" suddenly exclaimed the colonel. "I bought 400 of them for five shillings a piece at an auction. They had been sold by an English firm to the French Government during the Franco-Prussian war at a fabulous price. One night, at Dublin, we were doing "Der Freischutz," and poor Titjens was standing at the wing. One of these guns was loaded with a little powder rammed down by a piece of paper only. When fired, the lock blew off, and a piece of it went right through Titjens's dress, sticking in the wall behind her. What chance had the French with such weapons in their hands?"

From the armory we proceeded to the barber shop, where "Mignon," "Aïda," "Traviata," and "Lucia" wigs, curls, mustaches and beards showed grizzly on shelves. A French barber was engaged in titifying Campanini's wig for "Linda," and he expatiated on its wonderful approach to nature with all the *chic* of his very expressive mother tongue.

"A CHILD BALLET WAS BEING DRILLED."

In one of the wardrobes were the costumes for half a dozen operas, each opera folded away and labeled. Colonel Mapleson has about 2,000 costumes with him, and his packing-cases, each the size of a small apartment, number nearly one hundred. We found the Nilsson Hall full of newly-painted scenery, and the flies thronged with carpenters. The scene-painter's room was devoted to "Aïda," while the stage-man's room was choke full of flotsam and jetsam, from the lamp of a Vestal Virgin to the statuette of Cupid *in puribus naturalibus*, and from a loaded pistol to a rouleau of stage gold.

"The stage brass band is rehearsing in the lower regions, the principal artists doing 'Trovatore' in the first saloon, the chorus rehearsing 'Marta' in the second saloon, the orchestra on their own ground, rehearsing "Aïda," the ballet at work in a large room, and a set of coryphées blazing away in a distant corner. Listen!"

In the first saloon were the "Trovatore" party, lounging around a piano, presided at by Bianccia, the accompanist to the company. Mlle. Adini, *née* Chapman, the *Leonora*, was warbling right under the mustache of her husband. Aramburo, the tenor who was frantic because Mapleson refused £800 to release him from his engagement; while Del Puente was slapping his leg vigorously with his walking cane, as he occasionally burst in with a superb note in harmony with the score. Madame Lablache leant with her elbows upon the bar, and, knowing every square inch of a ride she has performed from St. Petersburg to Gotham, turned from the perusal of a newspaper at the right moment in order to discharge the electricity of her *Amneris*, while her daughter, who is studying for the operatic stage, attended on *amateur*, a toy black-and-tan terrier in her arms. Having listened to a delicious morceau from "Il Trovatore," we ascended to saloon No. 2, from whence a Niagara of melody was grandly thundering. Here we found the chorus, numbering about eighty, seated hatted and bonneted, with Signor Rialp presiding at the pianoforte. The rehearsal was "Marta." After visiting a dozen different departments, every one of which is presided over by a vigilant chief, we again found ourselves on the stage.

"WE TOOK A PEEP INTO THE ARMORY."

"*Now*," exclaimed the colonel, "you have some little idea of what I have to look after, and yet when I produce a new opera a crutch-and-toothpick fellow will coolly ask me, after seeing it twice, when I am going to give something 'new.' Do you know that every one in that chorus you have just seen is an Italian, and selected after considerable trouble and great expense. Do you know what it costs me to operatically rig up each member of that chorus?"

"I cannot tell."

"Well, it costs me 8600, and it cost me $15,000 to bring the troupe across the Atlantic. Do you know what it costs me every time I ring up my curtain? Two thousand seven hundred and fifty dollars, and then add the weekly hotel bills, $2,200. I am doing opera at Her Majesty's at this moment. Here's the bill"—handing me the programme of Her Majesty's—"doing the same operas as here, and that in order to do them here, I am obliged to get a second set of *everything*, from a drinking-cup to a bootlace, and this cost me £120,000 before I started at all, as this is a distinct and separate undertaking."

"How many operas does your *répertoire* include?"

"Thirty. I have thirty with me, and I can play any one of them. Another element I have to deal with is the superstition, or whatever you like to call it, of some of my people. They won't go into any room in a hotel with the number thirteen, and an artist won't make his or her *début* on the 13th; it's considered unlucky. I once recollect having engaged Mme. Grisi and Signor Mario for a tour in England, commencing on the 13th of September. On sending them the programme, Mme. Grisi's attention was drawn to the 'thirteenth.' She thereupon wrote a very kind letter stating that nothing could induce her to appear on the 'thirteenth': but, to show there was nothing mean about her, she would rather commence it on the "twelfth," although her pay was to commence on the 'thirteenth.' I amended her programme and commenced on the 'twelfth,' but as that date happened to be a Friday it was again returned to me with a most amiable letter, which I still preserve, in which she stated again that there was nothing mean about the alteration as she would be the only loser; she therefore desired me to commence it on the 'eleventh,' when both she and Signor Mario would sing without salary until the proper date of the commencement of the contract. One of the artists went to Tiffany's the other day to purchase a bangle. The price was $13. 'Won't you take less?' 'No.' And would you believe it, she paid $14 sooner than pay $13."

FLOTSAM AND JETSAM IN THE STAGE-ROOM.

We regained the managerial sanctum.

"Here is more of it," cried the *impresario*, "a letter from Campanini. I'll read it to you. 'Dear Mr. Mapleson—I am very ill, and cannot possibly sing to-night unless you send me—some tickets for family circle, balcony, parquette and general circle. Campanini.'"

Here the colonel was summoned to hear a young lady sing—an amateur who aspired to the vocal majesty of grand opera. Upon his return, after the lapse of a few minutes, he resumed.

"Mlle. Ambrè will repeat her triumphs in 'Aïda.' Do you know that Verdi directed the performance when she sang at the Italiens, in Paris. The opera was produced twenty-three times under his direction and along with Ambrè. 'La Forza del Destino' will be new, as I will produce it with the composer's alterations and additions, and not a scene or costume will ever have been used till the New York audience get hold of it. We'll do the 'Favorita,' the 'Talismano,' 'Un Ballo in Maschera,' and the whole lot of popular works. What I want the public to understand is that any singer who can make a few sky rockets and a trill doesn't make an opera. Just make a note of that, will you?"

"How do you stand as regards the renting of your boxes?"

"I haven't a box unlet, not one for the first season, and for the second, in February, all the occupiers have given me notice of renewal, while for *next* season I have already—*next season*, mind you—thirty-three applicants, all swells of the first chop. Look here!" and the colonel, drawing forth a pocket-book, read me the thirty-three names, the most foremost in Gotham society.

"What opera pays best, colonel?"

"Oh, there are a dozen trumps."

"Is not 'Carmen' one of them?"

MLLE. ADINI AND THE TENOR WARBLING.

"Yes, 'Carmen' has been one of my best successes."

In conclusion, Colonel Mapleson said:

"If the New York public are desirous of having an opera the critics must foster it. Imaginary criticism makes singers so nervous, that it will come to this, that they will not sing at all. It is only by encouraging the opera that you will raise it to a high standard. I am nervous as to the future, as nearly every coming artist has the misfortune to be American."

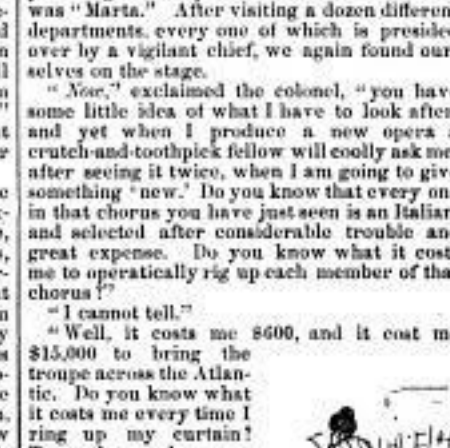
"Misfortune, colonel?"

"Yes. I use the word advisedly. Albani, Valleria, Adini, Van Zandt, and Durand, one of the best dramatic *primi donnas* on the stage, who, by-the-way, has gone to sing at the Grand Opera in Paris instead of coming here, and Emma Nevada, a new prima—Candidus, the tenor, too, all the coming talent is American."

"What is your opinion of Miss Cary's talent?"

"I do not know a more charming singer or a better voice. When I am in my box during the opera I have numerous complaints. For instance, if one set of people talk too much or too loudly, their next-door neighbors come round to me to lodge a complaint against them."

"How do you act?"



"Well, I send word to the box, through the usher, that I wish to pay my respects. I enter. 'Very pleased to see you, Mr. Mapleson,' say the delinquents. 'You will not be so pleased when you hear what I've got to say.' 'How so?' 'Well, you are accused of interrupting the performance, and, most unpleasantly, the duty devolves upon me to say so to you.'"

"Do people take it well?"

"The well bred people all do."

"VERY PLEASED TO SEE YOU, MR. MAPLESON."

"A FRENCH BARBER ENGAGED ON CAMPANINI'S WIG."

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, DECEMBER 6, 1879.

NOTICE.

There can be no better time than the present to subscribe for FRANK LESLIE'S ILLUSTRATED NEWSPAPER, *which is offering unusual attractions, both artistic and literary, and maintaining, in the largest sense, the reputation it has so long enjoyed as the leading illustrated journal of America. In the family an illustrated newspaper which depicts all the great events of the time, and thus vividly impresses upon young minds the facts which go to make up history, has a value which cannot be measured by ordinary standards.*

The public should understand that we never employ traveling agents, and that we will not be responsible for any money that is not sent directly to our office. Persons remitting subscriptions for any of our publications should be careful to address their letters to FRANK LESLIE'S PUBLISHING HOUSE, *Nos. 53, 55 and 57 Park Place, New York.*

We give in the present number an illustrated interview with Hon. Alexander H. Stephens, of Georgia, being the sixth of the series. Mr. Stephens discusses at length the subject of the industrial recuperation of his own and other Southern States, and touches upon some of the political questions of the time with a directness and emphasis which will be appreciated by our readers.

POLITICAL TENDENCIES.

AT the end of each political canvass, covering a wide extent of country and revealing the currents and counter-currents of public opinion, it is both natural and necessary that the party leaders should take account not only of their profits and losses, but also of their stock in hand in the way of available issues for the future. The Democratic leaders in the West and South are called to make this inventory under circumstances which are little creditable to their sagacity as trustworthy guides either in that "large politics" which looks to the supreme welfare of the republic, or that "minor politics" which looks to the achievement of success. And at the same time, amid all the successes which have come to strengthen and uphold the Republican banner, there rises in the breast of its most intelligent followers an unwelcome feeling that their victories have rather been won by tactical manœuvres than by the grand strategy which puts an end to the campaign.

If regard be had to the politics of the future, it is evident that there are two dominant issues which must be set for the rise and fall of parties. The first of these issues relates to the establishment of the currency on a basis which shall be at once sound and permanent. The other relates to the sound and permanent pacification of the country on the basis of the constitutional results bequeathed by the late war. The purification and stability of the currency require that the legal-tender notes shall be withdrawn from circulation and canceled. The radical and enduring pacification of the country requires that sectionalism shall be eliminated from the political methods and appeals of both parties—from the methods and appeals of the Democrats when they invoke a "solid South" in the name of Southern interests or sensibilities, and from the methods and appeals of the Republicans when they invoke a "unified North" as the natural and normal counterpoise to "Southern aggression." There can be no true and real political peace between the late belligerent sections so long as the Democrats assume and pretend to be the peculiar and exclusive guardians of "Southern rights," or so long as the Republicans assume and pretend to be the peculiar and exclusive custodians of the results deposited in our polity and public life by a war which not only destroyed slavery but strengthened and enlarged the constitutional supremacy of the nation in matters of national concern. The party which does not make its plans and issues as broad as the whole country is a party which, sooner or later, must come to grief between the grinding collisions of antagonist forces. It may be the Democratic Party which feels the force of the shock to-day; it may be the Republican Party which shall feel the force of the shock at the next onset between the actions and reactions of a sectional struggle, for it is through these oscillations that the country tends, and surely tends, to the equilibrium of a just and permanent peace which shall be beyond the reach of those who would disturb it, and beyond the patronage of those who would fain convert it into the *pernium* of their party capital.

There are abundant signs that the Democrats of the West and South are impressed with the necessity of "unloading" from their shoulders the burdens under which they have staggered from the blunders committed by the blind guides who have landed themselves and their followers in the ditch. It is safe to say that "the Ohio Idea" has lost its power to seduce party leaders, since it has lost its power to seduce the sweet votes of the people. The men who ruled in the Democratic caucus of the late extra session of Congress, and who turned a deaf ear to the counsels of a statesman like Senator Bayard, may be, at least, expected to practice hereafter a becoming modesty, unless, indeed, they are ambitious to pose in the foremost rank of the country's discredited politicians.

And tried by the two critical touchstones of the future—a purified currency and a pacified country—it is evident also that some of the Republicans as well as some of the Democratic leaders have a useful lesson to learn from the signs of the time and the drift of events. Intelligent and candid Republicans do not mean to follow a leader who has not sagacity enough to discern the path of financial safety amid the perils which now menace the stability of resumption, whether those perils result from the coinage of a depreciated silver dollar, or from the reissue of the greenbacks and their permanent incorporation in the currency. Liberal and enlightened Republicans do not mean, moreover, to lend their countenance to a purely sectional agitation which borrows the livery of patriotism in which to serve the cause of party, for in such shame they discern as much a source of weakness as a source of shame.

A curious illustration of the current tendencies to new political formations and adhesions is passing before our eyes even as we write. On the strength of some considerate words spoken by General Grant to the deputation of Confederates who waited upon him in San Francisco, and on the strength of some frank and manly words spoken by him in Chicago, where he referred to the people of the South, not as alien enemies of the Republic, but as men who "fought bravely" for a cause in which they believed, and who are now entitled "to equal claims with ourselves in the greatness of our great and common country"—on the basis of these broad and national considerations there has actually come from the South the rudimentary signs of a new "Grant boom" which may well give pause alike to the Confederate Brigadiers and the stalwarts in the Republican army. Commenting on these signs of the times, the New York *World* adventures the suspicion that General Grant is preparing a strange mortification for the Republican politicians who are out-Heroding Herod and overdoing Termagant in the railing accusations they bring against the entire people of the South. And, commenting on these same signs, the Springfield (Mass.) *Republican* draws the practical inference that the good people of the South are no fonder of the pending sectional issue than the good people of the North; for what must be their weariness of the desert wanderings into which they have been led astray by false guides of their own selecting, when they betray even a disposition to follow the lead of General Grant, provided he offers them a hope of attaining, through his conduct, to the promised Canaan of peace? Whatever may be the political outcome of these tendencies, it is at least safe to say that they are tendencies which it would be well for the extremists in both parties to ponder with all diligence and sobriety, lest in the end they should be found to have built the house of their political hopes on sinking sand or melting ice.

THE NEW FRENCH CABLE.

WITHIN the last fortnight another great triumph in what may be called the science of international communication, has been achieved. The new French cable has been successfully laid. On the morning of Sunday, the 16th of November, the *Faraday*, with the cable on board, was sighted off North Eastham, and a little later came to anchor about a mile from the beach. On Monday the final splice was made, and the cable was worked throughout the entire circuit, from Cape Cod to Brest. Another new tie is thus knit between Europe and America.

At the time the work was completed, it was only seven months to a day since the concession to lay such a cable had been granted by the French Government. President Bates, of the American Union Telegraph Company, was not, therefore, in any way extravagant in his congratulations to the French company when he said that, "As regard rapid construction and the laying, as well as perfect isolation," the achievement was "without parallel in cable history." The American terminus is admittedly well chosen, being close by Nauset Beacon Light, Cape Cod, in a sandy ravine, where the cable will be effectually and securely covered. The cable was made at the works of the Siemens Brothers, of England, the same who constructed the direct cable. It is declared to be the best of the three cables which now span the waters of the great Atlantic, being heavier, stronger and in every particular more nearly perfect. The central wire is surrounded by ten copper wires, twisted. For insulating purposes three envelopes of gutta-percha surround the wire, and outside the gutta-percha is a wrapping of manilla hemp, twisted with Chatterton's compound. Outside the hemp is an armor of steel wire, the wires composing the armor being laid in a peculiar manner, side by side. Surrounding the armor is another covering of manilla hemp, saturated with an anti-corrosive compound. It is believed that such an arrangement will make it next to impossible for the cable to get out of order. The new company is entitled "La Companie Française du Telegraph de Paris à New York"; its president is the well-known M. Pouyer Quertier; and the stockholders are Frenchmen and Americans, the Frenchmen holding the balance of power. The paid-up capital amounts to 42,000,000 francs, and is soon to be increased by the addition of 10,000,000 francs.

The cable extends from Brest, France, to St. Pierre, Miquelon, and from St. Pierre to North Eastham, as above stated. On its return to Europe, the *Faraday* will be used for the purpose of laying a cable of a similar character from Brest to Land's End, England, thus making a connection with the British Isles; and it is the intention of the company to lay, next year, another cable from Land's End to St. Pierre, thus establishing a double line between this country and Europe. Such enterprise is in the highest degree praiseworthy. It well deserves success, and, as success can scarcely be doubted, it is not unreasonable to conclude that the example, which is thus being set, will be extensively imitated, and that our Atlantic cables will be greatly multiplied to the convenience of business men and of the general public. Each successive experiment diminishes the difficulty, and the submarine cables of the future will not only be constructed and laid more rapidly, but at a greatly reduced cost. As it is certain they will be greatly increased in number, it is scarcely hazardous to predict that before the present generation shall have disappeared business transactions between this country and the different commercial nations of Europe and Asia will be conducted wholly by telegraph. Thus it is that the tide of progress rolls on with ever accelerating speed, and with a force which is irresistible.

THE TRADE-MARKS LAW.

SOME excitement has been occasioned in business circles by a decision of the Supreme Court declaring the law in reference to trade-marks to be unconstitutional. The law, passed in 1870, authorized the registration of trade-marks in the Patent Office, and gave legal and equitable remedies for their protection for a term of thirty years, with a right to renewal for a like period. Under this law some 8,000 trade-marks have been registered, and many applications were still pending at the time the decision was rendered. The practical effect of the decision will be to abolish criminal proceedings against those who infringe upon the trade-marks of their neighbors in business. It does not, however, prevent injured parties from suing for damages, either in the United States Courts or in the courts of the several States. These courts are now, as they always have been, open to civil suits for damages. Representatives of leading business firms in this city, who have large and valuable interests involved, owners of special trade-marks or brands in drugs, provisions, groceries, dry goods and other commodities, say, after full deliberation, that they are just as secure in their privileges as they were before the rendering of this decision. The really perplexing thing about this decision to the Government is, as explained by a lawyer familiar with the subject, "that a series of treaties have been made with foreign countries protecting those residents who registered their trade-marks in Washington, and now the Government is unable to protect them." It is understood that the President, in order to meet this difficulty, will recommend Congress to enact some legislation which will be free from the objection of unconstitutionality, and this suggestion will, no doubt, be promptly acted upon.

As a remedy for any inconvenience to purely domestic interests which may arise from the late decision, should one be found necessary, the *Herald* suggests that the several States might act together and pass uniform statutes, each State establishing a registry of trade-marks for its own citizens, and passing a law inflicting penalties for falsifying trade-marks registered either by itself or by any other State which in like manner punished the same offense. It would seem that "the legislatures of all the principal trading States might be induced to pass such a law at their approaching Winter sessions, and, by making common cause, protect both the owners of trade-marks in their rights and the people against adulteration of commodities."

ART CRITICISM.

AN article on the subject of dramatic criticism, published not long since by the celebrated playwright, Mr. Boucicault, has revived a topic which, from time to time, has agitated all art circles, whether musical, theatrical or fine art. The traducer or the panegyrist always follows closely on the heels of the artist, and how to secure judicious criticism is a problem which must continue to puzzle all those who have any form of artistic production to place before the world. Notice of some kind is a necessary preliminary to fame: abuse even, will sometimes serve the artist better than neglect; but the abuse of a good work or praise of a bad one, whatever the motive, must always be not only a prostitution of the office of the critic, but an injury to the public taste. The writer of the criticism, through the force of his position, is regarded as more or less an oracle, and all false utterances are like the discharge of filthy waters in a clean spring.

Mr. Boucicault complains that dramatic criticism is incompetent, and neither unprejudiced nor disinterested; that to inability to form a correct judgment on dramatic works is added a mercenary spirit which will prostitute itself to private gain. It is possible the aspersion is deserved. Incompetency intrudes itself everywhere—in the State, in the church, in the professions, and in the spheres even of mercantile and mechanical pursuits, and it would be strange if it were not found occasionally on the press. But with regard to the mercenary spirit of dramatic critics, assuming the strictures of the experienced gentleman to be correct, who are responsible? There will be no goods offered for sale where there is no market, and the opinions of critics will never be sold if there be no one to buy.

As to the question of incompetency, it may be said that no man, who is not himself an artist, and of high qualification in his profession, too, is a thoroughly competent judge of art. It is execution that creates a picture, a statue, a musical sentence, or a play, and the details of execution can never be completely mastered except by practice. Mr. Boucicault himself has written, adapted and placed upon the stage an almost fabulous number of pieces. In the process of this work he has been compelled to bring into play his most subtle faculties of analysis. He has had occasion to observe what effects are due to action, to incident, to situation, to sentiment, and it may be assumed that his practice in creating plays has taught him how to dissect one most thoroughly. But the mere critic of art is of necessity a theorist; he may have had sufficient opportunities for observation, but his knowledge is not fundamental nor subtle. He may go wrong when actuated by the best of motives, and with the most positive conviction of his correctness. He is a practical writer, perhaps; is sufficiently technical in his phraseology to seem learned; but the accomplished artist knows that he is shallow, and that he, himself, could say more to fix the standard of a work of art in a single sentence than the mere critic could say were he to write volumes. The artist will always strike the key-note of production at once; the critic will play all over the instrument and be entirely unable to discover it among the multitudinous sounds and discords which he is producing.

What hope have we, then, of securing perfection in art criticism? None whatever, since those who are engaged in the production of works of art have no time to spread the knowledge of their principles before the world. The best critic is the man who associates most with the masters of art, learns their opinions, and is content to reproduce them for the instruction of his readers. One difficulty lies, now, in the false notion among critics that their mission is to instruct the artist first and the public afterwards. They are not content to judge according to the discoveries of men who have made the principles of art a life-long study, but must promulgate theories of their own, theories sometimes fanciful and always superficial. Is it strange, in this case, that artists should sometimes suffer, and that popular taste

Digitized by Google

should be vitiated and misled? It would be strange if it were not so; and the best subject for criticism which could be offered to all art critics, for all time to come, would be their own sphere of knowledge. There, if their study be made truly analytical, they may learn to be cautious, considerate, not too hasty in praise nor too prompt in condemnation, but always ready to make allowance for the differences of taste and methods in the interpretation of nature.

THE NEXT CENSUS.

THE arrangements made by General Walker justify the belief that the work of taking the census of 1880 will be completed within the single month of June. Some 20,000 persons will be employed in the service. In large cities, the work of enumeration will be done in two weeks, thus reducing the errors arising from omission or duplication. Heretofore, while the enumeration has had reference to a single day, namely, the 1st of June every tenth year, it has been extended over a period of five months or longer. The consequence has been that, through their migration from place to place, many persons have been counted twice, while others have not been counted at all. The collection of the statistics of manufactures, agriculture, mining, fishing interests, and social statistics, such as taxation, wealth, public indebtedness, libraries, churches, schools, newspapers, paupers and crimes, insanity, etc., will constitute a distinct department of the work, which will be performed by experts, who will also gather statistical information as to the operations of railroads, fire and life insurance, telegraph and express companies and other institutions. Speaking of his preliminary work, General Walker said in a recent interview:

"Persons are already in the field obtaining statistics of gold, silver, iron and copper mining. Others are working along the shores of the great lakes, obtaining statistics of fisheries and the fishing population. Others are obtaining statistics of steam and water power, and manufacturing machinery. Special investigators have been at work on the social statistics of cities and penal and reformatory institutions. Still others are occupied with the facts concerning the cultivation of cereals. Building stones and the quarrying industry will form the subject of separate investigation by one of the most eminent geologists of the country, while the statistics of tree covering, forest wealth and the timber industry will be collected by an expert equally eminent in his own field. The report on the cultivation of cotton will include investigations made on his own account by a specialist who has devoted years to that subject, and the report will be the standard authority for the world.

"The report on the fisheries will have a decided bearing on the international questions now pending; had we had the facts before, the country would have been saved from one to two millions of the money paid to Great Britain. The American fisheries, instead of being less valuable than those of Canada, will prove to be much more valuable."

EVENTS ABROAD.

WHILE the London *Times* is vigorously denouncing the vexatious rules lately issued for the guidance of editors and newspaper correspondents with the Army in India, the Government has committed itself to a policy of active repression in Ireland, where the editor of the Connaught *Telegraph*, and two Dublin agitators—one of them a well-known lawyer and lecturer on political economy—were last week arrested for using inflammatory language in public addresses. The arrests occasioned a profound popular excitement, which was deepened by the refusal of the Government to admit the prisoners to bail, and the announcement that warrants have been issued for the apprehension of several other persons identified prominently with the cause of the Irish tenantry. The Irish organizations in all the principal cities of Great Britian have made public protests, and will contribute money to defend all whom the Government may prosecute and to maintain the agitation. The wisdom of this interference with the freedom of discussion by a Government which has done nothing whatever to correct the evils under which Ireland is suffering, may well be doubted. The Irish tenantry, menaced by starvation, and keenly conscious of the hopelessness of their future, are in no mood to submit to arbitrary assertions of the authority they detest. Of course, order must be preserved and crime punished, but these are duties not beyond the power of the local authorities, or the scope of ordinary civil process, and the resort to extreme measures, and the use of the military as now proposed, can only aggravate the gravity of the situation. The county magistrates of Sligo will ask the Lord Lieutenant to largely augment the county constabulary in view of threatened disturbances and threats against landlords, some of whom are proceeding for the collection of rents from tenants who are believed to be able to pay. It is believed in Dublin that it will be impossible to sustain indictments for sedition against the persons lately arrested.

The Turkish Ambassador to England is reported to have turned the tables handsomely upon Lord Salisbury in a recent interview on the question of the Asiatic reforms, telling him plainly that England had no right to censure Turkey for disorders in Asia Minor so long as England herself failed to cure the troubles in Ireland. "There," he said, "was a country ruled by a well-established Government, yet the scenes and occurrences in it were in effect analogous to those in Armenia. He contended that it was as illogical to make the Turkish Government responsible for the condition of Armenian feeling as it would be to throw upon Lord Beaconsfield the responsibility for the revolutionary sentiments which at present prevailed in Ireland." This, to say the least of it, was well put, but it does not palliate Turkish duplicity and neglect of solemn treaty engagements. The Sultan has at length appointed Baker Pasha, who is a British sympathizer, as his representative to superintend the introduction of the delayed reforms throughout the whole of Asia Minor. The latest telegrams from Constantinople confidently assert that cordial relations between England and Turkey have been completely re-established.

It is again announced that Germany and the Vatican have arrived at an agreement, "Bismarck having made important concessions." The basis of the alleged agreement is not stated, but it is quite safe to assume that if it involves an apparent surrender of principles heretofore contended for, Bismarck has gained amply compensating advantages in some other direction.

The latest accounts from Cuba indicate that the late insurrection has spent its force. The insurgent chief Nunez was recently killed, and another leader of the revolt has been captured. Many of the Liberals deprecate the movement as unwise. The Cuban Senators and members of the Spanish Chamber of Deputies will support the Bill for the abolition of slavery in the island as originally presented, and there is a rumor that General Martinez-Campos will resign the Premiership and go to Cuba with 15,000 men to pacify the disaffected districts. Meanwhile, Captain-General Blanco appears to be acting discreetly, and under direct instructions from Madrid.

The English ritualist, Rev. Alexander Mackonochie, evidently aspires to the crown of martyrdom. In 1874, as will be remembered, he was suspended for six weeks for ritualistic practices in violation of law, at St. Alban's Church, Holborn. Disregarding the warning, he was subsequently suspended by Lord Penzance for three years, whereupon he appealed to the Queen's Bench for a writ of prohibition, which was granted. The case was then taken by Lord Penzance before the Court of Appeals, which set aside the judgment of the Queen's Bench, and revived the original suspension. Again the belligerent divine appealed, but only to encounter a fresh rebuff, the Court of Arches having now ordered the instant enforcement of the writ of prohibition. It is said that this decree will be resisted; that Mr. Mackonochie expresses a determination to go to prison rather than obey the law, and that his church officials will not permit any other clergyman to officiate in his place without his consent.

The fact that all Russian officers on leave of absence have been ordered to join their regiments immediately is attracting some attention. A St. Petersburg paper, discussing the prospects of war, says neither the Russian people nor the Russian Government wish for war, because the bad financial state of the empire enjoins peace; but every day and every hour the conviction deepens that a great struggle is soon to break out. The statement is made that papers were found in Cabul compromising the Russian Foreign Office in the massacre of British officials; but it is probably unfounded. Operations against the Turcomans are reported to have been suspended, pending the arrival of reinforcements.—Further disturbances have occurred among the students of the St. Petersburg University, resulting in several arrests and in the closing of the library by order of the Governor-General.

One-sixth of the population of Montenegro is said to be on the verge of starvation with only supplies enough to last to the end of January.—It is said that the Pope deplores and censures the assaults of the Belgian Bishops upon the Education law of that country, and the clerical party are a good deal troubled at the discovery.—Sixty-three Legitimist mayors and deputy mayors, who had been dismissed from office, were entertained at a banquet at Nantes, in France, on November 19th, at which 1,200 persons were present, and speeches were made in support of the royalist pretensions of the Comte de Chambord. The election of M. Humbert to the Municipal Council of Paris has been annulled.—Many French priests having omitted to pray for the safety of the Republic, the Minister of the Interior has called upon the prefects to report whether the omission is prompted by the bishops.—Some of the tribes of Afghan hillmen are still in arms against the British on one of the main roads leading into Cabul. In all, forty-nine Afghans have been hanged for complicity in the recent massacre. The report of the commission to inquire into Yakoob Khan's connection with the massacre has been forwarded to the Viceroy of India; it is believed to sustain the views heretofore expressed of the Ameer's action.—The mother of the ex-Empress Eugénie died at Madrid, November 23.—The state of siege at Berlin has been extended for another year.

A CASE, under the Massachusetts Civil Damage Act, just tried, resulted in a verdict of two hundred dollars damages against a saloon-keeper who furnished liquor to a person who, in resisting arrest for drunkenness, severely injured a policeman. The result is regarded as a vindication of the principle of the law, and affords a good deal of satisfaction to the temperance party.

THE City Board of Health last week procured injunctions against the owners of certain tenement-houses which were being built in defiance of health laws, and compelled a modification of the plans in accordance with the requirements of these statutes. If the Board would resolutely lay its hand upon all owners of tenement-houses who seek in this way to evade the law, it would entitle itself to the cordial plaudits of the whole community.

THE Commissioners of Emigration, in view of the increase in the number of paupers, lunatics, cripples and criminals sent to this country by the Poor authorities of foreign Governments, will urge the passage by Congress of some Act which will authorize the prompt return of all such persons to the countries whence they come. Secretary Evarts has expressed his approval of the movement, and the object proposed is so obviously proper and desirable that it would seem necessary legislation should be enacted without a moment's hesitation.

GRATIFYING evidences of the business revival are afforded in the statements of all the trunk lines of railways. Thus the Baltimore and Ohio Railroad reports its earnings for the past year at $14,143,980, being an increase of $428,700 over the year previous. The net earnings for the year were $6,502,384. The working expenses were two and a quarter per cent. less than during the preceding year. The tonnage of through merchandise East and West was 1,425,629 tons, while in the preceding year it was 1,149,449 tons; 743,381 barrels of flour and 29,622,895 bushels of grain were brought to Baltimore during the fiscal year, being a decrease of 34,830 barrels and an increase of 8,983,241 bushels, respectively. Of this aggregate of grain, 18,467,448 bushels were wheat. The receipts of wheat for the preceding year were 9,365,233 bushels, showing an increase of 9,102,265 bushels, and an increase over 1877 of 15,966,898 bushels.

SECRETARY EVARTS, who has in his time been a good deal "chaffed" on the length and complexity of his sentences, both in speech and writing, took occasion, at the Potter banquet the other evening, to reply in a good-natured way to the gibes of his critics. Referring to a remark of a previous speaker that Mr. Evarts could clothe a diplomatic discussion with sentences as long as the English language can supply, the Secretary said:

"The English is a language whose true efficacy the gentleman who last sat down does not seem to appreciate. Not only is it fine in quality, but in quantity it is absolutely marvelous. What wonder then that a public servant should try to check the volubility of his countrymen by consuming large portions of it himself! I don't wish," he continued, "that our guest should carry away with him a wrong impression in regard to this alleged fault. The only persons in this country who are opposed to long sentences are the criminal classes. In diplomacy we always got along well with those nations that do not speak our language, but in our dealings with Great Britain the possession of a common tongue always leads to misunderstandings."

THE commercial reports of English consular officials in China show that the American cotton goods are pushing the English out of the market in that country. Leading English journals are commenting upon the fact as affording ground for anxiety as to the control of one of the greatest cotton markets in the world. The extent of this market is shown by the fact that the province of Shantung alone has a population of 30,000,000, clothed entirely in cotton. Socks, caps, even shoes and boots, are made of the same material; sedan chairs are often covered with cotton, and wadded curtains of cotton often supply the place of doors in the houses. Last year the enormous number of 332,000,000 needles were entered at the single port of Chefoo—a remarkable indication of the vast quantities of cloth which must be made up in the province and the extent of the market for cotton fabrics. The loss of such a market to the English manufacturers would be little short of a positive calamity.

THE Ute Commission last week examined a number of the Indians suspected of knowledge of the White River Agency massacre, but all of them exhibited a marked reluctance to tell the truth. This is said to have been due to a belief that they were to be at once arrested and put under guard, and they were determined to resist such an effort to the last extremity. Chief Ouray has convinced them that they were mistaken, and it is said that they will now come in and tell all they know. Ouray has behaved with genuine courage and manliness throughout, and if the persons guilty of the massacre shall be secured, and war averted, it will be due almost entirely to his efforts. In a recent speech, which is said to have been remarkable for its eloquence and pathos, he said he had no other ambition but "to be known as Ouray, the friend of the white man." He has stated to the Commission that Mormon emissaries have been encouraging the Utes to fight, and that he believes the Mormons were concerned in instigating the recent outbreak. Secretary Schurz refuses to permit any of the Ute chiefs to visit Washington until they shall discover the parties responsible for the massacre, and see that they are surrendered for punishment. The Indian Commissioner, in his annual report, recommends the removal of the Utes to the Indian Territory.

NEWS OF THE WEEK.

Domestic.

TWO thieves were hung at Leadville, Col., last week, by order of "Judge Lynch."

DENIS KEARNEY was arrested in San Francisco last week for disturbing a public meeting.

COLONEL JOHN HAY, recently appointed Assistant Secretary of State, has entered upon his new duties.

THE Central Pacific Railroad have paid in to the United States Auditor $600,000 under the Thurman Act.

A GALE which swept over Lake Ontario, November 13th, wrecked a fleet of tugs, scows and derricks; nine persons being drowned.

THE Pension Commissioner's report shows 242,775 persons on his list. Between $25,000,000 and $30,000,000 are annually paid to pensioners.

REV. DR. JOHN N. GALLAHER, Rector of Zion Protestant Episcopal Church, of this city, has been unanimously chosen Bishop of the State of Louisiana.

THERE are 500 cases of diarrhœa in the Kentucky Penitentiary. The physicians have been unable to determine the immediate cause of the disease.

BY an explosion in a tunnel on the San Jose and Santa Cruz, in California, November 18th, thirty Chinamen were killed and a number of others seriously injured.

IT is reported that Cipriano Munoz, a Brooklyn cigar manufacturer, and his sister-in-law, who started for Cuba on November 3d, have been arrested at Santiago de Cuba as spies.

A TEMPORARY injunction restraining General Newton from continuing the improvements in the Hudson River, below Albany, was granted last week in the United States Circuit Court.

THE national committees of the National and Greenback Labor parties will hold a conference in Washington early in January, when steps are to be taken to nominate a candidate for the Presidency.

THERE was a heavy fall of snow in parts of Georgia and South Carolina November 19th, and on the 20th the weather became intensely cold, and there were snow-storms over the Middle and Northern States.

CINCINNATI is making arrangements for a grand reception to General Grant, December 11th. The General has taken passage from this port for the West Indies and Mexico by the steamer which leaves December 27th.

THE General Committee of the Democracy of the City and County of New York has appointed a committee, of which Abram S. Hewitt is Chairman, to prepare an address to the Democrats of the country on the course pursued by John Kelly at the last elections.

MAINE politicians are excited over the official count of the returns of the late election, the Democratic State officials being charged with a purpose to "count out" enough Republicans to give the Legislature to the opposition. The matter has been carried into the Supreme Court.

THE speculations in Wall Street took a sharp downward turn last week. On Thursday, November 20th, the recorded transactions of the Stock Exchange reached the unparalleled figure of 683,120 shares, while the actual dealings probably exceeded 750,000 shares. The decline in prices of some principal stocks from the highest point was from three to ten per cent.

AT the meeting of the Army of the Cumberland, in Washington, last week, General Phil Sheridan was elected President for the ensuing year. A resolution offered by General Sherman was adopted, attesting the loyalty of General Robert Anderson. On the second day of the meeting, the delegates made a visit to Mount Vernon. In the evening there was a brilliant reception at the White House, followed by a grand promenade concert and ball at the Capitol. Toledo was chosen for the next reunion.

THE official returns of the late election in the State of New York, show that Mr. Cornell's plurality over Mr. Robinson's exceed 42,000, while on the total vote cast for Governor, Mr. Cornell is to a minority of 59,423 votes. The official vote on Lieutenant Governor is very close, Mr. Hoskins (Rep.) having a majority of only 193. For Comptroller, Mr. Wadsworth, Republican, has 5,927 plurality; for Secretary of State, General Carr, Republican, has 2,029 plurality; for State Treasurer, Mr. Wendell, Republican, has 2,583 plurality; for Attorney-General, Mr. Ward, Republican has 4,426 plurality, and to the office of State Engineer and Surveyor, Mr. Seymour, Democrat, is re-elected by 14,011 plurality.

Foreign.

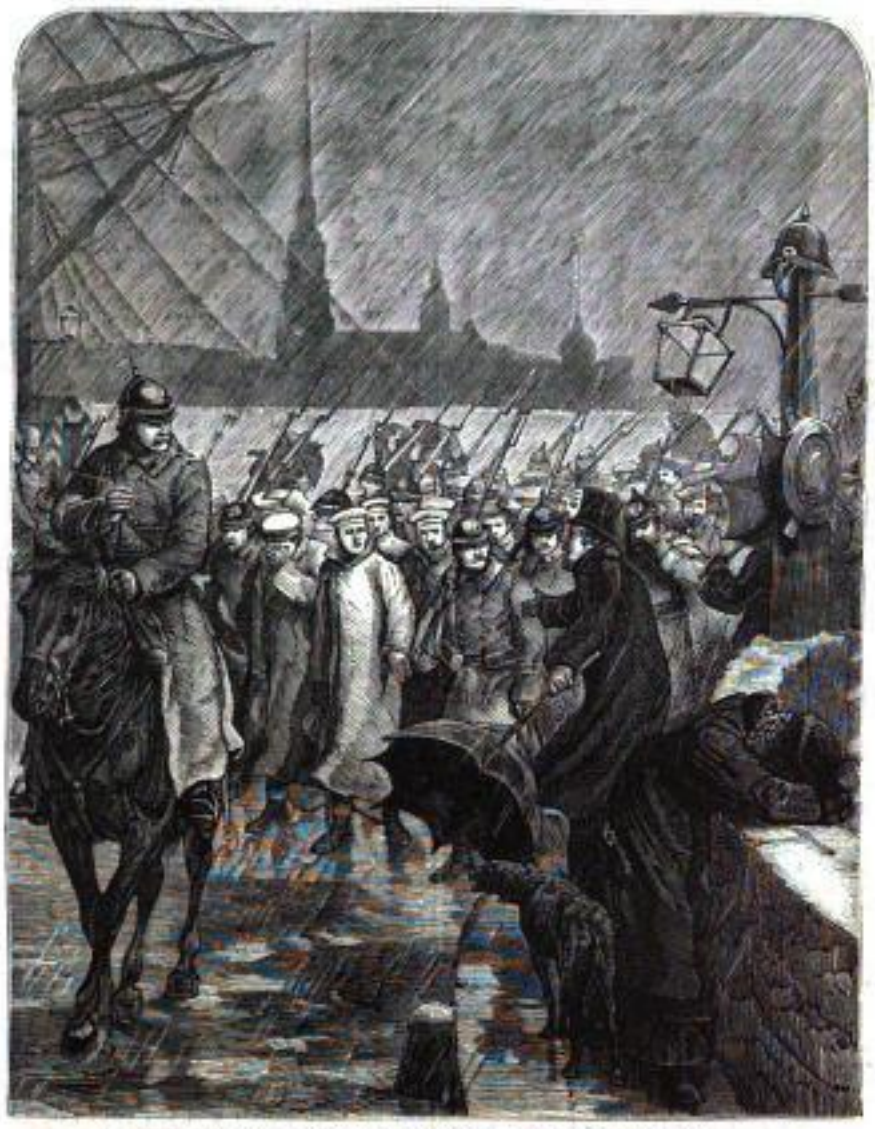
MISSIONARIES are not to be excluded from Zululand.

THE widow of Charles Dickens died in London, November 23d.

UPWARDS of 90,000 deaths from cholera have occurred in Yokohama and the epidemic still exists.

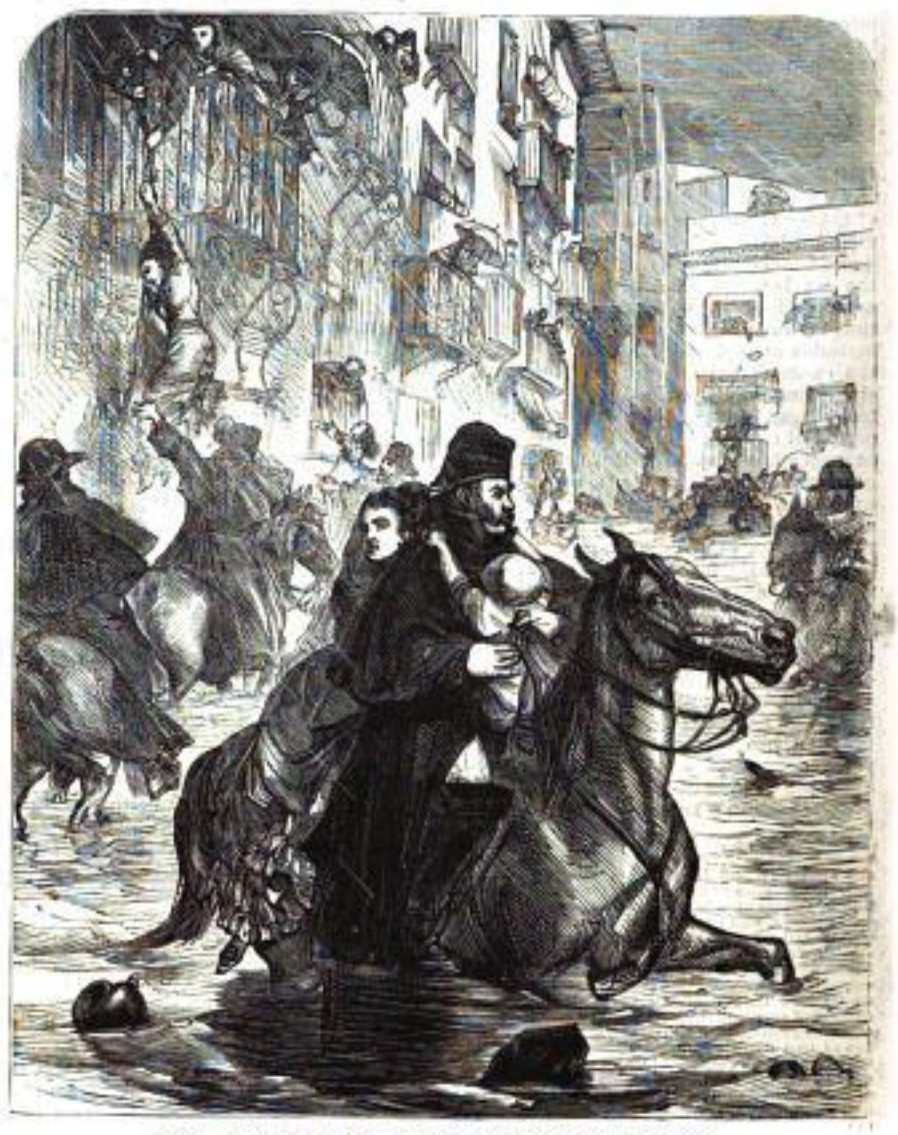
A POLITICAL street riot is reported from Pergola Italy, in which one person was killed and several wounded.

THREE regiments of infantry with cavalry and guns have gone towards Ghuzzee, in Afghanistan, to collect supplies and disperse the malcontents.



THE Government of Manitoba has been reconstructed. The reorganization includes one representative of the French-speaking population. There was previously none.

THE English Court of Queen's Bench having refused the application of Mr. Labouchere, of the *Truth* newspaper, for a mandamus, he is to be committed to jail. His costs in the suit will amount to £800. Sir Henry Mannly denounced the *Truth* libel as vulgar in the extreme.



THE Chilians have followed up the capture of the Peruvian port of Pisagua by marching southward in the direction of Iquique, with the intention of defeating the allied forces which are massed there. The armies were near each other, and a great battle was imminent at the date of the last despatch.

NEW JERSEY.—AN IMPRESSIVE CEREMONY IN THE BENEDICTINE CONVENT, ELIZABETH.—NUNS PLACING THE BLACK VAILS ON THE HEADS OF THE NOVICES.—FROM A SKETCH BY A. BERGHAUS.

TAKING THE VAIL.

SCENES IN THE BENEDICTINE CONVENT, ELIZABETH, N. J.

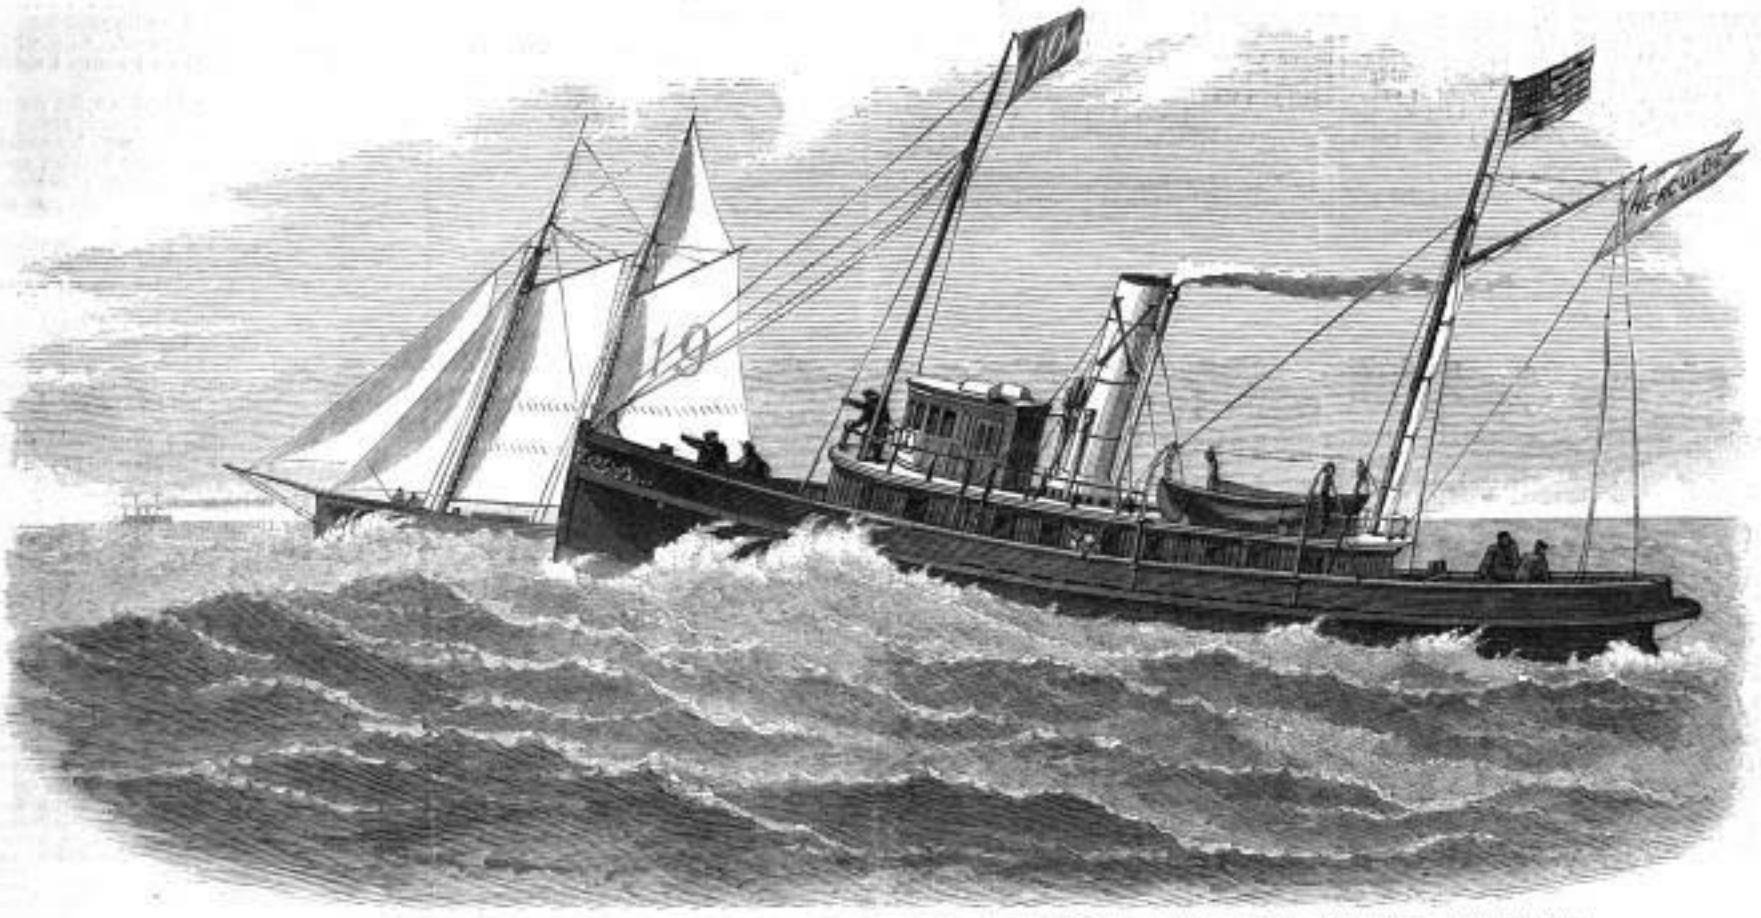
IT will surprise most readers to know that in this country convents and monastic institutions surpass, in number and variety of rule, nearly all other parts of the world. In the liberty left by our form of government, each denomination lives its own life and gives birth to the institutions evoked by its principles and system.

Elizabeth, N. J., has convents of four different religious orders, and in one of these, the Convent of St. Walburga, of the ancient order of St. Benedict, took place, recently, the ceremony of giving the vail to three postulants, young ladies who, turning their backs on the gayeties and promises of the world, resolved to devote themselves to a cloistered life; and, also, the giving of the black vail to three who, after testing for two years their resolutions as novices, were now ready to take the black vail and bind themselves by vow.

Bishop Corrigan of Newark officiated on the occasion.

Mass was said in the usual manner in the large convent chapel, and at the Credo, three young ladies, dressed as brides, entered the chapel and proceeded up the aisle to the sanctuary, followed by three sisters in the black habit of the Order, wearing, however, the white vail of novices, the Superior of the community, in her black vail, closing the line. After they had entered the sacristy, and Mass ended, Bishop Corrigan entered and took his seat on the episcopal throne at the side. In a few moments he took his place on a chair placed on the altar platform immediately in front, and, in his vestments and mitre, began the prayers for the occasion. The postulants entered and knelt before him, replying to the interrogatories addressed to them as to their wish to enter the community. When all had replied satisfactorily as required, the Superior removed from the elegantly dressed postulants the white vails and orange wreaths, and the Bishop cut three locks from the head of each in the name of the Father, Son and Holy Ghost, and handed to each her religious habit, white vail and Rosary. The three then retired to the sacristy, and laying aside the bridal dress, returned attired as nuns, wearing the white vail. After kneeling before him to receive his blessing they retired.

Then the three novices entered, and, taking the place occupied by the new Sisters, answered the interrogatories put to them. They declared their desire to persevere in the career on which they had entered, and each read aloud the formula of vows which constituted her a Benedictine nun. Each then received the black vail, and, ascending to the Gospel side of the altar, signed her name to the record of her engagement, and, bowing low to the Bishop, retired.



The ceremony closed with the episcopal benediction in the usual form.

The chapel was filled, a large part of the audience being ladies of all denominations, attracted by a desire to witness a ceremony which is so striking and rarely witnessed, except among the circle of immediate relatives and friends.

A REVOLUTION IN OUR PILOT SERVICE

THE excitement that has prevailed in New York shipping circles during the past two weeks over the announced determination of certain pilots to unite in purchasing a steam pilot-boat, is now vastly increased by the very active operations of the *Hercules*, as the new boat is named. Up to the time of writing, the five pilots who are interested in the vessel have brought in three ocean steamships, the *Germanic*, the *Arcadia* and the *Ethiopia*.

On the one hand it is claimed that the foreign

NEW YORK CITY.—THE PILOT-BOAT EXCITEMENT—A RACE BETWEEN THE NEW STEAM PILOT-BOAT "HERCULES" AND A SAILING BOAT FOR AN INCOMING OCEAN STEAMSHIP.

Digitized by Google

steamship companies last year sent representatives to Albany for the purpose of inducing the Legislature to reduce the pilot fees, but after long deliberation and exhaustive argument and hearing, that body decided that for the effort expended and risk incurred the present rate was only adequate, and so refused to interfere in the matter. Failing here, it is claimed that the companies took the matter into their own hands, and the subsidizing of the new steam pilot-boat, for which they in the first instance advanced the money, was the result.

On the other hand it is claimed that the pilots who brought in the above-named steamships had violated the by-laws of the Pilots' Association, which require that only a certain number of pilot-boats shall be enrolled, and that their substitutes must be approved by the Commissioners; that no pilot shall board an inward-bound vessel from any other than a pilot-boat, when a pilot-boat is in sight of the vessel; and that steam pilot-boats shall not be employed except by permission of the Commissioners. A communication received from the New Jersey Pilot Commissioners approves of the action of the New York Board in prohibiting the use of a steam pilot-boat. This communication was received at a secret session of the Board of Pilot Commissioners convened to take action upon complaints lodged against the offending pilots. Citations were ordered to the inculpated pilots to appear and defend themselves on Tuesday, November 25th. Representatives of several of the largest ocean steamship companies have already announced their determination to support the steam pilots in any event that may arise; more complaints by the old pilots are heard than reported. They do not like the idea of a steamboat standing well outside, and as soon as a steamship is descried, going under full head towards it, because the race between steam and sail is too unequal. At the same time they deny that the *Stevens* will injure them in the least, pronouncing her unseaworthy, etc. Meanwhile both parties are on the look-out for incoming vessels, as well as the decision of the Board of Commissioners.

MISS CAROLINE.

A THANKSGIVING STORY.

BY ELEANOR KIRK.

"YOU' are the torment of my life, Seth Smith. What, under the sun, moon and stars, are you for ever poking about my kitchen for?" and the speaker, a pleasant-faced serving-woman, looked up from the pumpkin she was sifting, with an expression of countenance which quite belied the severity of her words.

"You mean Miss Caroline's kitchen," said Seth, with a grin, as he seated himself by the pine table, which he had been heard to say was "whiter and shinier than Deacon Brown's bald head, and a considerable more wholesome-looking."

"I rather think you know, Huldah, why I stick round in this 'ere way," he continued; "and if you really want me to tell you the story over again, I am just as ready now as I've been any time these last twenty years."

"Oh, get out!" replied Huldah, making an unnecessary racket with her scive against the side of the milk-pan. "Throw an armful of wood into that oven, if you want to do something. I ain't got no time to listen to stories."

Seth grinned again, and without stopping to reply—though his great mouth was eloquent with words, which Huldah might have seen, had she looked at him, were only postponed—arose and did as he was bid. Mechanically and abstractedly, he threw piece after piece of the dry, split wood into the brick oven, until Huldah, alarmed at the blaze which shot out from its mouth, thrust him quickly one side, and, with a long poker, separated the burning mass.

"Well, I should like to know, Seth Smith," she exclaimed, as she finished, "what you thought you wor doing? Ask a man to help you, and if he don't set the house a-fire, 'tain't his fault."

"You're more scared than hurt, Huldah," Seth replied, coolly. "What shall I do now—stir the pumpkin for you?"

"No, you won't do anything of the sort," his companion answered. "If there's one thing that I hate above another, it's to have a man fussing about my cooking."

"I made my own pie last Thanksgiving," said Seth, with unintended pathos.

"More shame for you," replied Huldah. "There worn't anybody to blame but yourself it you did, for you know that I'd a come over and made 'em for you. All I wanted was an invitation."

"Why, I've invited you to come and stay hundreds of times," said Seth, in the same pathetic manner.

"Well, suppose you have," was the irritated response. "I should like to know how you think Miss Caroline would get along without me? I've been in this kitchen a good many years, Seth Smith, and the folks that I've served are all gone now, 'cept Miss Caroline, and I wouldn't give her the slip for a hundred men, no, not for a thousand! So, you can put that in your pipe and smoke it as quick as you're a mind to."

"That's the kind of tobacco I've been smoking ever since I can remember, Huldah," said Seth, with a comical grin, but in a minor key for all that; "but I've kinder thought that mebbe what you wouldn't do for a regiment, you might some time see your way to do for the man you know you love, Huldah, whatever you may say and——"

"Rake them coals again, Seth!" broke in Huldah, with a well-feigned interest in the oven. "At this rate, I don't believe I shall get any baking done to-day!"

"I've tried, lately," Seth began again, quite ignoring the interruption, "to try and put down this feeling that there couldn't nothing come on, but I might as well try to make myself over into a handsome man, Huldah, as to stop thinking of you!"

"Well, there wor a time, Seth," said Huldah, as she stirred the sugar and spice into the golden pumpkin, and taking on a more confidential tone, "that I wor willing to own up I was tempted."

"When was that, Huldah?" inquired Seth, with a sigh, though his eyes were dancing with fun.

"When you got home from the war, and had to go on crutches then for a spell," cried Huldah. "Then it seemed to me it wor my duty to take care of you; and I remember well the day I'd made up my mind to say so. I was looking up the road expecting to see you come hippity-hopping down as you had been doing, when lo! and behold! there you wor as fine as a fiddle, without any crutches at all, and walking almost as spry as you do this minute."

"I give 'em up before I really ought to, Huldah," said Seth, "because I thought you hated the sight of 'em; and now I find, when it is too late, that they were my best friends. They're up in the garret now, and I'll get 'em out if you say so."

"Don't be a fool!" said Huldah, with a snap. "I just wanted you to get it into that thick head of yourn, that if you needed me you'd have me in spite of anybody in the created world. Stir up them coals again!"

Once more Seth did as he was told, and as he raked the glowing embers, the door opened, and Miss Caroline, the mistress of this great house and sole heiress of one of the richest estates in Massachusetts, walked into the kitchen. She might have been thirty, and even more, but she looked about twenty-three or four, with her fresh, almost childish complexion, light brown hair and beautiful gray eyes, with their long, dark, sweeping lashes. She was a little above medium height, and in face and figure was the very personification of grace and delicacy. Caroline Wyndham could never be called pretty, but she was as handsome and as proud a woman as ever walked the earth.

"So Seth is tormenting you again, is he, Huldah?" the lady inquired, laughingly. "You were so quiet down here, that I didn't know but that you had forgotten all about Thanksgiving preparations?"

"Now, Miss Caroline," said Huldah, annoyed as much as she could be with the mistress she was so fond of.

"I've been talking kinder serious to Huldah," Seth broke in, "but I can't see that it has amounted to anything."

"Keep it up," Miss Caroline replied. "There is nothing tells in this world like determination! It is very strange that Huldah holds out so against becoming Mrs. Smith;" and now the lady brought a spoon and tasted of the cook's pumpkin mixture, which was almost ready to be poured into the pie-plates. "A little more sugar, Huldah," she continued, and then, with another laughing glance at the awkward lover, who stood with his back against the kitchen door, added: "Why, Seth, I should have been obliged to give in with half as much coaxing as Huldah has had."

"There are some folks you know, Miss Caroline, who are too proud to beg," said Seth, with a quick look at the lady; "but I'm glad I ain't ashamed to hang on to what I want. Huldah has been telling me that if I'd been obliged to go on crutches a little while longer, she'd had to give in." Miss Caroline turned away, and looked out of the window, but not before Seth had seen the color fade out of her face, and a little shiver creep over her supple figure. "I was down to Boston yesterday, Miss Caroline," Seth continued, carelessly.

"Well, I suppose Boston is as well as usual," the lady replied, with a poor attempt at facetiousness.

"Lively as ever," Seth responded. "I run up to the West End to see how Colonel Lovell was getting along. I always like to call on him whenever I get the chance."

If Miss Caroline imagined that Seth was going to volunteer any more information she was certainly disappointed. After a pause of a few seconds, she remarked, with apparently very little interest in what she was talking about: "I suppose the colonel is still improving? At least, I've been told he was doing very well."

"Oh, they are all fools," Seth replied, angrily. "The colonel can walk round his room a little with crutches, and that's something he never expected to do. Just think, twelve years, Miss Caroline, without walking a step, I tell you that last Bull Run give him a dose."

"Isn't *that* better?" the lady inquired, crossly, the blood coming back to her face in a great surge. Some emotion must manifest itself, and, as sometimes happens, in cases where there has had to be great repression, anger is the first to come forward.

"That's better as far as it goes," said Seth; "and the colonel's general health is very bad, and the doctor says if he don't have something to rouse him from the awful fix he's got into, he's a goner. He looks fearful, Miss Caroline. His eyes are as big as saucers, and he's as pale as a ghost."

"Well, we have all got to be ghosts some time," the lady answered, after another pause, and with an assumption of heartlessness which was utterly foreign to her nature.

"I shall be obliged to you, Seth," she continued a moment after, "if you will ask John to saddle Nero. I will be ready in ten minutes."

"You're done it, Seth Smith," said Huldah, in a rage, as her mistress walked out of the kitchen and closed the door. "Going to ride Nero? I don't believe the Old Harry himself has got a horse in his stable that'll come up to Nero for viciousness. If you'd only held your tongue she'd have helped me make some cake, and been as peaceable as you please. Now she's all worked up."

"I'm glad of it," said Seth. "It's time somebody was worked up, and if you could see the colonel you'd think so, too."

"But ain't the colonel as much to blame as Miss Caroline?" Huldah inquired; "and more too. Didn't he break the engagement himself?"

"Yes," said Seth, "of course he did. 'Tisn't likely an honest, square-minded man like Colonel Lovell, would expect a woman to stick to an engagement with a cripple for life, is it? But I'm just as sure as if I'd heard him say so, that he never thought Miss Caroline would take him at his word. She thinks he wanted to get rid of her, so there's a pair of idiots together."

Seth went out to the stable, saddled Nero, and brought him round to the front of the house. Miss Caroline had a scarlet spot on each cheek, as she walked down the hawthorn hedged path to the gate where Seth waited.

"John wasn't anywhere round," said Seth, apologizing, quite humbly, for doing the lady a kindness; "and so I brought the horse round myself. Shall I give you a mount, Miss Caroline?"

"Yes; thank you, Seth," she replied, springing at once to the saddle, and while her companion held the snorting and impatient Nero, Miss Caroline drew on and buttoned her gauntlet gloves.

"I don't know but this beast will be the death of you some time, Miss Caroline!" Seth remarked, as he stepped out of the way of the dangerous hoofs.

"Oh, well," the lady replied, "if he is, there's one good thing, there won't be any one to care very much about it."

This was said with a child's petulance, but the tender look in the deep, gray eyes, and round the lips, which would tremble in spite of all her efforts, touched her companion to the heart.

"Seth," she broke out again, before he could collect his wits to reply, "you are always talking to me or of me, which means the same thing, only it is vastly more disagreeable, about Colonel Lovell, and as if I were in some way responsible for all that has happened to him. Now, I want to tell you one thing, and I hope you will remember it sufficiently to spare me in the future, and it is this: I am no more to blame for Colonel Lovell's being alone and unhappy either in the past or in the present time, than I am for the wounds which have made him an invalid all these years. If he had allowed me, I should have been with him, not as a duty, but because I couldn't be anywhere else in any comfort; but I could not force myself upon Colonel Lovell, Seth. You have heard, of course, that he broke the engagement. I have given everybody to understand this, because I could not allow my friends to suppose that I would be mean enough to desert him in his great affliction. Since this cruel letter, Seth, by means of which he broke his promise and mine, he has never sent me a message or written me a line. Now, do you think you understand the case enough, Seth, to stop speaking of Colonel Lovell to me?"

These last words rang out in such a wail of anguish, that Seth's eyes filled with tears. Miss Caroline gave him no time to reply, for she took up her reins, and Nero and his rider were off like the wind. It wasn't but a few moments before she came galloping back over the meadows, and through the orchard, and so up to the kitchen-door.

"Where's Seth?" she asked of Huldah, reining Nero in with difficulty.

"He didn't come in again after he took the horse round," Huldah replied, and, before she could say any more, Nero was wheeled around and bounding off in the direction of Seth's cottage, a quarter of a mile up the hill.

All that day Miss Caroline was restless and nervous. She was obliged to return without finding Seth, and so she wandered up and down the great house without any apparent motive except to kill time, and when Huldah asked her if she wouldn't help her with the cake, she replied that there was cake enough in the house, and half an hour afterwards entered the kitchen, with her white cooking apron on, to try a new rule.

That evening when Seth came round, Miss Caroline sent for him to come to the library.

"I never thought this morning, Seth, to tell you," she began, with averted face, "that what I said at that time was in the strictest confidence. I rode back to try and find you, for I began to be worried five minutes after I left you."

"I hope you don't think I would ever do anything to hurt you, Miss Caroline?" Seth replied, deprecatingly.

"I didn't think you would *intend* to, Seth," the lady explained, "but I didn't know but your desire to do me a service might render you indiscreet. You understand now, Seth, that your lips are always to be sealed in regard to *that* foolishness?"

"Yes, Miss Caroline," Seth responded. "I'll never speak another word about it as long as I live, unless you give me leave," and here the interview ended.

Seth made desperate love to Huldah the remainder of that evening, every once in a while bursting out into the most unexpected fits of laughter, and these spasms were so contagious that Huldah found herself joining in, without an idea of what she was laughing about.

"Say, Huldah," Seth remarked, just as he was leaving. "I want you to promise me one thing."

"I'll see," said Huldah.

"I want you to give me your sacred word of honor that if Colonel Lovell and Miss Caroline ever get married, you'll marry me the same day."

"Lor, yes!" Huldah laughed, "and I'll do better than that, Seth. I'll promise to be your wife the day Colonel Lovell steps foot into this house, or the day Miss Caroline steps foot in his."

"All right," said Seth, "but suppose he is brought in, instead of stepping in?"

"I don't care a hang how he comes," Huldah replied, "but that day shall see you and me one, and I'm safe enough in promising it, too, Seth Smith."

Seth walked off still laughing, and Miss Caroline, as she sat before the library fire, felt more alone than ever. Within the past five years her father, mother, and sister had been taken away by death, and to-night of all nights since those terrible events, she seemed to herself most wretched and lonely.

The next day but one was Thanksgiving, and Miss Caroline nerved herself to meet this holiday with all the courage and philosophy she could bring to her aid. There used to be great feasting and merriment in the Wyndham mansion on such occasions, but the mistress of this beautiful home could not bring herself yet to open its doors for the old-fashioned hospitalities.

"I was in hopes you wouldn't cry to-day," said Huldah, Thanksgiving morning, as her mistress entered the dining room. "Goodness me! my muffins are as light as feathers, and the coffee is unusual good, and seems to me this last ham we cut beats the rest all holler! Now, I'm going to broil you a nice bit of tenderloin. Say, don't cry—there's a dearie!" and Huldah patted Miss Caroline's shoulder and wept herself, as she tried to comfort her mistress. "You're got a heap to be thankful for, Miss Caroline, after all," Huldah added, with a little protest in her voice.

"Yes, I know it," replied Miss Caroline, wiping her eyes. "I have muffins and ham to be thankful for, and a little more money and land than my neighbors," she added, bitterly, and then: "I don't mean that I haven't anything, Huldah, for as long as I have you, I can't be quite desolate."

"Good gracious!" exclaimed Huldah. "I've got a lump in my throat as big's a loaf of bread!" and, as she left the dining-room, "You know, Miss Caroline, that when I get to sniffling there ain't no stopping me."

Miss Caroline went to church that morning, and as she walked up the aisle to the Wyndham pew, there were no traces of tears on her face, and her bearing was as proud and queenly as if, as many thought, her wealth and position entirely satisfied her. After the service was over she greeted her friends and acquaintances kindly, and then got into her carriage and was driven quickly home.

"Perhaps it would have been better," she moaned to herself, in her great loneliness, "to have taken somebody home to dinner with me. But how could I make them happy with this heavy heart of mine?"

When the carriage stopped at the front gate, Seth was on hand to open the door.

"Good sermon, Miss Caroline?" he asked.

"I don't know, Seth," she answered, "for I believe I didn't hear a word of it."

"That's a pretty way to go to church!" her companion laughed, and added, carelessly, "Say, Miss Caroline, you've got company to dinner to-day."

"How many?" the lady asked, in an absent sort of a way.

"Only one, Miss Caroline," Seth replied, "and he's making himself easy afore the library-fire. You needn't be in a hurry, if you've got any fixing up to do."

Just here Seth dodged round the corner of the house, and when Miss Caroline called upon him to come back he didn't reply, and the lady walked into the house like one in a dream. Very slowly and deliberately she removed her things, and then stepped into the parlor, which room communicated with the library. The folding-doors were partly open, and the first thing that met the lady's longing eyes were a pair of crutches standing in an angle of the mantel. A little further, and there, in her favorite lolling-chair, reclined the man whom all those long years she had so faithfully loved. Her step was as light as a fawn's, but Colonel Lovell heard it, and was prepared for her coming. Stepping behind his chair, Miss Caroline placed a tender hand on each of his cheeks, and kissing his forehead said, softly, between a sob and a laugh:

"My dear, I thank God you have come at last."

Kneeling beside him with her fair head on his breast, and his loving arms round her, the colonel said: "Seth brought me to dine with you. Did you know it, my darling?"

"And you shall never, never go away," Miss Caroline replied; "until you are strong and well again, and take me with you."

"Shall I not?" he answered. "Do with me what you please, and God knows I shall be satisfied."

Just here there was a knock on the door, and Seth and Huldah entered arm-in-arm.

"I just come up," said Seth, with his usual promptitude; "to tell you that Huldah and me wor going to be spliced this afternoon, and to ask you if the parson mightn't just as well kill two birds with one stone?"

Miss Caroline lifted a blushing, laughing face to her lover's, but replied quite clearly: "It seems to me that would be an excellent plan!"

"Is it not a shame?" the colonel began—but a little hand was placed over his mouth, and the sentence was never finished.

"Well, Seth has come it over me this time awful," said Huldah; "but I gave my word, and I can't go back on it."

"You were wiser than I, Seth," said Miss Caroline; "and I shall be grateful to you as long as I live."

"And I," said the colonel.

That evening there were two weddings at the Wyndham mansion.

Did the colonel get well?

Of course he did.

THE UTE TROUBLES.

THE WHITE RIVER AGENCY AFTER THE MASSACRE.

AS a matter of historic interest, we give on page 239 a map of the White River Agency Farm which has acquired such general notoriety in connection with the massacre of the Indian Agent Meeker and the subsequent troubles with the Utes. Our special artist and correspondent, in his description of the farm, says: "A year ago, when the writer last visited this agency to make a treaty with this tribe for the Ute Peace Commission with which he was connected, the agency was some fifteen miles up the river at the mouth of a large cañon. The occupation of this valley, which contains some 300 acres, for agricultural purposes, was then mentioned by Mr. Meeker, and fiercely opposed by Jack

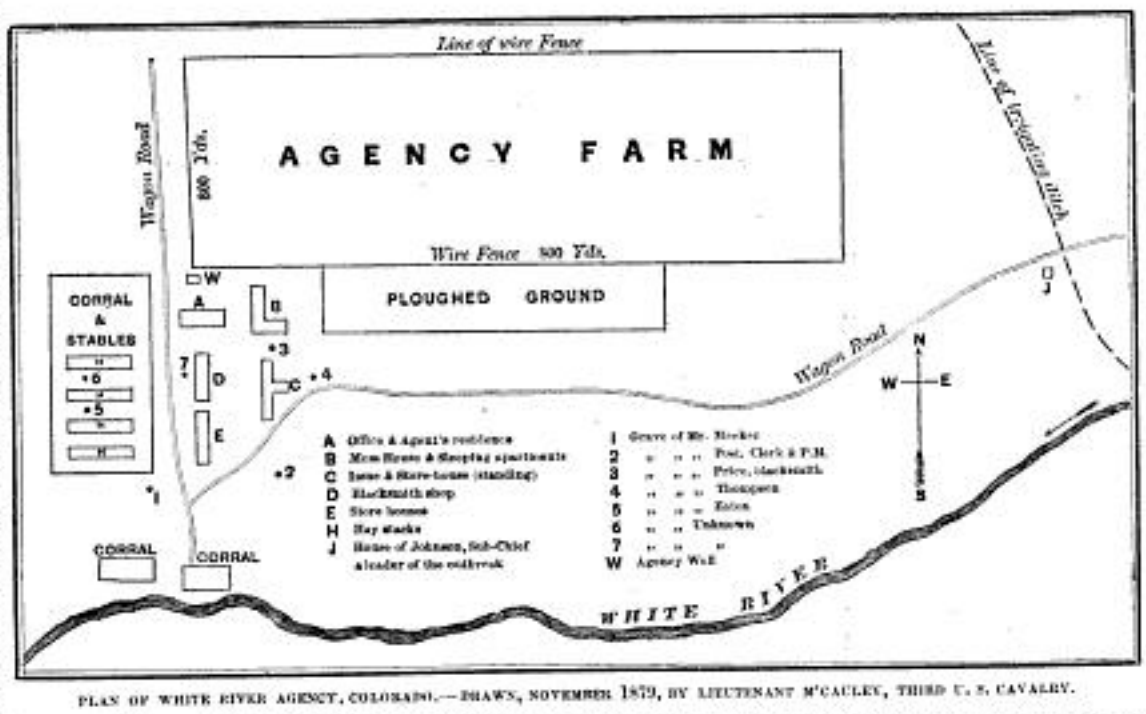
Digitized by Google

and other chiefs. After the conclusion of the treaty they entered against it a strong protest which they wished to have stated to the 'Great Father.' The removal was consummated during the past Summer, the Indians maintaining constant opposition. In this a squaw named 'Jane' was foremost, seconded by Johnson, a sub-chief and bad man, to pacify whom Mr. Meeker had a log-house built near the farm. Jane's ideas of farming were rather 'mixed'—somewhat communistic, in fact. Mr. Meeker stated last Fall that in the Spring she had planted some potatoes in the river bottom, and going away with her chief, hunting, the employés had attended to them all Summer and had gathered a good crop, for which, on her return, she *demanded and received payment*. From the letter of Miss Josephine Meeker just published, we learn that Jane was the instigator of the late troubles at the farm. While breaking the 'plowed ground' seen in the plan, Johnson shot at the employés and work was in consequence stopped. The mow and storehouse (C) and the house of Johnson were the only buildings not burned."

The illustration of the ruins of the White River Agency, on page 245, presents a vivid idea of the utter desolation of the place after the fire and massacre by the Utes. The scene on the arrival of the troops under General Merritt, practically beggared description. Our correspondent writes:

"Everywhere murder, theft and arson had held high carnival. Many of the savages, it appears from the narrative of Miss Meeker, were drunk at the time of the outbreak, having obtained arms, ammunition and whisky from white men trading secretly on the reservation. The Agent and employés were forced from cover by the murderous redskins, who set all the buildings on fire except the one which is seen standing in the picture. Escaping and fleeing towards the timbered river bank, nearly in the south, they were shot down and stripped of their clothing. The troops buried them as they were found, making headboards and inscriptions thereon, as best they could without tools, of the remnants of old lumber. The corpses had lain exposed for some time, and some of them had been mutilated by wolves and coyotes. The scene affected even the stoutest hearted soldier, and an advocate of a peace commission would have ill fared with his comrades. Huge piles of ashes, charred timbers, broken and burned machinery and farm implements, remnants of the ladies' sewing machines, crockery that rivals in antique appearance the Di Cesnola Collection, melted glass from the store of medicines, broken stoves and household ornaments of the Meeker family, the locks of Winchester carbines, used in killing cattle; slates and slate-pencils, for use at the schools; table cutlery, coils of wire-rope, for the fence about the farm; great saws, blacksmithing tools, and a thousand articles lie around, charred, bent or burned in a general wreck. Scattered about here and there are the graves of the murdered men, making the scene utterly horrible. Standing solitary and alone is the large house of issue. It was spared solely because the Indians wanted its contents. When they could no longer carry flour away, and the troops were advancing, they sacked the building and emptied the flour over the floor and the ground without, bestrewing it with filth. The vegetables and crops are still upon the farm, awaiting a gatherer. Instead of the harvest of peace the harvest of death has come, and cruel barbarism has swept all civilization away."

On page 244 we give an illustration of the residence of Johnson, a prominent leader in the Ute outbreak. "He shot at the employés while plowing, some 300 yards below his house, and thus stopped farming operations. Outside the farm, which was inclosed with a wire fence, Johnson had, also, a fine corral for his ponies, etc.—being honored more than the rest of the tribe—in order to pacify him. When he signed the treaty made for the Ute Peace Commission last Fall, Mr. Meeker was greatly astonished, and told the writer that it was the only paper he had signed since he had been in charge of the agency. Johnson is the incarnation of savage treachery, and, as now appears, most brutally assaulted Mr. Meeker in his office three months before the outbreak, knocking him down and trampling upon him."



We present, also, an illustration of the residence of Ouray, where the Peace Commission to settle the Indian troubles has been in session. "This Commission consists of General Edward Hatch, U. S. A., for the War Department; General Charles Adams, Interior Department; and Ouray, chief of the Tabequache Utes, on behalf of the Ute Nation. The ranche, or home, consists of a large farm in the valley of the Uncompahgre River, nine miles above the 'Los Pinos' or Uncompahgre Agency. There are eight buildings in all, constructed mainly of adobe or mud bricks, with dirt roofs, excepting the residence of Ouray himself (Fig. A in the picture), which has a fine roof of shingles. This building has several rooms well furnished, carpeted, etc. The chief employs upon his large farm a number of Mexican laborers, who also have the care of his stock, consisting of sheep, horses, etc. In traveling through the country, to and from the railroads, he uses a carriage which was presented to him several years ago by Governor Mcllook, of Colorado. Upon a large area under cultivation, he produces quantities of corn, potatoes, etc., for which he has a number of storehouses contiguous to his residence. Ouray speaks English well, and Spanish fluently, the latter being his favorite language with visitors. He is a born leader of men, is a natural orator and of great ability, and well known as the best living friend of the whites among the Indian race. He is, moreover, wealthy and has a bank account in Denver."

Two additional illustrations on page 244 represent incidents of the campaign—a Government scout, and the ubiquitous correspondent of the New York *Herald*, who caught up with a party with which the writer was traveling, all en route to "the front." Armed like every one else in this "bad lojus country," he rode by in blissful ignorance of the immortality awaiting him in the columns of FRANK LESLIE'S ILLUSTRATED NEWSPAPER.

"Pending the labors of the Peace Commission, whose decision will scarcely be known before the latter part of November, by which time the mountain trails will all be blocked with the snow, and the hostile Indians, in scattered bands, be secure in remote mountain fastnesses, subsisting on game and flour stolen from the agency. Pending the long waiting, General Merritt keeps up a ceaseless watch, not being allowed by his orders to pass south of White River. Picket posts and stations of cavalry and infantry surround the camp in all directions. The Indians are on the lookout as well, their advance picket being within twelve to fifteen miles of the troops, while daily they may be seen at an afternoon hour in bold relief against the clear sky upon a mountain summit about nine miles distant from our own stations. All movements they signal by puffs of smoke and in other ways, having a regular signal code."

GENERAL WESLEY MERRITT.

GENERAL WESLEY MERRITT, colonel of the Fifth Cavalry, graduated from West Point in July, 1860. He was made a captain in the Second Cavalry in April, 1862, and on June 29th, 1863, was appointed brigadier-general of volunteers. During the Pennsylvania campaign, of that year, he was in command of the Reserve Cavalry Brigade, participating in the battle of Gettysburg, July 3d, and in the pursuit of the enemy to Warrenton, Pa. For gallant and meritorious services at Gettysburg, he was made brevet major. From November, 1863, to April 19th, 1864, he was in command of the Cavalry Division, Army of the Potomac, taking part in the operations in Central Virginia during that period. In the Richmond campaign he commanded the Reserve Cavalry Brigade, and had a part in "Sheridan's Raid" and all the important engagements of that year. Made brevet lieutenant-colonel, in May, 1864, he was, seventeen days later, appointed brevet colonel, for gallantry at the battle of Hawes's Shop, Va. Later, he had charge of the Cavalry Division in the Shenandoah campaign, participating in the encounters at Stone Chapel, Cedarville, Kernanstown, Bunker Hill, Opequan Creek, Luray, Cedar Creek and other points. In the final campaign against Richmond he was at the head of the Cavalry Division, and in March, 1865, was made brevet major-general, United States Army, for "gallant and meritorious services during the campaign ending with the surrender of the insurgent army of Northern Virginia." Subsequently he served as chief of cavalry of the Military Division of the Southwest, and was for a time in command of the cavalry of the Department of Texas, and the Military Division of the Gulf. In July, 1866, he was made lieutenant-colonel of the Ninth Cavalry, and ten years later, in June, 1876, was appointed colonel of the Fifth Cavalry, which have borne so honorable a part in the recent Ute disturbances. Few officers have a finer record than General Merritt, and it is quite certain that if he shall be compelled to fight the malcontent Indians, he will strike with a decision and force which will compel speedy submission.

PLAN OF WHITE RIVER AGENCY, COLORADO.—DRAWN, NOVEMBER 1879, BY LIEUTENANT M'CAULEY, THIRD U. S. CAVALRY.

The National Finances.

THE annual report of the Treasurer of the United States shows the aggregate of coin and bullion to have increased from $61,452,456 in 1876 to $114,464,392 in 1877, to $161,909,444 in 1878, and to $222,867,368 in 1879. The decrease in the aggregate note assets is shown to have been gradual, as follows: In 1876, $98,419,685; in 1877, $107,664,287; in 1878, $88,772,980, and in 1879, $59,699,090. A statement of the assets and liabilities of the Government, October 31st, 1879, shows the following aggregates: Assets, $274,867,374; liabilities, $123,820,330; amount available for resumption, $151,047,044. Accompanying the Treasurer's report are statements by the Assistant-Treasurer at Boston for the fiscal year, and at New York for the nine months ending September 30th, showing the transactions of their respective offices. At Boston the receipts were $110,003,925, and the disbursements $102,301,116. At New York the receipts were $1,080,303,566, and the disbursements $926,702,915. The transactions with the National banks of New York, on account of refunding of the public debt, are shown to have involved an amount of $2,650,638,300.

The aggregate of the estimates for expenses of the various departments of the Government for 1881 is $136,347,129. The total amount appropriated by Congress for the current fiscal year was $102,404,648, which included $25,000,000 for arrears of pensions, and about $3,000,000 for the District of Columbia. No estimates for either of these purposes are submitted in the book of estimates this year.

Cetewayo Sits for his Photograph

THE following account of the photographing of Cetewayo on board the *Natal* is furnished, by the operators, to a Cape Town paper: "Having placed everything in readiness, we informed the King through his interpreter that we were ready, and received the answer that the King was 'going to sleep' and did not wish to be disturbed. After a while we could hear him speak, so we once more informed him that we were waiting for him. He did not seem inclined to appear, and Captain Poole thought it best to give him some inducement to do so, which was accomplished by catching a fish. This made him come out at once, and after some palaver the King was persuaded to seat himself near the compass, with his back against the rudder-wheel. He appeared to be very nervous and requested that it might be done at once in order to have it over. He seemed to dread the camera and did not like the look of the lens. We succeeded, however, in getting our first double negative. He was more at ease when he found that it was done without his being hurt; but, in order to show him what we were doing, Commander Caffyn showed a photo of Umbulazana to Cetewayo, at which he seemed pleased, and at once disrobed himself of his blanket to show his figure, of which he appears to be very proud. We succeeded in taking a second double negative, and then he stoutly refused to have any more taken. We were at that time not certain of success, as the ship was rolling; it was raining all the while, and our negatives were finished only partially in order to obtain as many negatives as possible while the King was in a good mood. After that came the King's wives; they appeared eager to be photographed, and after they had been placed in position we requested the King to sit in the centre of the group, which he declined to do, saying that he had to undergo it alone and they would have to do the same. Upon his being told that we wished to have him in the middle, he answered that we could cut the photos and then place him wherever we liked. He would not sit again, so we contented ourselves with taking two more double negatives of his wives while he was smoking his cigarette, and this finished our day's work, leaving the King on deck trying his hand at fish-catching."

Japanese Ingenuity.

JAPAN is equal to Yankeedom in ingenuity. An English patentee sent a Jordan rock-drill to the stone quarry region of Iinkasima, where its success promised large orders for more. On a visit to Nagasaki fair he was amazed to find an exact copy of his machine, perfectly constructed, with information that a great many of them were made at the Government works in Akemonan for ten per cent. of his price. We get from this an idea that may check extravagant calculations of our manufactures of any kind finding an extensive market in the East. Japan will, no doubt, supply all Asiatic ports after this fashion. Moreover, the Japanese are given to improving on our make. When Commodore Perry presented a box of Sharp's rifles to Japan our Government quickly received in return a like box from Japan, supposed to be the same rifles not accepted. But Mr. Sharp instantly perceived a great improvement, which he had tried for years to invent without success.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Off to Siberia.

A few weeks ago we gave a view of a batch of Nihilist prisoners on their way from the State prison in St. Petersburg to exile in Siberia. Thousands of prisoners have thus left their homes this year for that dread northern clime, and during last Summer so fewer than 10,417 were drafted off to Siberia from the Central Prison of Moscow, which appears to be a species of depot for political exiles. In leaving large cities like St. Petersburg, prisoners are chained with their hands behind their back, except in the case of men marked "dangerous." These have to wear leg-chains of four pounds weight all the way. Nobody may approach them.

The Floods in Spain.

On the night of October 14th the rivers Mundo and Segura, swollen by heavy rains (and, it is also thought, by a large waterspout, as the water was slightly saline), flooded the populous and fertile valley in the province of Murcia, in southeastern Spain, destroying villages wholesale, wrecking crops and farms, and converting the plain, for a stretch of thirty leagues, into a lake. The towns of Murcia, Orihuela and Lorca were invaded at night by the waters, which extinguished the gas, overwhelmed churches and houses, and by its sudden onset created a perfect panic. The authorities attempted to grapple with the disaster without delay, and at once took steps to rescue the inhabitants by torchlight, and to provide succor and shelter for the sufferers, temporary accommodation being provided in the public buildings and the Bishop's palace, while boats collected persons who had fled to the upper stories. The King at once proceeded to the scene of the disaster, and distributed large sums of money to the sufferers, and large subscription lists were at once set on foot throughout the country, the appeals being readily responded to by all classes.

Return of the Amnesties.

The last vessel from New Caledonia with pardoned Communists on board was the *Calvador*, which has transported to Port Vendres the greater part of the whole number amnestied. The engraving shows the dock of the lower battery, where a kind of cage-work was erected for the more hot-headed men whom, it was feared, might attempt a revolt during the passage. Upon their arrival at Port Vendres, as at Paris, the men were received with marked demonstrations by relatives, friends, and politicians.

The Royal Spanish Wedding.

The ceremony of demanding the hand of the Archduchess Christine, of Austria, in marriage with King Alfonso of Spain, took place at Vienna on October 21st, at the imperial palace. General Duke de Bailen, a grandee of Spain of the first class, was the envoy extraordinary of the King, and, after a variety of court ceremonials, made the demand of the Archduchess. On his return to Spain the Duke received the Grand Cross of the Order of St. Etienne.

AT HOME AND ABROAD.

—THE Belgian Government has purchased the railway from Antwerp to Rotterdam.

—CALIFORNIA apples are being exported to New Zealand, where they are preferred to those from other quarters.

—Two hundred and thirty-three more immigrants from Germany, Austria and England have arrived at Galveston, Texas.

—THE German Minister of War has ordered a survey of the Baltic coast, to report what additional defenses are necessary.

—MONDAY, November 17th, was the five hundred and seventy second anniversary of the declaration of independence of Switzerland.

—THE King of Belgium has offered a prize of 25,000 francs for the best essay on "The Development of the Commercial Relations of Belgium."

—THE tide of immigration now pushing into Kansas in wagons is larger than ever known before. They are destined for Western Kansas principally.

—THIS year's crop of Louisiana sugar will realize $25,000,000 to that industry in that State, and it is expected that next season will see plantations in cultivation that have been waste places for years.

—IT is estimated that the net receipts from cotton sold in the Southern States during October will amount to from $8,000,000 to $10,000,000 more than was realized during the same month last year.

—THE Agricultural Bureau reports an improvement in cotton during October, but the yield will only be 176 pounds per acre compared with 191 last year. The wheat crop will be 26,000,000 bushels larger than last year.

—THE former Confederate cruiser *Shenandoah* has sunk off the Island of Socotra, in the Indian Ocean. The date of the disaster is unknown. Most of the crew were drowned. The *Shenandoah* belonged to the Sultan of Zanzibar.

—ANOTHER large mill to manufacture several varieties of cotton cloth is projected in Augusta, Ga., and large subscriptions to the stock of the company have already been made. Augusta promises to become the Lowell of the South.

—THE practicability of establishing an ocean route for trade purposes from Fort Nelson in the Northwest Territories to Europe, by way of Hudson Straits and Bay, is likely to receive the consideration of the Dominion Government.

—IN all, forty-nine Afghans have been hanged for complicity in the massacre of the British Embassy. It is reported that trouble is apprehended in the Ghilzai country. One of the Khans and his brother are inciting insurrection in Kohistan.

—IN 1878 Nevada yielded, in round numbers, $35,000,000 in precious metal; California, $19,000,000; Utah, $6,000,000; Arizona, $2,500,000; Idaho, $2,000,000; British Columbia, $1,400,000; Oregon, $1,200,000; Washington, $100,000.

—SHIPBUILDING on the Clyde appears to be lively. The Compagnie Générale Transatlantique have ordered ten new steamers, eight of which are to be constructed on the Clyde. All are to be of about 1,700 tons burden, 360 feet in length, and have engines for a very high rate of speed.

—GOVERNMENT schools for practical military instruction of officers of infantry are to be opened, January 7th, 1880, at Toronto, Montreal, Quebec, St. John's and New Brunswick. They are to be maintained during a period of two months, provided enough candidates come forward for instruction.

—A LOCAL revolution has occurred in Chihuahua, Mexico, against the State Government. The Pronunciados have occupied the capital and captured the Governor with all the State officials. General Trevino, at the head of the necessary forces, has left Saucatecas, and is marching on Chihuahua to put down the revolution.

—AFTER being closed for five years the oldest, most famous and most lucrative iron works in the British empire have been set agoing by Messrs. Crawshay at Merthyr Tydvil. This is a tremendous event in the principality. Mr. Crawshay, who died some months ago, vowed that he would never reopen the works on account of the misconduct of his men in trying times.

—THE report of the year's work by the United States Fish Commission shows that great progress has been made in distributing the German carp through the Southern States; the pole-flounder and tile-fish have been added to the food fishes of the Atlantic; and the experiments in hatching codfish have been so successful that the Commission hopes to restock the waters of New England coast, and also to extend the range of the cod a long way toward the South.

—IN his annual report Postmaster-General Key recommends to Congress to appropriate the necessary funds to enable him to make contracts with American steamship lines for carrying mails to the West Indies and the Spanish Main. He says that his reasons for doing this are primarily to promote American commerce, encourage American shipbuilding, and establish such postal facilities as will bring the countries named into closer relations with the United States.

—THE more prominent landlords in Ireland are recognizing the difficult positions occupied by their tenantry, and among the number is the Earl of Rosebery, who has published a notice to his tenantry remitting twenty-five per cent. from their rents. It is believed that a satisfactory adjustment of the Irish land question is in progress, and that the Government is more ready than ever before to co-operate with the landlords and the Irish members of Parliament to effect this result.

—IT is assumed by the Director of the Mint, in his annual report, that the annual consumption in the United States of precious metals in all forms for manufacturing purposes averages seven millions of gold and five millions of silver. The total amount of gold coin in the country on the 30th of June last is estimated at $286,490,678, and of silver, $112,050,985. Since the close of the last fiscal year to November 1st, the imports of coin and bullion and the domestic coinage have increased the amounts to $300,750,497 gold and $121,456,355 silver.

—THERE was recently on exhibition at Portland, Oregon, a botanical wonder, known as the "baby plant," and said to be indigenous to Japan. The flower is star-shaped, having five petals of a handsome brown-and-yellow color. The calyx encircles and protects a tiny little figure that bears an exact resemblance to a nude baby, its little arms and legs outstretched and the eyes distinctly marked. Hovering over this diminutive form is a small canopy, angel shaped, having extended arms and wings, and peering closely into the face of the infant. The family of plants of which the "baby" is a member produce perfect imitations, if such they can be designated, of different animals, insects and birds. Mrs. Mark Hopkins, of San Francisco, has one of the latter varieties, for which $300 was paid. The plant grows to be about three feet in height, when fully matured, and when in full bloom will look like a shipwrecked hand-ling hospital.

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF MINE."

CHAPTER VII.—THE DOG HOWLS.

"DAT dog he got an awful bark," muttered a portly negress, as she emerged from the great kitchen to the back porch for the twentieth time, and, with a stamp of the foot and a most emphatic growl, shook her fist in the direction of the canine kennel. Her perplexity and disquietude had quite another cause, aside from her own annoyance. The dog might have howled into midnight so far as she was concerned, but her little miss, who had but recently recovered from a serious illness, was fretting her life out—so Desire, the nurse, said—because the dog would howl.

"No use, Aunt Roxy," said a light mulatto, who was wiping dishes at a side table; "dat ar critter knows somethin's gwine to happen. I ain't heerd him take on so since Miss July died."

"Don't be a fool, gal," retorted the cook, "you has your signs for everything, and nuthin' don't happen, after all, out of the sperial way. What's your trust in Providence, I'd like to know? Dogs ain't human critters—how's they gwine to tell when trouble is coming? Shouldn't wonder, though, of 'twas; massa gits wilder an' wilder, an' if somefin don't come to stop them drinkin' bouts, we's all bound to go to de debil togedder. Dar he sets to-night wid Massa Colonel Wilde, drinkin' brandy and playing cards, and de ole house is gwine to rack and ruin. Blessed Lord an' Marster knows Miss Eve got a hard life-afore her, poor lily."

At that moment a distant laugh sounded. It came from the saloon-parlor at the right of the main entrance, where Colonel Lewin and Colonel Wilde sat over cards and wine. The room was long and lofty, richly upholstered with hangings of pale-blue brocade and furniture to match. Colonel Lewin possessed the luxurious tastes of a woman, and though his wife had long been dead, he kept up the style and hospitality of the house, as far as furniture and viands went. Still, comparatively speaking, Colonel Lewin was a poor man, and yearly growing poorer. He had sold the most valuable of his slaves, and from sixty they had dwindled down to ten or twelve, of which nearly half were children.

Colonel Wilde, his intimate and life-long friend, was by far the richer man of the two, yet he did not know of Colonel Lewin's embarrassed circumstances. Wilde was a tall, slender blonde, with slight aristocratic features, a haughty smile and a perfect manner. His voice was very musical, and his words spoken with such precision that one would fancy him a professor of elocution. Colonel Lewin was the exact opposite of his friend, being short, compactly built, his face clean shaven, his eyes black, bright and twinkling, and his talk more careless than his neighbor's. Both were men of fair education and had been born in the purple—that is, to an inheritance of slaves and land. They had, on this particular evening, been talking about the future, dark now with the portents of war. Occasionally a slight cough troubled Colonel Wilde, and when it occurred he frowned, and held his lips tightly, as the exertion cost him a pang.

"You see," he said, throwing down the cards; "I have a presentiment that things are going bad with me. You know how long I have had this cough, and I'm not so strong as I was in the Fall. Don't shake your head—I've had warnings enough. All my family have gone the same way, and I'm not an ostrich to hide my head in the sand and pretend that I don't see. I do know that my doom is settled, and I have only a few years to live at the most."

Then he went on to speak of settlements he had made for his only child, a son. The conversation need not be repeated, only the gist of it, which was that in case anything happened to him, Colonel Lewin was to take the responsibility of Raphael Wilde's education, and to invest certain moneys for him in the North, should any trouble come of the outbreak then pending, or should he die suddenly.

"To tell the truth, I hope my boy will continue his allegiance to his little divinity," he said, laughing. "He inherits his mother's constitution and is as sound as iron. But it is warm in here; suppose we move out to the veranda and smoke there."

The two stepped outside the broad French window, and there found all the appliances of comfort ready to their use. The veranda was fully twenty feet in width, for the house was built by a very rich English exile, something after the fashion of an Italian temple or palace, and neither pains nor money were spared upon its erection. Chairs, tables, divans and footstools were negligently placed around, and no fairer sight could the eye rest upon than the view in the rich soft moonlight, as the friends talked together.

The house was situated in the midst of a fertile, well-wooded tract of land. On one side stood the trees of the forest intact. On the other, one looked down into the heart of a valley, one of the choicest of pastoral landscapes to be seen in the world. Green hills, dark woods and glittering streams; distant stretches of alluvial land, pastures, terraces, bright little rivulets, deep romantic gorges, filled the artistic mind with a pleasure too deep for words.

The clear moonlight brought out into vivid relief the eight Doric columns in front of the portico, the wide stone steps with their marble balustrades, the urns filled with flowers, and, displayed on the wide lawn below, the vases of crystal and marble, fountains, statues, flowers and ornamental *parterres* flaming even now with gorgeous colors. Who would have dreamed that ruin hovered over this palatial house—that before many years, nay, months, its halls might be used by hordes of careless and bitter men, who thought but little of mere ornaments, and laughed to scorn all evidences of an ancestry?

"What a lovely night!" said Colonel Wilde, leaning back in his chair; "ah, what have we here—an angel?"

For at that moment appeared at the French window the portly handsome shape of Maum Desire, and hanging to her clumsy fingers by both small, fairy-like hands, was the slight figure of a child, some nine or ten years of age.

"How came you to bring her down, Dee? She's not fit for the exertion," said Colonel Lewin, as the child stood looking at both gentlemen, with her large, serious, beautiful blue eyes, wider open than usual.

"'Deed, marse, seem's if dis chile's possessed. I can't do nothin' wid her nohow. Fust it's de dog and then it's de moon. But ar dog jes going on howling like's if the bery debil was in he. 'Deed, I'se prayed dat the yeth would open an' swaller him up, or else he'd swaller de yeth—nothing else wouldn't stop him."

"Nonsense," ejaculated the colonel; "let the dog howl, he's talking to the moon, that's all. Come here, Eve—I'm afraid she will catch cold."

"No I won't, papa, only I'm *so* afraid. Old Nance told me that when dogs howled it was a *certain* sign of death," said the child, going slowly forward and nestling in his arms, as he took her light figure on his knee.

"That's the curse of these black creatures," muttered Colonel Lewin, aside; "they fill a child's head with all their ridiculous notions, and spoil them for life, sometimes." Then he added, aloud: "Old Nance knows nothing about it, and you must never heed what she says." Aunt Dee had retreated within the room.

"Oh, but she does, papa; she's the oldest slave in the place; long ago she was a hundred. And she sees ghosts and talks with them, and all sorts of spirits."

"Particularly whisky, which is her favorite drink," laughed her father.

"And she says somebody is *sure* to die when a dog howls like that. There, papa, listen." It certainly was a distinctive, horrible and blood-curdling sound that rang out just then upon the silence; the howl and shriek blended of a spirit in agony.

"Somebody is sure to die, for I'll have Luth killed to-morrow, and so put an end to all his yelping and howling."

"Oh, papa, you mustn't kill Luth! Oh, papa, do not kill him! I love him."

"But we're not going to let him trouble you with foolish and idle fancies, and so make you ill again."

"But I won't mind it—indeed, I won't, papa—only don't kill Luth. I haven't seen him since I was taken sick, and Dee promised me that I should see him to-morrow."

"Very well; if you'll go up to your room and not trouble yourself over the brute's howling, I'll spare his life. But if you fret, I must do my duty. I won't have you worried."

"Papa, I won't mind it any more—indeed I won't—only save poor Luth. I don't suppose he means anything; and I'm sleepy now, I guess; Dee, come and take me."

She sprang from her father's arms as Dee came forward. Her long flaxen tresses, a perfect marvel of luxuriance, shone like silver in the radiant light. Her father let them fall over his arm, as he held it up, and they seemed like melting amber as they slid from his caressing grasp.

"Poor little woman," he said, with a sigh that was almost hopeless, as she disappeared, "no mother to care for her. God help her! These old slaves fill her head with abominable things. I feel like giving old woman Nance a good hiding for her interference, and I'm afraid old Dee isn't much better. But she loves the child to idolatry."

"There is something sinister and unpleasant, if nothing more, in the howl of a dog," said Colonel Wilde, who had been looking on and listening to this little by-play, as he smoked idly. "Say what you will, but just before my wife died, Jenny, our little terrier, lay down before her bedroom-door, and howled and moaned like a lost spirit. Nor would threats or coaxing stop the beast. And then, if you remember the night old Mildmay was killed—it must have been nearly ten years ago—I was waked up in the night by the same horrible noise, and there, under my window, was an immense black dog, and he went on so that I threatened to kill the creature, but my wife would not let me. I remember I threw my bootjack at him, and hit him, too—but he only went off a little ways and kept on howling. Afterwards I heard that it was old Mildmay's dog—and if I had followed the creature the deed might have been prevented. A more harmless, impecunious old fellow than Mildmay never lived, yet it seemed he had his enemies—for he was not killed for gain. I confess I'm rather superstitious myself though I'm half ashamed to own it."

"I'll put Luth in the cellar," said Colonel Lewin, rising, "and then he knows that if he opens his mouth he'll be shot." The two men entered the parlor again, emerged into the hall and passed through the door of a side entrance. A glass door communicating with the kitchen was open, and as they stood there, partially in the shadow, they saw three dusky faces in close proximity, one of which was the withered, ebony framework of old Nance, with its parchment-like skin fretted into a hundred or more wrinkles.

"'Twas jes so afore Miss July died—leave it to my Master in heaven, if it wasn't—and now you'll see—marse'll go next—or else young missee, mark my words. I'se over a hundred, and I knows, chillen."

Colonel Lewin shrugged his shoulders, but nevertheless a quick chill penetrated his veins, though he laughed. Miss July, as the slaves called her, was his wife, and she had died when little Eve was born. He had loved her passionately, and in consequence of his great loss and the shock it gave him, the child had never seemed so welcome or so dear. The men passed out into the yard and were greeted with a peculiarly prolonged howl. Colonel Lewin's face flushed with anger.

"If it were not that my word was passed with Eve, I'd kill that dog for a shilling," he said. Another moment and Luth was thrust growling down into the dark cellar.

CHAPTER VIII.—THEY FIND THE BODY.

THE cigars not being yet consumed, and the exceeding beauty of the night tempting them, the two men walked out into the road, meaning only to take a stroll by what was called the forest-path, a road leading along the outer belt of trees that constituted the forest. This piece of woods, a mile or more in extent, was a part of the family acres, and was called Hood's Retreat, on account of some military chieftain having once lain hiding there during the perilous times of the colonies. The stroll lengthened into a long walk, for the evening was dry and bright, and the path, quite covered with moss and short grass, was softer than the finest carpet.

"There's another abomination," said Colonel Lewin, as he pointed to a high and solemn-looking edifice, which, with its open windows, guiltless of glass, let in the moonbeams on broken rafters, soiled walls and dilapidated staircases. It was the haunted house of the neighborhood. Over a hundred years before, tradition said, a stranger had come to Virginia with a young and beautiful wife, had chosen the most solitary spot in all the neighborhood, and built this house of the most durable materials, keeping his bride at a small hotel while the work was going on. In six months, the house being completed, he furnished it in the most sumptuous manner, and took his bride there. But he never cultivated the neighborhood, and though people lived miles apart, they were very sociable; and the poor young wife, scarcely more than a child, was lonely and heart-sick, in prison, as it were, with her jailer. They were never seen at rural gatherings, never at a church, and, at last, it was whispered about that the woman was insane and the man her keeper. At last people became accustomed to seeing the closed house, and sought no longer to penetrate its secret. Sometimes strange stories were in circulation, as to shrieks having been heard late at night, and one of the hired servants, a slave, by-the-way, of Colonel Lewin's father, told the rest of his companions that he had not seen the missis for a month, nor heard her voice, or heard her spoken of. Suspicion grew apace. The house became an object of attraction, and it was said that at night the space around it echoed with the shrieks of a woman, and that often a bright yellow flame, that had more than once caused an alarm of fire, appeared to envelop the house. Finally it was deserted. No one could tell what became of the owner or his wife, as she had been called, till, in one of the terrible gales, a chimney was blown down, disclosing the fact that it had harbored the skeleton of a woman—for how long no one could tell. The fact sent a shock of horror throughout the neighborhood, and since then the matter, as before, had been shrouded in mystery, and, of course, the house had a reputation.

"They ought to pull it down," said Colonel Wilde.

"I've thought so, sometimes, and wondered if they might not find another skeleton," said his friend.

"What—of the man himself?"

"It would not be strange," said the colonel.

Tempted by the moonlight, they still moved on past the shadows of the trees, emerging into the open road with fields well cultured on either side. A rather high stone wall, such as is not seldom seen in that part of the country, jagged and uneven, ran for several rods at their left. The moonlight fell into canyons, clefts and fissures, making, under the pencilings of the full-leaved boughs that hung above them, some pretty traceries, which Wilde stopped to admire, while Colonel Lewin sauntered on to the turn in the road. All at once a cry of: "My God, come here, Wilde!" went through his brain like the sharp crack of a rifle. He threw away the still burning end of his cigar, and ran forward till he came up with his friend. There both men saw, lying prone on the ground, a motionless figure with dull white face turned to heaven. The marks of a struggle were discernible. The man's pockets were turned inside out, the hands were clinched tightly, and the face wore a resolute though somewhat ghastly, look.

"There has been murder done," said Colonel Lewin, his hand under his vest, for he always went armed.

"Murder most foul!" repeated the other, kneeling down. "The man was beaten about the head and temples; he must certainly be dead. Do you think there's any life, Lewin? See, here is the instrument with which it was done—a sharp rock taken from the fence."

"He is dead—must have been dead for an hour or two; and, by the heaven above us, I know the face! 'Tis poor Ben Lake, the peddler. No doubt he was on the way to Lewindale. Poor fellow!—poor fellow! Who could have done it, Wilde? He was as brave as a lion—the most fearless man I ever met; and always went armed. I feel as horror-struck as if I had killed him myself. What's to be done?"

"It's miles to the sheriff's," said Wilde, still surveying the spot, "but you can get some of your negroes to saddle up and go over. I hate to leave the poor wretch alone here; but, of course, no more harm can come to him, and it's our duty to have the matter come to light as soon as possible, that the country may be scoured. Well, such a thing as this hasn't happened since poor old Mildmay was killed ten years ago—we were talking about it, you know. Ought we not to start back as soon as possible?"

Imagine, if you can, the dumb, intense agony of Flix, who, startled by the sound of fresh voices out of his almost death like stupor, and finding himself still unable to move or speak, heard the footsteps move off again, leaving him alone with the dead. It could not be, he said to himself, that God would desert him utterly. They must, in common reason, search the place where this foul deed had been done, as soon as the proper authorities were found. It seemed an age before he heard the coming of rapid hoofs down the road.

The moon had nearly gone quite from his narrow bed, but he saw the flames of torches held high, and heard the confusion of darkie dialect, as the horses were reined in for a moment, that one brief sight of that terrible face might be obtained. These went past, but were soon followed by a multitude of footsteps, clamorous voices and the strong light of a dozen torches.

The news was traveling fast, and there were negroes, men and boys, from the farms adjacent to Lewindale and Eagle Crest, Colonel Wilde's place. A strange tumult it was, with the glare of the red light painting the stones, the trees, the road, and falling fairly upon the upturned, living face on the other side. It did not seem long before horses' hoofs were heard again, and this time it was the sheriff and others from the town just below. The corpse was again surrounded. Flix heard them order the body laid upon a board and to be taken to the court-house—heard expressions of astonishment, sorrow, anger, but never a face peered over the stones. It seemed to be taken for granted that the murderer had escaped, and plans were laid for his detection; no one seemed to think he might be lurking in ambush. Indeed, the principal actors appeared to be actuated by a desire to get away from the place as soon as possible.

Flix closed his weary eyes from the light of the torches, and would have groaned if he could, but the power was still denied him. The murdered man was carried off, the negroes dispersed, horse hoofs and footsteps grew fainter and fainter in the distance; the shadows of night, brightened by no light either of heaven or earth, fell denser and darker, and Flix tried to give himself up to Death composedly.

(*To be continued.*)

THE COLORED FAIR AT RALEIGH, N. C.

RALEIGH, the "City of the Oaks," is the thriving capital of North Carolina. "Pefo' de waw, sah," her population was but 4,000; to-day it is close upon 13,000. "Beto' de waw, sah," she sent forth, annually, but 300 bales of cotton. This year she will have passed through her various railway depots over 50,000 bales. "Befo' de waw, sah," two drays sufficed for her carrying purposes; now one hundred and sixty are all too little. And to Raleigh is due the credit of organizing the first colored fair ever yet held in the sunny South. The artist and I struck Raleigh, *via* Baltimore and Norfolk. The *menu* on board the Bay Line steamer, *Florida*, would send a London alderman into apoplexy; and I may mention that we had our choice, for one dollar, of bluefish and bay mackerel, of roast turkey and broiled beefsteak, of wild duck, venison, robins and partridges; of oysters fried, escalloped, stewed, raw, broiled, and of terrapin stew, with other fascinating adornments, including chicken and oyster salads, wine, jelly and ice-cream. "Not a bad bill of fare, my Lord Ogleby!"

Raleigh is chiefly composed of a Main Street, rich in a brand-new post-office—the janitor of which, by-the-by, nominated Mr. Hayes for the Presidency—filled to the brim with Republican officials, to the gnashing of the teeth of the solid out-in-the-cold Democrats—and in rare old elms. This street, about half a mile long, is bounded on the north by the Capitol, situated upon a gentle slope; and on the south by the former gubernatorial residence, styled "the palace," now a normal school. Raleigh boasts of three iron foundries and one boiler-shop; of ten churches for white prayers and seven for colored prayers, while even the Jews rejoice in the possession of a synagogue. Education is laid on at high pressure, 1,080 white and 1,090 colored children being on the school-lists. The city is presided over by a mayor and a board of aldermen, one of whom was the body-servant of Jefferson Davis, and with him to the memorable surrender. There is a chief of police and ten constables; a health officer, a street superintendent, and a street force of twenty laborers. The city is lighted with gas and gasoline, a light that merely serves to make darkness visible. Ten newspapers are published in Raleigh—three dailies, six weeklies and one bi-monthly. The colored people "run" two of the weeklies, one of them being a very creditably gotten up industrial journal. The governmental department of agriculture, presided over by Colonel L. L. Polk—the right man in the right place—is a special feature of Raleigh, its museum containing an exhibit of every product of the State, from the sparkling Tokay, made from the famous Scuppernong grape, to sheets of mica that would glaze one of Tiffany's windows, being well worthy a studious visit. Close to the city are a State Lunatic Asylum, Penitentiary—they hang for burglary in North Carolina—and institutions for the deaf, dumb and blind.

The most famous hostelry in Raleigh, or, indeed, in the Carolinas, is the "Yarborough," presided over by Dr. G. W. Blacknall, who, having thrown physic to the dogs, now prac-

Digitized by Google

tices through the medium, not of the gallipots, but of stew pans, and whose prescriptions, carefully compounded by expert and skilled assistants, are made up of the best ingredients known to the wide area of modern cookery-book. The genial doctor is an amiable type of the Southern gentleman, and his powers as a *raconteur* unrivaled.

I paid my respects to the Governor of the State, the Honorable Thomas J. Jarvis, a portly gentleman with a laughter-loving eye, who resides at the Yarborough, and from him gleaned information as to the *raison d'être* of the colored fair, and the general condition of the State.

"The Secretary to the fair, Mr. Hunter," observed the Governor, "came to me in Spring last to engage my assistance in procuring the barracks out here, as the place where the fair is being held is claimed by both the Government and the State, and the permission of both is necessary to its occupation. The object of the fair is an exhibition of the result of the industry and labor of the colored people of the State."

"Do you consider that the fair will prove an incentive to further exertion on the part of the colored people?" I asked.

"I think that it will create some spirit of enterprise, but not to the extent we could desire. They are not, as a race, an ambitious people. Here and there there is an ambitious fellow amongst them, but these are few and far between. I was in the first Legislature that had colored men in it, and have been associated with the leading colored people ever since, consequently feel fairly entitled to an opinion. A few colored men in this State are smart, and my observation leads me to conclude that the colored children are very fond of school, and learn rapidly. I think there is more desire amongst the colored children to learn than amongst the white children."

"You have a colored normal school, Governor?"

"Yes; established in 1867 at Fayetteville, in this State. It is under the control of the State Board of Education, and has for its principal a colored man named Harris, an unusually good scholar and a well-behaved gentleman. The school is doing good work in preparing colored teachers in the ordinary branches of education, and the rapidity with which colored children get on in an ordinary education, and their tardiness in the higher branches, prove to me that the negroes are not a race of scholars."

"Have you any wealthy colored people in this State, Governor?"

"Here and there we have men who have accumulated small properties, some of them being worth $3,000, but as a race they are without property."

"Have you felt the general revival of industry in this State?"

"Most decidedly, and it is most encouraging. We will raise 24,000,000 pounds of tobacco in the State this year. I consider North Carolina is in a better condition than any Southern State, and we are paying to-day the lowest tax of any State in the Union. We tax *ad valorem* thirty-four cents on every hundred dollars' worth of property, and with this we support our State Government, Prison, the Asylums for the Insane, the Deaf, the Dumb and the Blind, while, in addition, we maintain the common schools. We are now building three railroads with convict labor."

General Clingman, ex-United States Senator, with whom I conversed on the subject of the fair, is of opinion that considerable good will emanate from it.

"The colored people are little better than grown children, and an organization like this is exactly suited to their dispositions and capacities. They will come to regard the fair as the leading event of their lives, and each one will spend two-thirds of the year in preparing a something for exhibition. If we whites," continued the General, with a laugh, "love to see ourselves in print, what must be the unalloyed satisfaction of a colored agriculturist? Yes, this fair is the nucleus of a movement in the same direction all over the South."

The Raleigh colored fair was formally opened upon Tuesday, the 18th. From an early hour the colored folk commenced to pour into the city, borne upon antediluvian and nondescript vehicles of every sort, shape, size and description, a board upon a pole attached to a "bull yearling" being held most in favor. The ladies were attired in the starchiest and gayest of calicoes, their heads decorated with handkerchiefs that bade defiance to the rainbow, while the gentlemen strutted jauntily by the side of their lady friends, clad in garments three sizes too large for them, and of patterns only to be seen in stage farces. Each cart bore some contribution to the fair, from an oil painting to a pumpkin, from a goose to a knitted spread. The fair grounds are situated about one mile from the city, and cover an area of about five acres. The buildings, originally constructed during the war by the Confederates for hospital purposes, were, after the surrender to Sherman, similarly used by the Federals, and subsequently as barracks. The State of North Carolina claims them, as does also the Government. They were known during the war as Pettigrew Hospital, and later on as Camp Russel. The buildings are admirably adapted to their present uses, being well-lighted, roomy and ventilated. The old headquarters building is used for office purposes. South of this is a row of four one-story buildings, each one hundred feet in length, and twenty-five feet in breadth. The first was used as a Floral Hall, and devoted to the handiwork of the colored ladies. It was tastefully decorated with flowers, grasses and evergreens. The next building was converted into a Horticultural Hall for the display of fruits and flowers. Another, the Mechanics' Hall, exhibited wagons, etc., while the Art Gallery was devoted to the ambitious attempts of our dusky brethren and sisters who would fain follow in the footsteps of Phidias and Apelles. The last of the four centre buildings was the Agricultural Hall, wherein was displayed the produce of the farm. There were commodious stables for horses, stalls for cows, styes for pigs and coops for fowl, while within the inclosure was a race-track one-fourth of a mile long.

The artist and I paid our first visit to the fair grounds upon Monday, trudging along the road in company with a laughing, gossiping, merry crowd of darkeys, who sang as they footed it:

"Went to de ribber an' couldn't git across,
Oh, bless de Lamb!
Paid five dollars for an ole blind hoss,
Oh, bless de Lamb!
Hitched him up, an' hoss wouldn't pull,
Oh, bless de Lamb!
Traded him off for a short-horn bull,
Oh, bless de Lamb!"

Every crank, crack, nook and cranny of the board fence inclosing the fair grounds was occupied by an eye, while numbers of gentlemen in tatters patiently awaited their turn *en queue*. The entrance was guarded by a stalwart janitor, with a wand of office composed of a stout sapling, which would occasionally descend with a loud whirr and thwack upon the curly head of some too adventurous boy, or on the flanks of an inactive steer desirous of retaining possession of the entire entrance-way.

"Stan' back dar; where's de hurry. Yer'll all git in. De fair grounds ain't goin' fo' to run away. Fo' golly, you'd tink it was a cake-walk," said the gateman, as, by voice, gesture and no very gentle pushings, he endeavored to collect his checks, and allow the eager crowd to filter in.

The gate, as we entered, was blocked by four darkeys staggering under a crate of hogs, and the expressions of anguish on their features, as the unwieldy animals rolled from one side of the crate to the other, was the very embodiment of human misery.

We were conducted by a sub-committee to the headquarters, where we were met by the President, Mr. Cæsar Johnson, and the Secretary, Mr. O. Hunter, Jr., both colored. After enthusiastically welcoming the representatives of Frank Leslie, Mr. Hunter exclaimed:

"This is the first colored fair, and already a fair is announced in Alabama for the 26th. I have been engaged in working this up for the last eighteen months. I got the public sentiment worked up to the idea before I attempted to organize it, and have been busily engaged every since. We want to let the world see that the colored people can do something—to let the world see"—here Mr. Hunter spoke with considerable enthusiasm, accompanied by vigorous and expressive action—"the product of our muscle and of our brains. Our white fellow-citizens have been ever so good and kind to us, and have come forward to help this our maiden effort in a most noble manner, and, in addition to sending articles of interest to help our exhibits, have contributed $500 towards our expenses."

"Are the colored people all over the State interested in the success of the fair?"

"Yes, sir; they are, sir. They think it is high time that we should look to our material as well as our spiritual and political welfare."

We accompanied Mr. Hunter into the apartment dedicated to entries, which was occupied by an eager, excited, chattering crowd of both sexes, laden with various articles for exhibition. Behind a long table sat half a dozen clerks, two of them of the gentler sex, engaged in receiving the entries, and issuing labels and receipts therefor. The questionings these officials were obliged to respond to were of so multifarious and complicated a character, as to delay the proceedings considerably; one young lady, with teeth resembling that $250,000 pearl which Cleopatra consumed in an Egyptian cocktail, exclaiming for the nine hundredth and ninety-ninth time, in relation to a pair of worked slippers that had accidentally gone astray, and which were subsequently fished up from beneath a pair of pumpkins: "Fo' God, dere's no justice nowheres. I see dem slippers fo' my eyes dis minnit, an' dey're gone like a drink. Fo' God, der's no justice nowheres." One colored gentleman, as dark and as glossy as a five-cent shine, somewhat paralyzed me by an expression of opinion on the subject of the fair organization:

"Dere's people of bof classes as isn't gen'l'manly. We are operatin' dis distraction to the consummation of our sability, but a satisfactory concilliation results in a demonstration of aggressive combat. We are a lower race on the strapum of mortality, but our abnormal instincts is but an abortionized hallucination."

Here a rooster, penned in an adjoining coop, blew a clarion note.

"'Scuse me, boss, but I have a little property here dat me and my companion has raised, and I must supervise my merchandise. It comprises fo' little chickens. The rigidity of my principles will not admit of further explication of my susceptibilities;" and proceeding to the coop, wherein the rooster still continued to blow a cock-a-doodle-doo, he flung a handful of corn to the needlessly exultant bird.

I give Mr. C. B. Brien's conversation *verbatim*, and am still at a loss to define the exact meaning of his trite and sagacious observations.

Tuesday morning "woke with weeping eyelids," and "the Indian Summer has gone," was the exclamation to be heard from many, while more than one darkey of sporting proclivities welcomed the rain, "Cos it will lay de track lubly, sah!" Signs of unwonted animation vigorously manifested themselves. Marshals, gorgeous in blood-red sashes, cantered rapidly through the streets, the destiny of nations upon their knitted brows. Colored citizens in uniform proudly strutted on the sidewalks. Carriages, attached to horses with heads bedizened with plumes, passed up and down, seemingly without having any definite object in view. Groups gathered at street corners and on steps to indulge in one vast expansive grin. Colored ladies, gorgeous as macaws, paraded coquettishly, casting provoking glances at dusky gallants, who responded with a snigger. White citizens, their hands deep in their pockets, conversed in knots and stowed away a fresh plug as some additional incident stirred up the fire of languid excitement. Drummers adjourned with the proprietors of stores to the doorways, and dapper clerks lined the new post-office windows. Dogs took the centre of the roadway, and small boys made coignes of vantage of the lordly elms.

At ten o'clock the strains of a band—not led by Arditi—announced the approach of the colored troops, and presently the marshals, some of them superbly mounted, especially Jeff Davis's faithful follower, curveted into sight, followed by a guard of honor of colored regiments, consisting of the Raleigh Blues, East Raleigh Guards, Oberlin Vance Guards, and companies from Wilmington and Newbern, all fine soldierly-looking fellows, well-drilled and well-handled. The fire department came next in order and then the carriage of the Mayor, which drew up in line opposite the Yarborough.

A carriage attached to four white horses, gayly beplumed, stood at the hotel entrance, and as the Governor emerged from the hostelry the guard presented arms. In the carriage with the Governor were Hon. E. G. Reade, ex-Judge of the Supreme Court, Colonel L. L. Polk, the courteous and efficient United States Commissioner of Agriculture, and "mine host of the Garter," Dr. G. W. Blacknall. Tap, drib, tap! and the band resumed its march—the carriage preceding the military—on to the fair grounds, the rain mercilessly coming down in torrents; but despite the frowns of Pluvius, a goodly representation of the colored population trudged to the tap, drib, tap of the drum, while every colored homestead along the route manifested in some form or other its interest in the proceedings of the day.

The Governor was received at the fair grounds with all honors, and having been conducted to a large wooden building set apart for the purpose, which was choke-full of well-dressed and respectable colored people, he formally opened the first colored industrial fair ever held in the Southern States. His speech was telling and to the point—full of a common sense that went home to his auditory, and the expressions of satisfaction when the ceremony had concluded were as genuine as they were enthusiastic.

I took a turn with the secretary round the fair, now ankle deep in mud, and through the various halls. The Agricultural was strong in tobacco, wine, corn, hams, pumpkins, plows, harness, leather, cotton, and even in coffins. Around the walls were placards with the words, "The work of our own hands." The Floral Hall was the very centre of attraction, exhibiting as it did all those dainty knick-knacks, those brilliant fantasies in colored wools so dearly cherished by the female heart—and I must confess that the exhibit of our colored sisters in spreads, in baby hoods, and in clouds, would hold its own in any Northern fair I have ever attended. There were one or two very good copies from chromos in oil, notably the "Christian Martyr," while colored maps and some drawings by a little darkey of six years old elicited honest expressions of satisfaction from the visitors. In this department there was an exhibition of home-made cakes and bread, and the watermelon cake, representing when cut the exact sectional appearance of a watermelon, especially in color, was regarded as a triumph of confectionery. There was one exhibit in this department at which many a darkey beau gazed in languishing delight—a waistcoat composed of the breasts of birds of yellow plumage. I overheard one young fellow mutter to himself as he reluctantly turned away, casting a last, long, lingering look behind, "Golly, dat's de finest ting in de whole show. Wouldn't it set me up? Jay-roo-sa-lum!" The model of a cottage executed in shell-work proved a source of intense interest to some old "aunties" who hung fondly over it, their sun-bonnets completely shutting it out of the range of vision of the outer world.

The side-shows were doing a roaring business, Punch and Judy standing high in popular favor. The electric machine was both feared and admired. An unhappy victim was jeered into accepting the fatal legacy of those handles that cling with ten thousand devil-fish tenacity. How that unfortunate wretch played, and kicked, and squirmed, and plunged, and writhed, and twisted and quivered, while the bystanders "Yaw, yaw'd" in ecstasy, actually rolling on the muddy ground in a delirium of mirth!

The race-course, and all appertaining thereunto, was placed in the hands of Tim Lee, a celebrated character in North Carolina. Tim is Irish to the backbone, and was sheriff during the war. Tim, a broth of a boy, had to serve a writ upon an individual residing sixty-four miles from Raleigh, and a question having arisen as to what time he would take to do the sixty-four miles, Tim bet a considerable sum—$5,000—that he would leave Raleigh, serve the writ, and return between sunrise and sunset. He started in a sulky and driving tandem. In the boot of the sulky Tim had five bottles of whisky. When half the distance, he gave the horses a bottle of whisky each in their mash, and when he arrived at his destination, half a bottle each. In returning, on reaching the half-way house, he again gave the horses a bottle of whisky each. And my informant, Mr. Wilson, editor of the Raleigh *Observer*, informed me that one of the horses caved in, while the other is still to the fore, but that Tim Lee won his bet. The races passed off with considerable *éclat*, every Southerner being exceptionally strong on horse, while the walking-matches were contested in a manner almost worthy of a match in Madison Square Garden. One of the most striking, if not the most amusing, scenes in the fair was when the judges sat in solemn council upon the candidates for the singing prize. How those candidates exerted themselves! How solemnly the judges wagged their heads! How the candidates opened their mouths like young birds waiting to be fed! How the judges opened *their* mouths in sympathy, following every note!

I must not omit mention of a supper tendered to us by Mr. Jacob Higgs, consisting of the North Carolina *pièce de résistance*—baked 'possum and potatoes, with turkey "fixins." The 'possum was barbecued after the fashion of this region, and, if a leetle too full-flavored, was a veritable *bonne bouche* as a *bonne bouche*.

The first colored fair of North Carolina has been a pronounced success. Many difficulties had to be encountered which will never impede the progress of the second fair, and as there is nothing so successful as success, it is to be hoped that the good example set by North Carolina will be promptly followed by the whole of the sunny South.

PERSONAL GOSSIP.

THE Archduchess Maria Christine, the future Queen of Spain, officially announced her right to Austrian succession on November 25th.

THE Sultan has appointed Baker Pasha as his representative to superintend the introduction of reforms throughout the whole of Asia Minor.

MR. JOHN BRIGHT is said to be deeply read in Milton, and always carries with him wherever he goes a copy of that great poet's greatest poem.

THE Earl of Leicester and the Duke of Abercorn are British nobles particularly blest. Each has six daughters; each of these twelve ladies is married to a peer or the heir of a peer.

PETER GORLEY, who lived for many years on the corner of Broadway and Nineteenth Street, New York, and kept a quantity of fancy fowls in his front garden, died on November 21st, in the eightieth year of his age.

THE Czar has a nice little income—a trifle of $25,000 a day. The Sultan gets $18,000 a day, the Emperor of Austria $10,000, the Emperor of Germany $8,200, the King of Italy $6,600 and the King of the Belgians $1,643.

THE late Edward Mass, who died in London, England, left $100,000 towards a beneficent fund to the Zetland Masonic Lodge of Montreal, of which he was formerly a member. The money has been paid over by the sons of Mr. Mass.

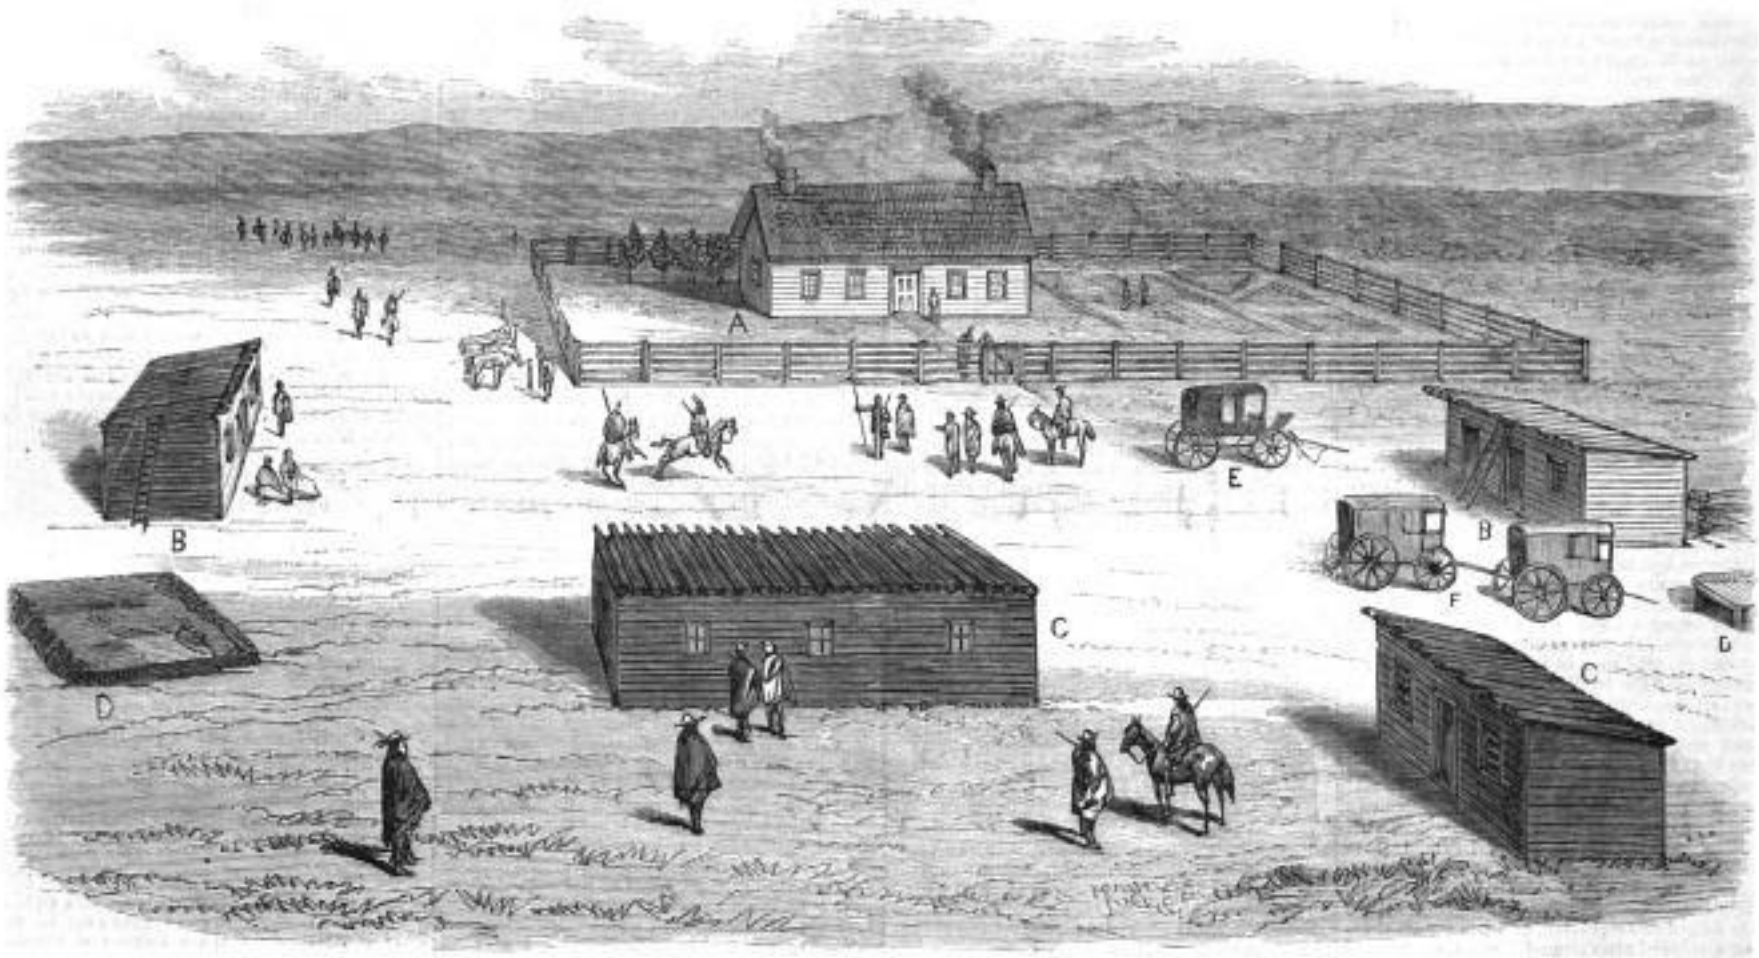
MR. SETH GREEN announces an achievement of much interest. It is nothing more nor less than the domestication of shad, naturally a salt-water fish, in Lake Ontario. Mr. Green thinks these fish have become land-locked, and will make the lake their home.

THE Mayor of Stafford, England, Mr. F. Marson, has been presented with a silver cradle thirty inches high and weighing 200 ounces, in accordance with an ancient custom prescribing such a gift for the Mayor whenever a child is born to him during his incumbency.

PRESIDENT SEELYE, of Amherst College, has lately received for the college gifts amounting to $106,000. Of this amount $55,000 in stocks and bonds is from the Hon. Chester W. Chapin, of Springfield; a pledge of $50,000 from the Stone estate of Malden; and $1,000 from another source to establish a scholarship.

MR. GLADSTONE has had eight children, seven of whom are living. His eldest son is a Member of Parliament, his second son is rector of Hawarden, his third is engaged in mercantile pursuits. His eldest daughter is married to the Head Master of Wellington College. Mr. Gladstone was about thirty years old when he was married to the daughter of Sir Stephen Glynne.

RICHARD DUDLEY MASON, a prominent old Virginian, is now living at the family manor house, Tredale, on the banks of the Potomac. He was born in 1795, was educated in France, and at the age of twenty-two became *attaché* to the American Legation in London. He afterwards took his degree from the University of Oxford. Returning to America, Mr. Mason was elected to the Virginia Assembly. Since that time he has refused all political honors.



GENERAL GRANT made a neat little address to the school-children of Chicago who "received" him at the Exposition Building, November 17th. It was as follows: "I am always glad to be received by the school-children. I met them in San Francisco and I have met them elsewhere. I see in the children of to-day the future safety of the nation, and in view of the importance of their future they must be carefully nurtured and educated now. The best safeguard the country can have is education. If education were universal there could be no danger to our free institutions. Without it I should despair of the future of the Republic."

THE wedding dress of the future Queen of Spain will be of white baccarat, covered with a court mantle of excessively fine lace. All the escutcheons of the ancient kingdoms of Spain and their alliances are reproduced by a process hitherto unknown. The escutcheons form the border, and the ground of the mantle is flowered. The bridal vail is a reproduction in miniature of the mantle. The gala toilet will be of gold brocade, embroidered with touffes of roses in relief, joined together by bands of myosotis and little *fleur de lys*. Another grand reception toilet will be of silver brocade, embroidered with geranium flowers of all shades.

A STATEMENT prepared for the Postmaster-General by Auditor McGrew exhibits a remarkably small percentage of loss to the Government in the amount of money received by Postmasters. It appears that during the two years ended June 30th, 1878, the aggregate sum paid into the hands of Postmasters for all purposes was $214,863,727, all of which was accounted for to the department except $3,041, now given up as "bad debts," and $96,286 now in suit against Postmasters and their bondsmen. Of the latter amount Auditor McGrew estimates that one-half will be collected. But, assuming the entire amount to be uncollectable, the total loss to the Government during the two years will be less than one-twentieth of one per cent.

EX-GOVERNOR BALDWIN, who was appointed United States Senator to succeed the late Mr. Chandler, was born in Coventry, R. I., February 22d, 1814. He was left an orphan when a boy, and, after receiving a good education, was a mercantile clerk at Pawtucket for eight years before becoming of age. He then engaged in business on his own account in Woonsocket. In 1838 he removed to Detroit, and, identifying himself with the interests of Michigan, became President of the Second National Bank of Detroit. For two years he was a State Senator. In 1868 he was elected Governor by 50,761 majority over John Moore (Dem.), and was re-elected in 1870. He brought to this position a full store of general information, gathered from foreign travel and the study of men and books.

FUN.

SOBOSIS is the Queen of Clubs.

THE latest—David Davis and Alexander Stephens. Quantity and quality.

TWO ladies presented themselves at the door of a fancy ball, and on being asked by the usher what characters they personated, they replied that they were not in special costume, whereupon he bawled out: "Two ladies without any character!"

DURING a dense fog a large river-steamer had to cast anchor. A traveler, anxious to go ahead, came to the man at the wheel and asked why they stopped. "Too much fog—can't see the river." "But you can see the stars overhead." "Yes," replied the sailor, "but until the biler busts we ain't going that way."

"You see, massa," said the old colored washwoman, "since dey's got dese here big crayvats we don't hab so much to do. De gemmen puts on a big crayvat nowadays instead ob a clean shirt. You don't know much about dese matters, but if you take off all de crayvats in this town an' make the gemmen show up, landsakes! you'd see de worst lookin' white men you ebber laid yo' blessed eyes on."

LATE one afternoon, recently, one of the police discovered a boy about nine years old curled up in a corner of the City Hall, and made inquiry, "Bub, what are you doing here?" "I'm lost!" was the laconic reply. "How long since you have seen your friends?" "Well, I left dad about three hours ago, I guess." "And you've been lost ever since?" "Yes." "Well, it's too bad." "I-yes, it's a sad case," said the lad, trying to be very brave; "but I'll bet that while I'm doing all the losing, dad's doing most of the feeling bad!"

IN a carriage attached to a train on one of the branches of the North-Eastern Railway, lately the conversation turned on the various modes devised for defrauding railway companies, and the difficulty that attended their successful accomplishment. "Oh, begor, but aa tyeuk them in last forimest!" said an old miner, with a chuckle. "Hoo wis that, Jack?" asked his mate. "Wey," Jack replied, "aa tyeuk a return fra Widdrington Colliery to Morpeth, an' aa waalked back hyem an' kept the ticket!"

FACTS ABOUT DIAMONDS.

LUCY HAMILTON HOOPER, in her Paris letter to a Philadelphia paper, describes, in an interesting way, some of the details of the diamond trade of the world, which, she says, is mainly controlled by some six or eight large operators. After speaking, in her letter, of the courtesy shown her, and describing some of the rare gems in the possession of the dealer visited, she continues:

"He then brought out and put before me a box in size and shape not unlike those in which stockings are sold. From this he took a number of small cases to show me some unusually fine matched stones, and also a yellow diamond of wonderful beauty, so full of lustre that it shone like a drop of golden fire or a consolidated sunbeam. Then, closing the box, he remarked that it had been packed for transmission to the United States, and that it contained the finest assortment of diamonds that he had of late years transmitted to that country. I inquired with interest respecting its destination, and was pleased to learn that it was going to Philadelphia, that small box, whose contents were worth more thousands than I am willing to state, representing this season's purchases of Mr. Joseph Bailey, for the firm of Messrs. Bailey, Banks & Biddle, of Philadelphia. He also told me that never in the history of the trade had diamonds been as cheap as they are at present, the depressed condition of commercial matters in America, the Russian and Turkish wars, the disturbed political state of Russia, etc., having combined to lessen the number of purchasers, while the diamond discoveries at the Cape had flooded the market. 'And it is a mistake, madam,' he said, 'to imagine that the African diamonds are scenes of an inferior value to those that come from India and Brazil. We get as fine gems from the Cape as from either of the latter countries, and no house of our standing will deal in any but the very best stones; but, of course, a number of ill-shaped, flawed and discolored diamonds are found, which meet with a ready sale at very low prices.' I asked him if the present unprecedented cheapness would be of long continuance, and he replied that there would probably be a reaction in the course of a few months, as already the demand for first-class stones was largely increasing, while the 'find' at the Cape was by no means being kept up in the same ratio. Hence, I would advise all my compatriots who wish to purchase diamonds to do so with as little delay as possible, while those who wish to sell had best keep quiet for a time. The fire-proof safe in which the stock of the house was kept contains, I am told, precious stones to the amount of $2,000,000. As to the artistic surprises reserved by Messrs. Bailey, Banks & Biddle for the public of Philadelphia this season, I will content myself with declaring that I have never seen so varied a collection of objects of such artistic beauty at such remarkably moderate prices."

CHILDREN AND INFANTS.

MORE cures of skin and scalp affections by the CUTICURA REMEDIES. Fred Rohrer, Esq., Cashier, Stock Growers' National Bank, Pueblo, Colorado, writes: "I am so well pleased with its effects on my baby, that I cannot afford to be without it in my house. It is a wonderful cure, and is bound to become very popular as soon as its virtues are known to the masses."

J. S. Weeks, Esq., Town Treasurer, St. Albans, Vt., says, in a letter dated May 28th: "It works to a charm on my baby's face and head. Cured the head entirely, and has nearly cleaned the face of sores. I have recommended it to several, and Dr. Plant has ordered it for them."

M. M. Chick, Esq., 41 Franklin Street, Boston, says: "My little daughter, eighteen months old, has what the doctors call Eczema. We have tried most everything, and at last have used CUTICURA, and she is almost a new child, and we feel very happy.

HALFORD'S TABLE SAUCE.—Relish for Soups, Fish, Steaks, Chops, Cold Meats, Gravies, etc.

BURNETT'S COCOAINE.—Allays irritation, removes all tendency to dandruff, and invigorates the action of the Capillaries in the highest degree. The COCOAINE has earned a deserved reputation for promoting the growth and preserving the beauty of the human hair. Ladies dressing their hair elaborately for the evening will find that it imparts a healthy natural gloss to the hair, and will cause it to retain its shape for hours.

A FAVORITE COUGH REMEDY.—For Colds, Sore Throat, Asthma, Catarrh and other diseases of the bronchial tubes, no more useful article can be found than the well-known "*Brown's Bronchial Troches.*"

NERVOUS PEOPLE should avoid the temporary relief of tea and coffee. A cup of pure COCOA will be found nutritive as well as sedative. Insist upon your grocer's furnishing WALTER BAKER & CO.'s preparation.

CHICAGO is noted, among other things, for one of the most enterprising and progressive confectioner's establishments of the continent—"GUNTHER'S," which has become famous for its fine confections and liberal prices.

SUMMER'S HEAT

relaxes the system and renders us liable to attacks of diarrhœa, dysentery, bloody flux, cholera-morbus, cramps in stomach, colic, and other painful and dangerous affections for which Dr. Pierce's Compound Extract of Smart-Weed—compounded from the best French brandy, Jamaica ginger, smart-weed, or water-pepper, anodyne, soothing and healing gums and balsams—is a most potent specific. It is equally efficacious in breaking up colds, fevers, and inflammatory attacks. Every household should be supplied with it. Fifty cents by druggists.

THAT low, nervous fever, want of sleep and weakness, calls for HOP BITTERS.

AROUND THE WORLD.—Any intelligent young man of good character who desires to spend two years in foreign travel under the most favorable conditions for improvement will learn how he may do so at very small expense on application to A. B. Proal, St. Nicholas Hotel, New York City.

TIME to Insure Against Accidents—Before they happen. Moral—Insure in THE TRAVELERS.

$1,425.50 PROFITS IN 30 DAYS.

$10 to $100 invested in legitimate Stock Speculations in Wall St., pay immense profits. Pamphlets explaining everything sent free. HEATH & CO., Brokers, 122 Broadway, N.Y.

"WHERE shall I stop?" is the query frequently put by the visitor to New York. This question can easily be settled in favor of the ST. NICHOLAS hotel, now, as ever, the leader among metropolitan hostelries. Its furniture, fittings, apartments, conveniences, and table, are beyond comparison the most suited to please the fastidious taste. Rates only $3.50 per day, the anti-Delfas price.

SOUR STOMACH, bad breath, indigestion and head ache easily cured by HOP BITTERS.

THE Improved Asbestos Roof Coating, as applied to H. W. Johns Asbestos Roofing, or to any other suitable foundation, forms a fibrous waterproof covering, partaking of the nature of a felt and a paint. It can be applied with a brush or a trowel to any desired thickness, and forms the most durable and economical roofing in use for mills, factories, warehouses, railroad buildings, bridges, etc. H. W. JOHNS MANUFACTURING CO., 87 Maiden Lane, New York, sole manufacturers.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

THE MANAGER
OF THE
Cosmo-American Colonization
AND
General Improvement Bureau

Invites all philanthropic and other capitalists, as well as landowners throughout the country, to consider the plans of the Bureau for colonizing the worthy able-bodied homeless families and single persons in the various States needing immigrants and other laborers. Safe investments with ample profits will be insured. Full particulars furnished. Call on or address

JOHN HOLLAND'S Patent Record GOLD PEN
Patented Oct. 2, 1877.

Is the highest achievement in the manufacture of Gold Pens and the result of experiments for more than twenty years. The "RECORD" Pen is produced by a skillful combination of the two precious and non-corrosive metals: *16 kr. Gold* and *Platinum*, while the ordinary gold pen contains an alloy of copper, reducing its fineness without yielding that elasticity, density and steel like temper which the costly *Platinum* supplies. The "RECORD" Gold Pen *Points* are of the best *Iridium*. (Diamonds,) indestructible with fair treatment, and polished to glass like smoothness.

Steel pen writers have now every objection to gold fairly overcome, and every requirement in a Pen which will endure and not oxidize, squarely met. The "RECORD" Gold Pen is guaranteed to possess Durability, Permanency of Spring and Perfection of Point. Price, $2.50, sold by all Jewelers and Stationers in the United States. If not found order direct from *JOHN HOLLAND, Manufacturer, 19 W. 4th St., Cincinnati.*

JOHN H. HORSFALL, Furture and Decorations, 6 and 7 East Twenty-third Street, New York, respectfully invites an inspection of his stock, containing many new and desirable patterns which, for material, workmanship, style, and price, cannot be excelled. Attention is also called to his Folio of excellent designs, which are finished in a thorough manner, and cannot fail to convey a correct idea of the work intended, embracing all kinds of Cabinet-work for House Trimming, Doors, Folding and Single, Wainscoting, Furniture in single pieces and *en suite*, with Draperies, etc., etc. Designs and estimates on application.

Madison Square, South, three doors east of Broadway, Kurtz Art Building.

ANGOSTURA BITTERS

An excellent appetizing tonic, of exquisite flavor, now used over the whole civilized world, cures dyspepsia, diarrhœa, fever and ague, colics, and all disorders of the digestive organs.

Try it, but beware of counterfeits. Ask your grocer or druggist for the genuine article, manufactured by DR. J. G. B. SIEGERT & SONS.

J. W. HANCOX, U. S. Sole Agent, 51 Broadway, New York. P. O. Box 2,610, New York.

A Fortune Quickly Made.

Money has been made more rapidly within the last few months in Wall Street than at any period since 1873. Immense profits have been realized from small investments. The following affidavit explains itself:

Personally appeared before me, George A. Payne, of 134 West 43th Street, New York City, to me known, and on being duly sworn, says that on an investment of $53 placed with Thatcher, Belmont & Co., Bankers, and by them operated for a period of two weeks, I had returned to me by the said firm $972.53.

(Signed) GEO. A. PAYNE.

State of New York, } ss.
City and County of New York, }

sworn before me this 22d September, 1879.

J. B. NOONS, Notary Public,
91 Duane Street, New York.

Thatcher, Belmont & Co. accept subscribers on their 1 per cent. margin or in their concentration of capital, whereby a number of small sums, from $10 upwards, are aggregated and stocks operated. Latest Wall Street information sent free upon application by Messrs. Thatcher, Belmont & Co., Bankers, P. O. Box 1307, or 48 Broad St., New York.

BUILDINGS ERECTED IN TROY, OHIO, FOR THE MANUFACTURE OF T. P. CHILDS'S CATARRH SPECIFIC.

EFFECTS OF CATARRH IN THE SYSTEM.

Can you comprehend in its terrible significance that this disease is more fatal to mankind than all the fevers and other ailments we know of? or the millions of people that labor under it? Many often are unconscious of its ravages until the discharge from the nose and throat brings it painfully home to them, in the ineffective efforts to cough and expectorate the offensive matter. Can anything be more disgusting to the onlooker than this spectacle? Yet none are so frequent. You will find it in every street car, in every public conveyance. This is only the beginning of the disease. It requires instant scientific treatment. From the delicate organization of the parts affected, there is no time to lose; nothing but the most decided measures will arrest the silent progress of this cruel malady. There must be no neglect. The lining of the Nose lies close to the Ethmoid bones which form it. These are as fragile and as thin as an egg-shell in their delicate construction, and when once inflamed, result in the formation of ulcers, discharging matter so frightfully fetid as to be almost unbearable, while the patient, from the injury to his own sense of smell, is unable to comprehend the extent of the effluvium in its loathsomeness to others, ending sometimes in the total decomposition of these bones, which is, from its unsightliness, one of the most painful and hideous pictures that humanity can show.

ADVICE THAT SHOULD BE HEEDED--DO NOT USE NOSTRUMS.

Rev. Wm. Anderson, writing to a friend in Andover, Mass., says of Childs's Catarrh treatment:

I would advise you to write to Rev. T. P. Childs, Troy, Ohio. His remedy you can rely on, and if you can be relieved by medication, his remedy will afford you certain relief. It is the only reliable treatment for Catarrh I have known. Do not use those nostrums advertised unless your physicians can recommend them. They seriously injure the healthy parts. Rev. T. P. Childs's remedy is indorsed by three physicians in his town.
Yours truly, WILLIAM ANDERSON, Fordham, New York.

The Entire Family of a Missionary CURED—Childs' Treatment all it Professes to be.

Rev. Thomas Allen, now residing in Dayton, Ohio, after twelve years' service in India, accepted the position of District Secretary of the American Baptist Union for Ohio and West Virginia. The entire family contracted Catarrh in its worst form while in India. Their wonderful cure Mr. Allen himself relates:

DR. CHILDS: *Dear Brother*—This is to certify that I have used your *Catarrh Specific* and *Cold Air Inhaling Balm* in my family with the most beneficial results. My son, now in Madison University, New York, was so badly afflicted with *Catarrh* I feared for a time that he was incurable; and when I applied to you for medicine my hope was faint. It acted speedily and efficiently, and I believe saved him from an early grave. He is now perfectly cured. My wife, who had become very much reduced by a residence in Farther India as a missionary, has derived great benefit from your *Inhaling Balm*. I can most heartily commend these medicines to the afflicted, believing they are all they profess to be.
THOMAS ALLEN, Dayton, Ohio.

THE CHANCELLOR OF THE UNIVERSITY OF NEBRASKA CURED.

Too much stress cannot be laid upon the following testimonial. Dr. Fairfield is well known all over the United States as a man of high standing, learning, and great eloquence in the pulpit. He is at present the Chancellor of the University of Nebraska. Prior to the use of *Childs's Catarrh Specific*, he had utterly lost the use of his voice, and was compelled to suspend his daily lectures. The fact that *Childs's Catarrh Specific* restored so prominent a man to usefulness and health, should convince the most skeptical that their cases are not hopeless.

REV. T. P. CHILDS: *Dear Sir*—I think you have the true theory and practice for the cure of Nasal Catarrh, and also for the treatment of the respiratory organs. My throat is now so well restored, that I lecture daily without any difficulty, and I find no difficulty whatever in preaching. You are at full liberty to use my name for the benefit of others.
Yours very truly, E. B. FAIRFIELD, D. D., LL. D., Lincoln, Nebraska.

HOME TREATMENT

Childs's Treatment for Catarrh and for Diseases of the Bronchial Tubes can be taken at home with perfect ease and safety by the patient. No expense need be entailed beyond the cost of the medicine. Unlike a patent medicine, or the many so-called Catarrh cures advertised, CHILDS'S CATARRH TREATMENT must be adapted to the wants and constitutional needs of each individual patient. A knowledge of this is of the first importance, and of this we make a special study. We use in our treatment the best instruments, nicely adapted to the skillful treatment of this disease, and yet so simple that the patient can use them with perfect safety and without pain.

Send a 3-cent stamp, and obtain the facts and expense of this treatment. Address,

T. P. CHILDS & CO., Proprietors, TROY, Ohio.

—No. 6.—

VIEWS OF HON. ALEXANDER H. STEPHENS.

The Industrial Development of Georgia.

CONDITION OF THE BLACKS IN THE SOUTHERN STATES.

"Their Relations with the Whites Kindly and Friendly."

MR. STEPHENS SAYS THE SECESSION QUESTION IS DEAD.

HE QUOTES PRESIDENT HAYES ON "THE MEN IN GRAY."

AND SAYS A WORD FOR GRANT.

IN his now historical wheel-chair I found Representative Alexander Hamilton Stephens engaged in smoking a meerschaum, worthy of Hans Larsen himself, before a roaring fire in a snug apartment at the National Hotel, Washington.

His snow-white hair falls smoothly over a superbly developed dome of thought, while a pair of dark, singularly expressive eyes reveal his "brain workings," now in vivid flashings, now in glances soft as those of a woman. His mouth denotes adamantine firmness, and every gesture reveals the inner life of the ardent and enthusiastic nature of the man.

Whilst he is engaged in carefully replenishing the capacious bowl of his meerschaum, let us take a brief glance at the chief incidents of his eventful career. He was born in 1812 at Taliaferro County, Ga., graduated at Franklin College, Athens, Ga., and was admitted to the Bar in 1834. Elected to the Legislature of Georgia in 1836, he was re-elected for five successive terms. In 1843, he was elected as a Whig to Congress, and held his seat till 1859. After the breaking up of the Whig party he acted with the Democrats. At the close of the Thirty-fifth Congress, Mr. Stephens announced his retirement from public life. During the Presidential canvass of 1860 he sustained Douglass, and denounced those who advocated a dissolution of the Union in case of Mr. Lincoln's election; and in 1860, he made a speech before the Legislature of Georgia against Secession, on which subject he had an interesting correspondence with Mr. Lincoln in December. He was, nevertheless, elected to the Secession Convention which met at Milledgeville, January, 1861, and there spoke and voted against the Secession ordinance. He was a member of the Southern Congress which met in Montgomery, Ala., in February, and was elected Vice-President of the Confederacy. In March he delivered a speech in Savannah, in which he declared slavery to be the corner-stone of the new Government. In April, as a Special Commissioner from the Confederate States, he addressed the Convention at Richmond, urging the union of Virginia with the Confederacy. He frequently differed from the policy of the Richmond Government, especially on the subject of martial law, and pronounced the appointment by General Bragg of James M. Calhoun as Civil Governor of Atlanta a palpable usurpation. In February, 1865, with R. M. T. Hunter and John A. Campbell, he held an informal conference on a steamer in Hampton Roads with President Lincoln and Mr. Seward, which, however, had no practical result. After Lee's surrender Mr. Stephens returned to his home in Crawfordsville, Ga., where, on May 11th, 1865, he was arrested and sent to Fort Warren, in Boston Harbor, but was released on parole. In February, 1866, he delivered a speech before the Legislature of Georgia favoring the restoration policy of President Johnson. In the same month he was elected to the United States Senate, but as the State had not complied with the conditions of reconstruction he was not permitted to take his seat. In 1872, he was elected to Congress, and again 1874, almost without opposition.

Having lighted his meerschaum, which he now whiffed after the placid fashion of a pasha, Mr. Stephens announced himself ready for the interview.

"What is the industrial situation of the South?" I asked.

"I cannot speak for the entire South. I can speak for Georgia, and you may take Georgia as a type. We are a debt-paying people in Georgia. Our stocks and bonds, the eight per cents. are equal to any in the United States. The six per cents. are all above par, and the four per cents. are at par. The State credit is good."

"Are the people devoting themselves to the development of their natural resources?"

"There is very great energy bestowed in Georgia upon the development of her natural resources: in mining, especially, in gold and copper. I think the gold-mining interest in Georgia is now doing as well as in any part of the world. New mines are being discovered, especially in Lincoln, Columbia and Oglethorpe. This is below the heretofore well-known rich mining country of the mountains. New discovery is being made of the brown coal, or lignite, in the County of Richmond, near Augusta, which it is believed will prove of great public interest. It is thought that in this vicinity a better class of coal exists, namely, bituminous, anthracite and hard coal."

RIGHT REV. HORATIO POTTER, D.D., LL.D., D.C.L.—TWENTY-FIFTH ANNIVERSARY OF HIS CONSECRATION AS PROTESTANT EPISCOPAL BISHOP OF THE DIOCESE OF NEW YORK.—PHO. BY SARONY.—SEE PAGE 252.

PUNCH-AND-JUDY ENTERTAINMENT IN THE ADMINISTRATION BUILDING.

"How about the cotton industry, Mr. Stephens?"

"Our cotton manufacturers are doing as well as any on the continent. There are several of them in Augusta and in district, and all profitably employed. The largest cotton manufactory in the Southern States is the Eagle and Phœnix Company, in Columbus, Ga. This company has a capital of a million and a quarter paid in, and are doing profitable business."

"Are your railroads working well?"

"Our railroads are, upon the whole, doing well, though the stock in most of them is at present below par."

"How do you account for this?"

"They have not yet recovered from the destruction sustained during the war. Nearly all of them are paying interest on their bonds, and, with a few exceptions, from six to eight per cent. dividends on their stock."

TEA-ROOM.

COMPANY K'S TURKISH BAZAAR, MAIN DRILL-ROOM.

"What is the chief staple production of Georgia, Mr. Stephens?"

"Cotton; but for the last two or three years this staple has not paid the cost of production."

"Can you explain why?"

"The low price of cotton and the high price of subsistence, together with the cost of fertilizing."

"At what price per pound does cotton pay in Georgia?"

"From ten to eleven and a half cents leaves a small margin of profit, and if this year's whole crop should 'go off' at its present price, the best quality fetching eleven five-eighths, it would add considerably to the aggregate wealth of the State. But in view of the very large crop raised in the United States this year, I scarcely think so good a result may be looked for."

"Are manufactories multiplying, and if so, of what kind?"

OF COMPANY G.

THE GYPSY CAMP IN THE ROOM OF COMPANY C.

Digitized by Google

"The manufactories for cotton are increasing, also the manufactories for thread and cloth. Chair manufactories are on the increase, as are also flour mills."

"Is agriculture becoming diversified?"

"For the last two years the farmers in all parts of the State have been devoting much more attention than in years past, to the production of wheat, corn and oats, and subsistence generally."

"I would now ask you, Mr. Stephens, if the colored people are contented?"

"I have never yet found a place in the world where people were perfectly contented with their condition," adding, with a smile, "mankind, from the time that Adam and Eve were driven from the Garden of Eden for trying to better *their* condition, have been following in the footsteps of their great progenitors. The people in Georgia, white and colored, rich and poor, are about as well cultivated as ever I saw the masses of the people in any State I have been in. What Horace wrote nearly two thousand years ago"—here the Senator quoted the well known lines, "'*Qui fit Mæcenas ut nemo,*' 'How is it, Mecenas, that no one is contented with his position?'—is quite as applicable to the white and black in Georgia as it was to the Romans; but take the people generally in the State, white and black, rich and poor, and they are, *I* believe, quite as well contented and as thoroughly devoted to their State as ever I saw the masses of the people of any State or country that I have been in."

"Had you not an exodus in Georgia some years ago?"

"Yes. Some years ago there was quite an exodus of colored people from Georgia. Several thousands left for Mississippi and Arkansas under the delusive promise of greater rewards and surer returns for their labor. Colored agents were employed by a number of companies to engage emigrants for their respective enterprises in the West. Their agents received $10 a head for every emigrant they could send forward."

"Was there any effort made to counteract the influence of these agents?"

"None whatever. There was no obstruction offered that I ever heard of. The people recognized that this was a free country, and they were glad to go where they pleased. There was no stir made on the subject. Quite a number of colored people from my immediate section joined the exodus, but every one of them, as far as I know, came back who survived and could raise the means to enable them to return. Some of them walked all the way, begging their bread, through the swamps of the West to their native hills and valleys."

"Are the relations between the races in Georgia of a cordial nature?"

"They are as kindly and friendly, upon the whole, as in any part of the world. Of course there are exceptional causes of troubles and strifes there as everywhere else. There is no Paradise either in Georgia or any other place on earth that I have seen, or that I have heard truthful accounts of."

"Do any number of the colored people seek to become employers?"

"None that I know of. Several in my own county have bought land, but they run their farms chiefly by the help of their own families. I know of no colored contractor either as farmer or mechanic in any extensive way."

"About what wages do the colored people earn?"

"Where laborers engaged in farming in any portion of the county, they get $10 a month, but usually they get part of the crop. Skilled masons employed by white contractors generally get board and $15 per month. Women cooks usually get their board and $7 a month, but when they have children, arrangements are made accordingly."

"Is there much sympathy among the colored people with the exodus movement?"

"None in the world, as far as I have heard in my part of the country, either on the part of white or black. There is no sympathy on the part of the blacks, and no opposition on the part of the whites."

"What is the political situation South?"

Mr. Stephens here refilled the meerschaum.

"I don't wish to talk politics," he said, after a pause. "In fact, I have nothing to say on the subject. Georgia is a Democratic State. By that I mean her people have been reared and educated in the Jeffersonian principles of constitutional free government. The present generation of Georgians are as devoted to these principles as their ancestors were. Since the war they have abandoned for ever, and in good faith, the right of secession, or withdrawing from the Union, as a remedy for any grievances. Many of them before the war, who believed it was right, were utterly opposed to its policy. The entire body of white people in that State now take, I think, this view upon the subject. Whatever evils they may suffer from the mal administration of the present Government they think should be rectified entirely through the peaceful instrumentality of the Constitution. They are for law and order. In elections they are for a free ballot and an honest count; and as for those in office, they don't care half so much about who shall govern as how they will govern. They look more to the wisdom of measures than to the man whom they put in power. In other words, they look more for policies than for organization."

"Was the Yazoo difficulty caused by political feeling?"

"They put too many lies in newspapers," replied Mr. Stephens, sharply. "I know nothing in the world about it."

"Do the colored people show an increasing disposition to vote with the Democrats?"

"Decidedly so. I think at the very least 20,000 colored voters in Georgia, at the last election, voted for the Democratic candidates; perhaps more. In my district, I do not think ten colored voters cast against me. I was put in nomination by a colored convention as well as by the regular Democratic convention."

"Could you explain this extraordinary adhesion on the part of the colored community to the Democratic ticket?"

"I account for it in this way. The Democratic party in Georgia advocate such measures in State and Federal administration as suit the interests and views of the colored people, as well as the whites, better than those of the Republican Party. For instance, in the matter of schools. The Republican Party, when in power in Georgia, collected large amounts for colored school purposes which were never appropriated to that end."

"What became of the money?"

"These funds were pocketed by the members of the Legislature to meet their *per diem* pay of $9 a day. No colored schools were established by the Legislature until the Democratic Party came into power. It is to the Democratic Party that they are indebted for the present flourishing Colored University at Atlanta, and in our new Constitution, made by the Democrats in 1877, the University is hereafter to receive $8,000 annually, the same sum as is paid by the State to the white university located at Athens. There is the matter of Federal taxation. The Democratic Party of Georgia opposed the present system of internal revenue, especially the high tax on tobacco. This is an article of general use by all classes in the community, with white as well as with black, and under the present system of Federal taxation the colored laboring man pays on his tobacco and whisky tax more than many persons who own $100,000 or more of property in stocks and other things. This the colored man, as well as the white man, conceives as unjust, and hence they naturally vote with those who advocate the system of Federal taxation which will bear equally upon all classes, and upon all industries. I could greatly enlarge upon the subject, but it is unnecessary."

"Was the course of the majority at the extra session of Congress, in your opinion, a wise one, in reopening the question of State Rights and in refusing appropriations for Federal marshals?"

"My position upon the question raised," exclaimed Mr. Stephens, almost fiercely, "was so well-known, *is* so well-known, I need not repeat it here. However, as you desire an answer to your question, I shall give you one. I did not think it was wise, politic, or right, to withhold the necessary appropriations to carry on the Government, either in the civil or military branches of the service, because the President thought fit to veto any measure passed by both branches of Congress. Under our system of Government, as provided in the Constitution, the President has the right to withhold his assent upon any measure he may disagree with. He, as well as the members of House and Senate, is responsible to the country for his actions. It is not here as in England in this matter. England is a monarchy, and an hereditary monarchy. Ours is a constitutional government, consisting of three separate, co-equal and co-ordinate Departments of Government—the Executive, the Legislative, and the Judicial. With us there is a division of sovereign powers. To each of these separate, co-ordinate departments of Government are delegated the exercise of these sovereign powers, which are expressly specified in the Constitution, to each respectively. In England, for centuries, when the Crown refuses to give its assent to measures of public relief and right, the only sure redress for the Commons is to withhold supplies until measures for the redress of popular grievances shall be assented to by the Crown as the Executive in that country. The redress of grievances in this country is by the popular vote and one bi-annual and quatrro-annual elections. In this way the machinery of the Government can move along harmoniously in all its parts with the rectification of all wrong without any disturbance of the peace, or public disorders. And the proper administration of our system requires that each of these co-equal and co ordinate departments of Government shall be kept separate and independent of each other. But I held at the extra session, and do hold, that Congress has got the right to specify the purposes and uses to which moneys appropriated by them shall be applied—appropriate, itself, means to set apart for specified objects."

After a pause Mr. Stephens resumed:

"The right of secession and the practical question as a resort for the redress of grievances I consider as ended for ever by the war, and I do not think that any such question was raised at the extra session. Whatever men may have thought before or since on this as an abstract question, all, it seems to me, must admit that for the future it can never again enter into American politics. The right or wrong of the question when it was a practical one, cannot be settled by the men of the present generation. It is a question for the philosopher and the future historian."

"What if it were made an issue?"

"To make it an issue simply as a practical theoretical question of this day seems to me to be utterly out of place. How anybody could suppose that the two millions of Democrats who so recently put this asserted right down by arms could now be induced to put it up by votes I cannot see. How this can ever again become a practical question in the country I cannot see. When the Southern States abandoned their appeal to maintain this right, which they did doubtlessly before conscientiously entertain, they abandoned it in good faith."

"Do you consider this to be the prevailing feeling in the South?"

"There is not one, I suppose, in a thousand, perhaps in a million, in the Southern States who does not feel pledged to abide by that abandonment for ever. But, as I have said, I do not think this question was raised by anybody at the extra session. The discussion upon it since the adjournment has been more the work of agitators than of anybody in the House of Congress at the extra session. The prevailing opinion I think, upon all sides of the House, was that President Hayes gave utterance at Atlanta, Ga., two years ago, to the popular sentiment of the country everywhere, when he said in substance, in reference to the late war between the States, that the men in gray in that conflict fought as conscientiously and bravely for what they thought was right as did the men in blue."

"Will Congress at its coming session make early provision for paying fees of marshals?"

"I cannot answer that question."

"Who is the favorite candidate in the South for the Presidential chair on the Democratic side—Tilden or Bayard?"

"I do not wish to say. I do not wish to give any opinion at present upon politics."

"Who of the Republicans would poll the largest vote South?"

"Grant, I imagine, but as I have already stated, I decline to speak upon politics."

"What is your opinion upon the present financial boom?"

"The present apparent financial boom I look upon as short-lived, at least I am apprehensive that it will prove so."

Mr. Stephens's colored valet here announced the carriage, and I withdrew.

BISHOP HORATIO POTTER, D.D., LL.D., D.C.L.

THE TWENTY-FIFTH ANNIVERSARY OF HIS CONSECRATION.

THE Right Rev. Dr. Horatio Potter, Protestant Episcopal Bishop of the Diocese of New York, was born in Beekman, N. Y., February 9th, 1802, two years after the birth of his brother Alonzo, who also became a Bishop. He was graduated at Union College in 1826. A year later he was ordained a deacon in the Episcopal Church, and, shortly after, a priest. In 1828 he became Professor of Mathematics and Natural Philosophy in Trinity College (then Washington), Hartford, where he remained until 1833, when he received the rectorship of St. Peter's Church, in Albany, N. Y. Four years later he was elected President of Trinity College, but declined the honor. Immediately after the death of Bishop Wainwright (1854), Dr. Potter was chosen Provisional Bishop of the Diocese of New York, being consecrated November 23d of that year. Seven years later, by the death of Bishop B. T. Onderdonk, he became Bishop of the diocese, and has ever since continued to discharge the responsible duties of the episcopal office with eminent ability and fidelity to the interests of the church. Few men, perhaps, have a more exalted conception than he of the dignity and sacred character of his office. It has been well said of him that "he exhibits to the fullest extent that solemnity of demeanor, that strictness of life and that superiority of talent required in one called to such functions." The atmosphere about him seems laden with refining influences, all his daily steps are in the path of conscientious duty, and his grandeur of intellect makes his authority more imposing.

The twenty fifth anniversary of Bishop Potter's consecration was commemorated November 23d by significant services in Trinity Church, at which the Bishop personally officiated, assisted by Bishop Littlejohn of Long Island, Bishop Coxe of Western New York, Bishop Doane of Albany, Bishop Clarke of Rhode Island, Bishop Clarkson of Nebraska, and Bishop Seymour of Illinois were also present. The order of service was as follows: Processional Hymn No. 425; Te Deum Laudamus, Tuckerman; the Communion Service, Kyrie, Gounod; Nicene Creed, in unison; anthem, "Lord God of Hosts," Spohr; an address from the clergy and laity to the Bishop of New York, by the Rev. Dr. Morgan Dix; reply by Bishop Potter; hymn No. 405; Sanctus, Gounod; Gloria in Excelsis, old chant; Recessional, 303.

On the evening of November 25th a reception was given to the Bishop at the Academy of Music, which was thronged by a brilliant company, including most of the church dignitaries of the diocese. Rev. Dr. Morgan Dix, during the formal exercises, occupied the chair, and an address of congratulation to the Bishop was delivered by Mr. William M. Evarts. Then followed the presentation to the Bishop, on behalf of the diocese, of a beautiful memorial gift, consisting of an elaborately-wrought casket of silver, gold and steel, the speech of presentation being made by Mr. John Jay. Music was supplied by the choirs of Trinity, St. Thomas's and Grace Churches, with the assistance of a fine orchestra. At the close of the principal exercises gentlemen ushers presented guests to the Bishop.

THE SEVENTH REGIMENT FAIR.

ALTHOUGH the members of the Seventh Regiment, N. G. S. N. Y., had every reason to believe the citizens of New York would aid them very liberally in their efforts to pay for the new armory, the success thus far of the great fair must be a long way beyond the liveliest expectation. By day and night the spacious apartments are thronged almost to an uncomfortable degree, and that, too, by men and women and children, who leave many dollars in their wake. A massive floral temple stands in the centre of the main drill-room, and six booths are arranged in a hexagon around it. Spreading out on each side are the pavilions erected by the several companies, representing the most tasteful styles of architecture, and containing great varieties of useful and ornamental articles for sale. These are in charge of a committee of the lady friends of the companies. Up one flight of stairs are the rooms of the companies used for meetings and other purposes. In these are what are called the side-shows of the fair, such as the Punch and Judy exhibition, the gypsy camp, the rifle gallery and countless other attractions.

It would be impossible in the space at our command to even mention the thousands of articles on sale that are deserving the notice. But there are some that cannot be passed over on account of their exceptionable character. Thus, the Gorham Manufacturing Company has $25,000 worth of its finest silverware on exhibition at the pavilion of Company G, the entire profits on which are to be given to the Armory Fund, and on many tables are superb contributions from the varied and tasteful stock of the Meriden Britannia Company, whose gifts exceed in aggregate value $1,000. Company F has, among other articles, a casket of silverware, containing 224 pieces, and worth $800, and Company B a case of fifty eight-dollar hats from Youmans, the entire proceeds of which will be contributed to the fair. A billiard-table, worth $2,500, which won the medal at the Centennial Exhibition, may be seen at the English Gothic Pavilion of Company D. Four of the finest grand pianos, contributed by A. Weber, may be seen and tried by any one. Here and there in the grand kaleidoscope the visitor sees a sword worn by Kosciusko in the Revolutionary war, and a picture drawn and signed by him; the sword worn by Commodore Decatur at Tripoli; a sash worn in the Revolution by Colonel Sebastian Bauman, who was postmaster of this city for eighteen years after the War of Independence; the camp bedstead used by Lafayette in the Revolutionary war; the robe worn by John Jay as the first Chief Justice of the United States, made of black satin with salmon-colored facings; a small brass cannon, which was cast in Venice in the sixteenth century, and ornamented with the winged lion of St. Mark; a copy of the famous "Breeches Bible," printed in 1568, and some hymn-books, etc., belonging to the Collegiate Dutch Church; testimonials given to General Jacob Brown for his services in the War of 1812 are shown, including the gold medal presented to him by Congress, the gold snuff-box given to him by the City of New York, and the sword which was voted to him by the Legislature of this State; the christening robe of Gustavus Adolphus, of Sweden, which was made in 1594; and a piece of Gobelin tapestry of the time of Louis XIV., which is valued at $5,000.

Voting is in progress for elegant swords to be presented to the most popular officers of the National Guard and the Army and Navy, while there will be drawings at the close of the fair for a large number of articles, including twelve different diamond pieces, valued at $5,000, in a single subscription; pianos, a $1,000 billiard-table, wagons, carriages and T-carts; a $750 bust of Napoleon I., cameos, jewelry, and almost everything worth keeping.

The fair will open hereafter at 3 o'clock P. M., and close at 11 P. M., daily.

HINTS FOR EMIGRANTS.

In San Francisco bay are ninety-two varieties of fish for food.

THE Swiss colony at Mount Airy, Ga., is flourishing. More Swiss are coming.

IT is believed that there are now 3,674,000 sheep on the stock-farms of Texas.

SIX hundred negroes of San Augustine and Shelby Counties, Texas, are to start for Kansas this month.

THE tide of immigration is again turning towards Texas. Trains are said to be well loaded going from all directions.

A PARTY of French agriculturists, numbering seventy-nine men, women and children, have left Havre on their way to Texas.

UNDER the new law of Texas all strips of vacant land in organized counties can be bought from the State at fifty cents an acre.

ON November 3d the steamship *Teutonia*, from Liverpool, landed in New Orleans 200 farmer immigrants for Texas, who will invest from $100 to $5,000 each in land.

APACHE COUNTY, Arizona, has settled up at a rapid rate this Summer. People from New Mexico, who own large herds of sheep, have driven them in, selected stock ranges and become taxpayers in the new country.

IT is said that the G. H. and S. A. Railway Company of Texas will appoint an agent to proceed to Germany to induce emigration to the lands of the company along the railway, and that the position will be offered to Judge A. Siemering.

MR. E. A. FULTON, of Drew County, Ark., is visiting St. Paul and Minneapolis as the representative of a colony of colored people which has been organized in that county, who are seeking aid in the North to enable them to remove to Southern Nebraska.

LATE reports from Oregon represent that the northern valleys of Lake County are being rapidly settled by emigrants; that there are 90,000 acres of rich land in the Upper Nehalan Valley; and that the wool-clip of Jackson County this year will reach 300,000 pounds.

AN association has been organized at Erie, Pa., to induce immigration to that city, and will advertise in three hundred papers of England, Ireland and Scotland, offering inducements to settlers.

IN 1878, according to the census, the population of Washington Territory was 50,511. This year there is an increase of 7,273, making the population 57,784. Stevens County shows the greatest gain, 1,735; Whitman next, with a gain of 1,581; while Columbia stands third on the list, having gained 1,074.

JOHN MITCHELL, one of the most extensive landowners in the San Joaquin Valley, California, lately sold eight sections of land west of Modesto, at $20 per acre. It was sold in tracts varying in size from 160 acres to 640, and will be occupied and farmed by those who have purchased it—emigrants from other States and Europe.

THE population of Chattanooga has increased in two years from 11,488 to 12,879, a gain of 1,391. The increase of whites has been 318, of blacks 1,073. The preponderance of increase of the latter is of itself an industrial straw of value. For, while there have been added all these strong hands to the workers, there are less idlers than ever before.

SUGAR BEETS have been cultivated with success on the Euchol Brook farm at Pikesville, Maryland, from seed brought from Germany. The beet yields twelve per cent. of saccharine matter, and a German manufacturing firm have offered to build a mill for making sugar and bring skilled workmen, if a guarantee is given that at least two thousand acres shall be planted yearly for their use.

THE cotton receipts of Atlanta, Ga., fell off in 1878 about 12,000 bales from those of 1877, and this year there will be a further decline of some 2,000 bales. But what Georgia is losing in cotton would seem to be made up to her in rich minerals. A single blast recently in the old Strickland mine in Forsyth County exposed a vein three feet in width, with the gold so thick that it could be seen at a distance of ten paces.

THE Elberton (Ga.) *Gazette* tells "how to double the price of our cotton crops" as follows: Supposing our crops reach to 8,000 bales, at ten cents, it would bring to our county $320,000. If this crop was used up by factories in the county it would bring instead of $320,000, a return of nearly $700,000. This being the case, it behooves every farmer in the county to use his exertions for the establishment of cotton factories right here at home.

CHIEF-JUSTICE PALMER, of New Mexico, says he has received many inquiries from Eastern people concerning the advantages of that Territory for emigrants and capitalists. He speaks of the fruit prospects as superior to California, the flavor being much finer, and is especially hopeful over the outlook for native wines. Now that there will soon be direct communication by rail with Kansas and Colorado, the Valley of the Rio Grande will become the great orchard of the West.

SAN FRANCISCO will have the sum of $900,000 with which to keep up her schools during this school year. The State apportionment part of this amounts to $390,000. The city's school property is valued at $3,051,000; the estimated value of the school apparatus is $25,000, and of the school libraries $13,000. During the past year the enrollment in the schools has been 38,129, the average daily attendance being 27,075. The private and church schools instructed 7,224.

IT looks as if Dakota would be the thirty-ninth State. In 1870 its population was about 14,000. Now it is estimated at 120,000, and its people think it will be 180,000 by 1880. This will clearly entitle it to admission unless the Territory is divided, a question which will be much discussed. It is asserted that three-quarters of the soil of Dakota is unsurpassed on the slope for wheat-growing, and there are six lines of railroad now being pushed across these lands from east to west.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER

Entered according to the Act of Congress, in the year 1879, by FRANK LESLIE, in the Office of the Librarian of Congress at Washington.

No. 1,263—Vol. XLIX.] NEW YORK, DECEMBER 13, 1879. [Price 10 Cents. $4.00 Yearly; 13 Weeks $1.00.

HEARING WITH THE TEETH.

A Satisfactory Test of the Audiphone.

MR. RICHARD G. RHODES of Chicago, the inventor of the audiphone, designed to enable the deaf to hear by means of the teeth, gave a very interesting exhibition of the new instrument at No. 41 East Twenty-second Street, in this city, November 21st, in the presence of Mr. Peter Cooper and the Rev. Dr. Thomas Gallaudet; the Rev. Robert Collyer; Prof. Jenkins, of the Institution for the Deaf and Dumb, who was accompanied by a class of mutes; Mr. Henry Bergh, and many others. After explaining the origin of the invention, Mr. Rhodes described it as consisting essentially of a diaphragm of hard rubber, somewhat similar to the diaphragm of the telephone, and of somewhat peculiar composition. This diaphragm is very thin and elastic, and cut in the form of a square, with rounded corners, so as to present a collecting surface of not far from one square foot. For purposes of convenient adjustment it is furnished with a neat, hard rubber handle, and in this form might readily be mistaken for a fan of the ordinary Japanese pattern. When in use the edges of the diaphragm are made to approximate towards each other by a silken cord, so as to present a convex surface to the speaker and a concave one to the listener. The cord may be fastened at any convenient convexity of the surface of the auditory disk. When thus adjusted, the upper edge is pressed firmly against the interior edge of the upper teeth, and the deaf-mute is ready to listen. The experiments on the class of deaf-mutes present were conducted by Mr. Rhodes in person. The most satisfactory results obtained were those in which the congenitally deaf members of the class were the subjects of experiment, deafness from disease frequently involving loss of sensibility in the auditory nerve, rather than injury to the bony or membraneous structure concerned in hearing, and thus extinguishing the necessary basis of sensation. A young man who had been deaf from infancy heard words spoken in the tone of ordinary conversation. His delight at the recovery of a lost sense affected every spectator.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, DECEMBER 13, 1879.

CAUTION.

Subscribers, in sending subscriptions for any of our publications, should be careful to direct their letters plainly to FRANK LESLIE, *53, 55 and 57 Park Place, New York, in order to insure their safe delivery.*

The present number gives an interview with Mr. Frederick Douglass, United States Marshal for the District of Columbia. The utterances of Mr. Douglass upon the exodus, as well as upon the condition of the negroes in the South, will be read with considerable interest, not only from the fact that Mr. Douglass is himself of the colored race, but from his having been a slave. Mr. Douglass touches upon many topics of importance in this interview.

THE CURRENCY REPORT.

WE always look to the annual reports of the Hon. John Jay Knox, the Comptroller of the Currency, with the assurance that we shall find in them lucid statements of fact, accompanied with valuable suggestions for the future guidance of our legislators and of the banking institutions over whose management he is called by his office to exercise a vigilant inspection. In his report of the previous year he made a vigorous defense of the national bank system against some of the attacks waged upon it from the political hustings and by the public press, and in his report of the present year he is able to cite, in further defense of that system, the effective part it has played in contributing to the success of Secretary Sherman's refunding operations, by which such a great diminution has been effected in the annual interest paid on the public debt. Indeed, Mr. Knox does not hesitate to say—and the remark is abundantly substantiated by the facts and figures which he adduces—that if the national banking system had not existed, and if United States notes had been issued in place of the national bank notes, it would not have been possible to consummate the brilliant achievement which has shed so much honor on the financial skill of Mr. Sherman. It does not at all detract from the merit of the latter that the national bank system was so directly and so effectively instrumental in promoting the execution of his funding transactions.

But, as becomes a wise financier, it is rather with the present and future than with the past that the Comptroller mainly concerns himself in the doctrinal part of his report. Since the advent of resumption the old forms of tables, giving the amount and kinds of currency in actual circulation, are no longer adequate to represent the current volume of money at any given date; for the sum total must vary from time to time according to the amount of coin in the country, and this amount is, besides, a variable quantity which must be determined by calculation rather than by exact statements. The amount of coin in the country is estimated by the Director of the Mint to have been $427,000,000 on the first day of November in this year, and of this amount $121,000,000 was in silver coin. Assuming the correctness of this estimate, and it cannot be far from the truth, Mr. Knox reports that the circulating medium of the United States on the date indicated was as follows:

Treasury notes outstanding	$346,681,016
National bank notes outstanding	337,181,418
Gold in the Treasury, less certificates held by the banks	157,960,193
Silver in the Treasury	50,078,620
Coin in the banks (Oct. 20)	42,173,741
Estimated amount of coin held by the people	231,478,516
Total	$1,165,553,504

On comparing this volume of the currency with the highest point that was reached between the suspension and the resumption of specie payments in the United States, Mr. Knox finds that it is $380,000,000 in excess of that highest point. And after due allowances made for the amount of hoarded coin which is available as currency, but which has not, as yet, actually entered into circulation, and for the coin reserves held by the Treasury and the national banks, he comes to the conclusion that the present actual inflation of the currency, in everyday circulation, is about $120,000,000 in excess of previous years.

It is undoubtedly true, as Mr. Knox argues, that an unusually large volume of currency has been required by the business operations of the country during the past year. Our harvests, as he says, have been unprecedentedly large; the price of all agricultural products has been enhanced by the foreign demand resulting from the failure of crops in Europe; and there has been a consequent rise in the price of wages and of all exchangeable commodities. But these considerations only serve to show how it is that the country has thus far escaped some of the evils resulting from an undue expansion of the currency. While they explain the grounds of our security in the past year, they afford no security for the years that are to come, but, by their exceptional character, would seem to teach the lessons of an indispensable prudence to our banking institutions, to our business men, and to our legislators in Congress.

As Mr. Knox is called by his functions as Comptroller to consult primarily for the soundness of the national banks, and through them to consult for the welfare of the people, he does but perform his duty to each when he "urgently recommends" that all the national banks shall take advantage of the present influx of gold to accumulate in their vaults an amount equal to the total cash reserve required by law. The grounds of this recommendation, and the advantages expected to result from its adoption, are explained by Mr. Knox as follows:

"If this coin, which is still flowing into the Treasury, shall also be largely accumulated by the banks, it will be more likely to become diffused among the people. The addition of coin to the circulation should have the effect to reduce the amount of paper money, if in excess of the wants of business, and send homeward for redemption the legal-tender and the national bank notes. If the legal-tender notes accumulate in the Treasury, they cannot again be issued, except upon requisitions of the Government; and the accumulation of such notes has a tendency to induce extravagant appropriations and expenditures by Congress. The law, as it now stands, requires that the Secretary shall keep in circulation the legal-tender notes, which is not practicable, and their accumulation by him will lead to constant agitation of the subject in Congress and among the people, which discussions will encourage speculation, and disturb the current of legitimate business. With the influx of specie it is important that such a paper currency shall be in circulation as can be easily retired, if in excess."

At the date of this present writing we are not apprised of the views which Mr. Secretary Sherman will announce in his annual report with regard to the expediency of withdrawing and cancelling the legal-tender notes. We know that on the political "stump" he has persistently argued in favor of their retention in our currency, and has predicted for them in the future a circulation throughout the marts of the world on an equality with the Bank of England notes. We have seen an intimation that since the light shed upon the financial situation by the late autumnal elections, in which the Greenback party has been driven to the wall, the Secretary is not indisposed to change his opinions on this point, and will hereafter keep lock-step with the advancing course of an enlightened public sentiment. We shall soon know how much truth, if any, there is in these vaticinations, but in any event it is satisfactory to know that the Comptroller of the Currency, though speaking with all the delicacy and reserve due from a subordinate in the Treasury to its official head, has not left either Congress or the country in any doubt with regard to his views of financial policy and of public expediency in the premises. When he says that the accumulation of greenbacks in the Treasury is a lure to extravagant appropriations by Congress, that their periodical reissue leads to a constant agitation of the subject in Congress and among the people, and that this agitation tends to disturb legitimate business while promoting speculation; and, finally, when he says that the country requires an elastic currency which easily admits of withdrawing so much of the circulating medium as may be at any time in excess of the actual wants of trade, he does but formulate the patent objections which lie against the longer toleration of a currency that is at once seductive to public virtue, injurious to lawful business and rigid in its volume. That a kind of money subject to such perils should have been invented by the financiers of 1862, when they supposed themselves unable to find or to create a better currency, is, at least, intelligible, but that such a currency should be retained at the present day, when it is required for no useful purpose, and is only productive of evil, and that continually, can be explained only on the grounds of that infatuation which is said sometimes to overtake men in masses as well as individuals.

MAKING OUR OWN SUGAR.

THIRTY years ago Louisiana produced one-half of all the cane-sugar used in the United States, but at this time she supplies less than one-tenth of what is consumed. This change is due to a decrease in the home production and the enormous increase in consumption. There is, as is well-known, but a limited area of country in the Southern States adapted to the culture of the true or tropical species of sugar-cane, and, although this has not as yet all been utilized, still, it has long been apparent that no possible increase of production in these regions could keep pace with the rapid increase in consumption. This being admitted, both the Government and individuals have been looking about for other sources of supply, that might in part, at least, relieve us from the necessity of purchasing millions of pounds annually of foreign countries, thus sending money abroad that might perhaps be kept at home.

The introduction of the Chinese sugar-cane some twenty-five years ago was pregnant with great promise, for it was a plant closely allied to the broom-corn and other species of sorghum that were known to be adapted to cool climates and likely to thrive in all of our Middle States and most of the Northern, but the valuable properties claimed for this new cane were not realized to the extent expected, and the interest in it gradually waned. Attempts to make sugar from sorghum were indeed not wanting, but they were not, upon the whole, sufficiently successful to warrant the extended cultivation of this plant, and for the past fifteen or twenty years it has been little talked about except as a cheap and convenient source of obtaining syrup for home consumption by the farmers growing it. During this time, however, new varieties have been raised, among them, one, called the "amber cane," that promises to be a great acquisition, and, in fact, has already revived the waning interest in sorghum culture, bringing once more prominently before the public a sugar-producing plant of the highest order. Whether this recent and quite widespread interest in sorghum sugar is due to the new varieties, or the discoveries in methods of treating the syrups and obtaining a good quality of sugar therefrom, is a question not definitely settled. Still, the results are apparent on every hand, and it is proved that good sugar can be obtained from the newer sorts and in much larger quantities than was ever extracted from the old ones. Besides, some of them are so early that they will mature even in the State of Minnesota, practically making the production of sugar possible wherever Indian corn will grow. In fact, it has been found by some of the recently discovered processes that the stalks of Indian corn will yield about 2,000 pounds of syrup to the acre, nearly one-half of which can be changed into sugar.

Quite a number of our sugar-refiners in both Eastern and Western cities have been experimenting with sorghum sugar during the present season, and from their favorable reports we may conclude that there can be no longer any doubt in regard to its production in almost unlimited quantities and of excellent quality. The only remaining point to be definitely settled is that of cost. If this should be satisfactory, we may conclude that the country is now in a fair way to produce all the sugar required for home use, and, perhaps, in the near future, have some to spare. The sorghums are so closely allied to Indian corn—requiring similar soils and cultivation—that our farmers were inclined to take hold of them from the start, and recent developments have made many of them more than anxious to extend their plantations.

The sugar-beet, from which the larger part of all the sugar used in France and some other countries is obtained, has received but little favor in this country, as its cultivation is far more expensive than the sorghums, calling for a much greater expenditure of labor. Furthermore, in our dry climate, all kinds of root crops are far less successful than in the more moist one of Northern Europe. Attempts have, however, been made to utilize the beet-root for sugar-making in several of our States—principally in Maine, Illinois and California—but with indifferent success; and this interest may be considered as yet in a kind of embryonic state, no one knowing whether there is any really good foundation for even a hope of final success. Large sums of money have been invested and lost in erecting costly manufactories for producing beet-root sugar, and, while they may finally succeed, the results are uncertain.

CARING FOR THE CHILDREN.

IF there is any one city charity which is exceptionally conspicuous for the beneficence and grandeur of the results achieved by it, it is the Children's Aid Society, now in the twenty-seventh year of its active history. The annual report, just given to the public, shows that during the last twenty-six years the Society has supplied 55,717 persons, of whom 45,000 were children, with homes and places of work, and it is stated that not five per cent. of these have become criminals or chargeable on the public. Great numbers of the boys have grown up and now own property and occupy positions of influence; some are scholars, lawyers and clergymen. The girls have often married happily and many are now happy mothers of families. The statistics of the past year show that 3,713 persons were sent to homes, of whom 1,920 were boys, 1,280 girls, 210 men and 203 women, at an average cost of $8.04 each. In the lodging houses, during twenty-six years, some 200,000 different boys and girls have been sheltered and partly fed and instructed. In the industrial schools probably over 50,000 poor little girls have been taught; and of these, it is not known that even a score have entered on criminal courses of life, or have become drunkards or beggars, though four-fifths were children of drunkards.

The Society claims that the police statistics of crime demonstrate very conclusively the great usefulness of its work. "During a portion of the period through which these figures run, the population of the city increased from 814,224 in 1860 to 1,083,371 in 1878, while, as usual, great numbers of poor people remained here, left by the foreign immigration; yet the commitments of female vagrants have within those years been reduced over one-half; the commitments of young girls for petit larceny over one-half; the commitments of boys for petit larceny have been materially reduced, and criminal offenses by boys held decidedly in check."

The total receipts of the Society since 1853 amount to $2,748,001. A work which touches so vitally the welfare of the whole community, and embodies so much of actual benefaction to thousands of lives that but for its intervention might be in perpetual eclipse, may surely challenge the heartiest sympathy and the substantial support of all right-minded citizens.

THE SILVER IDIOCY.

THE annual report of the Director of the Mint sets forth the interesting fact that at the close of the fiscal year, June 30th, 1879, the metallic money of the country amounted to $398,541,683, of which sum $112,050,985 was composed of silver. In six years, that is to say, from June 30th, 1873, the gain in gold has been $151,490,698, and in silver $107,050,985. According to the same authority, the total of coin owned in the country on the 1st of November, 1879, amounted to $427,206,852, an increase of $28,665,169 in four months. Of this increase $9,405,370 was in silver, making a total in that metal of $121,456,355. Having in view the attitude of European nations with reference to bi-metallism, and apparently deprecating the expansion of the silver volume, the Director uses the following precautionary language:

"Should the $600,000,000 of silver coins now permitted to circulate as full legal-tender in Europe be demonetized, consequences will follow more disastrous to the stability of silver and all monetary values than have attended its partial exclusion from European circulation, and its immediate further depreciation would pour the whole supply upon nations willing to receive and use it as money. The United States could not, single-handed among commercial nations, with no European co-operation or allies, sustain the value of silver from the inevitable fall."

Notwithstanding the fact that our chief commercial relations are had with countries devoted to mono-metallism, or which have relegated silver to a subsidiary position; and also the other fact that European nations have thus far declined American overtures for an international agreement in regard to the coinage of silver, our Government, by direction of Congress, goes on with the foolish work of coining silver dollars of base weight, all of which the superior law of commerce rejects. That the country stands committed against this coinage of silver is clearly shown by the completed report of Treasurer Gilfillan, which covers the transactions of his department for the past fiscal year. In that report he shows that the total coinage of standard silver dollars, under the Act of February 28th, 1878, amounts to $45,206,200, of which only $13,002,842, or less than 29 per cent., is in circulation. The remaining $32,203,358 are piled up in the mints and Treasury offices, while the farce of increasing this useless coinage goes on at the rate of more than $2,000,000 per month, to the great detriment and disgust of people awaiting the coinage of gold.

The Director of the Mint states it as an opinion that the true policy of this country is to pursue such conservative action as will tend to bring the values of gold and silver to their former status, but precisely how this is to be accomplished without the aid of countries to which we are commercially related, we are at a loss to understand. The fact is only too apparent that the United States must come into financial harmony with civilized nations as to a single standard of value and subsidiary coinage. The one pressing need of this great producing and commercial country is not that of a strictly circulating medium, but a standard of value liable to the smallest possible fluctuations. The public requires a steady denomination dollar wherewith to measure other values, rather than a great quantity of actual dollars either of gold or silver. This is the want of the age. We stand on the advanced plane of civilization, and yet we use financial methods all unknown to semi-barbarous nations like China and India. The introduction of the deposit system and the clearing-house has had much to do with changing the aspect of

Digitized by Google

the question. The mass of all business is being conducted on credits, and the turning over of $300,000,000 in money means the transaction and settlement of trade values to the extent of $6,000,000,000, and each time the same $300,000,000 are turned over it simply settles the balance on $6,000,000,000 involved in exchanging domestic and imported productions or other property. In consequence of this state of affairs the standard of value becomes of more importance than ever. Actual metal dollars we must have in order to get and keep the all-important denomination dollar, that being the measurer of all credits, commodities and services, but the actual metal dollars are no longer used to anything like the former extent. These several facts constitute an important element in considering the silver question, and yet, as a rule, they have been willfully or ignorantly ignored.

The advocates of bi-metallism argue in favor of silver as though they believed that the business of the world was still done in gold and silver dollars. The civilized world, with its perfected financial system, does no such thing. Its business is now substantially done through the medium of bills of exchange, drafts, checks, bank bills and other forms of credit. More and more these appliances of commerce and trade are taking the place of coined money. At home, as abroad, the principle of the clearing-house is extending, and more and more are debts liquidated by offset, and less and less by direct payments in coin. Last year—1878—the aggregate business of twenty-one clearing-houses in the United States reached a sum total of more than $32,323,000,000, and yet not more than five per cent. of money was used in adjusting the offsets or balances found due. Credits, of course, can never wholly usurp the place of coined money. If that were possible there would remain no *denominations* for the measurement of values, but it is quite plain that the more the credit system extends its operations the more it does away with the need of and use of actual money.

Under the changed methods of conducting trade, and able to command all the gold called for by commercial wants, why should the United States attempt to preserve a double standard, or go on coining silver dollars for which there is no demand? The country no more needs two standards of value than it needs two Constitutions or two Presidents. According to Professor Perry, of Williams College, silver, as compared with agricultural labor in England, has declined in 600 years to one-tenth of its former purchasing power; that is, it has lost in that period 90 per cent. of its purchasing power. Gold has suffered no such decline, and this experience, as well as all other, proves it to be the better and more reliable standard of value. Let us have done with the foolish idea of a double standard, and put an end to the idiotic coinage of silver dollars for the mere purpose of storing them away in the vaults of the Treasury Department.

EVENTS ABROAD.

THE situation in Ireland is undoubtedly critical. In the counties of Mayo and Sligo great popular demonstrations were held last week, and bodies of troops were held under arms in apprehension of probable outbreaks. The populace, however, while intensely indignant at the recent action of the Government, have, for the most part, kept within the law, and no serious acts of violence have so far been reported. But there was a very turbulent scene in the Sligo court on Friday, November 28th, when, after refusing to give bail, and making a passive resistance to arrest, Mr. Killen was committed for trial. The announcement of his counsel that he desired to call as witnesses the Catholic Archbishop of Dublin, the Crown Solicitor and Mr. Dwyer Gray, M. P., evidently provoked the magistrates, who were willing to accept bail, and they cut the examination short. Mr. Daly, who, with Messrs. Davitt and Killen, had been arrested for alleged sedition, it is said, will be presented as the County of Mayo's next representative in Parliament. It is said that Lord Beaconsfield has expressed a purpose to undertake certain Government works in Ireland with a view of furnishing employment to the necessitous, and that the Government contemplates sending large quantities of coal to the parts nearest to the distressed district, to be distributed by Poor Law officers and relief committees at cost price. Mr. Parnell continues to be the hero of the hour, and has an opportunity to serve his people, which it is to be hoped he may employ wisely.

Prince Gortschakoff is succeeded in the direction of the foreign relations of Russia by Prince Walujeff, who is understood to favor a pacific policy, especially as to Germany. Walujeff has filled with great ability the position of Minister of the Interior, and more recently has been known as Minister of Domains. He is one of the most distinguished representatives of the Russian aristocracy, and it is believed that he will direct with exceptional wisdom the foreign affairs of the empire, though his policy will not be in accord with the democratic spirit now so rigorously asserting itself. An important meeting of Russian diplomats was held at St. Petersburg, December 2d, and it is hinted that Gortschakoff has expressed decided opposition to the promotion of Walujeff, whom he regards as too strongly disposed to conciliate the Western Powers.

Mr. Gladstone opened his canvass at Edinburgh last week, being most cordially received. He sharply criticised the policy of the Government, and declared himself in favor of giving home rule in Ireland as to all purely local matters.

The French Chamber of Deputies was formally opened in Paris, November 27th. The event seems to have attracted little attention. M. Gambetta, in opening the session, congratulated the House on its return to Paris, the legitimate capital of France, and urged the Chamber to abstain from all useless and passionate discussions, and concentrate its efforts on securing the grandeur of the country and consolidating the Republic. There are still indications that the present Ministers are not likely to continue much longer in power.

There is a report that the Russian army in Central Asia will be reinforced by four regiments, and that a new route of advance is being prepared. There is probably some ground for this statement. Russia does not mean to let go her hold upon the points already secured in Asia, nor will she abandon her campaign against Merv so long as there is a possibility of success in that direction.

The financial distress in Constantinople is becoming very serious. It is said that the purveyors to the Sultan's palace, owing to the non-payment of long-standing bills, have suspended the daily supplies, and there are other equally significant indications that the credit and resources of the Government have reached the lowest possible point. It is now said that the Ministry proposes to do their utmost to arrive at a direct understanding with Greece, and avoid an appeal to the Powers.

The obsequies of the Countess Montijo, mother of the ex-Empress Eugénie, which occurred in Madrid, November 24th, were marked by great pomp. The hearse was followed by six hundred carriages filled with mourners, including statesmen, ambassadors, courtiers and distinguished people of every sort. Eugénie is said to be prostrated with grief at the loss of her mother, who was the centre of the very highest society at the Spanish capital.

Another of the London sensational journals, the *Figaro*, has fallen under the ban of the courts for publishing articles declared to be libelous of a society lady. The proprietor was sentenced to three months' imprisonment and to pay a fine of $500.

The new Italian Cabinet, of which Signor Cairoli is President, represents the best phase of Italian liberalism.

The Turkish police force, which is to act as a reserve in case of war, has been fixed at 60,000 men.—There is still a possibility that the British will be compelled to reconquer the Transvaal by force, the Boers still showing a hostile attitude.—The northwestern provinces of India are suffering from a severe epidemic of malarious fever, which has increased the death rate to an enormous extent and temporarily disabled a large proportion of the agricultural population.—The negotiations between Austria and Germany for the conclusion of a new commercial treaty have been suspended.—Direct telegraphic communication has been established between London and Cabul. The weather in Afghanistan is intensely cold.—Count Schouvaloff, who has presented his letter of recall as Russian Ambassador, to Queen Victoria, will spend the Winter at Cannes.—Eleven hundred soldiers, on two frigates, left Spain for Cuba on the last day of November. The insurrection is regarded as practically over.—M. de Lesseps will be preceded on his visit to Panama by a brigade of pioneers and surveyors who have already sailed for that point "to prepare for cutting the canal." De Lesseps will sail for Panama, December 6th, and after his exploration there will visit New York.

THE PRESIDENT'S MESSAGE.

THE "hardy annual" has appeared. The President has sent his Message to Congress, and its merits and demerits are now being canvassed over the length and breadth of the land. It deals with many subjects, the most important being the Finances and the Civil Service Reform. It congratulates Congress upon resumption and the familiar fact that $40,000,000 more coin are deposited in the Treasury in exchange for legal-tender notes than there has been coin paid out for notes redeemed. The revival in trade is alluded to, as well as to the liquidation, per $50,000,000 in gold, of the large indebtedness to the United States by foreign countries. Regarding the currency, the President states that of $45,000,000 of silver dollars coined up to November 1st, over $32,000,000 still remain in the vaults of the Treasury. The Message recommends Congress to authorize the Secretary of the Treasury to suspend the coinage of silver dollars upon the present legal ratio. "The market value of the silver dollar being uniformly and largely less than the market value of the gold dollar, it is obviously impracticable to maintain them at par with each other if both are coined without limit. If the cheaper coin is forced into circulation it will, if coined without limit, soon become the sole standard of value, and thus defeat the desired object, which is a currency of both gold and silver, which shall be of equivalent value, dollar for dollar, with the universally recognized money of the world." The President is still more decided in reference to the paper currency. He views the retirement of United States notes with the capacity of legal tender in private contracts as "a step to be taken in our progress towards a safe and stable currency which should be accepted as the policy and duty of the Government, and the interests and security of the people," adding: "It is my firm conviction that the issue of legal-tender paper money, based wholly upon the authority and credit of the Government, except in extreme emergency, is without warrant in the Constitution, and a violation of sound financial principles."

The Message deals with Civil Service Reform in a somewhat elaborate manner, dilating upon the propriety of "stump" by certain Cabinet officers, and its impropriety in inferior officials, while it alludes with considerable satisfaction to the results of the competitive examinations for minor positions in the Custom House and Post Office. The President appeals to the patriotism of the country to put an end to race proscription, and urges Congress to legislate towards the amendment of the laws regulating the exercise of the suffrage. With reference to polygamy in Utah, he insists upon the enforcement of the laws against it, declaring himself in favor of the withdrawal of citizenship as a penalty for their contravention of such laws. The temporary adjustment of the Fisheries Question is referred to as needing "early and permanent settlement," while the enlargement of our commerce with South America, more frequent mail communications therewith, a resumption of diplomatic relations with Colombia and the Indian Questions, wind up an able and interesting Message.

Among the Bills on the House calendar which will early engage the attention of Congress, is one to prohibit Federal officers, claimants and contractors from making contributions for political purposes, and another to prevent the cases from State to Federal Courts. On the Senate calendar are Bills prohibiting military interference at elections, and providing for a treaty of reciprocity and commerce with the Republic of France.

THE reports of United States consular officers on the rate of wages paid to, and the cost of living of, the working classes of Europe, have attracted great attention abroad. Indeed, so high is the estimate placed upon them that the British Foreign Office has distributed them to the chief Chambers of Commerce in England, and has recently asked for additional copies. The Edinburgh *Scotsman* says, with great directness: "The Foreign Office would render greater service if, through its own consuls, it would collect the information for itself, instead of having to beg it from the American Government."

IT is probable that Dakota will be the next applicant for admission into the Union as a State. The influx of population into this Territory during the last year and a half has been very large, and it is believed that before the close of 1880 the number of inhabitants will reach 160,000. It is not unlikely that the Territorial Assembly will, at the coming session, memorialize Congress for an Act enabling the people of Dakota to adopt a Constitution and secure formal admission as a State into the Union.

THE arrest of the agitator, Denis Kearney, in San Francisco, some days ago, for disturbing a public meeting, may be accepted as indicating the speedy collapse of the "sand lot" *régime*. The dispatches state that on his way to the lock-up, Kearney was "hooted and jeered," and that none of his followers manifested the slightest interest in his fate. It is to the credit of the Pacific metropolis that it has, at length, made up its mind to deal with this pestiferous demagogue as he deserves; but it is unfortunate that he has been so long tolerated, that the virus of his teachings has found a lodgment in the fundamental law of the State.

AT the recent meeting of the American Health Association, at Nashville, the subject of quarantine as a means of preventing yellow fever was discussed at length and with a good deal of earnestness. It was quite generally held that the present quarantine regulations are defective, and that a national quarantine should be provided for, under which all railroad trains should be stopped, at least, twenty miles from an infected city. Subsequently at a meeting of railroad managers of the southwest resolutions were adopted for a committee to lay before the several State Legislatures the practical defects of the present system of local quarantines, to the end that a more effective system may be enforced by appropriate legislation, and asking from Congress that the appropriation for the enforcement of State quarantines be expended under approval of the National Board of Health.

NEWS OF THE WEEK.

Domestic.

THE second session of the Forty-sixth Congress was opened on Monday, December 1st.

IT is said that General Butler will run for Congress next year in one of the Boston districts.

GREAT preparations are making in Philadelphia for the reception of General Grant on his visit December, 16th 22nd.

THE secretary of the Louisiana State Lottery Company has applied for an injunction against Postmaster-General Key.

ONE hundred and three proposals, averaging $13,000, have been received for the forty new seats in the New York Stock Exchange.

THE Legislative Committee charged with the investigation of the management of railroads in this State resumed its sittings last week.

THE Committee of the New York Senate who investigated the charges against the management of the State Asylums for the Insane have reported that they were baseless.

GRAHAM, the confederate of Benjamin Hunter, who was hanged for the murder of Armstrong to secure the insurance on his life, has been sentenced to imprisonment for twenty years at Newton, N. J.

A RECEPTION was tendered to the Right Rev. Bishop Potter, at the Academy of Music, New York, on November 25th, when a vase, commemorating the twenty-fifth anniversary of his advancement to the episcopacy, was presented him.

THE Board of Aldermen has passed a resolution to exempt certain Roman Catholic orphan asylums in this city from payment of Croton water rents and taxes. The propriety of the proceeding is very justly called in question by a good many taxpayers.

THE Propaganda has approved the proposal of Cardinal McCloskey for the establishment of three bishoprics in America, under the jurisdiction of the Archbishop of New York. The Propaganda will ask Cardinal McCloskey as to the most suitable location the sees.

WILLIAM H. VANDERBILT has sold a block of 250,000 shares of New York Central Railroad stock to a syndicate composed of representatives of the Wabash and Union Pacific Railroad systems and prominent foreign and home bankers. At the price agreed upon, the sale amounted to $30,000,000.

THE grand jury which recently adjourned at Salt Lake City was specially instructed to uphold the law against polygamy. The District-Attorney and Deputy Marshals have been hard at work for two months getting evidence, which resulted in four indictments for polygamy. The grand jury, in their report, say they found the witnesses very refractory, especially the younger ones.

THE excess of the imports of gold and silver over the exports from July 1st to October 31st, 1879, amounted to $51,853,679. The excess of the imports of gold and silver over the exports at the port of New York from November 1st to November 22d, 1879, amounted to $12,695,354, indicating that the total excess of imports into the country over the exports thereof from July 1st to November 22d amounted to about $65,000,000.

THE report of the Comptroller of the Currency shows that there are 2,050 national banks in operation, with a capital of $455,244,415, and a surplus of $114,000,000. The average capital of all other banking concerns is less than half that of the national banks. The aggregate capital and deposits of all banks have diminished since 1875. The annual interest on the national debt is now $83,273,278. The total banking capital of the country is $656,495,899; total deposits, $1,893,526,471.

ALL investigation by the Ute Commission was stopped on November 29th, by runners from the White River Utes, who stated that rumors from the Uintah Utes said that troops were moving to the Uintah Agency to make prisoners, and that all the Uintahs had left for the camp of the White River Utes, who now refuse to come in until assured that this is not true. The Indians have been informed that this report is false, and that the troops are instructed not to advance during the present negotiations. Ouray thinks the story is an invention of the Mormon element, who are doing all in their power to create serious trouble.

Foreign.

IT is denied that Russia is making threatening preparations.

THE Swiss Federal Council have decided to take no general action to suppress emigration of Mormons to Utah, but to act in special cases.

KING ALFONSO of Spain and the Archduchess Marie Christine of Austria were married in Madrid, on Saturday, November 29th, amid great pomp.

THE council of Turkish Ministers has decided to do its utmost to bring about a direct understanding with Greece and to avoid an appeal to the Powers.

THE Papal Secretary of State has written to the Nuncio at Brussels that the Vatican's relations to the Belgian Education Law are expressed only in the Belgian diplomatic correspondence.

THE Chilian army, which advanced from Pisagua against the allied forces at Iquique, has achieved a victory which gives them control of the Peruvian coast from Pisagua southward, and may compel the Peruvians to sue for peace.

THE first legislative session held in Paris since 1870 was opened November 27th with only the ordinary formalities. M. Gambetta advised the Deputies and the people of Paris to be tranquil. It is supposed that the Waddington Ministry may be reorganized.

THERE was a large gathering in Hyde Park, London, on November 30th, in response to a call for an organized demonstration in favor of the Irish agitators. Sympathy meetings were held the same day all over the County of Mayo, Ireland, and at Liverpool.

ROWELL, the English pedestrian, has decided that the next walking match for the long-distance championship of the world and the Astley Belt shall take place in England. The backer of Panchot writes that he will withdraw his man if the next match does not take place in America. O'Leary also wishes to withdraw from the match.

HEARING WITH THE TEETH.

[Continued from front page.]

A little girl who was born deaf indicated by signs and looks of surprise that she heard the sound of voices; but, having never before heard any sound, she did not know the meaning of the words. Instruments were placed in the hands of the entire class, and a lady sang, accompanied by an organ. At the sound of the first notes the faces of the mutes expressed great surprise, and when the voice of the singer rose and fell, and the harmony of the accompaniment blended with the voice, the pleasure of the mute listeners was manifested. Their faces lighted up and their hands were moved up and down as the pitch of the air rose and fell. Some of the mutes waved their hands with a peculiarly graceful movement to show that they could distinguish between the volume of the crescendo passages and that of the less loud portions. The inventor—with Caswell, Hazard & Co.—claims that totally deaf persons may be made to hear ordinary conversation by the use of the audiphone, and that they may then be taught to speak.

SUE'S HUSBAND.

AMONG Mr. Whithune's mild lunacies was the delusion that he was an Adonis, an Apollo, a very King of Hearts; and to see his simpering air towards women, and his self-complacent air towards himself, without the power to take him by the throat and kill him on the spot, was a trial for which his fellow-creatures may be rewarded in another and a better world, but there are no gold medals for it here.

John used to say (John, by-the-way, was my husband, and Sue was his sister, Mr. Whithune, consequently, John's brother-in-law), John used to say he would give his salary if Sue's husband would commit a forgery or join a debating society, or do something decisive like other men, but Mr. Whithune's pet phrase was that he "knew a thing or two," and it seemed that he knew too much to do either the one or the other.

On one occasion he had come to the city to procure his Winter stock of merchandise, and, of course, stopped at our house; so after breakfast John offered him a cigar, and said, as Mr. Whithune remarked that he never smoked anything but cigarettes—of course he didn't:

"I shall not be able to be much with you to-day, Whithune, but we will see the ballet to-night, if you like."

Mr. Whithune cleared his throat and looked solemn enough to make it appear that he remonstrated, but not solemn enough to have it distinctly understood that he would not go.

"Can we not find something more respectable than the ballet, John?" he inquired, feeling in his vest-pocket for a toothpick.

By way of economy we used our dining-room as a sewing-room also, and the seamstress I employed was now seated on one side the fireplace, bending over her work.

She was a woman about fifty years old, of a sad expression usually, and thin physique; scant hair parted plainly on the forehead, and a sallow, rough skin, which betrayed the habitual use of cosmetics; but she had a pliant and elastic figure, and large, bright eyes which seemed, under genial influences, capable of becoming brighter still. She was clothed in shabby black, and presented altogether the ordinary appearance of an overtaxed needlewoman somewhat advanced in years.

As Mr. Whithune made the above remark, she raised her eyes to his face and a shade of color came into her faded cheeks; then they wandered off to John, and she smiled faintly as he gave her a glance of amusement, and left the room with his brother-in-law.

Presently my husband came tearing back; rushing up-stairs three at a time.

"Carrie! Oh, Carrie!"

"Adsum!" came from the store-room.

"Carrie, I'll give Mrs. Oakey fifty dollars if she will do it."

"Do what?" I asked.

"Sell Whithune," answered John.

"Why, who wants Whithune? Who in the world, may I be allowed to inquire, do you suppose would have Whithune?"

"Oh, I mean—pshaw—sell him—make a fool of him, you know," said John, eagerly.

"You cannot improve on nature, and she made a specialty of Mr. Whithune. However, what would you of Mrs. Oakey?"

"I will take Whithune to the ballet to-night, and I want her to make eyes at him, and kiss her hand at him, and all that. Make a fool of him. Sell him, as I said."

"But it will flatter him to death. There will be no tolerating him."

"Oh, we shall have to let him down, of course," said John; "I don't know how, exactly, but some way. There will be the fun."

"But he necessarily sees her every morning, for she comes before we breakfast. Suppose he should recognize her."

"Recognize her, the mischief! If he can recognize that poor old needlewoman in her rusty black clothes, through the spangles and paint and pads and fringes of the *danseuse*, then he may take my hat and I'll own up that he really does, as he says, know a thing or two."

So I returned to Mrs. Oakey.

She had become known to me through one of our servants who went home every night, and who had one day told me of a woman occupying a room in her neighborhood, who seemed almost destitute and very sick, whom I therefore went to see.

I found Mrs. Oakey as I have described her, but on a small bed, with very poor surroundings, and was greatly surprised to see among them a satin bodice, gayly spangled. Appreciating my look of surprise, she explained by saying that she was a ballet-dancer, and had been making some alterations in the dress when taken ill. Being a country girl just married and come to the city to live, I was speechless with astonishment.

"Yes," she continued, "I have been a *danseuse* thirty-five years."

"Why, I thought they were all girls!" I exclaimed. "Beautiful girls!"

She laughed, though so sick.

"Much for their being all girls, or beautiful either," said she. "A number of them are, of course; but not all, I assure you."

"And I thought," continued I, glancing around the room; "I thought they made any quantity of money—money to throw away."

"So some of them do, and I have made a good deal at it myself, but my day is past, and I take only inferior parts now. You thought another thing, no doubt, lady, that there is no good in any of us, and there again you are mistaken, as I hope to live to prove to you."

It was a long time before she grew strong again, but while she was convalescent I gave her all the plain sewing I could find for her, and even after she had returned to her accustomed avocation of *danseuse*, she came to me whenever I needed her services.

She was not sensitive about either her age or appearance, and had a latent love of fun which encouraged me to believe that she would promote John's wishes, and I was not deceived, for she entered into the spirit of the plan with a promptness which leads me to doubt the assertion that woman, though often endowed with wit, never possesses humor.

That evening John took Mr. Whithune to the Varieties where, as "Emilie de Verne," Mrs. Oakey smiled at him, and languished at him, and kissed her hand at him, and stood on her toes at him, and tossed her spangles in the air, and clasped hands above her head and peeped from underneath them at him; and, oh, the maddening smirk with which he appeared at the breakfast-table next morning, and stroked his chin and spoke patronizingly of the performance as "pretty fair, pretty fair," adding with attempted nonchalance:

"By-the-way, John, that wasn't a bad-looking girl on the left; wore scarlet and gold, if I recollect aright."

"*Over the left*, you mean," returned John. "Girl, indeed! Why, she's fifty years old if she's a day! What will you bet?"

"I never bet," said Mr. Whithune (oh, no, of course, he didn't!) "but I think I know a thing or two, especially about women, and," throwing his shoulders back and pompously drumming on the table with his fingers, "and the person we speak of is no more fifty nor forty, nor thirty years old, than I am eighty. I doubt very much if she be twenty."

The old lady in the corner smiled and clipped off a thread.

"Oh," said John, "you defend her because she evidently fell dead in love with you; struck her colors at once."

"And you attack her," said Mr. Whithune, laughing and coloring like a boy under the cordial administered to his vanity; "you attack her for the same reason; because it wasn't you."

"I shall send Sue word," said John. "Are you going again to-night?"

"I think there is a meeting of the Young Men's Christian Association to-night," said Mr. Whithune, evasively. Evasively. He could not tell even a good square falsehood.

"Don't put that up for Sue," said John, derisively. "Nobody is going to carry it to her, and she is too wide awake to take it if they should. Let's go to the Varieties. At least I would if I were you, because you so seldom have the opportunity. I have other business on hand myself, but you can get on alone, I suppose."

"Oh, yes," said Mr. Whithune. "Don't trouble yourself about me. I know a thing or two. Sha'n't get lost."

"All right, then," said John, and faithfully dogging the footsteps of his brother-in-law, he found himself, after tea, in front of a florist's, while he awaited the reappearance of that brother-in-law with the bouquet he had gone in to purchase; and secondly, at the Varieties, where the bouquet was duly cast at the feet of "Emilie de Verne," who smiled and pressed it to her heart, and retreated with a pirouette, kissing her hand to the audience en masse and Mr. Whithune in particular.

The next day Mr. Whithune's heart still yearned towards the hall of the Young Men's Christian Association, and John kept faithful guard.

This time he followed Sue's husband to the jeweler's, and saw a bracelet safely clasped among the flowers.

Then to the Varieties as before.

This was continued for about two weeks, and Mrs. Oakey had brought for our delectation sundry tender missives and various handsome presents sent "Emilie de Verne" (he had in his valise a copy of Spurgeon's sermons to carry Sue as a souvenir of his visit to the city), and John declared that the period had arrived in the history of Sue's husband when it became imperative that he should be "let down."

Mrs. Oakey being instructed to this effect, the next morning came prepared.

We did not afford Mr. Whithune time to fortify his spirits even with a cup of coffee, but John had himself at once called out to see an imaginary person at the front door, and I followed, professing curiosity to see whether it was any one from home.

We stationed ourselves behind the Venetian blinds that separated the dining-room and library, and peered through at the silent couple—Mrs. Oakey in her accustomed seat, and Mr. Whithune at the table, looking over the morning's paper, while he waited for me to return and give him his coffee.

He stroked his chin and read the paper with an air. He sported new studs which had taken his fancy while selecting jewelry for "Emilie." He had parted his hair behind, and there was pervading his entire appearance an air of self-complacent sentimentality which could have been intensified only by his having parted it in the middle.

Anon a thrilling whisper broke upon the startled air.

"Dearest!" said Mrs. Oakey.

Mr. Whithune looked up, but concluding that it had been imagination, or rats in the wall, he suffered his eyes to fall again on the column of amusements.

Imagination, indeed! Rats forsooth!

"Dearest!" said Mrs. Oakey.

This time it was unmistakable, and he looked her full in the face.

"Did you speak, madam?"

She drew near, and clasping her hands tenderly under his nose, exclaimed, passionately:

"Oh, hour divine for which my soul hath longed when we might meet, soul and soul, without the false glare and fleeting glitter of the stage! Ay, beloved, without the intrusive gaze even of the domestic circle! Ah, dearest, thou wilt not think me over-bold that I do say beloved! But my heart so reveleth in this sweet being alone with thee, when I may hear thee say, as thy dear hand so oft hath writ, 'My own Emilie'; and I would answer back with heart and voice—thine own!"

"You! Emilie!"

He stared vacantly at her, and his chin dropped.

"Emilie?"

He lay, rather than sat, on his chair, a limp and nerveless mass, and spoke in a hoarse, pitiful whisper—a ghastly whisper, if one may call it so—a whisper that sounded as a person looks who is gazed at through the small end of a telescope.

"Emilie?"

"Thine own?—thine own! Did not thy heart divine?"

"Miss—ma'am—I——"

"Ah, call me thine own, dearest!—call me thine own!"

She struck an attitude, and gazed at him with what at the Varieties had been an enchanting smile, but was now a mere fantastic and repulsive contortion.

"Miss—ma'am—I—— Will you please tell me who you are?"

"Ah, am I not fondly thine own? Thine Emilie?"

"I haven't got any Emilie, and I never saw you in my life," asserted Susan's husband.

She turned her head on one side, and brought her crow's-feet to bear upon him in another arch smile, which nearly drove the poor man to distraction, but he managed feebly to reiterate:

"I never saw you before!"

Then she opened a box lying on the sewing-machine, and, taking therefrom a pair of earrings, deliberately fastened them in her ears. Keeping her eyes fixed on his, she drew forth a bracelet and clasped it on her bony wrist; then she hung a necklace on her sallow neck.

He still stared vacantly, and hung across the chair. He had turned red and white and yellow, and was now becoming a beautiful green; but there is no name for his complexion as, vigorously rolling the breakfast table into a corner, she left a broad space before him, and commenced a *pas seul* which he had applauded and encored and gone mad over, night after night, at the Varieties.

But, oh, the ludicrous contrast!

There had been a rosy, youthful fairy, floating about amid the undulations of breezy flounces—amid the sheen of spangles and the flash of gems, surrounded by lights and music and the magic of a crowd.

Here, in the merciless daylight, was a sallow old woman, around whose unattractive limbs flapped and dangled a faded cotton dress; a wrinkled old woman in clumsy shoes, leering and grinning, and—except for our own sake, we should say—kicking up her heels.

What passed in the mind of that poor man, is known only to himself and the good Lord who fashioned him. All he did "ere his fainting spirit fell" was to gasp and choke and turn a deeper green.

And then he humbly murmured:

"Miss—ma'am—er—madam—er—I'll give you a five-hundred-dollar watch if you won't tell John."

"Why—ah, why would he our union bar?"

"Ma'am—madam!"

"But we forsooth will brave him!" she exclaimed, with tender fervor, bending over his shrinking anatomy.

"But, miss, I'm Susan's husband."

She drew back and scanned him composedly.

"Ah! Just so. I knew you were *somebody's* husband by the boy-in-the-apple-orchard air you wore while enjoying the ballet. But who is Susan, pray?"

"John's sister, ma'am," said he.

After a moment's pause, with her eyes still fixed upon him, she opened her mouth and elaborately inflated her lungs. "I believe I'll scream," said she.

Mr. Whithune came so near fainting that she continued, hastily:

"Don't, now, because I shall have to throw something in your face, and it might be the hot coffee. You say you will give me a five-hundred-dollar watch not to tell Mr. Smith?"

"Yes, ma'am," said Mr. Whithune, eagerly, feeling very much revived. "I will bring it when I come back to dinner."

"When—you—come—back," she repeated, slowly and impressively. "Ah, that is indefinitely. I will accept your check, my friend. You wouldn't mind my telling Mr. Smith's wife, would you?"

"Good Lord!" ejaculated Mr. Whithune.

"Well, three hundred will answer for that, and—I don't wish to be exacting—we will say two hundred not to scream. Just give me a check for a thousand dollars and——"

"Why, madam, I never saw a thousand dollars. I am not sure I ever saw a man who *had* seen a thousand dollars."

"Then I shall be compelled to give way to my feelings and scream——"

But at this juncture John yielded to his, and his mirth exploded into laughter, so there was nothing to do but for us to re-enter the room, which we did still laughing, as if at something that had taken place outside, and, as we entered, we heard Mr. Whithune say, *sotto voce*, and with tremulous haste: "Don't say a word. I'll give the check. I swear I will."

"What's the matter with the table? Spirits about?" asked John.

"The lady dropped her thimble and I rolled the table aside for her," said Sue's husband, feebly turning his eyes toward the *danseuse* of ten minutes agone, as if for confirmation of his words.

"Why, hello, Whithune!" exclaimed John. "What's the matter? You look collapsed. Are you sick?"

"Yes. Not very. I feel quite ill," said the poor man.

"My dear fellow, you must have a mustard plaster and quinine powder. Get the mustard, Carrie."

"Oh, I don't think he needs that, John. A cup of coffee will answer, no doubt," said I.

"No, indeed, Caroline," replied John, regarding me severely. "It shall not be said that Sue's husband was neglected in her brother's house. Come, Whithune. Mrs. Oakey, there is a box of mustard on the sideboard. Will you be good enough to take a large napkin, or some of that cloth you have in your basket, and prepare a plaster?"

She sprang up *con spirito* and made an enormous plaster, while poor Mr. Whithune actually allowed John to force him into taking the nauseous powder and going to bed; though, perhaps, he really felt ill enough to do so. John says he put on the mustard, too, but I don't believe that.

One thing, however, I know, that John had not been twenty minutes out of the house when Mr. Whithune slipped down the back stairs, valise in hand, when I met him.

"Going out?" I exclaimed, with a congratulatory smile.

"I—I thought I would try a little fresh air," responded Sue's husband, with a gasp of guilt and fear; "but—but you may expect me back to dinner."

I cannot say that I do, for John is smoking his post-prandial cigar, and it is my belief that, in the course of the evening, Mr. Whithune and his valise, and the volume of sermons for Sue, will all have reached home.

—No. 7.—

FREDERICK DOUGLASS ON THE NEGRO EXODUS.

He Thinks it Ill-advised.

THE SOUTH PECULIARLY ADAPTED TO THE BLACKS.

The Exodus not a Remedy for Alleged Evils.

EDUCATION AMONG THE NEGROES—THEIR PROGRESS SOCIALLY AND INDUSTRIALLY—THEIR POLITICAL STATUS, ETC., ETC.

"THE occasion of unveiling the Thomas statue was a great day for *me*," said Mr. Frederick Douglass, United States Marshal for the District of Columbia, as I seated myself beside him in his official sanctum at the City Hall, Washington. "For the first time in the history of Washington—it was an old slave-holding city at one period—a colored man rode in a grand procession in the carriage with the Chief Justices of the District of Columbia, and immediately in rear of the Justices of the Supreme Court of the United States."

Frederick Douglass was born at Tuckahoe, Talbot County, Maryland, in 1817. His mother was a negro slave, his father a white man. For ten years he worked as a slave on a plantation. While working at Baltimore he furtively learned to read and write. In 1838 he fled to New-York, and, seeking immunity from arrest, was taken in charge by the Massachusetts Anti-Slavery Society, from whom he received employment. In 1841 his career as a public speaker became pronounced, his argumentative and luminous speech on the horrors of slavery at a meeting held in Nantucket producing a profound impression. In 1845 he visited Europe. "They wanted to raise a penny subscription for me in Scotland," he said to the writer, while briefly narrating the chief incidents in his eventful career, "but I refused it. I asked for a printing press, and they gave it to me!" Upon his return to this country he began the publication of a vigorous and anti-slavery paper in Rochester, N. Y., which he kept up until the civil war. In the early part of the struggle he urged the employment of colored troops, and President Lincoln frequently consulted with him on that subject. After the Proclamation of Emancipation he lectured through the States and Canada. In 1870 he started the *New National Era*, in Washington, and the following year was appointed by President Grant Secretary to the Santo Domingo Commission. He was subsequently a member of the Territorial Council of the District of Columbia, and Presidential Elector-at-Large for the State of New York, and the messenger for carrying the official vote to Washington. To his present responsible and important office he was appointed by President Hayes.

Mr. Douglass is fully six feet in height, and

Digitized by Google

endowed with a splendid physique. His hair, combed high from off his forehead, flows in a snowy cataract over his head and ears, and the contrast of the soft, white framework to the tawny skin is as vivid as it is uncommon. His dark-brown eye flashes as he warms to a subject, and there is about the entire man so thorough, so abiding an earnestness, that, after a few moments' conversation, one ceases to wonder he has risen "strong" above his fellows. Such men do not remain in the ranks.

"What, in your opinion, was the primary cause of the exodus of the colored people from the South, to Kansas and other Northern States?"

"The primary cause was the low wages and the political persecution to which the Republicans of all colors were subjected in the Gulf States. This was the primary cause, and, no doubt, defeated political aspirants have done much to encourage discontent, and to encourage the exodus."

"You are opposed to the exodus?"

"I am."

"Will you kindly state your reasons for being opposed to the movement?"

"My objection to the exodus is, that it invites the colored laborers of the South to leave a country to which they are entirely adapted as laborers, and to go into a country for which they are unfitted, by reason of climate and other causes, to live and flourish. It asks them to leave a country where their wants are few, and go to a country where their wants will be many and difficult to supply. It asks them to leave a country where they have no competitors as laborers, and go to a country where they will meet with a great variety of competitors. It asks them to leave a country where the landowners are themselves unaccustomed to work, and who must, therefore, have the negro as a laborer, and go to a country where the landowners do their own work, and where the labor of the negro is not indispensable."

"Do you object to it on any other grounds?"

"I do, sir. I object to it again because, taken to any Northern State in their present ignorant and destitute condition, they will be likely to invite against themselves the very aversion from which they will escape. I object to it again because those who have prejudice against the negro race will find in this exodus a new ground for attacking the race politically. I dread the effect of that portion of the press and that class of political speakers who can go upon the platform and hold up to view the degraded and destitute condition of these colored people, and charge upon the Republican party the introduction of them into doubtful Northern States for the purpose of outvoting the native white population, and thus securing negro rule outside of the old slave States. Such an appeal to popular prejudice would, in my judgment, in certain of the Western States, kindle against the emigrant population a fury and violence as bad as that from which they are endeavoring to escape."

Mr. Douglass here took two or three turns up and down the apartment.

"I am opposed to this exodus," he resumed, "because it is not a remedy for the evils which the negro of the Gulf States is now enduring, and, furthermore, because it is a cry of despair, and a denial of the possibility of securing and protecting the rights of the colored people upon the soil of their birth.'

"Have you any further objections to urge?"

"I object to the colored man leaving a country where he is politically protected, where, for instance, he has a majority of from twenty to thirty thousand, as in Louisiana and Mississippi, to go to a country where he will be politically impotent and almost a nonentity. I object to his leaving a country where he has the power to elect representatives to the Congress of the nation, and so diffusing this power as that he can never elect one of his own class to position."

"What is the extent of the exodus?"

"The extent of the exodus cannot be more than ten thousand persons, and they are mainly in the State of Kansas. Some four or five thousand have taken up their abode in the State of Indiana, and some few in Ohio, but the whole will not exceed ten thousand."

"If the exodus continues how should it be managed; by committees, or boards of intelligent negroes, or by whites?"

"Now, in all I have said, I wish it to be understood that I do not object to individual self-move, self-sustained, and self-directed emigration. Such emigration may, in individual cases, prove highly beneficial, but I object entirely to the organization of associations with the object to promote emigration personally, for this I regard as an evil. I hold with Emerson 'that the man who made Rome worth going to see, staid there,' and I do not wish to have my race further humiliated by seeing agents perambulating the country taking up collections of money and of old clothes with which to help them, while in fact only a few thousand will receive the benefit, where millions will share the degradation. Now, with regard to the matter of establishing colonies separate and distinct from the white people of the country, I regard all such schemes as impossible, and, furthermore, as impracticable."

"Will you kindly state your reasons for this line of conclusion?"

"I shall, sir. In the first place, there is no part of the continent, or of the world, where the negro can be perfectly separated from the Caucasian race. That race is omnipresent. They cover all islands, capes and continents. They compass sea and land. They are at Sierra Leone on the west coast of Africa; they are at Natal in South Africa; they are at Zanzibar at the east end of Africa, and they are present everywhere on this continent. You can have no reservations on this continent for any class of people very long. We have tried it with the Indians and with bloody results, and no doubt any attempt to put the negroes by themselves anywhere on this continent would be followed by like results. The antagonism between negro and white man would doubtless be as bitter as any that has taken place between the British in South Africa and King Cetewayo, or any between our Indian tribes. There is no safety for anybody in the United States outside of the Government of the United States."

"Are your views shared in by the leading colored men of the country, Mr. Douglass?"

"These views are objected to by many of the leading colored men of the country, sir; but after reading all they have had to say on the subject, I am still of the opinion that any wholesale emigration of the colored people from the South will prove a mistake, a failure, and a calamity; that, all other things being equal or nearly equal, the South is the best place for the negro. I am far from believing that the Southern white people cannot be reached and their sentiments modified by the spirit of the age and the progress of civilization. I have seen the Northern States in very much the same condition on the question of slavery, and upon questions of the rights of the negro, as that occupying the Southern States, and I have seen these States gradually regenerated and reformed, till now the negro has little to complain of as to his position before the law, or in society."

"Do you consider that the South will follow the example set by the North?"

"What has happened in the North in this respect I believe will happen in the South; and instead of running away from the South, my counsel to the colored man is, to stay there, and endeavor by industry, economy, education and good conduct, to make the South agree with his desires and conform to his constitutional status as a citizen of the United States."

"Do the local laws as to contracts or taxes operate oppressively upon the colored people?"

"I have heard much complaint in the matter of taxation, especially the poll-tax, but I am not prepared to say that the hardships attending the collection of taxes do not arise out of the ignorance or illiterateness of the parties taxed, and that it does fall upon illiterate whites as well as upon blacks. The complaint is that these men come forward to register in order to vote, and that they are denied registration on the ground that they have not paid this tax."

"Are the colored people bettering their condition? Are they cultivating land on their own account?"

"In the State of Georgia since the war they have acquired property, and are now paying taxes on $6,000,000. The colored people of Louisiana are paying taxes upon $50,000,000. Societies of a benevolent character are multiplying; among them good schools in many of the Southern cities are in a flourishing condition, while in countries away from the cities the sparseness of the population and the indisposition of the old planters to favor facilities for education are keeping the colored people back; but, nevertheless, the light is dawning in the darkest corners of the South, and from the best information I have on the subject, I am of opinion that the condition of the people is gradually and certainly improving. It must be borne in mind," added Mr. Douglass, with great energy, "that the negro started from a very low point, not only as to worldly goods, but to mental attainments. He was emancipated under conditions utterly unfriendly to the success of emancipation. He was not free as to the will of a deliberate choice on his part, or on the part of a community in which he lived. His freedom was the result of a military necessity, and he was literally turned loose in the tempest and whirlwind of war, without food, shelter, clothing or a land of his own upon which to stand. The old master class said to him, 'The Yankees have freed you, and now let them feed you. We do not want you, and the old quarters are denied you.' Thus, naked, friendless, penniless and ignorant, they were thrust from their own homes, and it was not until the old master class saw that they had driven away the hands and had left the mouths, that they had driven away the members and had left the stomachs, that they called back their hungry and destitute former slaves to the old fields of labor and to the old quarters of shelter."

As Mr. Douglass spoke, his eyes flashed, his nostrils expanded, while the heavy heaving of his chest also manifested how deeply the topic interested and agitated him.

"But for this hold," he continued, "which the negro had upon the old master and landholding class of the South, it is easy to see that the race must have been well nigh exterminated, and I rely upon this dependence on the negro labor as the best lever to lift the negro to success in the South."

"Are the colored people inclining more towards matrimony as an institution?"

"Among the best evidences of the improved condition of things in the South, marriages are coming into fashion, and bastardom held in contempt amongst the people. The colored religious denominations, as well as the white, are doing much to erect the family altar among the people where before it was unknown, for in the time of slavery they were herded together like cattle, sheep and swine. The sexual relations of the race were loose and formless, but now, as I have said, there is a growing respect for marriage, and with this, an improved tone of morals."

"As regards your schools?"

"In the City of Washington our public colored schools compare very favorably with the white schools, and most of their teachers are colored ladies who have graduated in normal and other schools in the Northern States. Upon the whole, sir, in view of the progress being made by my race, I do not grudge the forty years of my life devoted to the advocacy of their rights, and I do not despair of the ultimate success of what is now called the 'Experiment of Emancipation.'"

"Are the colored people more provident than formerly?"

"Providence is the negro's worst point, but the facts already referred to in respect to their acquisitions in Georgia and in Louisiana, and, I may add, other parts, prove that they are beginning to learn the value of property and of the accumulation of money; and very much of the teachings of the colored pulpit as well as of the colored public men have, of late years, gone to the point of the importance of acquiring wealth. My ground is that there is no progress without the acquirement of property. Where there is no property, there is no leisure; where there is no leisure, there is no thought; where there is no thought, there is no discovery; where there is no discovery, there is no invention, and, as a consequence, no progress. These ideas are taking root among the colored people, as I have reason to believe and know."

"Could you give me any instance of this property progress, Mr. Douglass?"

"I can, sir. One of the finest hotels kept now in the City of Washington—the Wormley House—is run by a colored gentleman, and quite large properties are now owned in this city by colored men, who, like myself, were once slaves."

"Are the colored people, as a matter of fact, politically intimidated?"

"There is no doubt that in certain sections of the South, especially in Louisiana, Mississippi and South Carolina, violence and intimidation have been resorted to. The Hamburg massacre in South Carolina, the Cushetta massacre in Louisiana, Vicksburg and Yazoo, the murder of Dixon, the shooting of Caldwell, the murder of Judge Chisholm and his family, and many other murders, make it impossible to say that intimidation and assassination do not exist for political causes in the Southern States. There are statistics showing that thousands of murders have occurred within the last ten years, directly traceable to political differences in the South."

"Are the negroes less Republican in their sympathy than five years ago?"

"Not in the least. The South is more Republican than ever, if it dared express itself. The trouble is, the Republican sentiment in the South and the forces of the South are without the advantage of intelligent and courageous leaders. The carpet-bag leaders have either been driven out, or have voluntarily retired from the political contest and left the rank and file like sheep without shepherds. But this state of the party," added Mr. Douglass, cheerfully, "will not long continue. The 'Solid South' is a transient political fact, and will speedily dissolve and disappear for the want, not so much of extraneous support, as of internal cohesion. The sober second thought of the South will soon begin to ask itself, 'For what have we made our section solid?' 'Against whom are we solid?' and 'For what are we solid?' 'Who has threatened us?' 'What institution of ours is now in danger from interference on the part of the North or the National Government?' And the answer to all of these questions must be that we have emphatically nothing in the South which requires solidity for its defense or protection. We are alike under the Constitution, alike in the Union, and alike potent to protect our rights and to advance our interests under the Government. Why, then, should we not permit the freest expression of political opinion in the rostrum, at the ballot-box, and in our State Legislatures? And the wisdom of the South will give the needed answer to these questions; but all this will require time."

After some further conversation upon topics foreign to the mission of my interview, I left Mr. Douglass to the tender mercies of a dozen applicants craving speech of him.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Fountain to Commemorate the Tunneling of Mont Cenis.

Italy is famous for perpetuating the history of great events not only in sober prose and in entrancing poetry, but also in medals and monuments. These last are not always mere blocks of stone, but commend themselves even to our utilitarian ideas when they assume the useful form of fountains. The tunneling of Mont Cenis could not be overlooked, and on the 26th of October there was inaugurated in the Piazza della Statuto, Turin, the fountain shown in our columns. The fountain shows a mass of rent and rifled rock, the mountain smitten by the wrath of heaven, on which the Titans were endeavoring to storm the empyreal heights. A serene, majestic angel, lighting on the summit, looks down on the baffled and defeated giants, clinging defiantly to the ruin around them.

President Grévy and the New French Cardinal.

Monsignor Meglia, formerly Papal Nuncio to France, having been created a Cardinal, received the red hat, according to ancient custom, from M. Grévy, as President of the Republic, with much ceremonial show. Four companies of the Eighty-fifth Regiment of the line formed a guard of honor in the court of the Palace of the Elysée, and members of the Noble Guard attended the new Cardinal in the Grand Salon, where the hat was placed upon the head of His Eminence by the President.

Danish Royal Yacht "Danebrog."

The steam-yacht *Danebrog*, built at the royal navy yard at Copenhagen, for the use of the King and Queen of Denmark, is of iron, has a draught of nine feet, is 192 feet long in the water, and twenty-six feet wide. Her speed is thirteen miles per hour. She is fitted up with sleeping, reading, dining and smoking saloons for the royal family, royal visitors and the ladies and gentlemen in attendance.

The New Cellular Prison, Milan.

The cellular or solitary confinement system introduced originally in this country has been generally adopted, and the City of Milan has just erected, at a cost of about three millions of lire, a new and extensive prison on this principle. Its site is healthy and quiet, and the building, exteriorly, does credit to Italian architecture. The entrance leads to a court which, in its proportions, shows none of the gloom of a prison. After this all becomes severe. Four streets divide the prison buildings, with their lines of cells opening on the galleries. When the prisoners, many of them old offenders, who had served terms in jails where the prisoners enjoyed each other's company, were brought here, and each committed to a separate cell, the effect was tremendous. For a time they were appalled, then they raved, shouted, beat with their fists and feet on door and wall, till they sank down exhausted. Gradually order was established, but the terror of the prison has already filled criminals with awe. The male department has a chapel visible from the cells; the women have a distinct part of the prison and a chapel room. Opening on this are solitary cells for the worst criminals, who can see the chapel when iron blinds are raised. All the departments of the prison are excellently conducted and managed, the American system introduced into Italy in 1857 having since received all the valuable improvements proposed here and in Europe.

The Lord Mayor's Banquet.

The new Lord Mayor of London, Sir Francis Wyatt Truscott, gave the customary banquet on Monday, November 10th, the chief feature of which was the address of Lord Beaconsfield. Our sketch shows the passing of the "loving cup," a time-honored institution at all civic banquets. On the right hand of the Lord Mayor sat Lady Salisbury, the late Lord Mayor, Lady Wheatham, and the German Ambassador, in the order here given, while on his left were seated the Lord Mayoress, Lord Beaconsfield, Mrs. Crawford, daughter of the Lord Mayor, and the Lord Chancellor.

Defenses of Valparaiso.

The illustration of the Chilians at work, mounting their heavy guns for the defense of Valparaiso, has considerable interest at this juncture, when we learn that they have made a successful offensive land and water movement, resulting in the capture of Iquique, Peru. The guns here being mounted are of American make, a fifteen-inch calibre, smooth bore, each weighing twenty-two tons, and will repel any hostile fleet.

AT HOME AND ABROAD.

—THE gold discoveries in the north of New Caledonia are reported to be turning out very valuable.

—A TERRA-COTTA cylinder of Cyrus has reached England. It describes his genealogy and entrance into Babylon.

—SCHOOL savings banks have existed in France since 1833, and now there are about 260,000 pupil depositors in the country.

—THREE boa-constrictors, found in the Chinese island of Hainan, have lately been presented to the Botanical Gardens at Hong Kong.

—THE majority against the Debt-payers in the late election in Virginia was 2,724. One-third of the total Readjuster vote was cast by negroes.

—FROM Japan we hear that the manufacture of sulphuric acid is now being extensively carried on at the Osaka Mint, and large quantities are exported to China.

—ABOUT a dozen Russian cotton manufacturers have lately gone to Egypt to buy raw material and to hire all the largest plantations on the banks of the Nile.

—WE learn that in the month of January, 1880, an artistic and scientific exhibition will be opened in Algiers. It will be the first which has ever been held in the colony.

—THE increased value of the Southern cotton, tobacco and sugar crops this year over last is estimated at $80,000,000. This increase is due to better prices, as well as to a larger yield.

—IT is estimated, should the flow of gold continue from foreign countries, the metallic circulation of the country at the end of the present fiscal year will have swollen to over $660,000,000.

—THE owners of established factories in Georgia complain of the legislative exemption of new factories from taxation for ten years, and it is said that the validity of the exemption is to be tested in the courts.

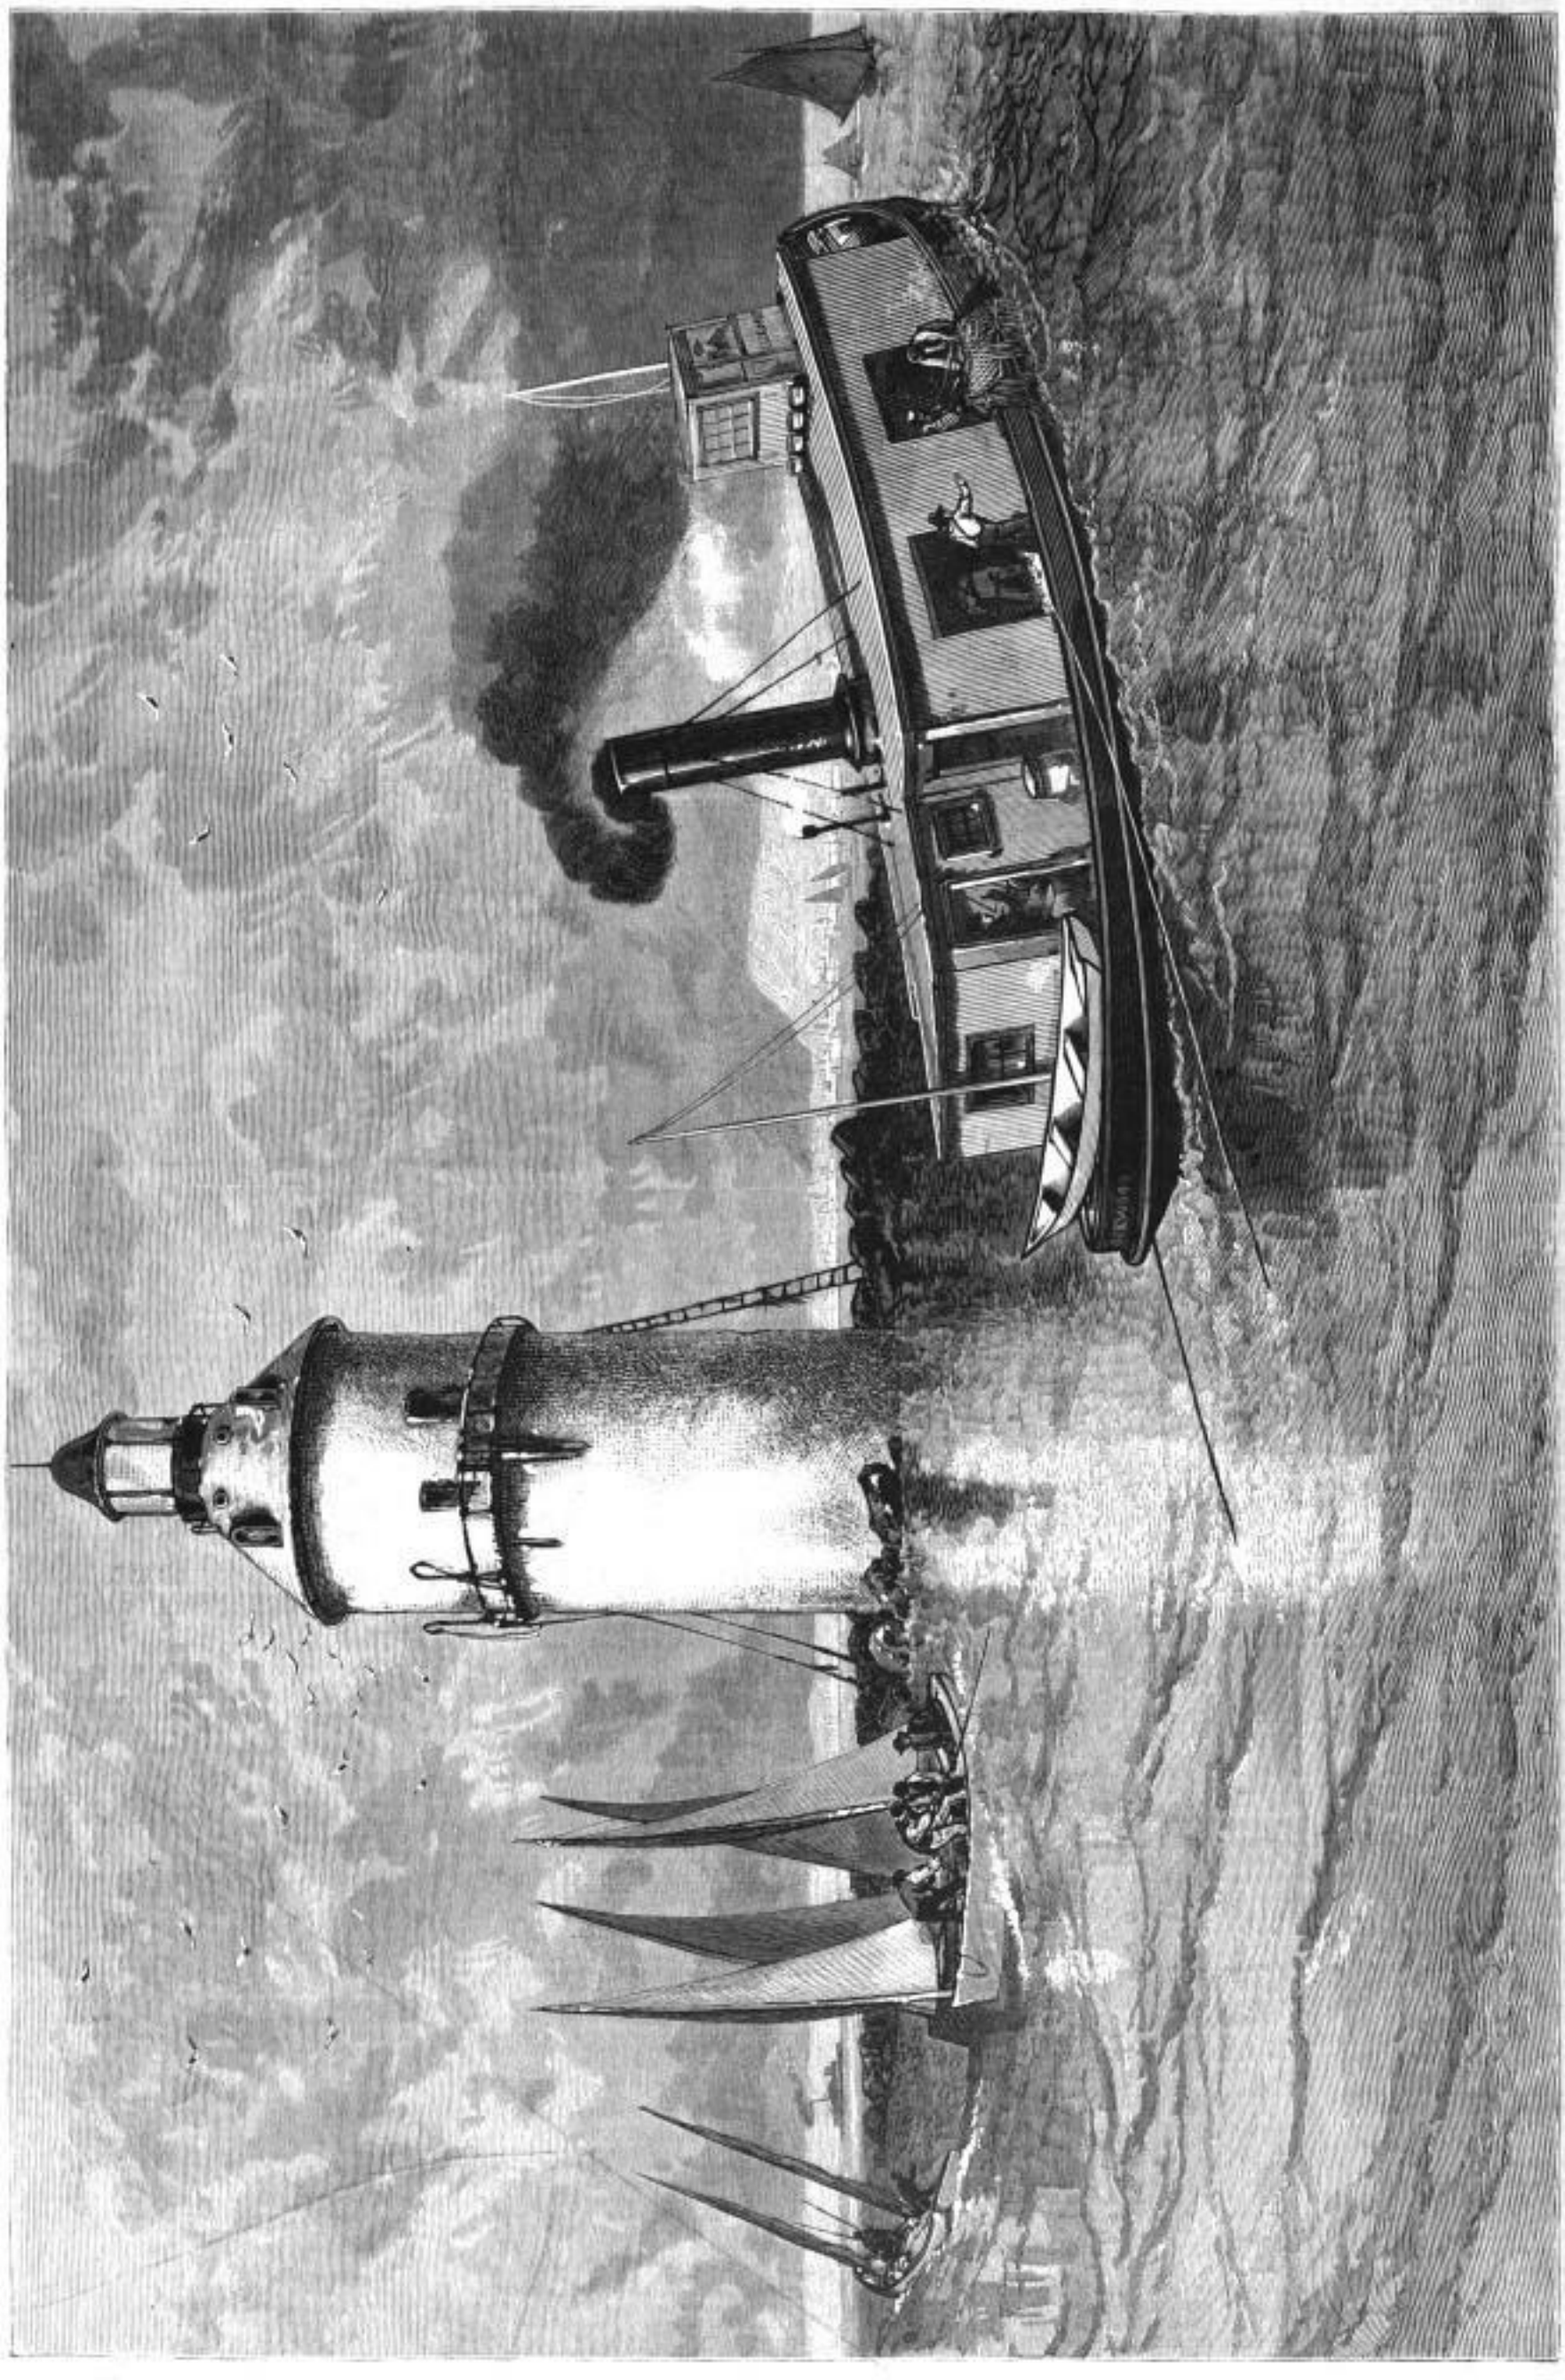
—EUREKA, Ark., is a mining town of almost miraculous growth. On the 4th of last July there were only six persons there and no houses. Now there are at least 2,000 people with about 300 houses; and there are nothing but lead mines there either.

—RUSSIAN papers publish the project of the Exhibition of Manufactures and Fine Arts, which will be opened in 1881 at Moscow. The Moscow Anthropological Society and the University propose to take an active part in it, and to give to the exhibition a scientific value.

—SOME Japanese Commissioners, deputed to study the police and judicial systems of Europe, have already visited France, Belgium and Holland, are now in Russia, and will next visit Germany, Austria, Italy, Switzerland, Spain, Portugal and England, returning home by America.

—IN Champagne, France, a disaster has occurred unparalleled for sixty years. Not a bottle of wine has been harvested; the loss is terrible for the small grower. The grape did not ripen, and it has been gathered only in order to prevent trespassers from entering the vineyards and damaging them.

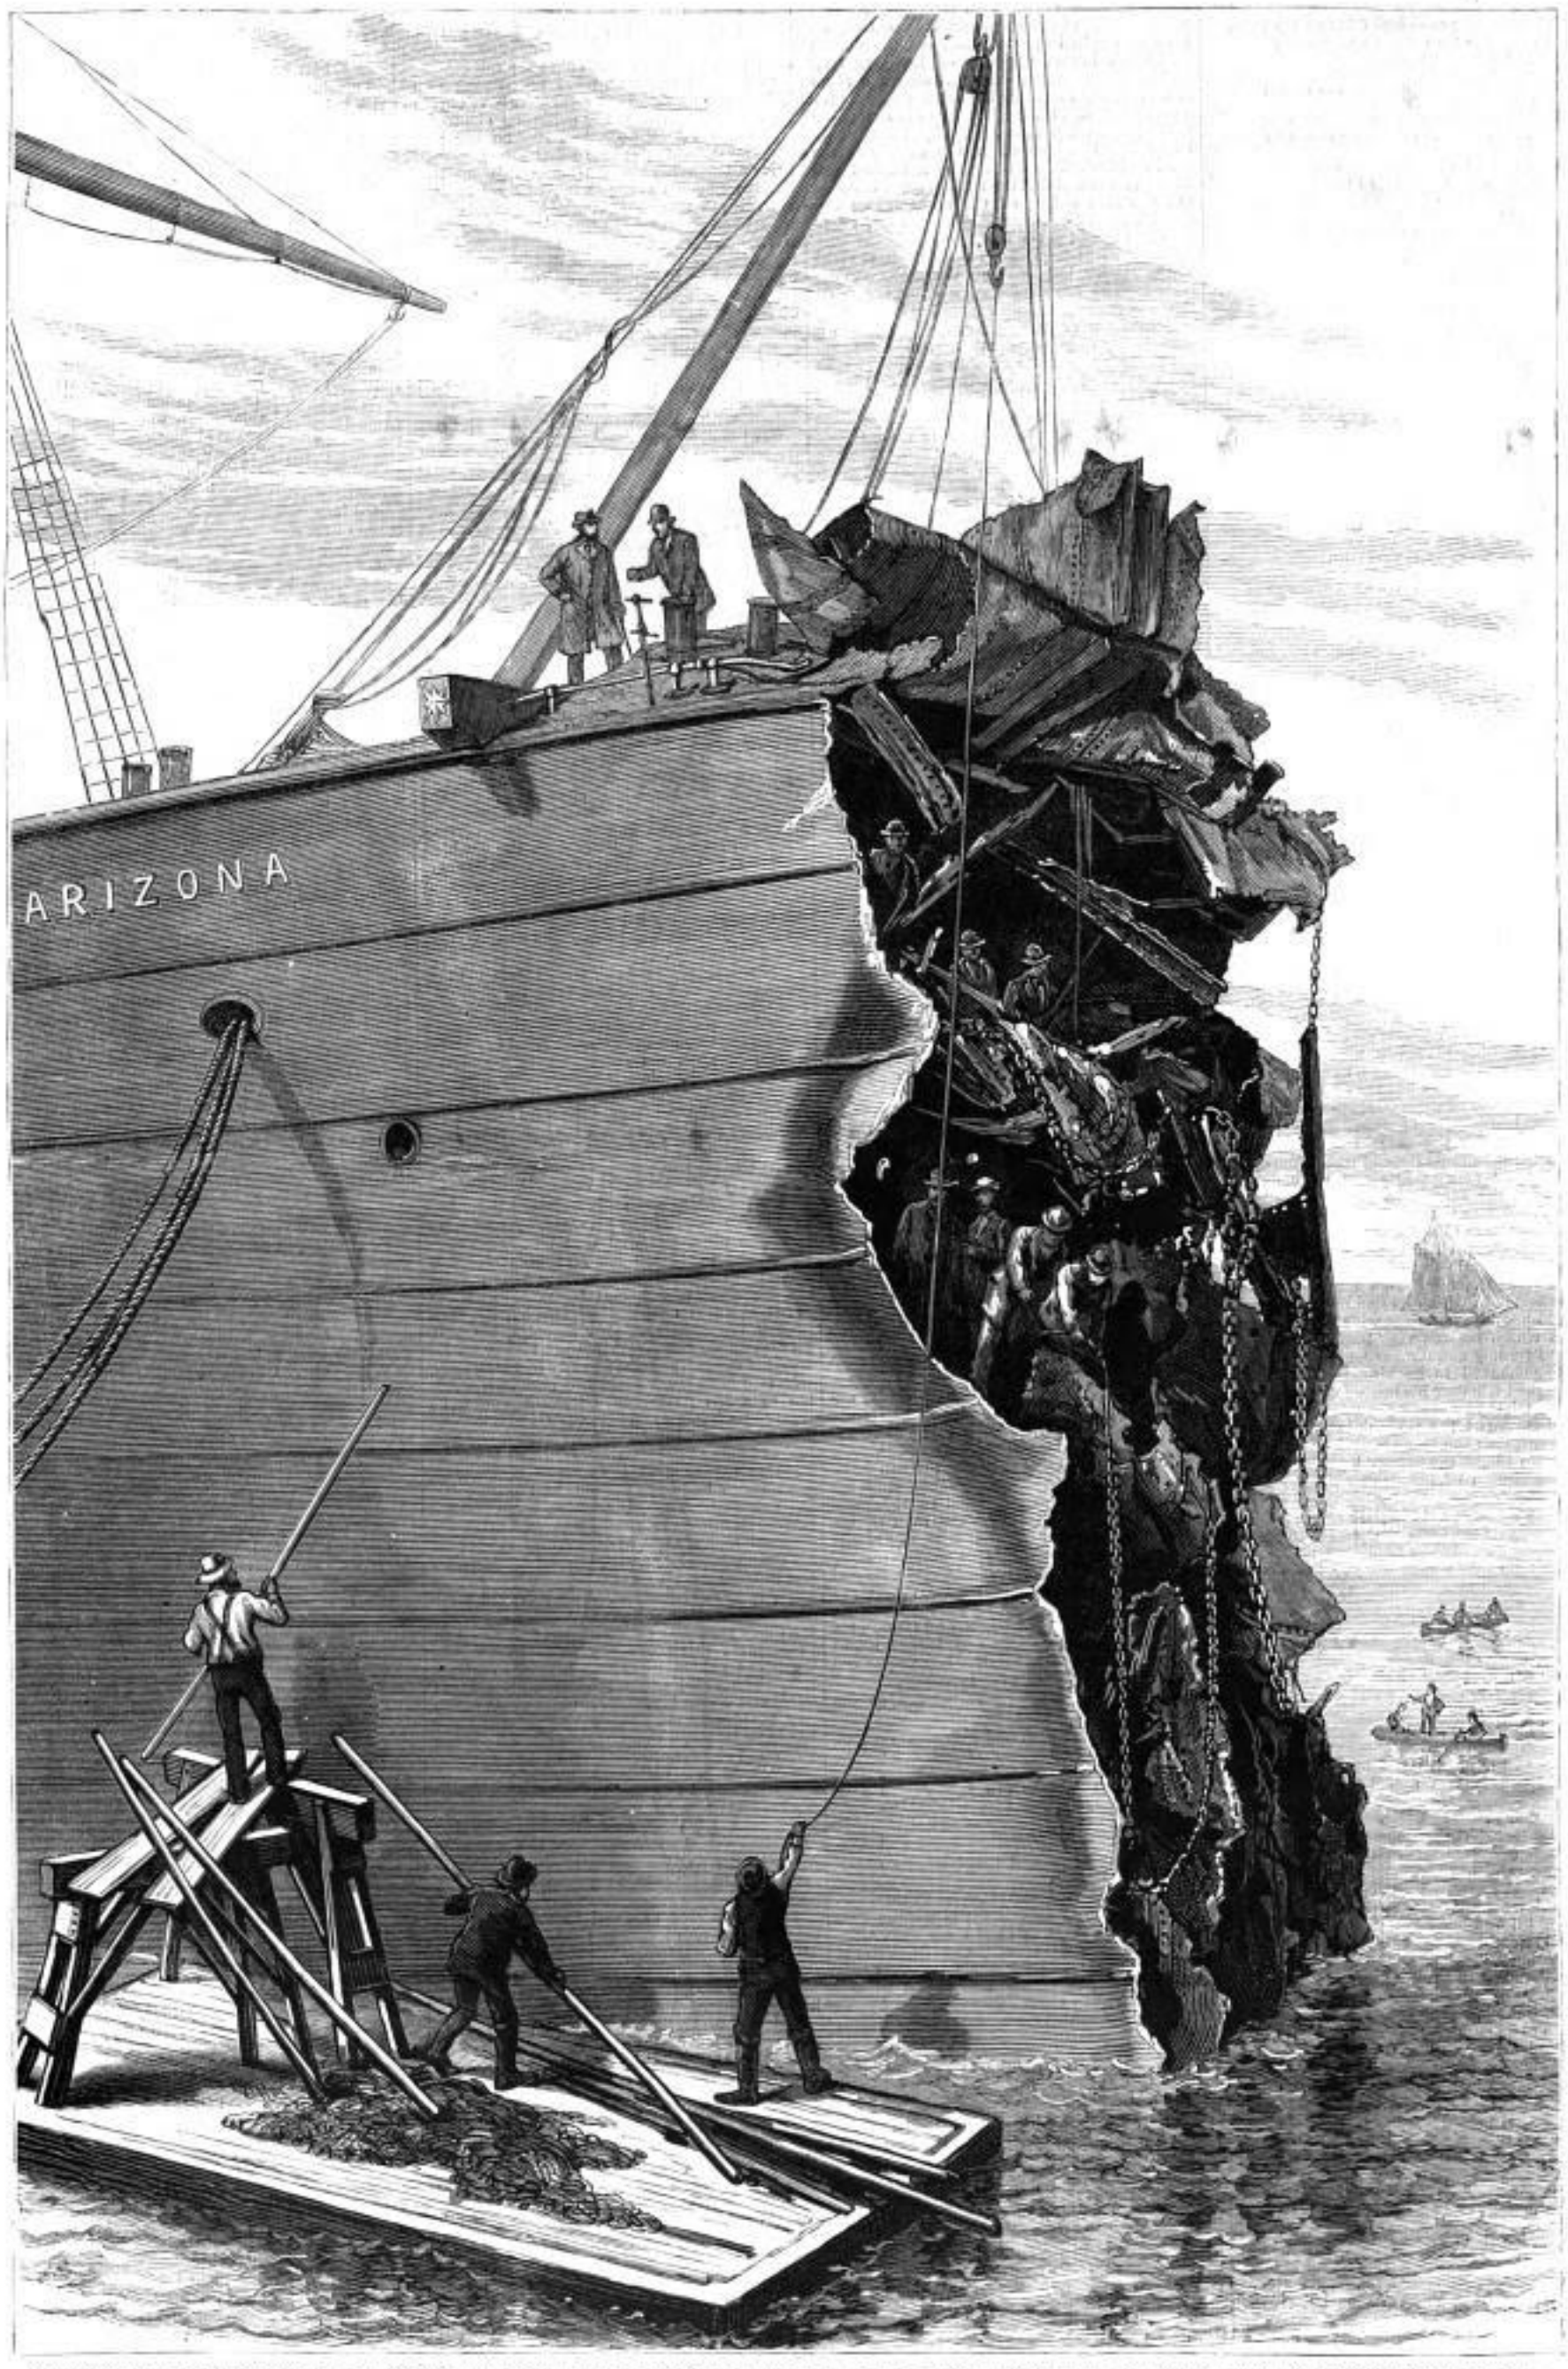
—IN the Cassel State Library, as well as in the archives at Hanover, Dr. Gerland has succeeded in discovering a whole series of important original letters, hitherto not known, from the pen of Leibnitz, the philosopher, and of Papin, one of the inventors of practical applications of the power of steam.



—THE Pennsylvania Railroad Company's lines east of Pittsburg and Erie in the ten months of 1879, as compared with the same period in 1878, show an increase in gross earnings of $1,999,019; in expenses of $1,465,539; in net earnings of $533,456. All the lines west of Pittsburg and Erie for the ten months of 1879 show a surplus over the liabilities of $960,599.

—THE project of erecting a meteorological observatory on the top of the Ballon de Guzzaux, in the department of Haute-Saone, is progressing favorably. A fortress is being built on this elevated site, and will be finished next year. The garrison will very probably have the care of meteorological observations. A telegraphic line has been already established between the intended station and Belfort.

—A PARTY of 120 Latter Day Saints from Southern States have just located in the San Luis Valley, Colorado, where there is already a colony of between three hundred and four hundred people. This is the fifth party from the South that has gone to that locality this season. These Mormons got their lands from the State of Colorado at a low price, and conform to the laws of the State, which prohibit polygamy.



—AN Arab who was quarrying stone at a place about four and a half miles from Gaza, in Palestine, recently, unearthed a marble figure supposed to be a colossal god of the Philistines. The total height is fifteen feet. The hair hangs in long ringlets down upon the shoulders, and the beard is long, indicating a man of venerable age. There is no inscription on the figure or the pedestal, which is a huge block carved in one piece with the figure. The statue was found in a recumbent position, buried in sand on the top of a hill near the sea.

A SERMON IN STONE.

On a "Bust (Unknown)" in the British Museum.

WHO were you once? Could we but guess,
We might perchance more boldly
Dense the patient weariness
That sets your lips so coldly;
Ye dead, we know, for fame and blame;
But sure, to friend or foeman,
You bore some more distinctive name
Than mere "B. C."—and "Roman"?

Your pedestal would help us much.
Thereon your acts, your title
(Secure from dull Oblivion's touch!)
Had doubtless due recital;
Vain hope! not even deeds can last!
That stone, of which you're minus,
Maybe with all your virtues past
Endows—a Tigellinus!

We seek it not; we should not find.
But still, it needs no magic
To tell you were, like most mankind,
Your comic mask and tragic;
And hold that things were tales and true,
Felt angry and forgiving,
As step by step you stumbled through
This life-long task—of living.

You trod the *cul-de-sac* of Thought—
The awful descent of Pleasure;
You found the best Ambition brought
Was strangely short of measure;
You watched, at last, the fleet days fly,
Till—drowsier and colder—
You felt Nemesis standing by
To touch you on the shoulder.

'Twas then (why not?) the whim would come
That, howso Time should garble
Those deeds of yours when you were dumb,
At least you'd live—in Marble;
You smiled to think that after-days
At least, in Bust or Statue,
(We all have sick-bed dreams!) would gaze,
Not quite incurious, at you.

We gaze; we pity you—be sure!
In truth, Death's worst injustice
Must be less tedious to endure
Than nameless petrifaction;
Far better, in some nook unknown,
To sleep for ours—and soundly,
Than still survive in wistful stone,
Forgotten more profoundly!

AUSTIN DOBSON.

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF HERS."

CHAPTER IX.—LOU'S DISCOVERY.

THE black story had spread everywhere by the next morning. Sundry reporters came riding up to Lewindale, and, between furnishing breakfast, news and drink, the master of the place had a busy time of it. Not only the reporters but the neighbors came pouring in, some of them expecting and asking to see the body. The consternation was general, as is always the case in neighborhoods where the inhabitants depend upon each other both for their amusements and their excitements. All the servants were in a state of alarm. Who was there among black or white but had listened to the witty speeches of poor Ben Lake, bought his bogus jewelry and laughed at his stale flattery? There was not a house along the road from Harper's Ferry to Winchester in which he had not eaten corn-cake and hominy, and drunk his glass of sour milk, of which he was very fond. His was a kind and comely countenance, and worth seeing if one chanced to be blue, for his merry eyes laughed whether his tongue wagged or no.

"Now, what you say, Aunt Roxy, dat ar dog didn't done yowl for nothin'," said Lou, the light mulatto, as she came in from the stables where Sam Lingo, the groom, had been giving her a description of his dark ride the night before.

"What yo' mean, gal?" asked Roxy, placing in a large pan row upon row of potatoes for baking. "You's always finding mar's nests."

"Tain't no mar's nest dis yer time, but a reglar murder out an' out. An' who do you think they's killed—dead?"

Aunt Roxy shook her head, really startled for the moment, but when Lou told her the story, she thrust the pan into the oven, and, throwing her vast calico apron over her head, rocked herself to and fro, as if overcome by grief.

"Might as well put in another pan o' them taters," continued Lou, catching up a basket, "for I speck the house'll jes be run down to-day, for 'twas massa and the colonel who found him."

Roxy's apron went down again. She had not shed a tear, but the solemnity of her black face was something quite awful.

"In the mist o' life we's all in def, obery one ob us," she moaned; "you mind dat, gal, an' go an' wushup de Lord 'fore your time comes, or I'll be bound you'll git scairt at de great judgment day. Yes; there'll be lots o' company here," she added, a moment after, looking thoughtfully round; "an' I guess I'll make a heap o' biscuit. You, Lou, whar's dey put de corpus?"

"Down to de court-house," replied the girl. "Everybody's gwine, and so'll I when Sam Lingo goes down for coal—he'll take me."

"You'n Sam Lingo better stop yer foolin'," growled Aunt Roxy, at which the pretty mulatto only laughed, showing her white teeth.

It was, in truth, a great event in the slave cabins where everybody was talking about it. Sam Lingo, as he harnessed up, had plenty of solicitations from the yellow coquettes of the household, but he set them all aside with a majestic wave of his hand, saying it was his business to get the coal, and theirs to 'tend to their work. So when Lou rode off by his side in her jaunty white hat and feather, she cast many a saucy, triumphant glance back over her shoulder.

Sam was a wag of a fellow, and did not intend to go riding into town with a woman on a coal cart. He had his notions of gentility, so when the two came to the place where the deed had been done, and Lou begged him to stop and look round with her, he very gallantly assisted her down, and then sprang on his seat, applied the whip to the high-spirited coal-black horses, and was off, laughing long and heartily. As for Lou, uttering a scream of terror, she ran after the lumbering cart for a few moments, but seeing by Sam's application of the whip that he really intended to leave her, she stopped in the middle of the road and looked about her like a hunted animal. The sun gilded the tree-tops and brought out the rich colors of the roadside, as she stood, uncertain whether to rush back or to stop and examine the fearful spot.

Early as it was, there had been several visitors there, but just now the place was deserted. The effect of such a catastrophe on the superstitious, uneducated blacks was seldom deep or lasting. A quick horror, a momentary dread of death, and then a burning curiosity to know or see something about the murdered man. Lou decided, therefore, to look about her—it by no means suited her to be fooled out of her ride and triumphant entry into town, or to let the rest of the girls see that, after all, she had been left to finish her journey alone. She remembered that Sam had said he must be back by ten, and she determined to remain in the road till he came, and so let him see that his practical joke came to nothing. Besides, who knew but near by where poor Ben Lake had met his death one's search might be rewarded by finding some of his goods—a ring, or, better yet, a chain or breastpin. With a flutter at the heart she commenced the search, first providing protection for herself in the shape of several flint-shaped stones, with which she filled her apron. Finding the place where by the blood-stains she knew the poor victim had lain, she began peering into every crack and cranny, and pulling aside dry twigs, and looking in every available place where money or jewels might be hid. Of course, she was frightened in her inmost heart, but that only added zest to the romance of the thing. Something in her dark bosom urged on the search, and for some time she continued it with unabated zeal.

At last, tired and somewhat discouraged, she sat down to rest, feeling every moment her complete isolation in this desolate and crime-stained spot, starting at the dropping of a twig, and wishing desperately that she had not come out at all. Still she wasn't going home—she would not give Aunt Roxy so good an opportunity for a sermon, neither would she endure the laughter of the others. Footsteps sounded and she sprang to her feet. It was only Jock, the body-servant of Colonel Wilde. How welcome was the sight of his black wizened face! In spite of her surroundings she laughed outright.

"Yo, yer!" was his single comment, as he stopped for a moment, and with a mop of silk rags taken from his venerable caster, wiped his heated brow.

"Yes, I'm here, Uncle Jock. Wasn't it awful?"

"Well, yest—I 'spect it was," he answered, gazing straight before him, "but de weges of sin is death, and dat yar Lake was an unconvarted sinner. Did he lay yereabouts?"

"I reckon," replied Lou, pointing to certain stains. "They took him down to the court-house." The old man shook his head gloomily, looking down as if he were gazing into a grave, and holding his hat as if it were an alms-box. Then he turned round.

"Are you g'in'?" asked Lou, sharply, unwilling to be left alone.

"Sartin—on'y de Lord knew I war coming," he answered, hobbling off.

The girl was sorely tempted to turn back with him, but the fear of ridicule was too much for her, and she watched the bent old figure till it was hidden by the turn of the road. Then came the sound of wheels. Colonel Wilde and his handsome boy Raphael, nearer like an angel in beauty than a being of mortal mold, came driving leisurely along. It was clear that the child knew nothing of the tragedy, for he laughed and called Lou, and though his father drove more slowly and looked about him with a clouded brow, the boy preserved still the natural gayety of his manner.

"How is Miss Eve?" he called out, as the colonel reached the spot.

"Gittin' better, Massa Rafe," replied the girl.

"Will you give her my compliments," he continued, with a fine flush and a gallant little bow. "I'm coming to see her before I go away to school."

"Yes, Massa Rafe," said the girl, demurely, and the small, open carriage went on. Lou was becoming more and more uneasy every moment.

The sky was that sweet, deep, sunny-blue, that in our climate sometimes rivals the rich color of Italian skies, and the birds were singing as merrily in the tree-tops as if the world had just been made for their pleasure and convenience. But slowly and surely settled upon the girl the consciousness of the blood-guiltiness with which the place was identified. The silence was becoming intolerable. She decided to return home by the way of Colonel Wilde's house, and so run over to Lewindale, as if she had been staying there with a neighbor.

"I'll just take another peep, maybe they threw something over the wall," she said to herself, and, fixing one foot in a cleft, she lifted herself to the top of the stone-fence, and there—met the blank, agonized glance of a pair of eyes far below her. At first, she stood entranced, looking down with a mighty fear at her heart. Then all at once came the impression that this man was the murderer, who had been wounded and had fallen backward among the loose stones and bushes. Acting upon this supposition, she gave one scream of deadly terror, flung her arms above her head, sprang into the road and ran home, utterly forgetful of her dignity, shouting "Murder" and "Massa Lewin" all the way to the house. As she dashed into the kitchen and fell in a heap on the floor, her eyes strained, her cheeks colorless, her breast heaving, the frightened servants gathered about her. To their inquiries she could only gasp out:

"I's found the man what killed poor Ben Lake!" she gasped, between convulsive efforts for breath; and then she collapsed again. It was not till Aunt Roxy had shaken her into consciousness that she rallied and regained her feet. In a calmer mood she went into Colonel Lewin's study, where he sat talking with two or three neighbors. Wine and cigars were even thus early in free circulation. They were, of course, discussing the murder when Lou burst in upon them with her still scared face. One of the gentlemen, who lived a few miles away, had just been describing the race of a black horse that had finally brought up in one of his fields, with part of the trappings of a saddle still hanging to his body.

"What's up now—what is it, girl?" said Colonel Lewin, putting down his untasted glass.

Lou, with a shaking voice, told her story.

"If the deed was done by that man, how in the world did he get back of the wall?" queried Colonel Lewin, after questioning and cross-questioning the girl thoroughly.

"It is quite evident she has seen somebody," said one of the gentlemen, rising. "The man might have been wounded, and, in his effort to escape that way, fallen from want of strength. You are sure he was living?" he added, turning to Lou.

"He looked right in my eyes," replied the girl, still quaking.

"I wonder we didn't think of searching back of the wall," said Colonel Lewin; "however, we might take a turn down there and see for ourselves."

They did see for themselves. Flix laid as he had fallen, only, instead of the painless stupor, he was suffering now acute anguish. This, of course, was a favorable symptom. The dark, handsome face, slender and elegant proportions, nicety of dress and delicacy of manner, presented to the gentlemen certain proofs of his non-complicity with the disabled man in the horrible deed of the night before. More than likely he, too, had been wounded by a ruffian, or ruffians, and thrown over there for dead. As they lifted him from his uncomfortable resting-place he groaned audibly, and found his speech.

"Gentlemen," he said, with clear, precise accents, "have any of you seen my horse?" and then fainted dead away. With great difficulty help was procured, and Flix, after hours of unspeakable torment, was carried to Lewindale, laid upon a comfortable bed, and the best doctor the place afforded was immediately sent for. For some time it was feared that medical skill would be of little or no avail, and the doctor shook his head sagely.

CHAPTER X.—NO CLEW TO THE MURDER.

ON no account would Flix allow his mother to be apprised of his state. As soon as he could use a pen, and that was some time before he could use his feet, he wrote her a cheerful letter, saying merely that he was pleasantly detained, and inclosing a letter to his business agent. And, barring the temporary suspension of his muscles, he was pleasantly detained. After proving who he was, his errand, and the identity of Black Jess, who had been lazily munching oats in the stable of a Mr. Ashington, no guest could be treated with more consideration. The colonel was noted for his hospitality, and made him feel at home at once. His version of the murder was recorded by the proper authorities, but no clew had been yet obtained to the missing criminal. The handsomest room in the house, fronting the south, was placed at his disposal, and a servant in waiting always at his command. Here, surrounded by pictures and flowers, Flix took his ease while slowly but surely convalescing. The splendid view without, the luxury and beauty within made the place seem like an enchanted palace. The princess of this place was little Eve, whose wealth of golden locks was his daily admiration. The child made friends with him at once, and wrote him two or more notes every day, besides frequenting the room whenever her little ladyship thought proper. She was a wayward child, but pretty in all her varying moods, and the sad-faced, queenly Dee—or more properly Desire—her nurse, interested the invalid almost as much as the child.

"You and I must always be friends," he said to Eve one day, when she was perched in her high chair at the side of his bed.

"And can I write to you when you go away?" she asked.

"Certainly you can, and I shall be sure to answer you. And this is the way I shall always begin my letter: 'To the angel of home Little Eve Lewin.'"

He wrote it upon a card, and held it up for her admiration.

"Please to write where you live on the other side," she said, quietly.

He did as she requested.

"I will put it in my box and keep it for ever," she said, fervently.

"And if ever you want a friend, you will know upon whom to call," he said.

"Yes; if ever I want you I shall know where to find you," she said, with the utmost simplicity.

He watched the flitting color of the cheek, and thought to himself that she would not need much friendship or companionship on this earth. The weeks passed on, and still no clew was found to the murderer of poor Ben Lake. Flix, meantime, had recovered sufficiently to continue his journey. It was with great reluctance Colonel Lewin parted from his most congenial visitor, for in no other light would he regard him. As for Eve, she flung herself into his arms with passionate weeping, much to the discomfiture of young Raphael Wilde, who looked daggers at his tall rival. The boy of twelve was passionately in love with the little maid of ten.

Several friends, frank, honest Southern gentlemen, had gathered to see him off. They had discussed all the questions that naturally arise between men of opposite political opinions, but it had been with courtesy and the utmost delicacy. That war must come before many years both sides agreed; how little did they foresee the long, deadly struggle, and the ruin of those ample farms and beautiful homes where they lived like lords of the soil.

Eve regretted her friend's absence more than even her father did. Her great delight was to talk of him. And she was looking forward to the time when she should write to him, in the fond anticipation of continuing the friendship, when once again the deadly malaria smote her, brain and nerves, and for one long year it was doubtful which force should triumph—life or death. Meantime Colonel Lewin failed perceptibly. His convivial habits grew upon him daily, and he became more and more careless in money matters. Whether the coffers were full or not, the guest chambers were seldom unoccupied. He managed in some way, in times of his utmost need, to procure money, but it never lasted long. Sometimes he would sell two or three of his slaves, till at last there were only some four or five left. Everybody liked him, but everybody lamented over his coming downfall, and prophesied evil, as they drank his costly wines and smoked his expensive cigars.

CHAPTER XI.—A CURIOUS BOOTBLACK.

"BLACK your boots, sir? I'll do it cheaper than the men do, and I'll black 'em all over—heels and all."

Flix had just come out of his room, having entered the hotel somewhere about four in the afternoon. The child who accosted him might have been ten years of age, but there was an expression of maturity in the face which made it, with all its beauty, almost unpleasant.

At watering-places in the South one finds all sorts of unique characters, but Flix was utterly puzzled to place this creature, with eyes like stars, and splendid hair that hung in loose curls to her waist. Her dress was neat, consisting of a plain black gown of some fine material, white ruffles in the neck and sleeves and a dainty apron. She looked neat and clean, and there was even a distinguished air about her which seemed a fitting key to further intimacy.

"You certainly don't black boots for a living, my child," he said, looking down into her eyes, which were powerful magnets.

"Yes, I do black boots, when I can get them to do, chop wood, bring glasses of mineral-water to all the stylish ladies when they will let me, because, you see, they pay me, and I like money."

"What is your name?" he further asked of this precocious financier.

"What will you give me if I tell you?"

He considered her sufficiently a child to answer:

"A kiss."

Her lips turned down at the corners.

"No, thank you. I can get kisses by the dozen for nothing. Besides, I don't like to kiss men with such ugly black whiskers and eyes as you've got. I don't believe it I lived with you a thousand years I should ever kiss you. Bah!"

"Oh, very well, young lady," he said, with affected lightness. "I'm quite willing to bide my time. I can dispense with the kiss very easily."

"And you won't give me your boots to black?"

"No, I won't give you my boots to black.

"You're a mean Yankee, that's what you are!" was the retort. "No Southern gentleman would refuse the request of a *lady*."

The mimic wrath and the tragic gesture were too much for Flix, and he laughed outright. The child drew her form up to its tallest proportions, walked towards him and administered a sudden slap on the hand, and by no means a light one, and, while Flix watched her between indignation and amusement, she turned her back upon him and marched away.

"Decidedly a girl with a temper," he said, musingly, as the light form vanished at one of the angles of the hall; "some smart child of some smart servant, I suppose; she will be ruined if she lives here—the last place in the world for such a forward, conceited little minx." Soon the gong sounded, and Flix went down-stairs to dinner, prepared to do justice to the fine courses for which the meals of the house were famous. He had just comfortably taken his seat, and was studying his bill of fare, the ebony waiter standing behind his chair, when to his consternation, walking the length of the dining-room alone, came the child who had so offended his dignity, and took the seat exactly opposite. As he looked up he noted what beautiful eyes she had and the fineness and polish of her skin.

"That is no servant's child," he said, and just as the thought occurred their eyes met, hers red with a wrathful light. With a dignity that was really unusual for a child of her age, she immediately rose, saying to the waiter who was then passing:

"I don't wish to sit opposite this gentleman—he has offended me."

"But missee, there's no other seat," was his reply.

"Then I will wait," concluded Miss Importance, and forthwith marched down the long room again, all by herself. Flix turned to the servant, his brown eyes dancing with mirth.

"Who is that little girl?" he asked.

"That's missee" was the dull answer.

"Yes, but missee who—what's her other name?"

Digitized by Google

"Dunno, sir—ain't got no oder name as I knows. What'll ye have, sir?"

"Don't any of you know her name?" queried Flix, curious, hungry as he was, to solve the mystery.

"Dunno, sir. I'll ax de cook. She's mos'ly like to know ef anybody—missee's all de time in de kitchen."

"Well?" interrogated Flix, impatiently, when the boy brought him a minute piece of canvas-back, "did you find out?"

"Cook dunno; only missee, sir," was the stolid answer. For a moment Flix was vexed, but then he reasoned that in a house like this, where there were from three to four hundred guests, it was not to be wondered at that the names of the children were not remembered. It was not much in accordance with the habits of a young lady, though, to make her quarters in the kitchen with the blacks.

"Are her parents boarding here?" Flix ventured again, after sending off his plate for ham.

"Dunno, sir; guess she ain't got none," was the reply. Flix started and looked down at his fork that for a moment played idly with the food.

This was the hotel to which that unknown correspondent had directed him, in which to find her child Sylve Bysche de Latude. The exceeding beauty of this girl, though she looked older than her years, her willful, imperious nature, and the manner that plainly showed that morally and mentally she had been neglected, gave him a presentment of the truth, that this was the charge he had come for, and for the seeking of whose welfare his life had been imperiled. Under the circumstances it is scarcely to be wondered at that he shrank from the conviction as well as the certain knowledge that this elf, wildling, witch, as he called her, was to be his mother's *protégée*. How could he subject Mrs. Forester's delicate nerves to such a trial; it was simply out of the question. The more he thought and reasoned with himself, the more he felt assured that this singular child was the one over which he was to exercise the duties of guardianship—most assuredly they looked anything but delightful to him, with the tingle of that vicious slap still burning in his memory. He hoped within his heart that his surmises were not correct—little Eve Lewin had prepared him to find angelhood in all children, but this girl had rather a spice of the opposite ingredient in her character as he had seen her. And yet there was such a spice of originality about her, that even though it ran counter to all the proprieties, he could not withhold a little youngmanish admiration. If she had been older, now—what pleasure it would have given him to tame that lawless nature—but coquetry and passion in a child, that was another thing—the business was not so congenial. He rose from the table thoroughly prepared to find his suspicions correct. His business was to confer with the wife of the hotel proprietor, a Mrs. Bimley, but it occurred to him that he would first go to his room for a cigar as he had left his case there.

On opening the door he stood for a moment on the threshold, confounded. He had certainly not mistaken the number—no, there it was on his key—and this must be the very apartment he had left in exceptional order, being a neat person himself in all the little details of the toilet. But the bedclothes lay in a heap in the middle of the floor. The ewer had been filled till it ran over on the floor, and bade fair soon to reach the pillows and coverlet, as had undoubtedly been intended. His own small hand bag was turned inside out, and combs, pomade and brushes scattered over the carpet. Indeed, the state of the room was sufficient excuse for the deep flush of anger that overspread the face of the fastidious Flix. A chambermaid came at his call, and doubled her fists and shook her head as her eye took in the scene.

"It's that abominable missee. I knows her work," muttered the irate girl. "No use to have any fine feelin's in dis yer house. I'll box her ears, I will, for serving me such a trick, see'f I don't. Now, I done wonder how she got at my keys. But she did—she'd get 'em 'thout a ladder ef I hung 'em top o' de sky. Begs your pardon, massa. I's sure it'll be all right in a few minutes, but we can't do nothing wid that child. Hope de Lord'll herry up de folks what's comin' after her—de Lord pity 'em, too, for I does."

Flix comprehended, but did not condescend to question the girl, leaving her with her work while he sauntered out to smoke on the piazza. Crowds of people were congregated on the grounds in front of the hotel, but he looked in vain for the child, towards whom he felt a sudden antipathy, a willingness to wash his hands of her altogether. It was not before evening that he sought the interview that was to decide the fate of Sylve de Latude.

Mrs. Bimley admitted him into her parlor with many apologies. She was an invalid, pale but not interesting. In her limp cap, weak eyes and faded hair, one saw how utterly characterless she was.

"Ah, yes, sit down, sir, sit down. Oh, not that chair, if you please. I tell the cap'in there ain't a chair in my room fit to use. You see, as soon as a chair begins to crack, they take it into this parlor—anything's good enough for the family. You know how it is. There's an armchair—its safe though dreadfully rubbed—too bad for the public parlor and almost too good for a private one. Little missee, you said, sir? Ah, you are the gentleman we were to expect. I envy you, sir—so sweet a child—the life of the house, any one will tell you, sir."

"Yes. I should judge she might make your boarders aware of her existence," said Flix, dryly. She looked at him narrowly with her blue white eyes; her flabby mouth trembled.

"What! she has—then you have met the child—a pretty little girl—with better training. The poor thing has no mother, sir—and my nerves—well, I can give her but little attention. I am an invalid, you see, sir. She's a bright, spirited creature, and such pay for care in the long run."

"Did her mother die here?" queried Flix, not caring to enter into particulars with the woman.

"Yes, sir, poor thing, and I never saw a prettier or a sadder creature. And that child, sir—indeed such devotion is very rare. You may read it in books, but very seldom one sees it in private life. Why, sir, she was more a woman than a child; with her mother night and day, and, sir, we had to lock her up by herself when the poor soul left us. Indeed," she added, forgetting her *rôle*, "it's the only way we can get anything out of her; just mention her mother, and she's as good as a kitten."

After a little conversation, in which the woman reiterated the dying wishes of the mother, and her steady faith that the friend upon whom she relied would not fail her, Flix decided to take the child upon his own responsibility, and to find a home or a good school for her. Mrs. Bimley brought out a box in which were some very rare family jewels, and spoke of several trunks containing the dead woman's wardrobe, which would, of course, go with the child. Her son, she said, was a lawyer, and would sign necessary papers, besides putting her guardian in possession of the money which was to be used for the expenses of her education and keeping. Indeed, the woman brightened up as the interview continued, till Flix felt some respect for her intelligence. She, on her part, was more than glad to be rid of an incumbrance, as she considered Sylve, for she knew to her cost how difficult it was to minister to the child's capricious fancies. The matter was thus settled, and the woman undertook to prepare missee for her new experience.

(To be continued.)

DREDGING FOR OYSTERS BY STEAM.

WHAT a glorious day that was—the last rose of the Indian Summer! A keen, full blue sky. A green sea, flecked with laced-edged wavelets. A sunshine that glittered over dull earth like a jeweled crown! It was at Fairhaven, Conn., and the good ship *William H. Lockwood* lay at her moorings, her steam up to—anything. Mr. H. C. Rowe, her owner, a tall, handsome man, not yet well on in the thirties, bade the artist and I welcome as we stepped on board, and having blown a defiant whistle, we, in a few minutes, were steaming out into the bay and on to the happy hunting-ground where 1,500 acres of the bottom of the sea are paved with the luscious bivalves which we were now setting forth to dredge for by steam. The *William H. Lockwood* is a steamer of forty-nine tons burden, high in the bows, wide of beam, and built on the lines of a million non-capsizing power. She is sixty-three feet long, and her draught of water is five and a half feet. She carries astern an unusually powerful engine, in addition to which is a double-cylinder engine for the purpose of hauling in the oyster-dredges. The dredges consist of an enormous bag of linked chain, connected to a rope by three iron bars, proceeding from the ends and middle, meeting in a common centre, and forming the ring to which the haul-rope is attached. There are four dredges, with a man to look after the interests of each one, and a series of ropes, run through a series of pulleys, ultimately connecting the dredger with the engine. The centre of the boat is covered, doors open on either side, while rollers insure the smooth and safe passage of the ropes, as the ominous dredger descends in search of its prey, or is hauled to the surface surfeited, bloated and gorged. The new lighthouse is soon reached, and when a little to leeward comes the order: "Throw 'em overboard, boys"—this to the experts who "stand by" silently waiting for the word. A rattle, a dull, heavy splash, a clatter of rollers, and down twenty fathoms descend the dredgers, bearing a death sentence to thousands of all-unconscious Fairhavens; down, down, the waters seething and boiling around the bleached and quivering ropes. The steamer forges slowly ahead, the artist makes his sketch, and I collogue Mr. Rowe. "You see," he observes, with a light laugh, "the old hammer-and-tongs business is played out. I can fetch up more oysters in an hour's dredging, in this way, than in a day's dredging by sharpies and the old-fashioned stole-tongs. I can lift from ten to twelve bushels of oysters at a haul, while a tongs won't rake up a bushel. I am the only steam-dredger on the coast, and I find that it pays much better, as I can go out in all weathers, can 'bust' the ice, and keep my European clients always supplied. I do a lot of business with London and Liverpool, and many a 'blawsted Englishman, you know,' eats a half-dozen of Fairhavens, hauled by these very dredgers, while he fondly pays for—London natives. I pack all the small beauties for the English market."

The steamer still forges ahead, dragging the dredges along the bottom, and devouring the luckless oysters, the ropes twitching and straining and quivering the while. "A leetle more of 'em, boys," cries the captain. A "leetle" more it is, and the engineer is directed to "Fetch her up!" And then follows the order, "Let 'em come!" Clink, clank, clink, clank! and the hauling engine sets to work with a will. The rollers creak, and the water is squeezed out of the ropes as they pass over them. The iron ring appears above the waves, then the bars, and lastly the dredgers, gorged with oysters, many of which slip through the rings and over the sides. The dredges landed on the deck, the men—one of them a Montauk Indian, by the way—their hands protected by thick leather gloves, after causing a general disgorgement, proceed to sort the haul, which consists of oysters, oyster shells, blue mud, waterworn stones, periwinkles, crabs, sea spiders, horseshoes, and occasionally an old boot. The good oysters, with inconceivable rapidity, are jerked into bushel baskets, and then heaped up in a pen erected in the centre of the boat, while the happy "youngsters" are flung into a corner in order to be restored to their native briny. "Let 'em come," cries the cheery captain, and again the dredges flop over the side to the music of the clink, clank, of the engine. Again is the haul made, again do the pickers sort the "loot," and thus from day to day during the season. Back to the place from whence we came, and we anchor at the wharf.

"Now," exclaimed Mr. Rowe, "we'll throw the oysters overboard here on my prepared ground, and give them a washing, or, rather, what we call a 'drink'; then to-morrow, or the day after, we shall cull them."

The oysters get their "drink" in this wise[:] All hands seize wooden shovels and commence tossing the "beauties," as Mr. Rowe loves to call them, overboard. This operation is performed with such a good will that the decks are cleared in a trice. Upon the following day the "diggers," booted to the hips, come after the oysters, transferring them by shovel to carts that back into the tide. This drink of fresh water, although it weakens the briny flavor, fattens and beautifies the oyster, and there is beauty even in an oyster.

Mr. Rowe, with his $6,500 steamer, dredges up seven thousand bushels of oysters a month. And such oysters! I have eaten the Ostend at the Café Anglais in Paris; the Poldoody on the banks of the Shannon; the Native at Tyms, in the Poultry, and within sound of Bow Bells; the La Mancha in the City of Mexico—all more or less perfect in their way; but the Fairhaven possesses a special flavor, and one which, while recalling that of the others, seductively maintains its own *à outrance*.

Mr. Rowe is the oyster monarch, and had he lived in the days of Lucullus, he would have been the most noble Rowe-man of them all. As it is, his lines fall in pleasant places, and, with "All the world's mine oyster" for his motto—his broad platform whereon to shape his ends—I trust that the success which has already attended his enterprise will increase and multiply, with his full-flavored oysters.

SCIENTIFIC INTELLIGENCE.

M. Raoul Pictet has been appointed Professor of Physics by the Council of State of Geneva, at the University of his native city.

Experiments recently made on the Lake Shore Railroad prove that petroleum can be successfully used as fuel for locomotives with a great saving of money, besides doing away with smoke and cinders.

A Parliamentary Caravan, comprising about twenty members of the French Senate and Chamber of Deputies, has been traveling all over Algeria in order that the legislators might become acquainted with the peculiarities of the land and inhabitants.

The Commissioner of Agriculture has engaged Mr. Brisben Walker to proceed to Colorado and investigate and report upon the possibilities of artificial irrigation, especially with reference to artesian wells, where mountain streams are not available.

In Paris, France, the animal and vegetable refuse from markets and refuse of all kinds have been calcined, and from what is known as "Paris charcoal." A furnace for that purpose has been designed by an Eastern inventor at Stamford, Conn., for utilizing all these waste products.

A Cheap and Simple piece of machinery has just been invented and is in operation at Westchester, S. C., which spins seed cotton into thread. It is claimed that this invention will add 100 per cent. to the profit of the planter, as it saves him the expense of ginning, baling, bagging and ties.

The Smithsonian Institution has received from Professor Peters, of Clinton, the announcement of the discovery, by himself, on November 12th, 1879, of a planet of the eleventh magnitude, in 1h. 9min. 10sec. right ascension and 124deg. 20min. north declination, with a daily motion of 3min. south.

M. Revoil, who spent a long time with the Somalis on the western coast of the Gulf of Aden, has described to the Geographical Society of Paris the land and its inhabitants, who appear to be very anxious to trade with Europeans, and he presented an Arab firman signed by the Sultan inviting foreigners to visit his dominions. M. Revoil is to return to Somali land with Prince Albert of Monaco.

The Following Scientific Missions have been authorized by the French Government for this year: Ernest Chantre, of the Lyons Museum, is to carry out anthropological investigations in Kasan, the Caucasus, the Crimea, and Turkey; Emile Rivière, prehistoric researches in the department of Alpes Maritimes; and Paul Sârda to investigate the geology of the soil of Japan, and visit the most important mining districts.

Hemlik, King of Shoa, has written a letter to the president of the Geographical Society of Paris in reference to the scientific mission which has been sent to Shoa by the Geographical Society of Rome, and which has the protection of his Government. But the King would like better to have to assist a French mission sent to him by the Geographical Society of Paris; consequently he desires the society to fit out an expedition, promising them to employ all his power on their behalf.

M. Richard Cortambert, one of the librarians of the National Library at Paris, has discovered in that establishment a gilt globe, dated 1540, and showing apparently that the course of the Congo was known then to have almost the same direction as given to it by Mr. Stanley. There has also been discovered in the Public Library at Lyons a globe of 1701, on which was traced, in detail, the geography of the sources of the Nile and Congo. This globe is said to have been executed by some Fathers of the Order of St. Francis. From the fifteenth century most of the maps make the Congo issue from a great mass of water in the interior of the African Continent. No doubt all the information in these old maps was furnished by the Portuguese. The Portuguese traders were quite familiar with the geography of the interior of Africa, and all the maps, even that of Fra Mauro (fifteenth century), represent the Nile issuing from lakes to the south of the equator, and give an idea of the course of the Congo, similar to that made known by Stanley. Ptolemy also indicated three immense lakes in the centre of Africa, from which issued the Nile and the Congo; only in his map these lakes are placed much too far south.

PERSONAL GOSSIP.

ALEXANDER KINGLAKE, who is still working on his "History of the Crimean War," is seventy-four years of age.

THERE is said to be a "boom" in North Carolina in favor of Grant for President and Alexander H. Stephens for Vice-President.

GENERAL TODLEBEN has just been made a count by the Russian Government, in commemoration of his connection with the defense of Sebastopol.

EX-GOVERNOR E. D. MORGAN has presented the Manhattan Eye and Ear Hospital of New York, with $25,000, to free the building site from debt.

THE Rector of the Odessa University, following the example of two professors at the St. Petersburg University, has resigned in consequence of the new regulations.

MISS BRADDON, the well-known novelist, was the only representative of feminine literature on the English Reception Committee at the recent congress of authors in London.

PRESIDENT ELIOT, of Harvard, does not believe in competitive examinations. He says that it would be foolish to examine a porter in geography when mere strength and activity are required.

THE Duke of Buccleuch, the Premier Duke of Scotland, with 450,000 acres and a rental of $1,500,000, will soon celebrate his golden wedding. Mr. Gladstone is now contesting a Parliamentary election with him.

MADAME CLARA SCHUMANN is the first woman who has ever been elected to membership in the Imperial Royal Society of Austria. This honor was recently paid to her upon her return from long travel in the Caucasus and Persia.

MRS. MARY JOSEPHINE YOUNG, of Sacramento, was admitted to practice in the Supreme Court of California on the 13th ult. She passed the examination with credit, and is the first woman lawyer admitted to the Supreme Court in that State.

THE Duke of Devonshire has presented to the Derby Free Library his almost priceless collection of Derbyshire literature, which has been acquired at great expense and contains the collection of an eminent living Derbyshire antiquarian and historian.

RALPH WALDO EMERSON has never been considered as a man whose religious beliefs could be classed with those of any denomination. The recent statement of Bronson Alcott, that Emerson is in the full sense of the word a Christian Theist, has raised a great row in Concord.

GEO. L. PERKINS, of Norwich, Conn., treasurer of the Norwich and Worcester Railroad, is ninety years of age, and has acted as treasurer of that corporation from its commencement, about forty years. Previous to his appointment to this position he was paymaster in the army. He is probably the oldest railroad official in the United States, both in term of service and years.

ITALY is preparing to extend the suffrage to every citizen above twenty-one years of age who can read and write. Signor Salvatore Morelli, a member of the Italian Parliament, has proposed that women who fulfill the legal qualifications required of electors shall be admitted to the suffrage. Petitions in favor are receiving the signatures of a large number of women.

THE Society of Anthropology of Paris has received, at its last meeting, a letter from Felyx Denys-Raponiayabo a native King in the Gaboon, who, having been educated in the Catholic Mission, is a tolerably good French scholar. His negro Majesty is sending to the Anthropological Society the skeleton of a gorilla, and volunteers to send any scientific documents which may be required.

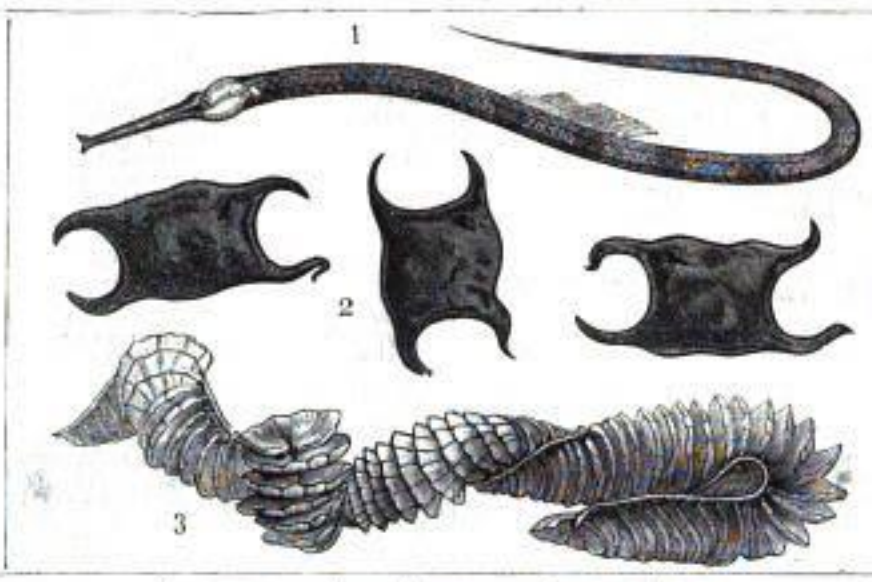
THE Baroness Burdett-Coutts has formally presented to the authorities of St. Pancras a monument in the form of a magnificent dial, which she has caused to be erected, at a cost of about $2,000, in St. Pancras Gardens, in honor of the preservation, as a recreation-ground for the people, of the burial-ground which formerly occupied the site, and in memory of the dead who had been buried there.

THE Tribunal of Brunswick has decided that the late Duke of Brunswick, who left his fortune to the town of Geneva, had been legally deprived of the right to dispose of his fortune. The Tribunal has, therefore, concluded that his will is null and void. As Geneva has already spent a large sum on the monument to the late Duke and the Opera House, the town will be in a sad predicament if it has to restore the money.

KOSSUTH, the famous patriot, has just lost his rights as a Hungarian citizen. The Chamber of Deputies has adopted a Bill declaring that any native of the country who voluntarily resides abroad for an uninterrupted period of ten years shall lose his civil status. The Extreme Left violently opposed this measure, accusing the Government of leveling it directly at Kossuth, but it was finally carried by 141 votes to 52.

HON. GEORGE Y. GILBERT, of Gilbertsville, N. Y., recently addressed the members of the Farmers' Club, of Butternuts, on a subject of interest to every one—money. He gave a very pleasing history of our colonial and constitutional finances, and declared our present national banking system the finest in the world. His address was replete with facts, statistics and arguments, plainly stated, which gave evidences of a scholarly, well-filled mind.

M. BISCHOFFSHEIM is leaving for Nice with M. Garnier, the architect of the opera, and M. Lowy, the sub-director of the Paris Observatory, in order to inspect the site on which he intends to erect the new observatory, on which he is to spend a sum of $200,000, as we mentioned in our notes some months ago. Before determining on the details of his plan, M. Bischoffsheim and his scientific and artistic advisers are to visit the most celebrated observatories of Austria, Germany and England, during this Winter.



AMONG recent deaths we note those of Peter Goelet, a millionaire, of New York City, aged 79; the mother of the ex-Empress Eugénie, Mrs. Charles Dickens, John T. Delane, late editor of the London *Times*; Jules Noel, the French painter; Dr. F. J. Bumstead, President of the New York County Medical Society, formerly on the staff of surgeons at the New York Eye and Ear Infirmary, St. Luke's Hospital, and a professor in the College of Physicians and Surgeons; M. Michel Chevalier, the French economist; Rev. Dr. Wm. Ives Boddington, of Brooklyn; Hon. John A. Roebuck, Liberal member of Parliament and well-known political writer, and Gen. Jeff. C. Davis, U. S. A.

GENERAL SHERMAN has shown his appreciation of the artists connected with Frank Leslie's establishment by purchasing Forbes's "Army Sketches" exhibited at the Centennial Exposition, all of which were made from original sketches by these artists; and, more agreeably still, by purchasing, more recently, two pictures of Mr. James E. Taylor, who has been connected with our artistic staff for a long period of years. General Sherman, in ordering the latter pictures, which have as their subjects the Custer fight in the Washita in 1868, and the Battle at Vermilion Bayou in 1863, says: "They are unusually good, spirited and well-executed, and I compliment you highly." This commendation is fully deserved!

PERIWINKLE OUT OF SHELL.

A MILLIONAIRE'S MAJORITY.

ON the occasion of the coming of age of Caldwell Colt, only child and heir of the late Colonel Samuel Colt, his mother gave an unusually brilliant entertainment in the famous Colt mansion on Buckingham Street, Hartford, Conn., on Monday, November 24th. More than one thousand invitations were sent out, and guests were present from New York, Boston, and other centres. The young man, on his birthday, came into possession of great wealth, a moderate estimate placing it at two millions of dollars, to which in the future, if he lives, will be added further portions of the estate—now set apart for the life use of Mrs. Colt.

Upon entering the visitor was attracted by the coverings of the stairways and newel-posts with flowers and vines, and the scene presented in all the rooms was in keeping with this hall display. The parlors, drawing-room, library and other rooms were fragrant with the delightful odor of roses, mignonette, lilies, violets, camellias, and other choice flowers with which the doorways were arched and the mantles were banked. Graceful festoons of flowers and smilax also twined around the chandeliers, and almost transformed the rooms into bowers. To this was added the charm of the large conservatory opening into the hallway and brilliantly illuminated with crystal gas fixtures, the light from which was reflected in the sparkling fountain whose spray was scattered over the most luxuriant orchids and other rare plants. Many choice floral designs, sent by friends, adorned the rooms. One, from Mrs. Dr. Tait, was particularly noticeable, it being a colt of bronze, resting on a high bank of flowers, at the foot of which was the date and the years "1856—1879." Another was a large horseshoe of bronzeline rosebuds. Other designs bore appropriate inscriptions and words of "good luck." One band performed on the lower floor and in the picture gallery, where the dancing took place, and another band discoursed Strauss's waltzes elsewhere.

Two supper rooms were open during the evening, and near

CONNECTICUT.—CALDWELL COLT, SON AND HEIR OF THE LATE COLONEL SAMUEL COLT, WELCOMING THE GUESTS AT THE CELEBRATION OF HIS MAJORITY, AT HARTFORD, NOVEMBER 24TH.
FROM A SKETCH BY OUR SPECIAL ARTIST.

midnight a novel concert was given by a party of ladies and gentlemen, attired in fancy costumes, who danced a quadrille to melodies selected from "Mother Goose," using nursery rhymes, the words being sang by the dancers. It was long past midnight when the last of the guests departed.

THE FOREIGN BICYCLIST TEAM.

ON the 5th of November there was opened in Boston a four days' contest for the bicycle championship of the world, of which we gave an illustration. It constituted the first appearance in a public long-distance contest in this country of Messrs. Cann and Terront, the visiting foreign experts, and was fairly successful. Several American riders competed, to whom, in order to make the affair more interesting, big allowances were made. The score at the close of work, on the last day, was: Terront, 660 miles in 60 hours; Cann, 628 miles 5 laps in 59 hours; T. Harrison, 400 miles 1 lap in 39 hours; Rollinson, 321 miles 6 laps in 39 hours; G. Harrison, 440 miles 1 lap in 63 hours.

The team consists of Harry Etherington, promoter of many tournaments in England; Charles Terront, of France, a lad of twenty years, who, having easily beaten all French riders, crossed the Channel, and in a race for the championship of England, although handicapped by an inferior machine and several accidents, finished second in a field of eight, with the previously unheard-of record of 1,200 miles in six days of eighteen hours each; and W. Cann, ex-champion of England, who has a similar record of 1,172 miles. David Stanton, another ex-champion, was one of the pioneers in this sport, has won hundreds of races, and gave a series of exhibitions in this country in 1878. John Keen has been for a long time the acknowledged short-distance champion of England, and has in recent trials proved himself about as fast as the most skillful amateurs. Very liberal challenges have been extended to American bicyclists, and a series of competitions and exhibitions are in progress of arrangement in many of our large cities.

DESTRUCTION OF THE EIGHTH AVENUE STABLES.

THE immense stable of the Eighth Avenue Railroad Company, covering the block bounded by Eighth and Ninth Avenues, and Forty-ninth and Fiftieth Streets, was destroyed by fire on Tuesday morning, November 25th. In two hours and a half the fire had made a clean sweep from Forty-ninth to Fiftieth Street, leveling everything except a few jagged piles of masonry. The front of the depot was obliterated. The building which was swept away by the flames had a frontage of about 180 feet on Eighth Avenue and 500 feet in West Forty-ninth and Fiftieth Streets, and was nearly 200 feet wide in the rear. Its erection was begun in 1851, and, as the prosperity of the line increased, additions were made to the small brick building which at first answered all the needs of the road, until a structure, almost a parallelogram in shape and four stories high, including the ground floor, had been reared. Of the company's buildings there only remained the blacksmith's shop, partly ruined, in the southwest corner, and the hospital for maimed and sick horses at the west end of the depot. This was saved by the intervention of a yard. All the snow-plows, 1,480 sets of harness, 130 horses and 30 cars were burned up, besides an immense quantity of grain, fodder and horse trappings.

Great difficulty was experienced in the endeavors to save the panic-stricken horses. They were released from their stalls as soon as the fire was discovered, and driven out of the stable. Some of them dashed about the streets among the firemen and spectators, but were afterwards found herded in groups not far from the depot. The employés of the company found droves of them from time to time, and picked them in the stables of the Ninth Avenue, Broadway and Sixth Avenue Railroad companies. Of the trained horses, not more than 2 per cent. were lost. Of the green horses, not more than 10 per cent. were saved, of which there were 130 on the third floor.

Of the losses the estimates are widely different. Fire Marshal Sheldon places the amount at $145,000; Monmouth B. Wilson, Superintendent of the Fire Insurance Patrol, at $150,000; the Eighth Avenue Railroad Company at $200,000.

The insurances of the company are said to aggregate $270,000. By the falling of the Fiftieth Street wall five firemen, including the Chief of the Battalion, were more or less severely wounded, two of them having to be taken to the hospital for treatment, where they are slowly recovering.

THE "ARIZONA" COLLISION.

IN its collision with the huge iceberg on the night of November 7th, the new Guion steamship *Arizona* struck head-on, while going at its fullest speed. The first blow stove in her bow, and bent, twisted and broke the heavy ironwork for a distance of fifteen feet, forcing the mass of *débris* inward, and leaving a fearful chasm to catch the waves. Many tons of ice were crushed upon the deck or thrust into this huge aperture. Quivering from end to end at the first blow, the steamship recoiled, and, before the engines could control her, advanced again, and struck a second time, but with comparatively harmless force. Our engraving, from a photograph taken immediately after the arrival of

the *Arizona* at St. John's, Newfoundland, gives a clear idea of the effect of the collision, while the presence of the men seen on the decks through the opening serves to indicate the great proportions of the vessel.

The British Emigration Movement.

THE emigration movement in Great Britain is assuming unexpectedly large proportions. Statistics show that during the month of August vessels sailed from the Mersey with 13,558 passengers, of whom 8,436 were British, bound for the United States, British North America, Australia and the East and West Indies. When to these numbers are added the numbers sailing from London, Glasgow and other ports, some idea may be gained of the dimensions of the movement. The idea of curing the present distress by emigration was started in the North of England, where, at place after place, associations are being formed to encourage emigration to the States and elsewhere. The movement is also rapidly extending south and taking in all branches of trade. Under the rules of the associations any workman may join on condition of the payment of three, six, nine or twelve cents a fortnight, each one to have a chance in the ballot in proportion to his contribution. Each member entitled by ballot to contribution money will receive a grant of $30, if going to America, or $50 if going to New Zealand or Australia. The money, however, is to be paid by the society to the shipping agents, so as to prevent, of course, misappropriation. The results of this scheme cannot now, of course, be foreseen, but it is certain that it will have an important bearing upon the industrial and agricultural future of Great Britain.

FUN.

JOB has been marked down in history as the patient man. The fact is that at one time he was just boiling over.

WE know of a man, a victim to tobacco, who hasn't tasted food for forty-seven years. The tobacco killed him in 1813.

INDIANAPOLIS has a creamery and a crematory. One churns and the other burns. Both urn a livelihood. There is only the difference in hashes and ashes between the two industries.

WHILE wine was being passed around during the administration of the Sacrament at the Minneapolis, (Minn.) church the other Sunday, the congregation was electrified by the sudden exclamation of a little boy: "Ma, I'll take beer." A ripple of suppressed laughter disturbed the solemnity of the occasion.

WAGGS went to the station of one of our railroads the other evening, and, finding the seats all occupied, said, in a loud tone: "Why, this car isn't going?" Of course these words caused a general stampede, and Waggs took the best seat. The train soon moved off. In the midst of the indignation the wag was questioned. "You said this car wasn't going?" "Well, it wasn't then," replied Waggs, "but it is now."

A STORY is told of a teacher who was talking to her scholars regarding the order of higher beings. It was a very profitable subject and one in which they took an uncommon interest. She told them the angels came first in perfection, and when she asked who came next and was readily answered by one boy, "Man," she felt encouraged to ask "what came next to man?" And here a little shaver, who was evidently smarting under defeat in the preceding question, immediately distanced all competitors by promptly shouting out, "His undershirt, ma'am!"

THE other evening just before sundown a gentleman, who was sitting by his window on Twelfth street, casually remarked: "There goes the woman that George Brown's dead gone on." His wife, who was in the back room getting supper ready, dropped a plate on the floor, stumbled over the baby and ran like a quarter-horse to the window with: "Where? where? Tell me quick." "The one with the long cloak—just at the corner." Then the woman at the window said, in deep disgust: "Why, that's Brown's wife." "Yes, exactly," replied the brutal husband, quietly. Then the disappointed woman went back and got supper ready, but her usually sweet disposition was soured for the entire evening.

ONCE there was a run on a bank in South Wales. Small farmers jostled each other in crowds to draw out their money. Things were at low-water, when the manager, in desperation, bethought him of a resource. By his directions a clerk, having heated some sovereigns in a frying-pan, paid them over the counter to an anxious applicant. "Why, they're quite hot!" said the latter, as he took them up. "Of course," was the reply, "they're only just out of the mold; we're coining them by hundreds as fast as we can." "Coining them?" thought the simple agriculturists. "Then there's no fear of their running short!" Their confidence revived, the panic abated, and the bank weathered the storm.

WHAT AN INTELLIGENT PHYSICIAN SAYS.

DR. R. C. STROTHER, of Monroe, La., who has been a medical practitioner for over twenty-five years, in a letter to the undersigned, says: "I have heard of your 'Compound Oxygen Treatment' for some length of time, in a casual, incidental way, but it is only within the last few months that I have had my attention particularly called to it in a way that has aroused my professional interest. I have watched its wonderful vitalizing power in two or three instances in which the patients were using the 'Home Treatment.' One of these patients was a sister, and her rapid improvement from a low condition of Nervous Debility and Muscular Prostration, resulting from severe acute disease, was almost miraculous. Your little work, 'THE COMPOUND OXYGEN TREATMENT, ITS MODE OF ACTION AND RESULTS,' has fallen into my hands, and the therapeutical and pathological views therein inculcated being to a great extent in accord with what theory and experience have been impressing on me, I have read it with unusual care and interest. Indeed, I have read and reread it with a great deal of pleasure. I am sure you have found a curative agent of incalculable remedial and vitalizing power, and adapted to a *wide range of diseases*." The above-named treatise is sent free. Address DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

A DEAF mute used the new AUDIPHONE—"Can you pay me that five dollars?"—these were the first words he heard. "I prefer to remain in my original condition," he said, sternly, and threw the audiphone out of the window.—*Buffalo Express*.

FOR BRONCHIAL, ASTHMATIC, and Catarrhal Complaints, and Coughs and Colds, "*Brown's Bronchial Troches*" manifest remarkable curative properties. Imitations are offered for sale, many of which are injurious. The genuine "*Brown's Bronchial Troches*" are sold only in boxes.

MANY reasons, not enumerated in official proclamations, exist for the national Thanksgiving festival. It will not, however, be many years before the product of our American vineyards will be deemed worthy of as honorable mention as any of the gifts of Nature for which we are officially exhorted to be thankful. Our leading dealers in American wines, like Messrs. A. WERNER & Co., 208 Broadway, who monopolize the well-known "America" Extra Dry Champagne, find a steadily increasing demand for our domestic goods, and by careful study of the popular taste, they are able to select and supply wines of American growth unexcelled by any in the world.

THE RECEIPT

for Gilt-Edge Butter Maker was obtained from one of the most extensive dairy farmers of Ireland, noted for the excellent and superior keeping qualities of his butter, which was eagerly purchased by London dealers for export to India, where the warm climate puts butter to a very severe test. It has been thoroughly tried by a large number of the very best butter-makers in this country, and they have given it their emphatic approval. Price 25 cents per package. Sold by all storekeepers.

COLLINS, N. Y., Feb. 23th, 1879.

Gentlemen:—We churned one gallon of cream today at a temperature of 56 degrees, using your Gilt-Edge Butter Maker. Time of churning, 15 minutes—result, 4¼ pounds of butter. Color good. As we have not previously weighed our butter, of course we cannot tell whether there is a better per cent. or not, but appearances indicate it, and the quality is at least two cents per pound better.

Yours, etc.,
M. E. WILBUR, Prop'r of Collins Creamery.

CUTICURA SOAP

Is an elegant toilet and medicinal assistant to Cuticura in the treatment of all external ailments. For chapped hands, rough skin and tan, sunburn and the lesser skin troubles, it is indispensable; as a soap for the toilet, the nursery and bath, it is the most elegant, refreshing and healing before the public.

STUDY HOP BITTERS Book, use the medicine, and you will be wise, healthy and happy.

THE ST. NICHOLAS HOTEL has peculiar claims on the public attention, for it has become one of the historic institutions of the city, and is managed with a liberality and knowledge which make its customers the delight of the Astor steward. Its apartments admirably furnished and fitted, and all its conveniences competent to meet the most exacting tastes. Its standard of excellence is higher than ever.

YOUR physician will recommend you to use COCA BITTERS made from the Peruvian Coca leaf.

HALFORD SAUCE unrivaled by any relish intended for family use. Recommended by the best families.

CAUTION.—The *National Dispensatory* says of Tonka Beans: "They are usually covered with a crystalline efflorescence of coumarin. Given to dogs in the dose of from seven to ten grains, this substance produced great and even fatal depression; and in man in the dose of from thirty to sixty grains it occasioned nausea, giddiness, depression, vomiting and drowsiness." Many of the spurious compounds purporting to be pure Extract of Vanilla are prepared principally from Tonka Beans.

Housekeepers who study their interest will demand of their grocer strictly pure vanilla only, and refuse to accept of an adulterated compound, which may render the dealer a better profit.

Burnett's Extract of Vanilla is prepared from selected vanilla beans, and is warranted entirely free from Tonka or other deleterious substances.

LOSS BY FIRE is loss of money; secure indemnity in case of accident by insuring in THE TRAVELERS.

DYSPEPSIA is positively and effectually cured by COCA BITTERS. Try it!

HAVE YOUR FUEL.—From one-fifth to one-third of the usual amount of coal bills can be saved by the use of fireproof, non-conducting Asbestos Coverings on hot air and steam pipes, boilers, heater pipes in dwellings, etc. The genuine is manufactured only by the H. W. Johns Manufacturing Company, 87 Maiden Lane, New York, sole manufacturers of Asbestos Paints, Roofing, etc.

IF you need a tonic take COCA BITTERS. It will do you good.

THE PHONOGRAPHIC CORNET.

THE latest musical wonder. A musical instrument that plays all tunes without any knowledge of music by the operator and in a wonderfully sweet and melodious manner. It is the cheapest good musical instrument in the world.

WHEN life is a drag, and you have lost all hope, then trust in HOP BITTERS.

Order one for a Holiday Present, or for your own fireside. Special Holiday Offers now ready, on all styles of the Beatty Piano, Grand Square and Upright, and Church, Hall, Chapel, and Parlor Organs. ☞ New Pianos, Stool, Cover, Book $143 & upwards. ☞ New Organs, Stool, Book $35 & upwards, Warranted. ☞ Send reference or have instrument consigned to your express Agt. Freight Agt. or Bank Cashier. Pay only after you fully test at your own fireside. Cash with Order have preference on order book. Money refunded if unsatisfactory.

GREAT SUCCESS. Once more I am permitted to send forth my Holiday Greeting. Never before has my business been so large as it is at the present moment, now nearly a hundred thousand of my celebrated instruments have found their way to happy firesides in all parts of the civilized world. Upon the strength of this great success, our citizens have chosen me their Mayor, by the largest majority ever before cast. So great has been the demand for my world renowned instruments, (many of which I saw while traveling in Europe last year.) I am compelled to erect the largest factory (that is now) in the world, covering four hundred square feet of ground, and will be the largest manufactory of musical instruments in the world, selling direct to the public on Earth. Situated as it is on one of the finest locations in N. J., at Washington, Cor. Railroad Ave., and Beatty St., (Name of street changed to Beatty, by act of council in honor of the great enterprise,) and within one hundred yards of the Junction of four different railroads, leaving for all parts of the country. Some idea of this immense structure can be gained from the following viz., In its construction over three hundred tons of lumber were required, thirty tons of slate were used in its roofing. It contains nearly four hundred widows an Engine of sixty horse power, drives over $2,000 worth of the finest wood working machinery. The above cut gives but a faint description of this mammoth building. ☞ Labor and Material is Advancing, if you ever intend to buy an instrument, Now is your Opportunity. If you do not want one for your own fireside, buy for a Holiday Gift for your friend. ☞ Latest Illustrated Newspaper, (Holiday Edition) Sent Free. ☞ Please show this Holiday Offer to your Friends. ☞

THE SUN FOR 1880

THE SUN will deal with the events of the year 1880 in its own fashion, now pretty well understood by everybody. From January 1st until December 31st it will be conducted as a newspaper, written in the English language, and printed for the people.

As a newspaper, THE SUN believes in getting all the news of the world promptly, and presenting it in the most intelligible shape—the shape that will enable its readers to keep well abreast of the age with the least unproductive expenditure of time. The greatest interest to the greatest number—that is the law controlling its daily make-up. It now has a circulation very much larger than that of any other American newspaper, and enjoys an income which it is at all times prepared to spend liberally for the benefit of its readers. People of all conditions of life and all ways of thinking buy and read THE SUN; and they all derive satisfaction of some sort from its columns, for they keep on buying and reading it.

In its comments on men and affairs, THE SUN believes that the only guide of policy should be common sense, inspired by genuine American principles and backed by honesty of purpose. For this reason it is, and will continue to be, absolutely independent of party, class, clique, organization, or interest. It is for all, but of none. It will continue to praise what is good and reprobate what is evil, taking care that its language is to the point and plain, beyond the possibility of being misunderstood. It is uninfluenced by motives that do not appear on the surface; it has no opinions to sell, save those which may be had by any purchaser for two cents. It hates injustice and rascality even more than it hates unnecessary words. It abhors frauds, pities fools, and deplores nincompoops of every species. It will continue throughout the year 1880 to chastise the first class, instruct the second, and discountenance the third. All honest men, with honest convictions, whether sound or mistaken, are its friends. And THE SUN makes no bones of telling the truth to its friends and about its friends whenever occasion arises for plain speaking.

These are the principles upon which THE SUN will be conducted during the year to come.

The year 1880 will be one in which no patriotic American can afford to close his eyes to public affairs. It is impossible to exaggerate the importance of the political events which it has in store, or the necessity of resolute vigilance on the part of every citizen who desires to preserve the Government that the founders gave us. The debates and Acts of Congress, the utterances of the press, the exciting contests of the Republican and Democratic parties, now nearly equal in strength throughout the country, the varying drift of public sentiment, will all bear directly and effectively upon the twenty-fourth Presidential election, to be held in November. Four years ago next November, the will of the nation, as expressed at the polls, was thwarted by an abominable conspiracy, the promoters and beneficiaries of which still hold the offices they stole. Will the crime of 1876 be repeated in 1880? The past decade of years opened with a corrupt, extravagant and insolent Administration intrenched at Washington. THE SUN did something towards dislodging the gang and breaking its power. The same men are now intriguing to restore their leader and themselves to places from which they were driven by the indignation of the people. Will they succeed? The coming year will bring the answers to these momentous questions. THE SUN will be on hand to chronicle the facts as they are developed, and to exhibit them clearly and fearlessly in their relations to expediency and right.

Thus, with a habit of philosophical good humor in looking at the minor affairs of life, and in great things a steadfast purpose to maintain the rights of the people and the principles of the Constitution against all aggressors, THE SUN is prepared to write a truthful, instructive, and at the same time entertaining history of 1880.

Our rates of subscription remain unchanged. For the DAILY SUN, a four-page sheet of twenty-eight columns, the price by mail, postpaid, is 55 cents a month, or $6.50 a year; or, including the Sunday paper, an eight-page sheet of fifty-six columns, the price is 65 cents a month, or $7.70 a year, postage paid.

The Sunday edition of THE SUN is also furnished separately at $1.30 a year, postage paid.

The price of the WEEKLY SUN, eight pages, fifty-six columns, is $1 a year, postage paid. For clubs of ten sending $10 we will send an extra copy free.

Address,

I. W. ENGLAND,
Publisher of THE SUN, New York City.

Digitized by Google

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, DECEMBER 20, 1879.

The Hon. Fernando Wood upon the Tariff Question forms the eighth of our series of illustrated interviews with eminent men. Mr. Wood's views on the tariff are explicitly set forth, his experience during his recent visit to Europe vividly portrayed, and his conclusions as to our powers of competition in the markets of the world against all comers deliberately propounded. This interview abounds in interest.

FRANK LESLIE'S ILLUSTRATED ALMANAC FOR 1880.

THIS charming annual contains four elegant chromo-lithographs and eighty-two illustrations on wood, many of them gems of art. Besides accurate calendars and calculations for the coming year, with valuable statistics of all kinds, the Almanac illustrates all the great events of the world's history during the last year. Scenes at our Resorts, Picturesque America, Noted Personages, the Zulu War and the Prince Imperial, Madame Bonaparte, the Afghan War and the Ameer, the attempts on the lives of royal personages, the Chili-Bolivian War—exquisite Art Pictures—are alone worth more than the price of this cheap and attractive work.

WHAT THE PRESIDENT SAYS.

THE annual Message of President Hayes is a plain, practical and sensible document. Without possessing any of those extraordinary elements of character which give to his person or to his suggestions any remarkable ascendency over his contemporaries, the President seems to be gifted with rare moderation of judgment, clearness of perception and purity of purpose in the formation and statement of his political opinions. His serenity is undisturbed by the turbulence of the political atmosphere through which he is called to make his observations, and if he has none of the energizing forces which make and mark the great party leader or the political reformer, he has at least the virtues which make and mark the careful and conscientious Chief Magistrate, who, though he may not magnify his office, succeeds none the less in making it honorable.

It may be true that the President has little sympathy with those "stalwarts" of his party who could find a perpetual bone of contention in the alleged state of public opinion in the South, but he makes it very evident by the clear and emphatic declarations of his Message, that in every proper sense of the term he has *stalwart* views on questions of finance. There is no uncertain sound in his language on this subject. He urges the gradual retirement of the legal-tender notes, as "a step to be taken in our progress towards a safe and stable currency," and as a step which should be taken on grounds of policy and duty that concern the Government, and on considerations which relate to the interest and security of the people. As we have so constantly held a language of like tenor with this, we need do no more in the presence of such declarations than to express our gratification at their clear enunciation in the most dignified and important state paper of the Administration at Washington. And if this gratification is slightly diminished by finding that the President's Secretary of the Treasury is not in entire accord with the views of his official chief on this great matter of public concern, we are at least pleased to note some slight signs of progress in the financial opinions of Mr. Sherman. He favors the repeal of the legal-tender clause which gives a forced currency to the greenbacks irrespective of their "equivalency with coin," and would reduce their volume to $300,000,000. It is a small step in advance, but it is so far behind the President's recommendations as to disclose almost a schism between the Executive head in the White House and the Administration arm in the Treasury Department. President Jackson was fierce to insist in his day that his Cabinet should be a unit on all questions of public policy, and is even suspected on one occasion to have carried his demand for unity into the domain of social questions. President Hayes displays the lack of this Jacksonian vehemence and pertinacity in the mild toleration which he practices towards a subordinate officer who refuses to share his opinions in a matter which he deems of vital concern to the conduct of the Government and the prosperity of the people.

We are pleased to remark that both the President and the Secretary concur in the recommendation that the further coinage of the depreciated silver dollar should be suspended until such times as the United States, in conjunction with other nations, may agree on such a mint ratio between gold and silver coins as shall secure the equal circulation of each as a part of the national currency.

In many of his appointments to public place and office, the President has fallen so far below the theory projected for himself in his letter accepting the nomination of his party, and in the inaugural address with which he entered on the duties of the Presidency, that we had almost come to despair of looking to him for any further movement towards a permanent and thorough purification of the public service by a reform in the methods of appointment and an improvement in the tenure of office so far as regards subordinate employment. But the President makes this subject the burden of his Message, as if equally undismayed by his own shortcomings, by the shortcomings of some of his Cabinet, and by the avowed hostility of the "machine" politicians compressed in the ranks of the Republican party. Affirming that it has been his purpose to do what is within his power to advance such prudent and gradual measures of reform as will, in the end, bring about a radical change in the civil-service system of the country, he calls public attention to the fact that nothing adequate can be accomplished under this head "without the co-operation of Congress, and considerate and intelligent support among the people." In asking the co-operation of the present Congress, with a majority of both Houses in that body belonging to the President's opposition, and with a large minority in his own party notoriously hostile to the reform he advocates, the President, we fear, has laid down the burden of his Message at the feet of men who will be little inclined to move it with one of their fingers, much less to share with him the duty and privilege of bearing it on their shoulders. It therefore remains for the people of the country, without distinction of party, to say how earnestly they desire to secure the Civil Service Reform which the President sets before them as a high ideal equally indispensable to the purity and the efficiency of the civil administration. If they *want* it they can *have* it, but they can have it only by wanting it with that insistence which will take no denial from the professional politicians. In the meantime, let us be grateful to the President for rescuing this discussion from the Slough of Despond into which it had sunk along with the hopes of the too sanguine and not over-wise reformers into whose hands it had fallen.

To the "burning question" of the hour, as evinced by the smoke and flame of the late Autumnal elections, the President makes an allusion which is none the less significant for the mildness and moderation of the diction in which it is couched. "These elections afford," he says, "new and decisive evidence of the deep interest which the great body of citizens take in the progress of the country towards a general and complete establishment, at whatever cost, of universal security and freedom in the exercise of the elective franchise." But the President takes pains to emphasize the fact that for the attainment of this security and for the vindication of this freedom he prefers to rely on the forces of an enlightened public opinion and the avenging Nemesis of offended justice, rather than on the coercive measures of a central power dominating from Washington. While urging upon Congress to supply any defects in present legislation on this subject, such as experience may have shown, and as may be in its power to remedy, he does not formulate any specific recommendations under this head, but earnestly appeals "to the intelligence and patriotism of all good citizens, of every part of the country, however much they may be divided in opinions on other political subjects, to unite in compelling obedience to existing laws aimed at the protection of the right of suffrage."

And as if to indicate the true source from which a permanent pacification of the country can only come, so far as this question is concerned, he invokes for this purpose the co-operation of the Executive and Legislative authorities of the States, which are charged with chief jurisdiction on all matters of suffrage, except in the case of the few reservations contained on this point in the Constitution and its amendments.

On the whole, whether regard be had to the matter or the manner of the Message, to its specific recommendations or to the spirit in which they are conceived, it seems to us that the President has laid the country under obligations for right words spoken in the right season on the great leading topics of public concern.

LEGAL-TENDER.

UNDER our republican form of government we have swarms of public men, but unfortunately for the country and its interests, very few clear-headed and unselfish statesmen. Among the latter, however, we are pleased to recognize Hon. Thomas F. Bayard, United States Senator from the State of Delaware. Leaving out of view any political consideration or partisan connection, it may be said of him:

> "He is not of that strain of counsellors
> That, like a bolt of rushes in a brook,
> Bridge every way the current turns itself."

We have been led to speak thus kindly of Senator Bayard because of his steady adherence to great constitutional principles, and his broad and statesmanlike views with reference to financial questions—questions intimately allied with every interest calculated to promote the wealth, power and greatness of this growing republic.

Holding with the earlier statesmen of the country, Mr. Bayard has been an uncompromising opponent of the issue of credit money by the Government. On a certain occasion, from his place in the Senate, he said: "There have been periods in the history of the world in which the legitimate uses of credit, combined with the intrinsic values of money, have not been, perhaps, so well understood as they may be now. There is a high and a grand duty which credit can perform, and a money of credit can perform conjunctively with a money of intrinsic value; but it is not in the power of any man in this Chamber to exhibit to the Senate a case where money, having been divorced from intrinsic value, has been able to sustain itself from depreciation, and in the end has not been the ruin and bankruptcy of the community embarked upon it." Time has given proof of the correctness of the views then enunciated.

Consistent with his record, the Senator has now introduced the following joint resolution for the consideration of Congress: "That after the passage of this resolution Treasury notes of the United States shall be receivable for all dues to the United States excepting duties on imports, and shall not otherwise be legal-tender, and any notes hereafter reissued shall bear this superscription."

This resolution will stand approved by the superior judgment of the financial world, and the country will commend its passage by Congress. The resolution, as it now appears before the Senate, proposes to work no revolution in the outstanding volume of Government paper, but simply to reduce the legal-tenders to the status of Treasury notes, such as were issued before the Rebellion to serve the convenience or temporary necessities of the Government.

And why, we may ask, should this not be promptly done? In the issuance of the so-called greenbacks, the enactment of the legal-tender provision gave them no stability or superiority over notes issued by banking corporations. The notes of the United States issued under the legal-tender Act rose in value in the market as the success of the National arms gave evidence of the early termination of the war, and they fell in value whenever the Confederate forces triumphed. No legislation by Congress could prevent this. Men measured the value of the notes, not by Congressional declaration, which could not affect or alter the nature of things, but by the confidence reposed in their ultimate payment.

The legal-tender provision served no other purpose than to compel people to do that which they did not want to do, and which they at first repelled as being contrary to natural justice. So far as the Government desired to borrow money, or to obtain required supplies for the army and navy, the provision added nothing to the value of the notes. Without the legal-tender quality the notes would have circulated equally well and answered all the purposes of the Government. The legal-tender provision, in fact, served no purpose other than it enabled unscrupulous debtors to use them for the discharge of previous obligations.

Our readers of mature years all understand that the notes of State banks circulated without possessing legal-tender quality, and supplied a currency for the people just so long as the public had confidence in the ability of the banks to redeem. The notes issued by the national bank associations during the war by authority of Congress, amounting to more than $300,000,000, which were never made a legal-tender, circulated equally well with the notes of the United States. Neither their utility nor their circulation was diminished in any degree by the absence of a legal-tender quality. They rose and fell in the market under the same influences, and precisely to the same extent as the governmental notes, which possessed this quality.

In the introduction of this resolution, Senator Bayard simply seeks to bring the Government notes into harmony with the strict provisions of the Constitution. In this he is sustained by the opinion of Daniel Webster, the ablest and wisest of our Constitutional expounders. That great legal luminary and statesman said: "Most unquestionably there is no legal-tender, and there can be no legal-tender in this country under the authority of this Government or any other, but gold and silver—either the coinage of our own mints or foreign coins, at rates regulated by Congress. This is a Constitutional principle, perfectly plain, and of the very highest importance. The States are expressly prohibited from making anything but gold and silver a tender in payment of debts, and, although no such express prohibition is applied to Congress, yet as Congress has no power granted to it in this respect, but to coin money, and to regulate the value of foreign coins, it clearly has no power to substitute paper, or anything else, for coin, as a tender in payment of debts and in discharge of contracts. Congress has exercised this power fully in both its branches. It has coined money, and still coins it; it has regulated the value of foreign coins, and still regulates their value. The legal-tender, therefore, the constitutional standard of value, is established and cannot be overthrown. To overthrow it would shake the whole system."

In the Senate the joint resolution of Mr. Bayard is antagonized by resolutions introduced by Senators Ingalls and Carpenter, and in the House by similar resolutions offered by Mr. Fort, of Illinois, and Mr. Price, of Iowa. The resolution of Mr. Fort, which represents the spirit of the others, reads as follows:

> *Resolved*, That any attempt to withdraw or change the legal status and quality of any paper money issued by the United States, or reopen by legislation the Currency Question, settled by decision of the Supreme Court and universally adopted and approved by the people (?), would be injudicious and mischievous, and could only result in disturbing business and retarding prosperity, and this House is emphatically opposed to any such legislation.

With all due respect for the opinions of these several gentlemen, we still hope that Congress will have the good sense to pass the resolution of Senator Bayard.

OUR HARBOR APPROACHES.

THE report of General Newton, just given to the public, recalls attention to the vast engineering work which is in progress in the harbor of New York and its approaches, and which has, to some extent, been lost sight of since the great mine explosion, some four years ago, at Hallett's Point. The work, it appears, has been steadily, though unostentatiously, prosecuted, and the prospect now is that within a very few years the obstructions in Hell Gate will be effectually overcome. Since the final blast some fifty-seven thousand tons of rock have been removed. Twenty thousand tons have yet to be taken out. This done, it is expected that the work at Hallett's Point will be completed. Mining and blasting operations have still to be conducted at Diamond Reef and at Pot Rock; but no serious difficulties are anticipated. The original estimate for these improvements was $5,139,120. Of this, $2,538,200 has already been appropriated, and $2,084,711 actually expended. The estimate for the next fiscal year is $450,000. The amount required to complete the work of improvement in the neighborhood of Hell Gate, according to the calculations of General Newton, will be approximately $2,615,078. When the blasting shall have been completed, and the *débris* removed, vessels of the deepest draught will be able to seek the ocean through the Sound with as much safety as through the Narrows.

The report throws some light also on the work contemplated in the neighborhood of Harlem. By means of a cut or canal at that point it is proposed to connect the waters of the North and East Rivers, and so make the passage to and from the ocean by the Sound available for the commerce of both. In 1878 Congress appropriated for the construction of this ship canal $300,000; and at the end of the last session there was a further appropriation of $100,000. It is distinctly stipulated, however, that none of this money shall be expended until the right of way is secured to the United States free of expense. Lying at the very threshold of this undertaking were found some serious obstacles. It was expected that, because of the improvements and the rise in the value of the adjacent property which such improvements would occasion, the owners of the property would be willing to make a voluntary gift of the strip of land required for the bed of the canal. But this expectation was not realized. On the contrary, it was found difficult to acquire the necessary land, partly because of the immense price demanded and partly also because some of it was held in trust for minors. These difficulties, however, have been surmounted by an Act of the State Legislature, passed last May, which empowers the Supreme Court to make the necessary appraisements and assessments, the assessments being required to be sufficient to compensate the owners of the property taken, and to defray all the expenses of the proceedings. The estimated cost of the cut or canal is a little over two millions of dollars for a channel fifteen feet in depth. There is a fair prospect that the work will now go on, and that it will be carried to a successful conclusion.

In his report General Newton suggests the propriety of having breakwaters constructed in the neighborhood of Rockaway and Coney Island, so as to check the violence of the waves and to facilitate entrance into the harbor. He also suggests the importance of having harbors of refuge on the coasts of New Jersey and Long Island. The latter improvements will, no doubt, come in time. The works of immediate importance are those at Hell Gate and Harlem. When these are completed other and necessary works will doubtless be undertaken; and science coming to the aid of nature will give us what, in a cer-

Digitized by Google

tain qualified sense, we have already, the most useful and the most magnificent harbor in the world.

MR. GLADSTONE'S CAMPAIGN.

THE present British Parliament came into being in the Spring of 1874. It is, therefore, about to enter upon its seventh and last session. Within a year from the present time a new general election must be held, and the people will be called upon to deliver their verdicts on the policy of the Beaconsfield administration, and to elect who shall direct the Empire in the succeeding years.

Soon, for the first time since his accession to power, Lord Beaconsfield must submit his political fate to the constituencies. It may be that he will yet dissolve Parliament before its full term expires, or he may wait for its natural demise. In view of the speedy approach, in any event, of a general election which is certain to equal, if not exceed, in excitement and bitterness, any which the present generation has witnessed, the chiefs of the two political hosts have already buckled on their armor, and the preliminary skirmish and strife have begun in dead earnest. Noble lords and honorable gentlemen are industriously wooing the constituencies for a renewal of their confidence and mandate; younger aspirants are making displays of their talents, lavishly dealing out profuse promises, and ingratiating themselves with the most humble voters.

Some time ago Mr. Gladstone, beyond all comparison the ablest and most prominent of English statesmen, and the most fervidly eloquent of English orators, consented to contest, in the Liberal interest, the historic Scottish county of Midlothian. It is an act of unusual daring on his part; an undertaking to engage in a most doubtful conflict and to challenge one of the most powerful of Tory houses in its northern stronghold, and in pitting himself against a scion of the semi-royal Scots, the Earl of Dalkeith, Mr. Gladstone provokes the most vigorous use of great patrician power and wealth to defeat him.

The famous statesman, however, has plunged into the fray, at the age of seventy, with all the fire and energy of his younger days. He has a great and to him a holy mission to perform—to bring back England to a policy of honor and justice, to rid her of a ruler who, according to his belief, is a "political juggler," and who jeopardizes the true interests of the Empire for the purpose of perpetuating his own power. Mr. Gladstone has always bitterly opposed the policy of his old rival. He has made no secret of his hostile opinion of Lord Beaconsfield as a man and as a statesman. He has for years accused him of dishonesty, trickery, unseemly histrionics, want alike of wisdom and of principle. He indignantly arraigns the whole foreign policy of the present Ministry. He pronounces a scathing judgment against the purchase of the Suez Canal shares, against the assumption by the Queen of the imperial title and dignity, against the Tory enmity towards and distrust of Russia, against the provisions of the Berlin Treaty, the occupation of Cyprus, the importation of Hindoo troops into the Mediterranean, the Anglo-Turkish convention, the dispatch of the fleet into Turkish waters, the assumption by England of responsibility for reform in Asia Minor, and the neglect of the interests of Greece. He impeaches the Zulu war, and can find no invective too bitter with which to characterize the invasion, occupation, and present English protectorate of Afghanistan.

Mr. Gladstone has chosen his ground fairly upon which to make his issue with Lord Beaconsfield. Though not nominally, he is really the chief of the Liberal masses; such an intellect and will as his cannot be relegated to a place in the party ranks. Should he win a triumph in closely-balanced Midlothian, its moral effect would be immense, no matter how the country in general pronounced. The verdict would be an unmistakable condemnation of the Beaconsfield policy. Mr. Gladstone's election would signify that, with the return of the Liberals to power, that policy would be, as far as possible, reversed; while the absolute engagements of the Government would be adhered to, every effort would be made by the new Ministers to diminish what they consider as the ruinous results of the course of their predecessors. The Christian subjects of Turkey, the young kingdom of Greece, would discover in them warm advocates and friends. Russia would be approached and be treated with more consideration. The Afghans would probably ere long find themselves left to themselves once more. In a word, a policy of conciliation, of non-interference with the affairs of other nations, and of far closer attention to long-delayed political and social reforms at home, would replace that of "Imperial interests" and "vigorous foreign policy," should a Liberal triumph, vastly emphasized by that of Mr. Gladstone, be the result of this electoral contest.

FOREIGN EVENTS.

THIS last attempt on the life of the Czar of all the Russias will lead to a bloody retaliation. The Government will now cast aside the scabbard and mercilessly use the sword. The Nihilists court destruction, and they are likely to receive grim satisfaction. The innocent will suffer alike with the guilty, and for every grain of powder fired in that infernal machine a human life may be destined to perish. "I have placed myself in the hands of Providence," exclaimed Alexander, at the ancient palace of the Kremlin, "but sedition *must* be extirpated." This "must" is pregnant with direful meaning. Accident saved the life of his Imperial Majesty. His railway journeys are usually made with two trains—one for himself and suite, and the other for the servants and baggage. The baggage usually clears the line. In this instance the Czar went first, and his *impedimenta* suffered while he escaped. He has received congratulatory telegrams from all his brother and sister sovereigns, as well he might. Who would be Czar of all the Russias, with this Nihilistic Damocleian sword hanging over one's head by so frayed a hair?

The ministerial crisis in France is over, and those who have her best interests at heart can afford to breathe a little more easily. The Government was not only interpellated but impeached. The ministerial shortcomings on the questions of judicature, gendarmerie and military schools were ingeniously raked up, while the *chevalde bataille* was the retention of certain officials avowedly hostile to the Republic. Of course, the Chamber was treated to an explosion on the part of the dynamitic Paul de Cassagnac, and Jules Ferry as usual got out of his depth. The honors of the day belong to a young and coming man, Deveze, who made a superb appeal to the patriotism of the Chamber, and concluded a most eloquent speech by moving a vote of unqualified confidence in the ministry. The Chamber divided and the motion was carried by a majority of 243. The Cabinet has now been placed on its feet, and it commands a working majority. Waddington wins.

The Turk is still troubling the British Cabinet, and as a result keeping European councils on the *qui vive*. We think the Beaconsfield policy has been founded on the absurd supposition that the "unspeakable Turk" could be reformed by "soft sawder," and that he could sustain himself as a great power in Europe. So far from facts according with this expectation, not a single symptom of improvement can be detected in any of the ways of the Sultan, or the tendencies of those about him. If one day the telegram brings an announcement which, if it could be relied upon, would look hopeful, the next day tells the old story of rottenness and corruption, a bankrupt exchequer, an army without pay, officials without honesty, and a people languishing for want of security of property and life. The Greek Boundary Commission has assumed a new phase. The French Ambassador to Turkey has received instructions to assume a more moderate attitude upon the rectification of the Turco-Hellenic frontier, as the Turk claims a certain line of frontier under the Peace with Honor Treaty. As this treaty is not worth the parchment it is inscribed upon, news of a startling character may be looked for from both Downing Street and the Palace on the Bosphorus.

The French Government has directed the Governor of Senegal, Western Africa, to send an expedition to explore the region lying between the Upper Senegal and the Niger Rivers, with a view to the feasibility of connecting the two rivers by rail. *Apropos* of Africa, King Amachree, of New Calabar, is about to see it out with one Will Braid, a powerful chieftain of that ilk. They have already fought a pitched battle, both sides claiming victory and both banqueting upon the slain. The English factories in that district are threatened, and Her Majesty's ironclad *Dido* threatens Amachree, Braid and King Ja-Ja. Ah-ma-Chree smacks of the Emerald Isle, Braid of the tight little island, and Ja-Ja speaks of Vaterland.

We are to have a visit from Mr. Parnell, M.P., and Mr. Finigan, M.P. It is announced that these gentlemen will leave Queenstown on the 17th. They come to us to seek subscriptions towards the fund for the defense, "to the foot of the throne," of Messrs. Davitt, Daly and Killen. The land agitation has lost none of its fervor, and meetings are being held from the Giant's Causeway to Cape Clear. How is this to end? Is Ireland to have all landlords and no tenants, or no landlords and all tenants? *Does* tenant-right mean a lease for ever and no rent? The Government have prosecuted, under the especial advice of "Jimmy Lowther," the Chief Secretary; and if the prosecution fails, as many of the ablest lawyers in the Four Courts predict it will, English rule in Ireland will receive a crushing blow, while Home Rule may be looked forward to through this blunder of the English Irish official. Thomas Brennan, Secretary of the Land League, has been arrested at Dublin for uttering seditious language, and the Court of Queen's Bench has granted the application of the Crown that if the Grand Jury of Sligo found true bills against Messrs. Davitt, Daly and Killen, accused of sedition, the indictments should be removed for trial to Dublin.

The report on the Bill for the abolition of slavery in Cuba has been read in the Senate at Madrid, and approved by the Cabinet Council. Great little Martinez Campos has promised the Cuban Deputies that he will shortly present to the Cortes Bills relative to economical reforms and reforms in the laws relative to the coasting trade of Cuba. The opinion in Havana seems to be that Campos will dissolve the Cortes rather than resign. One thing is pretty certain, no more Cuban campaigning for the important little premier.

The Archbishop of Malines has published a declaration, stating that no difference exists between the Holy See and the Belgian Episcopacy relative to the educational law.

CONGRESS AT WORK.

WITH the opening of the second session of the Forty-sixth Congress, on December 1st, Senators and Representatives appear to have settled down to the serious transaction of public business. Thus far the operation has progressed quite smoothly, the Republicans being happy and good-natured in view of their late victories, and the Democrats, far less aggressive than in the extra session. The contested election cases have been referred to sub-committees to expedite the labor of investigation, and will probably be reported upon at an early day. Senator Baldwin, who succeeds the late Mr. Chandler, has been given one of the vacant places on the Committee of Commerce. The proposed inter-oceanic canal received attention early in the week, Senator Gordon introducing a resolution for the encouragement of the project, and Representative Ellis a second in almost similar words; both were referred to the respective committees on Foreign Relations. Senator Burnside spoke on the joint resolutions presented by himself at the last session on the Darien project, holding it dangerous for the United States to permit a foreign Government to construct the canal on that route. Allusion was made to the Ute Indian outbreak by Senator Belford, of Colorado, who introduced a Bill which provides that all laws establishing a reservation for this tribe in that State shall be repealed; that a new reservation shall be selected by a commission in some of the Territories for them, and that the land constituting the present reservation shall become public domain. Two amendments to the Constitution were proposed in a joint resolution introduced by Representative White, one providing that general appropriation Bills shall contain nothing but appropriations, the other granting the President power to disapprove of any separate item of a Bill without thereby defeating the whole Bill. Financial matters claimed considerable attention in both Houses on Wednesday and Thursday. On the former day Senator Bayard offered a Bill making Treasury notes a legal-tender only, for all dues to the United States excepting duties on imports. Senator Beck a second Bill authorizing the payment of customs duties in legal-tender notes, and Representative Wood a third limiting the future rate of interest on bonds to 3½ per cent. On the following day Senator Carpenter introduced a resolution, which, after alluding to the general prosperity of the country, declared that any legislation during the present session of Congress changing the existing system of finance would be inexpedient; Representative Gillette offered another resolution declaring opposition to any reduction in the volume of legal-tender notes now outstanding and favoring the substitution of greenbacks for national bank notes, as well as the unrestricted coinage of the 412½-grain silver dollar; and Representative Garfield presented a Bill to facilitate the refunding operations by authorizing the Secretary of the Treasury to exchange the four per cent. bonds for any bonds bearing a higher rate of interest. In the line of inflation, Mr. Weaver offered a scheme in the House, to "restore to the soldiers and sailors who served in the late war equal rights with the holders of Government bonds," and calling for the issue of $500,000,000 in Treasury notes. A resolution by Mr. Goode for the appointment of a select committee to consider the expediency of carrying out the law of Congress adopted in 1781, providing for a memorial monument at Yorktown, Va., was adopted in the House. Mr. Morton offered a Bill in behalf of the New York Chamber of Commerce to facilitate the negotiation of bills of lading and other commercial documents, and to prevent fraud thereon. Both Houses adjourned on Thursday to Monday 8th.

THE United States Signal Corps, under charge of General Myers, has been complimented by the award of a grand diploma of honor by the jury of the Paris Exhibition.

IN order to save from a life of slavery the four young sons of Yakoob Beg, the executed Chinese rebel, President Gerry, of the New York Society for the Prevention of Cruelty to Children, has written to President Hayes, begging him to solicit of the Emperor of China a commutation of their sentence to banishment. If the Emperor consents to abate the rigors of an ancient law which inflicts upon the children a punishment for their father's crimes, Mr. Gerry promises that the society will take charge of these striplings and give them the best educational advantages.

A MOVE in the right direction has just been made by the managers of the Inman steamships, who, as an experiment, have furnished the *City of Berlin* with the electric light apparatus. Should this test of the utility of the light prove satisfactory, the remainder of the fleet will be similarly provided. This action meets our hearty approval. We have constantly urged the practicability of the light on shipboard, and feel sure that ocean travelers will unite with us in the hope that the other companies will follow the example of the Inman.

An important conference has been held by the Captain of the Port of New York with the superintendents of the ferry companies, with a view of adopting some means to prevent the frequent collisions in the East and North Rivers, particularly in dark and foggy weather. Now that the subject is under discussion by the parties best acquainted with its bearings, we would repeat a suggestion made by this paper on several occasions, viz., utilize the electric light. With even a single light at either terminus of the Fulton Ferry, that dangerous course could be kept almost clear as the noon-hour. Another at Whitehall would relieve that section of the present dangers, while for the boats plying between the city and the New Jersey shore, a light at Communipaw, Jersey City and Hoboken would effectually sweep those pathways, always crowded with sailing vessels.

NEWS OF THE WEEK.

Domestic.

DURING November the public debt was decreased $700,822.

THE receipts on the Erie Canal this season were $36,838.19 less than those of last year.

SECRETARY OF WAR MCCRARY has been nominated for Justice of the Eighth Judicial District.

SECRETARY SHERMAN has asked for proposals to sell to the Government $1,000,000 of the six per cents.

THE trustees of the Brooklyn Tabernacle, Rev. De Witt Talmage, have decided to withdraw from the Presbyterian Church.

THE State election in Louisiana on December 2d resulted in a Democratic majority and the adoption of the new Constitution.

MR. and MRS. VOLKENNIS have been held for trial in New York for attempting to poison Mr. Blair for the purpose of robbery.

THE New York Board of Aldermen adopted a new cross-town railroad scheme on December 2d, which has created much surprise.

WILLIAM C. GILLMAN, the Wall Street forger, received a pardon from Governor Robinson in season to attend the funeral of his wife at Norwich, Conn., December 4th.

IN Maine the Secretary of State has been ordered by the Supreme Court to show cause for refusing to exhibit election returns. December 9th was designated for the hearing.

ON Friday, December 5th, the thirty-third day of the Hayden trial in New Haven, the prosecution closed, and the defense opened with the wife of the prisoner on the stand.

MR. JEWETT has been re-elected President of the New York, Lake Erie and Western Railroad Company. More than $2,000,000 were expended last year for the improvement of the property.

GOVERNOR IRWIN has certified to the President and to Congress the vote of California on the Chinese question, accompanying it with the memorial required by the Act calling for the vote.

AT the execution of Andrew Tracey, at Smithport, Pa., on December 4th, the rope broke and the body lay quivering on the scaffold platform for ten minutes, when a new one was procured and the hanging was effected.

OWING to the great demand for bronze one cent pieces, the Philadelphia Mint turned out over 3,000,000 pieces of that denomination last month. This supply did not equal the demand by one or two million pieces, and the demand still continues.

THE sixty-mile bicycle race at Chicago was won by Terront, who beat Rolard and the Harmon brothers, each of whom had a stretch of twenty miles. The best mile of Terront was made in 3 min. 20 sec. He made fifty miles in 2 h. 55 min. 50 sec., and sixty miles in 3 h. 34 min. 36 sec.

THE General Assembly of Virginia met December 3d in its first biennial session. The work of organization went on quietly to the end, the Readjusters electing all the officers in both Houses, as nominated by them in caucus. The majorities by which officers of the House were elected ranged from 16 to 18, while in the Senate they ranged from 8 to 13, showing an average joint majority of 27 for the Readjusters.

GENERAL HATCH, of the Ute Commission, now in session at Los Pinos, says the hostiles are all coming in, and a favorable result of the work of the Commission is expected. Chief Jack has proved the most valuable witness yet examined, answering all questions promptly and keeping nothing back. He claims that the removal of the agency was the commencement of the trouble; that on an elevation of 8,700 feet, with frost every month in the year, farming was impossible; that he and his bands received no rations for a year, which he claims was a violation of the treaty of 1868, and that his engagement with the troops was a fair fight. It is believed that Colorow has surrendered himself.

Foreign.

ITALY has recognized the independence of Roumania.

SPAIN is about to send several small war vessels to Cuba.

NINE women have been elected members of the London School Board.

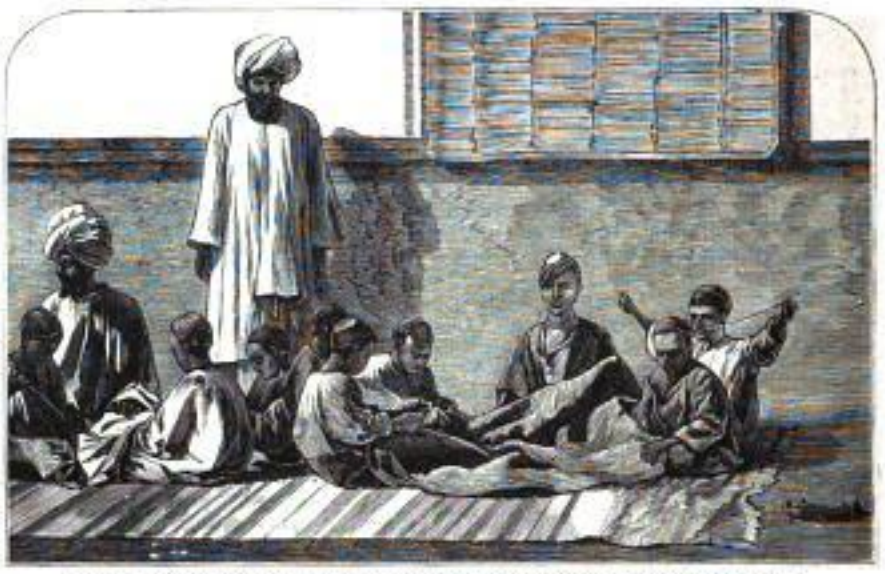
THOMAS BRENNAN, Secretary of the Land League, has been arrested at Dublin for uttering seditious language.

ALTHOUGH there is a confusion in the telegrams, it is believed that Egypt is making preparations for a war on Abyssinia.

LATE dispatches from Valparaiso and Buenos Ayres report victories both for the Chilians and the allied forces, but the accounts differ widely.

THE Archbishop of Malines has published a declaration, stating that no difference exists between the Holy See and the Belgian Episcopacy relative to the education law.

TWENTY villages in the Kindschali district of the Rhodope Mountains have risen in arms, and 500 of the insurgents have seized the local fund and made prisoners of the gendarmes.



THE Court of Queen's Bench has granted the application of the Crown that if the Grand Jury of Sligo found true bills against Messrs. Davitt, Daly and Killen, accused of sedition, the indictments should be removed for trial to Dublin.

FERNANDO WOOD AT HOME.

HE SEVERELY CONDEMNS THE TARIFF.

A Radical Reform Impossible Owing to Subtle and Powerful Counter-influence.

WE CAN COMPETE WITH FRANCE IN SILKS.

Free Trade an Absurdity.

THE DEMOCRATIC PARTY FULLY COMMITTED.

"THIS part or wing of my house was the headquarters for the English officers when Lord Howe held possession of New York. The Burnham mansion, his lordship's out-of-town residence, was a little to the north. I have preserved the farmhouse intact solely from its historical interest," observed the Hon. Fernando Wood, as he ushered me into a square, low-ceilinged apartment, walled with books, and cheered by a log fire that glowed in a pot-bellied grate beneath a mantelpiece of that monumental pattern so much in vogue when the redcoats mustered on Manhattan.

Mr. Wood's cozy dwelling stands on the Boulevard and Seventy-seventh Street, upon a grassy knoll overlooking the lordly Hudson and the rock-ribbed Palisades. The northern wing is modern; the southern, with its low stoop and gambreled roof, pure pre-revolutionary. Ivy clings to the eaves, and trees that might have shed their infant foliage to the sound of English artillery bend protectingly over the velvet grass. In the wide and airy hall is a genuine Vandyke, representing "Christ before the Doctors."

"This room is what I call my Municipal Library," said Mr. Wood, a type of a statesman militant, glancing around him. "I used it when I was Mayor. My library proper is at my residence in Washington."

The municipal library has two low windows giving upon the lawn. Between them is a table desk. The books—all bound in buff leather—are so uniform as to suggest dummies or secret panels. It is a room wherein to peruse "Sir Roger de Coverly" or the "Vicar of Wakefield," so quaint is it, and of an old fashion all so charming.

"You have devoted a great deal of attention to the subject of tariff reform, Mr. Wood," I said, "and I want you to tell me briefly wherein you consider the present system defective."

"Well," with a meaning smile, "if you were to ask me where the present system is a good one, I would say at once it would be doubtful to determine where it had any advantages at all. The present tariff of the United States was adopted at a time when the country was in an abnormal condition—at the beginning of the civil war—to provide a revenue and regulations for its collection applicable to the peculiar and unnatural condition of the country at that time. Whilst everything here has changed since, and been made gradually to conform to the peaceful and healthful development of our industries, the tariff has been continued and maintained, although it was but a temporary war measure. There are two difficulties which are aiding in preventing the

NEW YORK CITY.—RESIDENCE OF HON. FERNANDO WOOD, ON THE BOULEVARD.

COLONEL JOHN HAY, THE NEW ASSISTANT-SECRETARY OF STATE.—FROM A PHOTO. BY RYDER. SEE PAGE 275.

Digitized by Google

full development of the country—firstly, the tariff itself; secondly, the mode of administration by the Treasury Department. The commerce of the country, therefore, has to endure not only the enormous taxation imposed by our present high rate of duties, but also an illiberal and unfair construction and interpretation of the tariff by the officials who are clothed with that authority. It is evident," continued Mr. Wood, "that our power of production is very far in excess of our capacity of consumption, therefore, we produce much that we must dispose of to other countries. The large balance of trade that the last two or three years show in our favor has arisen from the large exportation of the excess of our productions. Now, if we would encourage and increase this advantage, we should remove the obstructions which our tariff has placed upon the production of other countries. If we would sell, we must buy. It is impossible to suppose that the difference between our imports and exports shall always be paid in coin as now. Five years ago there were more than $1,000,000,000 United States bonds held in Europe; at this time there are less than $150,000,000 United States bonds held in Europe."

"What has become of the $850,000,000 difference?"

"The difference has been withdrawn in payment for our breadstuffs and other articles of merchandise which we have sent to Europe—hence the large recent importation of gold, there being at present no other method by which the differences can be liquidated."

"What would be the result of a reduction of the rates of duty upon foreign goods?"

"Such a reduction would have the effect of supplying to the consumers of the United States the cheaper products of Europe, and thus lessen to the consumers here the cost of the like articles. To properly understand this question it must be remembered that the duty upon foreign goods, be it more or less, is added to the cost of the article, and hence becomes a tax upon those who use them to that extent. The $160,000,000 a year collected by imposts is added to the cost of the imported merchandise, and hence becomes a tax upon every individual in the country who consumes them. It is as much a tax upon a man's coat as if he was obliged to take the same amount out of his pocket and pay it directly into the Treasury. Nor is this all. The cost to the consumer of the domestic production is increased *pro rata* also, hence it enables the domestic producer to get just so much more for the article which he manufactures and sells. There is another important objection to the present system. It depresses our commerce; it has aided in driving from the ocean the American tonnage. The American ship-builders cannot compete with those of Europe so long as every article that enters into the manufacture of vessels is subjected to the present enormous rate of duty. England, that levies no duty upon the like articles, is thus enabled to build vessels at from twenty to thirty per cent. cheaper than we can possibly build them in the United States. During my recent trip to Europe I visited the principal seaports of the Continent, as well as of England, and I felt humiliated, as an American, to find every other flag floating from the shipping except that of my own country. I contrasted this significant fact with what I had seen in 1860 in the same ports, where two out of every three vessels floated the Star-spangled Banner. If it is true, as I have alleged, that the excessive production of this country must rely upon foreign purchasers, it is equally true that we must have commerce to carry it. Production and commerce must go hand-in-hand to secure material prosperity. They are twin sisters and cannot be separated. Therefore, we should adopt more liberal principles in dealing with other nations if we would have them purchase of us that which we have to spare and cannot use. We must encourage their commerce with ourselves, so that they will give to us in exchange that which we cannot produce and also must have. If we would have other nations adopt a more liberal policy towards the productions of the United States, we must not adopt a reverse policy, and lay an embargo upon their products on their admission into our own ports. The United States is a progressive nation. It has advanced rapidly in the arts, the sciences, in political and religious liberty, and, without assuming too much for our country, I am more than ever satisfied, having recently returned from Europe, that we are to-day the great leader in progressive civilization, and in the practical application of the true principle of genuine republicanism. Why should we not, therefore," added Mr. Wood, energetically, "apply the same principle to our commercial intercourse with foreign nations? The last quarter of a century has produced a remarkable similitude in the nations of the world. Old barriers have been broken down. The rapidity of intercommunication by telegraph has caused a unity of interests. The whole Christian people of the world of to-day are one family. We are in constant intercourse and have gradually assimilated in all our social and political modes of thought. No longer is restrictive policy maintained or encouraged even by the worst of European despotisms. It is well for us to realize this fact and to anticipate its effect and tendencies in our policy with reference to others. Therefore, I think, in answer to your original question, that the present tariff system is totally inadequate and inapplicable to the present condition of the country; that it is inconsistent with the progressive spirit of our people; that it is antagonistic to our best interests, and no way in keeping with our boasted superiority."

"How many articles in all are subject to tax under the tariff?"

"The general tariff enumerates over 2,000 articles, all of which are not dutiable. It is contradictory and constantly the subject of differences between importers and the Government as to what is really meant by the law. The tariff law itself is so vague and indefinite that it is almost impossible to tell on some things whether they are dutiable or not, and if dutiable, to what extent? Cases of this kind are perpetually arising. There are over 3,000 cases now on the docket of the United States Court in this district, growing out of questions relating to the interpretation of the tariff law, aside from the enormous protection to particular classes of American industries which the tariff provides for, thus favoring special classes at the expense of the whole people. The law is itself so clumsily framed, especially with reference to textile fabrics, that the most experienced experts are utterly at a loss to properly construe its intention."

"Upon what specific articles do you regard the present tariff as most onerous and severe?"

"In many instances we are dependent upon foreign countries for the raw material required by our manufacturers, and they have not only succeeded in placing the raw material upon the free list, but they have also succeeded in placing such a high duty upon foreign goods manufactured from the same raw material as to preclude those goods from coming into competition with our manufacturers' productions."

"Yes. Another evil of the tariff is, it offers encouragement to fraud. The high rate of duty, first, encourages smuggling outright. Secondly, the *ad valorem* principle encourages evasion by undervaluation of invoices, and, doubtless, many attempts have been made to get in foreign goods at a less rate of duty than it should be under the law in this way. But it will be recollected that the Government has taken every precaution to prevent these methods which have been adopted. For instance, all foreign invoices have to be presented to the American Consul at the port abroad, and sworn to, and examined and certified by him. Secondly, the importer is obliged to go to the Custom House and swear it is true as to its foreign value. Thirdly, the goods are taken to the Appraisers' Department and examined by experts, and the Government hold possession of the goods until they are satisfied that they are not undervalued. If a doubt arises the importer names a merchant appraiser, the Government names an appraiser, and the Government has the right to call in a third appraiser, who steps in between the merchant and the Government, and who also gives his opinion upon the value of the article in dispute. Therefore, it would seem as if every possible check was imposed to prevent any evasion by the importer of any duty imposed by the law."

"Do you think it would be wise to appoint a commission of experts to examine into the whole subject?"

"I do not. I think it would be a very absurd scheme, for the reason that it would be impossible to secure disinterested experts who could resist the influences which would operate to bias their judgments. My experience on the Committee of Ways and Means in the House of Representatives has convinced me that there are more differences of opinion on the same question by experts than by any other class of individuals, and that these differences could be traced very much to subtle influences which had biased their judgments."

"Would you recommend a gradual or sweeping scheme of reformation?"

"Four years ago I was satisfied that the evil was so radical that it required very radical treatment. I thought the whole revenue system of the country should be made to conform to the present condition of the country, and a more enlightened policy of the most intelligent nations of the world. I considered such a project and attempted to carry it out."

"With what result?"

"I discovered, sir, that I was too far in advance of the temper of the times, and that I hadn't appreciated fully the powerful influences which the pecuniary interests involved caused to stand in my way. I failed in the execution of this plan not from any defect it possessed, but from the private interests it antagonized and the cowardice of men who had not courage to maintain their convictions. Therefore, whilst I can say in answer to your question that I am in favor of the same scheme I then proposed, I do not deem it advisable to attempt it at this time, nor shall I do so. For the present, I think all that can be done will be a gradual modification of the tariff on particular articles. How far the Government may go will depend entirely upon the temper of Congress and upon the encouragement which the people and press of the country will give it."

"You have doubtless looked into the silk industry while in France, and from your knowledge of the subject, do you believe that we can, at Paterson and elsewhere in this country, successfully compete with France in the manufacture of silk goods?"

"Yes; and I think we have done so already in a certain class of silk fabrics. Except in that important department of the manufacture of the higher grade of silk, where the design is of great consequence, I am confident that American silk will very soon fully equal the best silk made at Lyons, and I state this from a personal inspection of the manufactories at Lyons and interviews with the manufacturers themselves. In France the remarkable talent of that people for all articles in which taste and fancy and artistic conception enter causes them to excel the world. It is not only applicable to the designs in the silk fashions, but it is also applicable to all the finer articles of luxury which their manufacturers so skilfully supply. In decoration, and that peculiar excellence and finish of that department of human production, they cannot possibly be equaled either in Europe or America. It is a significant fact, which I discovered at Lyons, that, whilst their manufactories are open to the visible inspection of foreigners, the designing process was never exhibited. They know their own secret and their own advantage, and they resolve to keep both as long as possible."

"Would you change the tariff as to articles entering into the manufacture of pottery, and could the New Jersey and Ohio pottery manufacturers successfully compete for the home market, under a reduced tariff, against goods of foreign manufacture?"

"I am not sufficiently posted in pottery to reply to your question satisfactorily."

"Would a tariff reduction injuriously affect our jewelry trade?"

"I think that the reduction of duty on jewelry, which is now twenty-five per cent., would introduce a large amount of foreign jewelry to the extent of the reduction made, and in proportion as jewelry is so much cheaper in Europe than it is in the United States."

"What is the present situation of the movement for a new commercial treaty with France, and is such a treaty desirable?"

"I do not at present feel myself at liberty to speak on this subject."

"How do wages of American operatives in factories compare with those of France, England, Switzerland and Germany, and would or would not a high tariff reduction temporarily affect them, and would it do so permanently?"

"I would prefer not to enter into the details of the subject, as it is before the Committee of Ways and Means, clothed with that power. Your question will be replied to as the facts come before the public officially."

"Would absolute free trade break down or sensibly impair any of our infant industries?"

"Absolute free trade is an absurdity. There is no such thing contemplated save by a few dreamers. In England it exists only for a few articles. Here it is impossible. We must have revenue for the tariff, and must impose duties. My doctrine is a revenue tariff on as few articles as possible. I believe that I can collect $150,000,000 on sixteen classes of articles. We have now 1,250 that are dutiable. I was in London when this free trade question was being discussed, and was referred to. I wrote my views to the London *Times*, as follows: Free trade in the United States is understood to mean the abolition of all duties, which would throw upon all the domestic industries the sole burden of taxation. This would not be popular. Until the late civil war all the revenues were raised by duties on importations. Internal taxes are not readily acquiesced in and are difficult to collect. Therefore, while, no doubt, our tariff will be continued, it is safe to predict that the rates will be so modified as to reduce it to that standard which will produce the most revenue. I am aware that one of the two political parties in the United States has sought to obtain the vote of the manufacturers by advocating the continuance of the present tariff, and in the districts where those interests prevail this scheme has been successful; but in the agricultural and trading districts, which comprise four-fifths of the whole population, an opposite policy has been adopted. It is a mistake to assume that protection is a doctrine universally acquiesced in by the Republican Party of the United States. The leading Republican newspapers are opposed to it, and the last Republican State Convention of Minnesota advocated a tariff for revenue only. In the Western States, where the balance of political power now exists, protection has little or no support, for the significant reason that the population is mainly agricultural and but little manufacturing. It is estimated that the census now being taken in the United States will show an aggregate population of nearly 50,000,000, of which less than 5,000,000 is employed in manufacturing. It is obvious that 45,000,000 people, so jealous of individual rights as Americans are apt to be, will not consent to be taxed for the benefit of 5,000,000. Further comment upon this pregnant fact is unnecessary."

"What would be the political effect of a committal of the Democratic party to a radical modification of the existing tariff?"

"The Democratic party is fully committed to the direction of a revenue tariff, with the exception of a few members from Pennsylvania and New Jersey. The Democratic party in Congress vote solid for a revenue tariff."

In conclusion Mr. Wood observed: "There would be no loss of revenue under my system. A reduction of duty would largely increase the importations, and more than make up the revenue that would be lost on the reduction of the tariff."

PHEBE.

HER STORY, AS TOLD BY ONE OF HER NEIGHBORS.

LAWS! that's Phebe Carl! Hain't you never seed her? I've knowed Phebe sence she was a little thing no bigger'n Mis' Les's baby. She used to think she had a hard time, poor girl! Well, it *was* kind o' discouragin'. Ole man Carl he had a big family, and Mis' Carl she never had no health, and Phebe bein' the only gurl, the heft o' the work fell onto her. I've seed that there child, when she wasn't more'n ten year old, puttin' out as big a day's washin' as many a growed woman could do. Mis' Carl had the cancer, and she made a terrible sight o' washin', so she did. Then there was six hulkin' fellows, and menfolks' washin' ain't no light job, now I kin tell ye! Of course they wore calico shirts and overhalls, but they was careless boys, all exceptin' Jake. Now, Jake, he was the proudest feller, an' he must have his starched white shirt fer Sunday and his linen coats in Summer, fixed up fit to kill! Hit didn't do him no good fer to fix up so fine, so it didn't. He married the worthlessest gurl of any of the boys, and they didn't none of 'em git much fer to brag on.

Well, Phebe, she done fer all of 'em, and they lived in the shacklin'est cabin down on that cross road, t'other side of the ole sawmill. The roof hit was al'ays a-leakin' and spilin' the beds, and Phebe she'd have to move her mother round from one corner to the other to keep her in the dry, and them big boys loafin' round up at the store with their hands in their pockets. Sometimes they'd git a day's work to do, choppin' or haulin', but giner'ly they didn't do much but lay theirselves out to sun—and spit. Every one o' them boys an' the ole man chawed, and they didn't have no manners where they spit, and Phebe never could keep her floor nor her quilts clean. I've seed that girl put out a washin' o' quilts 'twould reach from here to the mill. She was awful industrious, and always a patchin' quilts, so she was. She made one snowball and one settin'-sun as perty as any quilts I ever laid my eyes on; then she had two log-cabins—one woolen and one cotton—and nine patches——Laws! there was no end to the quilts that girl didn't make! But they never done *her* no good. She never got none of them, fer, when Mis' Carl died, the ole man he married a'gin and jes' kept everything. He married the triflin'est ole thing in the country that nobody didn't think was scarcely decent; and fust thing she does is to up and order Phebe out of the house. And Phebe she went, and said she wouldn't go back there no more; and nobody didn't blame her.

Two of the boys got married before their mother died; and the rest of 'em they jes' hung 'round like they always done.

But Phebe, there wasn't no hang 'round in her. Jake told her she might come and make her home at his house, and she did, and, laws! if they didn't work her! Jake's woman she never lifted her finger if she could help it, and had her children reel fast; and it was Phebe this and Phebe that, year in and year out. The gurl never went nowheres, and she had less clothes than anybody I ever seed! Jake he never got her nothin' to wear, except a linen suit onc't that he bought at the store and brought home, and everybody thought he was goin to make her a present of it. But, lo and behold ye! when she left, he ups and makes her pay fer it! *I'd* a-told him, "Mister, I've done your work fer nothin', and you hain't furnished me nothin' but vittles, and now if you don't pay the storekeeper fer this, he kin sue you fer it." But she paid for it, and didn't say nothin' to nobody, out o' the five dollars Abe give her after she worked fer him five or six months.

You see Abe's woman was one o' the bed-fast kind, like the fust ole Mis' Carl. She was a reel pleasant woman when she wasn't ailin'; but I've knowed her to lay with the bone-airysip'lis a year and a half without never gittin' up out o' her bed.

They couldn't git no help, and Abe he couldn't a paid fer it of they had a got it—workin' by day's works, and not always havin' a job; and they had three children, so they had, and as sassy brats as ever went unwhipped. Abe's wife couldn't do nothin' with them; and there was the family to do fer, and nobody to do the work.

So Abe he ups and goes fer Phebe when his woman gits so bad she can't help herself no more. And nothin'll do but Phebe must come to his house. He made such a pitiful mouth that Phebe, poor thing, she couldn't say no. And that made Jake and *his* woman mad, now I tell ye! They'd been so used to have Phebe to their beck an' call, that it sot hard for anybody else to git the use of her. Jake he did behave scand'lous, so he did! He cussed and ripped around at her, and tole her she needn't look to him fer a home no more. She might go to the porehouse fer all o' him.

Pore Phebe, she felt mighty bad, but she tole him she guessed she wouldn't never go onto charity, fer she'd always been able to work. And his wife wouldn't say good-by to her, and he cussed and dam'd till she was out of sight. She didn't have no pleasure at Abe's house, now I tell ye! I never see sich sassy brats as them was, and all of 'em onto Phebe from mornin' to night. It nigh about tuck the life out o' her. But she tuck care o' Abe's woman and done a sight o' work, and things went on fer about six months; and then the pore girl was clean out o' everything to wear. She was jes' as nigh naked fer all kinds o' clothes as you ever see.

Phebe was awful keerful of her things or she'd never made her mother's old things last her so long. But old Mis' Carl didn't hev but a few calico-things herself. There was that girl nigh twenty-five year ole, and she'd never had a all-wool or alpacky dress in her life. She never had nothin' better to wear on her head than a sun-bonnet; and my girls thinkin' they couldn't stir out o' doors on Sunday without their Sunday hats, and all in the fashion. I've always worked hard, 'specially since my man died; it was over in Henry County we lived then, and he was sick a yeer and six months, pore man, that he never left his bed. But, thick or thin, my children has always appeared as well as anybody's. When they war little things, in their pap's lifetime, they had their calicoes and delaines and 'ginghams, and their whites; and, laws! it did seem so queer to the girls that pore Phebe never had nothin' but calico; and that hangin' nigh in threads on her, so it war. So she ups and tells Abe she don't want to leave him when he has sickness in the family, but somethin' to cover her she has got to have, and if he won't bear no ill-will agin her, she'll git a place among the farmers some'ers and work till she gits her some clothes. Abe, he growled around, but he knew it wouldn't never do to let Phebe go. He said it was derned hard fer a pore man like him to have to clothe sech a family as his'n and his sister besides; and then he pulled out and borrowed five dollars and give her. You never see nobody pleaseder than Phebe when she got that money. She went to the store and paid for the linen suit Jake had give her and had charged up to her, and got some muslin

Digitized by Google

and calico, and my girls helped her do her sewin'. So Phebe, she come out in her new things and felt spruce. She bought a straw hat fer sixty-two cents, too, and my girls, they p'suaded her to go to meetin'.

Phebe hadn't gone among the young folks none around here; she never had no time, and then the boys they was so rough. They never had no manners, but would go whoopin' and yellin' round, and on Sundays they'd pitch horseshoes and play ball and jump all day long. Now, when Phebe got some clothes on her—made like the fashions is now—she wasn't a bad-lookin' girl. Some wimmen can look real perty in calico, and she was a good shaped girl, Phebe was, fer all she'd worked so hard and when she was so little. She was a big girl, but she had a good color, and her hair was as brown, so it was. And I went and staid with Abe's woman, so Phebe she could go to meetin' after her clothes was done, and the girls said they never seed a colt let loose fuller of play comin' and goin'.

That was the first time, too, that Irish John war at meetin', and I do 'low them two fell in love with each other then and there. The girls, a good many of them, was settin' their caps for John. He was a very orderly kind of feller, and 'tended right to his own business. He didn't go much with the other boys, though he didn't seem to feel himself above nobody, but it wasn't in him to go a jumpin' and a howlin' round. His place was stiddy with one o' the farmers all the year round. He lived at North's, and nigh about run the farm, fer ole man North he put all dependence in Irish John.

Some said he'd only been in this country a year, and some said he'd been over five year or better, and'd worked with a farmer up above Kokomo, or round about Alto some'ers, afore he come to North's. But he was a very quiet feller and didn't have much to say fer hisself, and some o' the girls kind o' took a shine to him. He was reel good-lookin', and straight as a Injun arry, fair-complected kind o', and he carried his shoulders back and didn't go hulkin' over like lots o' the fellers lookin' like their nose is hooked to their big toe, and their backs is bulgin' up to sprout.

Fust thing you know, him and Phebe Carl was goin' together; I thought it did beat all when I heard it, fer Phebe she never had no beau. Jake an' Abe and the rest had tied her down too clos't fer that. I thinks to myself: "Now, Phebe is a good girl, but she's never had no comp'ny, and most likely this feller'll turn her head, and we don't none of us know *all* about him. He 'pears stiddy and well-behaved; but he may have a wife in the old country, or even over here. And Jake and Abe, they're so all fer theirselves, they wouldn't keer what trouble Phebe might git into, and the other boys and the ole man is that ornry they won't never look out fer her none. So," says I, "I'll kind o' keep an eye on her courtin'."

I had a day's washin' to do at Mis' North's, and I inquired all about the feller. And Miss North she couldn't a thought more of him ef he was her own son. She praised him up to everything. And when he come in to his dinner, and I seed him at dinner-time so mannerly and perty, and kind o' like he thought well of hisself and thought he was a man, dog'd ef I didn't kind o' feel ef I was a girl I'd want to git him myself.

The boys they used to git into a row at the meetin'-house door and gawk at the girls when meetin' broke, and then foller 'em and ast for their comp'ny. But Irish John he'd jes' walk up to the seat Phebe was sittin' in and offer her his arm, and take her out through the crowd. It looked reel perty, so hit did, but some o' the rough ones they used to snicker and hoot, and say John was afeerd that somebody else 'ud git his doxy.

Well they didn't git much chance to court at Abe's house, 'cause there was Mis' Carl always down, and them childern yowlin' all over the house, and they didn't have only two rooms, the livin'-room and the shed where they cooked. I'd a shook the breath out o' that Sary Jane, so I would—that's the oldest one. "Humph!" says she to Phebe, after Abe had give Phebe the five dollars, "my pap don't owe you nothin', so he don't. He pays you fer your work." The owdacious little rip!

I goes over to Mis' Carl's when they fust begun goin' with one another, to see how Phebe liked her beau. And I give her a sly dig or two, and that satisfied me. There never was a changeder girl than she got to be. I b'lieve my soul she worshiped the ground that feller walked on. And if anybody'd speak about him her face'd git so red.

Him and her'd take their walks along the railroad Sunday afternoon, talkin' kind o' still and comf'terble together like old married folks. And that girl got reel perty, so she did. I used to run in and stay by Mis' Carl a good deal them times, so's Phebe could git out with her feller.

Jake and Abe, they done jes' as much agin it as ever they could. I low it made 'em mad to think Phebe might have a home of her own and not have to nigger fer them no more. They called him all the names they could lay their tongues to, and she'd go out where she couldn't hear, her eyes full and her face a-burnin'. Phebe's spirit was kind o' slow, but when it was up once, it was up. And one't when Abe was goin' on callin' John a dirty low bog trotter and an Irish beggar (and fer that matter Irish John could a bought *him* out, cash in hand then, fifty times over), she jes' took her bonnet and come over to our place. And Abe he had to cook the meals his-self, and 'tend to his woman and the young ones, nigh about a week, fore she'd go back. He came 'round and talked mighty mealy-mouth 'fore he could git her to go. So Abe he kind o' shut up after that. Only he acted like as if John was disgracin' the family by wantin' to marry into it.

Fer they got ingaged 'fore they'd went together long. They was desp't in love. It turned out that John he was ekally as bad struck as Phebe was. And I do 'low they'd a made an awful happy couple. But some folks is cut out fer trouble, and if they see satisfaction fer a little, 'pears like they ain't let to git no holt on to it.

Phebe used to come and tell me her troubles in them days, and I felt mighty sorry for the girl, so I did. But, laws! she war sectin' satisfaction, too, fer there never was a man nigher crazy over a girl than he was over her, and she thinkin' the world an' all of him. John wanted to git married right off. And that stood him in hand, fer he had two hundred dollars saved, and ole man North 'ud give him house-room on the place, and let him farm on shares, and jump at the chance.

But Abe's woman was gettin' worse all the time, and Phebe, she hated to leave 'em on that account, and she hadn't no way of gettin' nothin' to be married in, nohow. John, he offered her fifty dollars down to buy her things with. But, laws! she hung off, and I didn't blame her. If her own father and brothers wouldn't do nothin' fer her, after workin' her as hard as they done, she felt kinda too proud to go onto the man she hadn't married yit fer clothes to marry in. So John, when he's in Kokomo, he gits her as perty a cashmer dress pattern as you ever seed, and takes it to a dressmaker, and tells the dressmaker it's fer his wife; then back he comes and gits one o' my girls to measure Phebe on the sly, and sends the measure in a letter. John could both read and write, and they say he figgered. Perty soon here comes the dress all made, and directed to Mrs. John Cragin.

Phebe, she comes flying over to our place to show her dress and try it on; and, if you'll believe me, there wasn't a wrinkle in it, and you never seed anything so becomin'. She looked like a lady, so she did. The cashmer was so soft and fine, and made her look so slim and white-skinned. Only it was black.

"Oh, Phebe!" says my Mary, "he orter a got a black weddin' dress; it's unlucky."

"It's the pertiest thing I ever see," says Phebe, smoothin' it with her hand. And she war that tender 'bout John, I do b'lieve it hurt her fer Mary to say the dress he bought was unlucky.

Well, it wasn't but two days after that that a man come ridin' down from North's like he'd kill the horse, fer a doctor to come and see John Cragin. It was thrashin'-time, and he'd got throwed in among the machinery some way, and 'bout killed. I won't say whether it war the machinery or the horses; some says one way, some says another. I 'low it was done so quick and skeered them all so they didn't know what happened. Fer he was out before anybody could help him, and walked along a few steps white and laughin', and then he fell down and begin to bleed at the mouth.

One of our boys come runnin' from the store and told me, and I picks up my sun-bonnet and makes fer Abe Carl's, fer I knowed ef Phebe heard it unprepared, it 'ud nigh about kill her.

But, laws! ill news does travel fast. I 'low one of Abe's young uns had been as quick as cur'n. She was standin' in the middle of the floor bulgin' her eyes out at nothin', whiter than the dead. I don't think the girl had no sense left. She had the dish-rag in her hands, and she commenced wipin' her face with it, and that nasty little Sary Jane stood off and p'inted at her, and begun to yell and laugh.

"Shut up, you huzzy!" says I, givin' the young un a push; "you bustle 'round here and look after your mother. Your Aunt Phebe has got somebody else to look after now, besides sassy young uns."

I didn't know how Mrs. Carl 'ud take it, but I never thought about that till afterwards. Ef John was a-goin' to die, the quicker Phebe got to him the better. I changed her clothes and put her black dress onto her, pore soul! And, behold ye! as soon as she stepped foot out of house, there was North's buggy comin' fer her full tilt, fer John had sent fer her, and I 'lowed they'd need help, so I got in and went, too.

Phebe, she seemed sort o' crazy all the way, and didn't do nothin but wring her hands like she'd twist 'em off, and sort o' moan. "Oh, Lord! oh, Lord!" like she'd die.

There wasn't no p'tendin' between them two. Some girls 'ud kind o' holt back from showin' they thought so much of a man they wasn't married to fer fear folks 'ud talk. But I don't think she thought of nobody in the world but John.

North's wasn't but a mil'd out o' town, and it 'peared like we got there in a minute. And the doctor and menfolks was round him workin' with him, and they wouldn't let Phebe go in. She kept on her feet and walked around jes' a twistin' her hands and sayin' "Oh, Lord!" and me and Mis' North, we tried like bubbies, and tried to pacify her, but it was like talkin' to a stone, so it was.

At last the doctor he come out, and told us we might take her in, but John mustn't be excited. And I ast the doctor, kind o' low, ef it was very bad, and he says there wasn't no hope; the man was hurt in'ardly and wouldn't live but a few hours.

I puts my arm 'round poor Phebe and goes into the room with her, to kind o' hold her back from makin' a noise. But, laws! she slips along as still as death, and, to my dyin' day, I'll never fergit the look them two give each other. He kind o' spread his hands and she slipped down and put her arms round him. Then they kissed each other, and two of the thrashers that stood by the window wiped their eyes on their shirt-sleeves, and kind o' crept out o' the room like they's shamed o' themselves; and, before the sun went down, John and Phebe they was man and wife! He was bound to marry her, and nothin' would've give her more satisfaction, unless 'twas dyin with him. He didn't suffer much, his body was kind o' numb, and we wouldn't thought he was so dangerous by the way he acted, fer he 'peared as clear and lively. It was a mercy to Phebe, fer every groan he give 'ud go through her like a knife.

One o' the thrashers gits onto a horse and goes fer a preacher and a license to Kokomo; and fer a lawyer, too. John said he wanted to make a will; and he did, and left her everythin' he had—'twas only about two hundred dollars, and how them Carl's did fuss and try to git that away from her!

The preacher he come and tied the knot. I never seed such a solemn weddin': Her kneelin' by the bed holdin' his hand—it was a sofy-bed that they'd fixed up quick in the settin' room for him—and her arm under his head, and them two a-lookin' in each other's eyes like they'd die fer each other, and the preacher stannin off an askin', in a feelin' kind of voice, ef they'd take one another fer man and wife; and I noticed he didn't say till death does you part, fer it looked like *they* was gittin' married for t'other life.

Ole man North and old Mis' North and me and the thrashers all stood by, and to save my soul I couldn't keep from crying; but it was the pertiest weddin' I ever seed, and we all stepped up and wished them much joy; and John he answers pleasant, and says he, "All of you be good to Mis' Cragin." And we called Phebe Mis' Cragin. She sot down on the floor beside of his head, and never left her place that night, and they talked in whispers and kissed one another till he kind of sunk into a trance or sampin, and laid that away all the after part of the night, and died about sun up. I staid up to help nuss him and look after her. We had to change cloths on his chist and give him drops to keep him quiet, and ole Mis' North she handled 'im like a mother. I don't think no one about the house ra'ly slept. He looked as perty as a child when he was layin' a corpse, and there sat Phebe, kissin' his hair and cooin' to him till we drawed her away. She didn't make no loud to-do like we 'lowed she would, but she never left that corpse from the time it was dressed till it was put under ground. It was a big funeral, so it was. Ole man North he had the undertaker out from Kokomo, and everything was done up nice, and Phebe, she walked along right next to the coffin to the grave, a-holdin' to ole man North's arm, and lookin' like she was in a trance, and I b'lieve in my soul she didn't have her right senses fer many a day.

Why, laws! she'd walk two mile to that graveyard and set there all the afternoon by that grave, kind o' talkin' to John. Me and Mary was comin' home from Kokomo one day—I'd ben doin' some tradin'—and we see Phebe layin' there with her arm over the grave, again' on like John and her was havin' a good talk. I do 'low she thought he could hear her, and mebbe he could. Laws! how do we know?

She tuck the money he left and had a big place fenced in all round his grave, and a gate put to the fence, and a t soddled. The graveyard was open-like, and the cows they tromped it. And she bought the pertiest monnyment you ever set your seein' eyes on; and his name and age, and time he died'n all, was put on to it, and a verse of Scripter that says sumpin' about "Entreat me not to leave thee"—and I fergit how the rest of it goes. But all so perty.

Laws! how mad it did make them Carl's fer Phebe to use her man's money that way. They called her all the fools they could lay their tongues to; and Abe said, after he'd kep' her as long as he had, he did 'low she might give *him* sumpin'; and Jake and his woman they cut up, and said now she was a widder woman she needn't come onto him fer support, and the ole man he didn't do nor say much of nothin' but jes' let her alone.

But, laws! how they have changed their tune. You know John he left her everything, and not long after his death there comes news that some kinsfolks of his'n in the old country had left him a big fortune of ten thousand dollars, and Phebe she got it, every cent. There wasn't no lawin' nor nothin' about it. And there was Phebe a rich woman fer marryin' Irish John.

The Carl's they didn't never say another word agin him. And they'd jes' lick Phebe's shoes now, so they would, fer they know she won't never marry agin, and they think their young uns'll come in for the property. Phebe she's good to 'em, but they've done drivin' her and tellin' her what she's got to do. And I think it always sticks in her craw the way they talked about John. She lives at Mis' North's jes' like an offn daughter, and has her money in a nice farm, and gits the rent, and sees to things herself, and comes and goes as she pleases. Many's the feller that would like to git her, but she won't change the name o' Cragin as long as *she* lives. Mis' North says she has John's ole room, and keeps his clothes and things a-hangin' there, and she's got a picter of him on the wall. And every Sunday of her life she's out by his grave, so she is. There never was a lovin'er soul drawed breath.

Well, this ain't gittin' my work done, settin' here and talkin' about Phebe Carl.

COLONEL JOHN HAY.

COLONEL HAY, who has succeeded Mr. Frederick Seward as Assistant Secretary of State, is a native of Salem, Indiana, where he was born in 1840. His father was a physician, who removed the family to Warsaw, Ill., when John was in his infancy. When fifteen years old he entered the University at Providence, graduating three years later with the Class poem. He then began the study of law at Springfield, and, while so engaged, became acquainted with President Lincoln, who took him to Washington as private secretary at the time of his first inauguration. In 1863, wishing to participate in field service, he was appointed aide-de-camp to General Hunter, then operating in South Carolina, and subsequently he joined the staff of General Gillmore as Assistant Adjutant General. While so serving, Mr. Lincoln recalled him to Washington, where he remained until after the assassination. After this he was promoted to the rank of colonel, and granted leave of absence to accept the position of Secretary of Legation in Paris, where he remained two years. Shortly after returning to the United States he was appointed Secretary of Legation at Madrid, under the Ministry of General Sickles. Since then he has been engaged purely in the literary field, writing, besides his "Castilian Days" and the stories in verse of "Bandy Tim" and "Little Breeches," many papers and editorials on Spanish affairs and politics. He is well qualified for his new position, and will adorn it gracefully.

AT HOME AND ABROAD.

—In Sweden a bride has her pockets filled with bread. It is supposed that every piece that she gives to the poor on her way to church averts some misfortune.

—The vineyards of Malaga, Spain, covering an area of 29,000 hectares, have been attacked by the phylloxera. The pest is increasing in Gerona and Catalonia.

—The Greek members of the Frontier Commission have threatened to leave Constantinople unless some energetic steps are taken to forward the business of the commission.

—The German officers who attended the French manœuvres two months ago have been decorated with the Legion of Honor. This is the first instance of military courtesy between the two countries since the war.

—Mr. Hunt, in charge of the United States Legation at Paris, in a dispatch to the Department of State, dated November 1st, 1879, reports that, after careful inquiry, he does not find any trace of Mormonism in France.

—The Anglican Church Missionary Society are desirous of establishing a mission on the West Coast of Africa. Mount Cameroons has been selected, and an exploring party has found a suitable site at an elevation of 7,500.

—There are to-day more than 242,000 Government pensioners. The amount of the year's pension to all pensioners is $25,493,020; but the actual payment is millions in excess, because the newly-admitted cases have arrears of pensions due.

—At a meeting of the stockholders of the Permanent Exhibition in Fairmount Park, Philadelphia, a resolution was adopted offering the use of the Exhibition Building to the two great political parties of the country to hold their conventions in next year.

—Owing to the failure of the hop crop in England the price of American hops has advanced four hundred per cent. since July. Brewers of malt liquors will advance their prices. Over 20,000 bales have been shipped to Europe the past two months.

—Among other evidences of the reviving capacity of Europe to counteract the adverse trade balance with the United States are advices from Germany which show that 1,000,000 hundred-weights of steel blocks have been sold for shipment to America by Herr Krupp and others.

—The United States mints for November coined 301,933 gold pieces of $3,609,180 value, and including ten $3 pieces, ten quarter-eagles and ten dollars. There were also coined 2,499,000 standard silver dollars, 403 5 cent pieces, 600 3 cent pieces, and 3,120,400 1 cent pieces.

—The efforts of the English Wesleyans to raise a large special fund, begun a few months ago, have met with a wonderful success. Not less than $920,000 has been raised so far. The fund when completed is to be used for missions, education, new chapels, and other church interests.

—The position of the Chinese in Brazil is a peculiar one. The Government encourages their introduction with the view of more extensive tea and silk culture, while the people oppose Mongols on the ground that their immigration will prevent that of the more desirable Europeans.

—A citizens' committee of fifteen has adopted the report of the National Sanitary Commission, recently submitted in reference to sewers, etc., and decided that two per cent. tax is necessary to carry out the recommendations. Resolutions urging Governor Hoyt to call a special session of the Legislature were adopted.

—The Russian Military Court, before which the Nihilists charged with attempting the assassination of General Drenteln are on trial, has sentenced Mirsky to be hanged. Terkheff has been condemned to hard labor in the Siberian mines for thirteen years for omitting to conceal Mirsky. Six others were acquitted.

—The old church of San Salvatore in Venice has been reopened this Autumn after ten years and eight months spent in restoring it. The church contains two works by Titian—the great altar piece of the Transfiguration and an Annunciation, both works of his later years—as well as several other noteworthy pictures of the Venetian schools.

—The total contributions for foreign missions in Great Britain and Ireland for 1878 was $5,339,740. Of this amount, which is $140,000 less than in 1877, upwards of $2,500,000 was raised by the Church of England, $824,000 by joint Anglican and Nonconformist societies, and $2,122,225 by Nonconformist societies. The Roman Catholics raised for the same purpose, $67,445.

—The tide of immigration is strong again. For the year preceding the first of November, there was a total of 162,715 arrivals at New York, against 119,460 for the previous twelve months. Subtracting the sojourners and the citizens of the United States returning, there is a total of 124,615 genuine immigrants for the period in question, against 80,148 for the equal period just preceding.

—Hard times in Berlin have led to dog-stealing and dog-eating by the hungry poor. Many families are in mourning for their favorite pugs and terriers—the two varieties of dogs most affected as domestic companions by northern Germans—which have fallen victims to their too tempting obesity and appetizing sleekness. Plump terriers also, have mysteriously disappeared in considerable numbers.

—News has been received at Liverpool that a war has broken out between rival chiefs in New Calabar, West Africa, and that two hundred and nine persons have been slain and wounded, and the prisoners killed and eaten. The Europeans in New Calabar have requested a British naval officer to interfere. It is apprehended that the outbreak will spread from Opobo to Bonny.

—The corps of skaters, a force peculiar to the Norwegian army, has been lately reorganized, and consists now of five companies, each of 110 men, which in time of war can be reinforced by calling in 270 skaters belonging to the landwehr. The men of this corps are armed with rifles, and can be manœuvred upon ice or over the snow-fields of the mountains with a rapidity equal to that of the best trained cavalry.

—A Greek paper states that the celebrated monastery at Mount Athos, in Macedonia, has lately been besieged by an immense number of applicants who were anxious to quit the world and its cankers and live in retirement. It was, however, soon discovered that all or nearly all, of these would be penitents were firemen, officers, and the Police, having been informed of the last expressed considerable surprise and some anxiety

CORONATION.

GOD took the moaning sapphire of the sea
In His omnipotent hand, mysteriously;
And from the virgin firmament on high,
Seized the immaculate turquoise of the sky!
The livid lightning lumed His passing Form,
Grasping the awful ebon of the storm!
And in the labyrinths of space, secrete,
He placed the topaz of the ripening wheat.
The broad expanse of forest and of field
Were called upon their emerald to yield;
And o'er the obedient Day its task had done
He plucked the flamant ruby from the sun!
And, from the darkness of the brooding night,
Ravished the jet that made its holy might.
For rose divine, that mortals may not know,
He tore the iris opal from the bow;
The coral from an angel's lips, and far,
In desolate space, the diamond of a star!
Then with this gorgeous wealth before Him set,
God made himself an awful coronet!

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF HERS."

CHAPTER XII.—A COMICAL SITUATION.

FELIX was wakened from pleasant dreams by the saddest sounds that can reach the human ear—the sobbing of a child. He turned over in bed so as to face the window, and there, all in white, in a chair near the head of his bed, sat the strange elf whose proceedings had been a source of such disquietude on the previous day. For a full moment he looked at her as if doubting the evidence of his senses. But there could be no mistake—there she sat crouching, her face in her hands, her splendid hair falling over her bowed shoulders like a vail. Was the child in reality a witch, how unless had she managed to enter his room? His dignity began at once to war with his keen sense of the ludicrous. Should he bid her vanish at once with the stern authority of his new position? A little pity, fortunately, mingled with his irresolution, for there was no doubt of the genuineness of the sorrow whatever it was for.

"To whom am I indebted for the pleasure of so unexpected a visit?" he asked, formally. The child started with a stifled scream.

"Oh, please forgive me, sir—please do forgive me."

"Be kind enough, young lady, first to inform me in what way you entered my room."

"Oh, there's a door just behind the head of the bed, and my room comes next, though it leads out of the other hall. Poor mamma had both these rooms, and yesterday when I was in here I unlocked it—that door I mean. Do you know what I was going to do?" She turned to him, the tears streaming down her cheeks, her great eyes shining like diamonds.

"Really, I'm afraid I must plead ignorance," he said.

"I meant to come in last night with a broom-stick dressed all in white, to make you think I was a ghost. I almost frightened a man to death once, and he had the whole hotel up, he screamed so."

"What a delightful neighbor you are," he observed, calmly.

"And I'd a-done it, only Mrs. Bimley told me you were the gentleman that had come for me, and were going to give me such a sweet home. And when I knew how dearly my mother loved you, it made me awful sorry. Oh, I hope, sir, you'll forgive me—all about the shoe-blacking, and the slap, and the dinner-table, and everything—I'm so mortified and so sorry," down went her head again. Flix felt a curious qualm, as, not knowing the ways of the innocents, he began to fancy that in some way he had done a wrong to the child. The little vixen after some intuitive fashion saw her advantage and followed it up smartly. She sobbed more convulsively than ever, mingling her grief with plantive cries of "Mamma! Oh, would her mamma come back for her poor wretched Sylve."

The farce bade fair to put on a tragic semblance, and Flix was mightily stirred. If it had not been for his strong sense of the ludicrous, he might have felt something like a tear stirring the sleepy lids of his eyes, for childish grief is contagious. But the whole picture—himself unrisen, unshaven, a reclining judge in his nightcap, and the forlorn child thus unwittingly defying the conventionalities—was so like some of those genre paintings of the old Dutch masters that deal with the ridiculous, that he was more overcome with the mirth of it than touched by the misery that appealed to him so strongly. And yet the little vixen had contrived to make herself of some consequence to him, inasmuch as she had made him think about her, and he could never forget that she had shed some tears on his account. Too much of a child to reason this out, she was sufficiently a woman to know it after some queer fashion of her sex.

But it was time something should be said, and the culprit sent about her business.

"Then it was you who upset my room generally while I was at dinner?" he said, looking seriously at her.

"Yes, sir. I hated you as hard as I could hate you, just then, but I didn't know who you was, and you seemed to think I was a baby or a monkey," she added with a little of the old spite. "But, oh, please, sir, I'm just as sorry as ever I can be."

"I dare say, Miss Sylve, and ready to practice the same tricks upon travelers again if they offend you."

"Oh, but I didn't know who you were," she said, flashing her dark, intelligent eyes in his face the wicked little hypocrite, there was not a tear in them, and he saw it. "I didn't know you were come to carry me to a nice home where I should have everything I want, and where, mayhe, somebody would love me."

"How did you know you would have everything you wanted?"

"Oh, because Mrs. Bimley told me so, and my dear mamma said I should find friends in plenty if I would only be good; and I promised her, and I *will* try, truly." Indeed, honest intentions did seem to underlie both speech and manner, and Flix was taken in all the more easily as he had begun to find a sort of charm in the child's exceptional character. For his own comfort he certainly would have preferred a more docile nature, and he thought, with a sigh, of gentle, beautiful Eve Lewin—and yet in his erring judgment the piquancy and latent wickedness of this strange little being excited and pleased him. He thought of her, perhaps, much the same as an ardent disciple of the turf thinks of the willful, disdainful, wild and beautiful colt that he is to break in to its work.

"I am quite willing to forgive," he said, at last," if you will promise me never to assume the character of a bootblack, or invade gentlemen's rooms before they are up. Now, if you will kindly make your exit, and allow me for the sake of convenience and safety to lock the door behind you, I shall be much obliged."

She looked at him for a moment a little wonderingly—perhaps at the formality of his speech and grave fatherliness of his manner. Then suddenly he felt the sensation of being choked, for she sprang upon the pillow, her willowy arms were about his neck, while she kissed him almost savagely, as you have seen children kiss a cat, and wondered whether they would not prefer to bite off its ears for the fun of the thing.

"There, you darling. Your whiskers don't look a bit horrid now, and your eyes are just lovely!" and with that strange speech she was gone.

CHAPTER XIII.—POSSESSED WITH A DEVIL.

A CRASH resounded through the hall and penetrated into the beautiful morning room where Mrs. Forester sat serenely reading. The lady started. The color forsook her cheek, but she only said, clasping her hands: "It is that evil spirit. Alas, what has happened now!" A servant came running into the room—she was paler than her mistress.

"Oh, madam, the great Egyptian vase!" she cried, and then collapsed into her apron.

"What! not broken!" Mrs. Forester threw her book hastily aside. Her face was white now, and her lips. She hurried forward. "Charlotte! if you have broken——"

The girl screamed and the blood rushed back into her cheeks.

"I broken it! Oh, Mrs. Forester, I that have never dared scarcely to go anear it, and always brushed it, arm's-length, with the feather duster."

"Then how came it oroken?" queried Mrs. Forester, her lips tightened till there was no crimson to be seen.

"Oh, madam, it was that missee——"

"Hush!" exclaimed the widow, sternly. "It's as much as your place is worth to call that child 'missee.' If she breaks everything in the house to atoms, she shall not have her way there; she is Miss Sylve—now, remember."

She marched straight to the handsome drawing-room. She was very angry, as the two spots of vivid crimson on her cheeks testified. When that soft, sea-shell-pink deepened, then beware! Into the room she went, upborne by a stern determination. That child would no doubt be the death of her, but she was bound to die with flying colors.

Yes, the lovely Egyptian vase—there was not, of course, another like it in all the world—laid on the floor, like bits of a rainbow, hopelessly shattered. Sylve stood in one of the recesses of the window, a dogged determination in her face.

"Oh, you dreadful child! What have you done?" cried Mrs. Forester, gazing almost in tears at the ruin at her feet. The old judge had prized that vase as the choicest of all his possessions, and the widow's heart was grieved to the core.

"Can't you get another?" was the sullen answer.

"Another! Why, there isn't another in the world! Do you know it was worth thousands and thousands of dollars?"

"I can get a prettier one than that for five dollars at Gautier's," was her cool reply.

"You terrible—cat! Yes, you are more like a cat, springing at everything, and destroying things of value."

"I'll not be called a cat!" shouted Sylve, her face full of red passion. "There! take that!" and quick as thought a fine porcelain shepherd, standing on a table near her destructive hand, toppled over and fell a wreck to the floor.

This was too much for even Mrs. Forester's ladylike endurance, and she seized the child by her shoulder, but before she could be secured, with a vicious twist Sylve had extricated herself, and fled from the room overturning everything that came in her way.

"Oh, mistress, you'll never be able to get along with her," said the maid, tearfully. "She's killing me, and I've been going to give warning for a month. Indeed, Mrs. Forester, I wish you could see my arms, all over black-and-blue spots, where she has hit and even bit me. If everything wasn't solid in the child's room, it would have been naked to day. All the pretty little ornaments you and Mr. Forester give her are gone long ago—thrown out of the window on people's heads. Indeed, it's a wonder she hasn't murdered somebody afore now. She would play post-office in that vase, and I was just coming to tell you when she broke it."

"I can not bear it any longer," murmured Mrs. Forester, looking almost tearfully at the débris at her feet. "It is impossible to conquer her either by severity or love. All I want now is to see Flix, and, thank heaven, he will be home to-night. If the creature was heiress to a million I wouldn't keep her."

Sylve had been an inmate of Mrs. Forester's home for nearly three months. After deciding to take Sylve, in a letter to his mother, Flix had narrated his experience which, given in his most picturesque style, had rather amused the little lady, his mother.

"I think I am willing to try the poor little motherless thing," she said. And, as a consequence, an early day saw the child introduced to the house in Maverick Square—that elegant, exceptional mansion that was interiorly the envy of all the aristocratic circle to which she belonged. The girl's beauty pleased her, and stirred all those emotions that lie within the range of the feminine fancy and capacity. What colors would best become those rich, dark, velvety eyes and that wonderful tint of the cheeks! What pleasure it would be to dress her in the latest mode, as well as to gain her love and confidence?

Sylve had not been there an hour before she had, by some strange, moral legerdemain, turned the house upside down. Whether it was that the novel sensation of having a home and friends who would really care for her had, in a measure unsettled her wits, or that her perceptions of right and wrong were naturally clouded, Mrs. Forester was not able to judge.

Patience and firmness and decisive action at the outset might have done wonders for this small and carelessly-tended plant, but her antics were not checked, and the amusement they naturally afforded was made all too apparent, and the gypsy or evil tendency, or whatever there was in her nature that made her an outlaw, was encouraged and cherished. In a very short time, therefore, Miss Sylve became mistress of the house, and, of course, unmanageable by either the servants or Mrs. Forester. The place she looked upon as her own, and from day to day would go about numbering and valuing her possessions. If any good was got out of her it was by making her extravagant promises. She was to have jewels of divers kind, including diamonds—indeed, they were often glad to buy her off at any price. Sometimes she was so demonstrative of her affection, that her coming would only be heralded by a spring and an embrace, very like that which a wild mastiff might give, and then, without being aware of having incurred her displeasure, she poured out her vials of wrath with language and gesture, that, to a sensitive and refined woman like Mrs. Forester, was simply disgusting. A dress that incurred her spite or dislike was promptly torn in pieces. A sash that did not have the stamp in color or design of her approval was forthwith cut into strips and shreds. She was very beautiful, and that was the last forlorn hope of the poor lady, who felt as if a whirlwind had been introduced among her delicate and fastidious surroundings. She wore a new and fashionable dress with great gusto until she fancied some other fashion or color, when nothing would induce her to look at it; but with shrill cries, that were almost demoniac, she made the very thought of it distasteful to all concerned.

The servants hated the sight of her face, and never tried to conciliate her imperial ladyship. Flix alone was patient for a time, but he was not made of adamant, and she having chosen an evening when he had several friends at his house to display her peculiar accomplishments, among which was turning somersaults in her night-dress and overturning everything that could be moved, tearing some choice photographs and burning the cards, he lost his patience, called her a little devil, and carried her shrieking and kicking to her own room, where he locked her in, and on her threatening to jump from the window he actually had the ill-grace to say, through the keyhole, that nothing would please him better, and that he would pick up the pieces with pleasure. After that performance, obliged to present himself with several objectionable marks on his face, he consigned the child to any place but a good one, and determined to wash his hands of her at once and for ever.

Business calling him away, he regretfully left the elf upon his mother's hands, but fortified her with the promise that he would speak a word to the guardians of the peace, and if she should set fire to the house or attempt to murder any of the inmates, they would attend to her interests in a way peculiar to their calling.

CHAPTER XIV.—SYLVE IS READY FOR SOCIETY.

IT was not long before arrangements were made to send Sylve to a school where the regulations were severe enough to keep in check even her rebellious tendencies. The teacher in charge was fully instructed with regard to her delinquencies, and assured that whatever compensation she considered an equivalent for the extra trouble should promptly be paid on demand. Sylve was like an enraged creature when she understood in what way she was to be disposed of, but all her entreaties and promises were unheeded. Go she must, and go she did. Fortunately, the person to whom she was consigned was a woman of iron nerve, and in that respect well calculated to be the matron of an insane asylum. Her will in that establishment was law, and few children were safer, as far as the firm discipline and moral control of the habits and disposition were concerned, than the children who were gathered together under her roof. Sylve she recognized as a heathen at once, and deciding upon the line of duty which her case required, it was promptly acted upon. Finding that the child had an aversion to cold weather and cold water, she used either one or the other as instruments of punishment.

It took months of this practical kind of hygiene to enforce and fix the idea that the girl was a subordinate and subject to discipline. During that time she destroyed many things of value which were, as a matter of course, promptly replaced or paid for. Her very vague ideas of responsibility were assisted by modes which, though they did not commend themselves to her judgment, made her amenable to the existing order of things, particularly as there was no help for it. Even her stern preceptress felt the movings of pity when she thought of the child's utter loneliness, but as she had begun so she was forced to go on to the end or lose all she had gained. So the girl spent all her vacations with Mrs. Sturm, for Mrs. Forester had gone to Europe, and Flix Forester seldom troubled himself to call upon her. Indeed, the very thought of his guardianship was distasteful to him, though he was pursuing the case that ultimately would make Sylve de Latude a very great heiress. Outwardly, the girl became subject to the powers that be, and learned to consider "Windmill Height," as she called the school, her home. She made some friends but more enemies. On Mrs. Forester's return after a six years' absence from home, and by her son's advice, she rode out one day, merely as a matter of curiosity, to see her ward. The splendid carriage, with its trappings and coachmen in livery, made a great sensation at Windmill Height, and when the inmates learned that Miss de Latude was sent for, all sorts of speculations were rife. Sylve herself felt flattered. She was at just that age when money, position and pleasure command the utmost admiration. For years she had been looking forward to the time when somebody should claim her, and she heard through others that she had expectations. Sometimes Mrs. Sturm had allowed her to read Flix Forester's letters, and though they generally sent the rebellious blood to her cheeks and forehead in great waves, they yet thrilled her with a certain sort of anticipation. Such sentences as, "The claim is progressing slowly;" or, "We have found a new clew towards the opening of the labyrinth, but the other side are fighting their hardest and their best," raised wild, vague hopes within her breast. Not a day passed, after the girl came into possession of the fact that a great lawsuit was pending whose result was likely to be favorable to her, that she did not ponder upon what she should do if ever she came into possession of her fortune. Hitherto money had not been sent in stinted sums. Not a girl in the school had such expensive dresses as Miss Sylve, or such extravagant tastes, either. It is to do her justice, she possessed the art of dressing well. She knew to a shade what colors and contrasts were becoming, and always had a war of words with her dressmaker upon points of style, and came off conqueror too. Hence the reason that she was quoted as the most elegant girl in the establishment. Laces was her foible—little or much they must be the best—and in choosing them her taste was almost faultless. As she stood before her mirror, to which she had flown when she saw the carriage turn into the driveway, her heart fluttered and her color rose as the pert maid handed her a card.

"It's the genteelest thing that ever come up to these doors, Miss Sylve," said the girl, "and, oh, my! ain't you got up! Whatever made you know anybody was coming to put on that plum-colored silk?"

"Never mind, tie the sash, Abbe, and pull out the skirt," said Sylve, who was never above talking to the domestics. "Did you see the lady? What sort of a looking person is she?"

"Oh, just like a duchess—a little one," answered the girl; "but, then, her ways are grand enough, and the silk was that thick it rattled like a board, miss. Please, if ye be going away, don't forget me, Miss Sylve; any old dress that you don't care for will do for me, you know."

"I won't forget—there—now do I look? When I go home, if I do go, I'll have my mother's diamonds." She turned and gave one more glance at the mirror with a sort of sweeping gesture and a smile that was half-scornful, as if bowing to a score of Mrs. Foresters, and disappeared.

Flix's mother was waiting in an ante-room. Mrs. Sturem was not at home, and one of the under-teachers had been taxing her wits to entertain her. Just as Sylve turned the corner and came regally up to the door, the teacher made the remark that Miss Sylve had grown into a rather pretty young lady.

"I should think so," Mrs. Forester said to herself, startled out of her elegant propriety, as the young lady became visible. No human beauty, she thought for a moment, could exceed the loveliness of that face. In fact, she was too much astonished for a second to speak. As for Sylve, a laugh lurked in her saucy eyes, though the lids fell, sweeping the cheek with lashes such as no Irish beauty could match—and her perfect lips curved and settled into demure and proper lines, despite the irresistible tendency they felt to turn up at the corners.

"Miss de Latude—I—I am really very much gratified to find you so well grown and I may as well say it so very, very pretty." A graceful curve of the beautiful figure was Sylve's acknowledgment.

"I have been changing a little every day for six years, I believe," she made response.

"Yes, and you know I have been abroad during that time." Now, Mrs. Forester had felt quite undecided as to the course she should take concerning Sylve. Flix had left it to her to settle the girl as she pleased, either to take her home or to place her with some careful friend as a boarder; but at the first glance at this charming face, she declared to herself that Miss Sylve should return with her and make one of the attractions of her house the coming season. She herself, though still handsome, was becoming *passée*, and the place needed a bright young face to freshen its solitary rooms, and attract those who made her society. She forgot all the bitterness she had till this moment harbored against the child in whom nothing good had seemed to dwell. Now she was fain to go into raptures over her *protégée*, and exalt her as far above her actual merits as she had before disparaged

Digitized by Google

ber. And so she made answer as I have stated.

"'You know I have been abroad during that time, and really the years seem to have flown. I had nearly forgotten that our little ward must be quite a woman by now. How old are you, my dear?'

"'I am going on for seventeen,' Sylve answered.

Mrs. Forester looked her over without seeming to—laces, tags, buttons and bows.

"'And quite ready, I expect, to leave school and enter upon the toils and pleasures of society life. Well, my dear, we must give you a fair launch—you shall choose yourself what it shall be. I am very lonely at home, now that Flix is absent on that Western business, and should like to take you back with me. How soon could you be ready?'

"'Oh, any time—within an hour or two,' said Sylve, with heightened color and a delight she did not attempt to restrain. For the time—only for the time—she had forgotten the old bitterness, the almost hate, she had cherished towards the Foresters. She did not pretend to herself that she felt the least love towards this woman who had once called her a cat. Oh, no, with such a nature as hers that was impossible, but the silvery haze through which she was gazing with brilliant eyes, glorified the near future. She felt that she had made a decided impression upon this elegant, fastidious and traveled woman. For this she had studied and schemed, and the blessed height of her ambition was just before her.

"'I will not hurry you, my dear,' Mrs. Forester said; 'suppose I say at seven this evening? I will telegraph to town, and my carriage will be at the depot—the one I used in coming belongs to a friend with whom I have been stopping. Have you everything you need?'

"'Everything,' said Sylve, and mentally counted the trunks and boxes.

"'Then farewell till then; remember I will be here at sharp seven, with a porter for the boxes,' and, bending over, she left a kiss on Sylve's fair white forehead. If the girl shivered a little it was not perceptible. When Mrs. Forester had gone, she sprang up the stairs blythe as a lark. In less than an hour her room was besieged, for the news had flown all over the house that Sylve was going away.

With a little envy, some sorrow and a good deal of curiosity, the girls expressed their regrets. There would be no fun now, since Sylve was always at the head of all the secret mischief, such as supper at midnight, meetings with the college students and interchange of very trifling correspondence with a few inconsiderate dandies.

At last Sylve was packed, with the help of the maid who had always been her favorite, and who considered herself repaid by a present of something better than cast-off clothing—a small gold chain, which she had long coveted, and some money.

"'Now,' said that matter-of-fact person, as she seated herself upon a box, 'I'm going to cry. I've always liked you, Miss Sylve, better than all the other girls put together, because you've got grit. Oh, what's this? you've left it out,' and, quite forgetting her intention of weeping, she lifted a box from the table near and began to open it.

"'Give it to me,' Sylve said, in her imperious fashion, and snatched it from the girl's hand.

"'Oh, I saw—I saw! a boy's face, none o' them round here, either; oh, Miss Sylve, you sly one!'

"'Hold your tongue,' said Sylve, her cheeks crimson, for she would scarcely confess to herself how very dear the little picture, the only gift she had never destroyed, and that had been one of her childish treasures, was to her. Though she had hated Mrs. Forester, Flix had been the object of her secret idolatry, and this picture, taken in his miniature boyhood, she had always held sacred.

(*To be continued.*)

A SCIENTIFIC TRIAL FOR MURDER.

THE trial of the Rev. Herbert H. Hayden, charged with having murdered Miss Mary E. Stannard on the 3d of September, 1878, now in progress in New Haven, is one of the most extraordinary judicial investigations ever held in this country, from a variety of remarkable phases. At the arrest of the pastor it was alleged that the victim, whose dead body was found by the roadside in the woods at Rockland, Conn., had been killed with a knife-thrust to conceal another crime, by Mr. Hayden. After an investigation before a justice, Mr. Hayden was discharged. The State authorities, however, did not drop the matter, but procured an indictment against the minister, and pending trial had him locked up in jail.

On the 8th of October last, an exciting scene occurred in the court-room of the Common Pleas when action was taken on the indictment. It had been claimed that this document was defective and the question of amending it had occupied the attention of the Court and opposing counsel. On this occasion, counsel for the defense were willing that the amendment should be made, while representatives desired it in order to strengthen the case, Mr. Harrison giving a hint of the line of the prosecution, claiming that the State held that the defendant administered arsenic deliberately to the deceased with the intent of murdering her, and that the knife was used only because the poison was not quick enough. With the consent of the Chief Justice, a *nolle prosequi* was entered, Mr. Hayden was discharged, and for five minutes was a free man. Then he was rearrested on a bench warrant, and again committed without bail.

On Tuesday, 14th, he was brought into court, and, after pleading not guilty, a jury was obtained. The long trial fairly opened on the following day, when evidence was given as to the finding of the body, its condition and burial.

From that day to this the evidence has been simply enormous in quantity. For several days the court-room bore the appearance of a hall where an international congress of scientific gentlemen were discussing and illustrating the subject of arsenic in all its possible bearings. Technical testimony has never been so largely employed in any trial for murder, and the evidence of the experts on both sides would make an invaluable text-book on arsenical poisons. Indeed, the counsel have gone so deep into the scientific phase of the case that the public have become bewildered as to its early practicer, and only remember that Mary E. Stannard, a young woman of twenty-three, about to become a mother, was found dead near a spring in the woods, whither she had gone for water, her person disfigured with a knife, and that from evidence then deemed of a circumstantial character the Rev. Mr. Hayden was charged with her murder.

WOMAN SUFFRAGE IN THE BAY STATE.

FOR many years the friends of Woman Suffrage in Massachusetts have been working upon the Legislatures to induce the successive bodies to grant them the privilege of the elective franchise; but it was not until last Winter that sufficient courage was mustered to carry the much-agitated measure. To be sure, the right to vote is a limited one, the women being permitted by the law to express their choice for members of the school boards only; still even this boon was considered a great victory. Coming down to the first practical test of the popularity of the new law, on the one side it was claimed that, as in the case of the grant of woman suffrage in Wyoming, but few availed themselves of the privilege, the number of women in Massachusetts would have little effect in the general results. On the other side it was asserted that there would be a demonstration of woman's political power and influence that professional politicians would be compelled to heed.

The first of the municipal elections occurred on Tuesday, December 2d. We find as results that in Cambridge the number of women voting was so small as to be scarcely alluded to in the daily press. The occasional figure of a woman forcing her way through the crowd to the ballot-box created, of course, a novel feature of the day. We read that in the First Ward "from one to six occupied a settee during most of the day and peddled votes to all while on their way to the box."

Of the five Members of the School Committee chosen for a term of three years, two are Mrs. Phœbe M. Kendall and Miss Sarah S. Jacobs. The third woman candidate, Sarah M. Burnham, would have been elected had not her election involved the sacrifice of Father O'Brien of the same ward, who has served faithfully during the past term, and as a Catholic is strongly opposed to the action of Father Scully.

In Newton the Rev. Thomas S. Sampson, Rev. Thomas Marcy, Rev. E. Frank Howe and Mrs. A. Amelia Smeed were elected Members of the School Committee by the usual vote. In Chelsea 106 women had registered, and it is believed that all voted. The School Committee was evenly divided as to sex, Mrs. Annie E. Holbrook and Mrs. Emeline A. Gilman being elected. At Somerville Mrs. Martha P. Lowe was defeated by only fifteen votes for the School Board. Reports state: "The experiment of women voting, which was tried for the first time, was watched with considerable interest, and is admitted to be entirely successful. The ladies cast their votes without molestation or remark, and appeared to exercise a wholesome influence over the crowds in the ward rooms."

Fall River polled the heaviest vote it has ever seen, but there is nothing to indicate how many women put in an appearance. For School Board three ladies, Mrs. Louisa Aldrich, Mrs. Harriet T. Healey and Leontine Lincoln were elected for three years, and one man, William G. Bennett, for one year.

In Gloucester, Haverhill, Taunton, Fitchburg and Springfield, all the elected members of the school boards are men.

In Boston proper much disappointment was felt by friends of the innovation at the small number of women who appeared to register and qualify themselves. At last accounts, instead of the 1,500 anticipated, the books showed that but a little over 900 had registered. At the present writing the record is not likely to show over 1,500 in the entire State, in place of the 3,500 or 4,000 who were expected to vote.

It is claimed as an excuse for this that the balloting was merely experimental, and asserted that if the results were satisfactory a large registration throughout the State would be certain next Fall. Then it is believed that the amount of poll-tax operated severely against a full test of the success of the measure. Having secured what they asked for, the leaders of the movement are dissatisfied with the price they have had to pay for it, and will demand of the Legislature that the poll-tax on women shall be reduced from the present rate of $2 to half that amount. They argue that if a man by paying $3 can enjoy the right to vote for National, State, and Municipal officers, a woman ought not to pay more than $1 to vote for School Committee merely, and in the country towns, where the "town meetings" are not held till March, women are generally delaying registration until they know whether the price of a ballot is to be reduced or not.

Let us take a glance at the enfranchised ones and their doings on this eventful day. Behold the solitary woman voter of Ward Seventh! Her importance is superlative. She is no longer an individual; she is a representative of a mighty principle—a lion, a Leviathan. Carefully guarded by a stalwart policeman from the vigorous onslaughts of fiery canvassers, she proudly passes into the polling place and deposits her vote—the grain of mustard-seed. If she is saved from the clutches of the eager canvassers, the fair voter, surrounded and brought to bay, is suffering somewhat in the flesh. In vain she declines, refuses, denounces. She is but so much prey for the howling pack yelping all around her, and she would, at this instant, gladly renounce her new-fledged right to be once more free. Mark the self-satisfied expression of the buxom dame who is depositing her voting paper. The eye scintillates over and above her spectacles, while a congratulatory "Ha!" escapes from her lips as the potent paper glides into its receptacle.

Returning from the first exercise of the elective franchise shows the abject dismay in the face of the *cara sposa*, while triumph reigns on the massive brow of the lady "who owns him." *He* considers that the giving of the franchise to women is—but we all know what *he* thinks in the matter. Beacon Hill is the Murray Hill of the Hub, and the Beacon Hillites mustered in dainty groupings during the ballot. The tenderest of lilac and lavender and primrose six-button gloves deposited their voting papers, while pugs and toy terriers shared the general excitement of the eventful day. The Beacon Hillites were besieged by women canvassers, the influence of the sterner sex being marked "doubtful." "No smoking allowed." Abuse, ladies! Mark the rueful faces of the menkind as their attention is called to this imperious notice. It is easy to imagine what they think of the whole business. The entrance to the polling-place at Mount Vernon was fairly besieged by all the rank and beauty of Boston. Carriages worthy of Boston Row or the Bois kept dashing up to deposit fair and anxious possessors of the franchise, while the merits of the respective candidates are minutely discussed by those who hold their fates in their dainty hands. December 3d and 9th were great days for the other sex in Massachusetts.

THE SEVENTH REGIMENT FAIR.

THE fair in the new armory of the Seventh Regiment closed on Saturday evening, December 6th, after three weeks of complete and most gratifying success. No similar event since the great sanitary fair during the war has been so largely attended and patronized, and the net receipts will amount to a large sum. One hundred and fifty thousand dollars, is predicted, will be the amount realized by the regiment for the armory after all the accounts are settled. Among the most interesting of the closing scenes were the award of valuable contributions voted for during the fair. The elegant gold-mounted Remington rifle, illustrated in this issue, was awarded to Colonel S. C. Ryder, of the Ninth Regiment; the sword to the most popular officer of the National Guard, Seventh Regiment excepted, to Major McAlpine of the Seventy-first; the sword to the most popular officer of the army or navy, to Commodore G. H. Cooper, and the sword to the most popular officer of the Seventh, to Captain Allison of the First Company. The name of the fortunate winner of the elegant and costly suite of furniture presented by the Brooklyn Furniture Company, and also illustrated in this paper, had not transpired at the close of the fair. The suite was valued at $600, and was one of the most desirable objects in the fair. Many articles presented were sold for a handsome advance on the offered price. Among others the elegant Turkish chair from John H. Horsfall, for $100, nearly fifty per cent. more than the price named. The success of the fair removes any financial obstacle to the speedy completion of the new armory, to which the regiment will remove in the Spring.

A Word for Dumb Animals.

AT a recent meeting of the Board of Managers of the American Society for the Prevention of Cruelty to Animals, corner of Fourth Avenue and Twenty-second Street, the following appeal was ordered to be circulated:

"The Executive Committee of this society, looking back upon the official achievements of the institution for the past fourteen years, addresses itself with pride and confidence to the liberality of its patrons and friends for a share of that generosity which a return of the present season suggests.

"By the judicious and untiring efforts in the cause of humanity to that humble portion of animal creation which serves mankind so devotedly, its merciful example has spread itself over thirty-four States of this country, and now commands the respect and admiration of a large portion of the civilized world.

"These results, so remarkable and conspicuous, are mainly owing to the profound sympathy and practical support of the public, and it is hoped that the area of the good work may be extended through your appreciative generosity at this time."

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

Distributing the Remains of the Lord Mayor's Banquet.

The remains of the delicacies and viands left from the banquet of the Lord Mayors of London are each year given to the poor on the day following the installation and dinner of the new officer. This year there were 240 persons who received the remains, and as each one obtained from four to six pounds' weight, the gross bulk of fowls, tongues, game of all kinds, hams, joints, sausage, pies and all manner of sweet pastry, may be easily computed.

Missionary Relief in Cashmere.

The heavy rains of 1877 destroyed the crops in Cashmere, and then followed the fearful famine which has greatly decimated the province. Although the British Government did nothing officially to relieve the suffering, the missionaries and the Church Missionary Society, after much difficulty and opposition from the authorities, established a hospital and orphanage at Srinagger, where they have managed to keep alive some 2,000 people, and are, in fact, the supporters of the only philanthropic work in the country. The illustration shows a party of orphans being taught sewing in front of the Rev. T. A. Wade's bungalow.

Burying the Spoons.

It is customary for such soldiers as have served a term of three years in a Prussian Regiment of the "Garde" to have a sham parade on the day on which they are discharged for the "Reserve." All sorts of nonsense is practiced on the day, and even the officers of the regiment take part in the fun. The funniest of all is the burying of the lead spoons which have been used by the soldiers during their three years' service. After the spoons have been interred, the discharged Reservists and their friends spend the rest of the day in the next inn, where they amuse themselves with dancing and drinking beer, according to the customs of their forefathers.

Journalists' and Students' Collection at Barcelona.

Our illustration shows the attractive way they adopt in Spain to make a collection for a charitable object in Spain. A military band leads the procession, followed by students with their banners, collecting right and left as they move along; then a car, high on which is a basket, to which the money collected is transferred. This was followed by a second band, and the Press collectors with their car, on which contributions in kind were placed. The procession is passing into the Rambla, that long, noisy, charming promenade, where many always gather, and which this time was thronged. The success of the effort may be judged by the fact that they collected over $10,000.

Greek Monastery in Cyprus.

Among the ecclesiastical antiquities of the island, the seaport town of Larnaca contains one of more than usual interest. It is the Greek church attached to the Monastery of St. Lazarus, which stands in the centre of a large square, on one side of which is the burial-ground, and on the other three the cells formerly occupied by the monks. The cemetery is now a boys' playground, and the cells are converted into common lodgings. Greek religious tradition asserts that the church contains the tomb of Lazarus. Our illustration is in the vault beneath the altar, where tapers are kept burning and the huge stone basin filled with water of alleged miraculous properties.

Memorial Sun-dial in Old St. Pancras.

The spacious parish burial-ground surrounding the old Church of St. Pancras in Camden Town, London, is a place of much historical interest. The church being next to St. Paul's, is the most ancient foundation of a Christian place of worship in Middlesex. It was the last parish church in England where the bell tolled for Mass, and in which the rites and ceremonies of the Roman Catholic religion were performed. For many years it was the custom of French and other foreign Catholics to bury their dead, who passed away in London, in St. Pancras's Churchyard. It was long ago decided to remove the remains and convert the yard into a public garden, and in June, 1877, the place was opened to the public in that form. Lady Burdett-Coutts has recently erected an ornamental sun-dial to commemorate the distinguished and notable persons formerly interred in this ground. The monument is thirty feet high, and, besides the dials on the main tablet, exhibits reliefs representing St. Pancras and St. Giles, also Night and Morning.

Opening the Sydney Exhibition.

As previously announced, the international exhibition at Sydney, New South Wales, Australia, was opened on September 17th last, by Lord Augustus Loftus, the new Governor, then just transferred from the mission to Russia. There was a lengthy procession of military and naval forces, various benefit societies and municipal corporations. The garden palace was filled with the elite of the colony, and all the children of the public schools were in attendance.

SCIENTIFIC INTELLIGENCE.

The Shrinking of the water in Tulare Lake, Cal., has uncovered a prehistoric settlement, stone bulkheads, traces of canals once bordered with planted trees, and other evidences of occupation by an unknown race being clearly defined as the water subsides.

The Three Statues recently unearthed in Milo have been purchased by the Greek Government, and lodged in the Museum at Athens, at a cost of over 27,000 drachmas. The most perfect of the three is a figure of Poseidon, said to be in the highest style of Greek art.

In a Sterile Tract of Country between Dares-Selaam and Nyassanza the elephants attached to the Belgian elephant expedition marched uninterruptedly without food for forty-two hours and without water for thirty-five hours, each animal carrying at the time burdens weighing twelve hundred weight.

Professor Nordenskjold announces his intention, in a letter to M. Sibiriakof, the well-known Russian patron of Arctic research, of undertaking shortly a fresh journey of exploration to the Siberian Polar Sea. He will start on this occasion from the River Lena, and make the New Siberian Islands his base of operations.

The German Explorers at Olympia have resumed their excavations, and have already found some interesting pieces of sculpture, including the head of Titus, the head of a boy whose figure, in a kneeling posture, had been previously discovered on the eastern gable of the temple, and a statue of the Goddess Fortuna.

The British Authorities are going to try to burst the mate of the big gun that exploded on the *Thunderer*, for the purpose of finding out what the matter was. The Woolwich officers are said to be amused at the expensive performance, as, if the gun bursts, it may not be from the same cause that occasioned the disaster, and if it refuses to burst nothing will be proved.

According to the *Courrier de la Gironde*, the Chandernagor, which was dispatched by the Marquis de Rays some six weeks since, during the American War, to found an establishment in the islands of New Ireland and New Britain, is about to be followed to the same destination by the steamer *Géné*. This latter vessel will sail from Barcelona under the Spanish ensign, and is to carry two missionaries for the free colony of Port Breton in Oceanica.

Colonel Prejevalski, the indefatigable Russian explorer, is, according to his latest reports, progressing most favorably on his tour from Samsun over the Altai Mountains to Barkul and Chami. He hoped soon to reach Thibet. One of his companions, a Khirgis of the name of Mirsaas, whom he sent back with letters, confirms the statement that the Chinese authorities, after their first mistrust had vanished, treated the colonel and his party with marked consideration. He had followed him as far as Lake Oran-Kul.

Dr. B. W. Richardson, in reply to some strictures, in the London *Telegraph*, on his opinion regarding the use of alcohol, says: "In the dispensary of the apothecary and in the laboratory of the chemist, alcohol is a good agent when it is used with scientific discretion by skilled men; beyond this I hold it to be a mischievous chemical, which destroys its tens of thousands a year, diffuses misery and vice in all directions, engenders a constitutional condition of body altogether unnatural, and does no mortal service in return for all the evils it originates, sustains, and transmits from one generation to another."

PERSONAL GOSSIP.

DR. OLIVER WENDELL HOLMES, the "Autocrat of the Breakfast Table," was honored with a banquet in Boston on December 34, his seventieth birthday.

BAKER PASHA has started for his post, as the representative of the Sultan, to superintend the introduction of reforms throughout the whole of Asia Minor.

HENRY LAWA SELWYN, a full-blooded Sioux Indian, and a son of a leading chief of the Yankton tribe, has been ordained pastor of the church at Yankton.

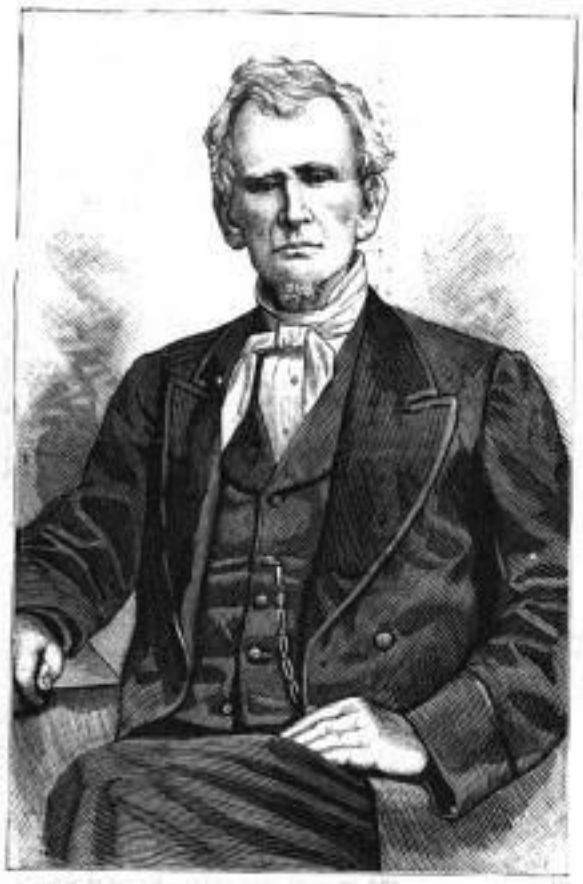
QUEEN VICTORIA has sent to Major Chard a valuable diamond ring as a mark of her appreciation of his heroic conduct at Rorke's Drift.

CHALITE BEY has just been received with much ceremony by the Montenegrins. He is the first ambassador sent to their country by Turkey for five centuries.

GENERAL U. S. GRANT has accepted the invitation of the World's Fair Committee to preside at a public meeting to further that movement, to be held in New York City about December 20th.

On the recommendation of Sir Austen Layard, the British Ambassador to Turkey, Rostem Pasha has been appointed Governor of the Province of Erzeroum. This is an excellent appointment. Rostem Pasha for the last six or seven years governed Lebanon with remarkable capacity, firmness and impartiality.

A BRONZE statue of Colonel G. B. Armstrong, the originator and first general superintendent of the Railway Postal system, is to be placed in the Postal Department at Washington. Contributions are so rapidly accumulating that it is thought that the contract for the statue may be made by January 1st.



CHIEF-JUSTICE L. BRADFORD PRINCE, of New Mexico, was married, December 1st, at Grace Church, on the Heights, Brooklyn, to Miss Hattie A. E. Childs, daughter of Dr. S. Russell Childs, of New York. The ceremony was performed by Bishop Littlejohn, assisted by the Rev. J. Carpenter Smith, of Flushing.

PRINCE BISMARCK has written private letters to the leaders of the National Liberals, thanking them for the support given by that party to the Government on the railway question, and expressing the hope that the former friendly relations between himself and the National Liberals may be renewed. The Clericals are much dissatisfied with this turn of affairs.

A GRACEFUL courtesy was extended to Messrs. Albert Pell and Clare S. Read, the two members of the British Parliament, on their visit to the National Capitol at the opening of Congress. After appearing in the diplomatic gallery of the Senate, the company, with Sir Edward Thornton, went over to the House, where, under a suspension of the rules, they were invited to seats upon the floor.

BEFORE leaving Vienna for Madrid, the Archduchess Christina formally renounced all rights of succession for herself and her heirs to the Austrian Crown. The ceremony is thus described in a Vienna paper: "There were present the Emperor, the Archdukes, the Ministers, the Presidents of the Austrian and Hungarian Parliaments, Cardinal Kutschka and the members of the Privy Council. The Emperor made a short speech, standing, in which he called on the assembly to witness the act. Then Baron Haymerle produced the Act of Renunciation, and the Archduchess Christina, after a low bow to the Emperor, advanced to a table on which stood a crucifix, placed two fingers of the right hand on a Bible held by the Cardinal, and read aloud the document. Afterwards she took it to another table and signed it. The Spanish Minister also affixed his signature in the name of King Alfonso. The Government Notary then put on the seal, and all the witnesses signed their names on another sheet of paper, which was attached to the chief document."

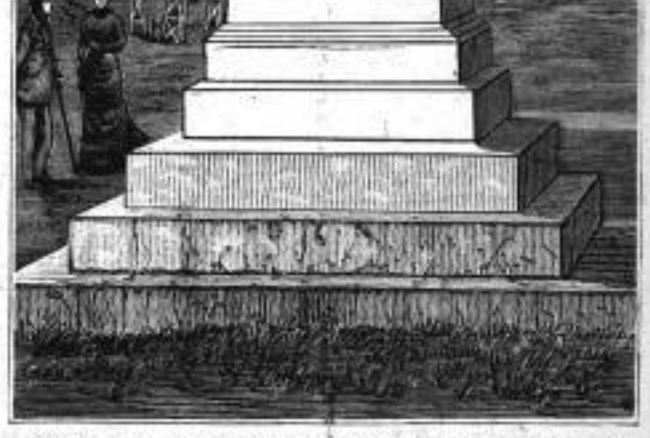
THE LATE REV. LOVICK PEIRCE, D.D.—FROM A PHOTOGRAPH BY BLACKSHEAR.



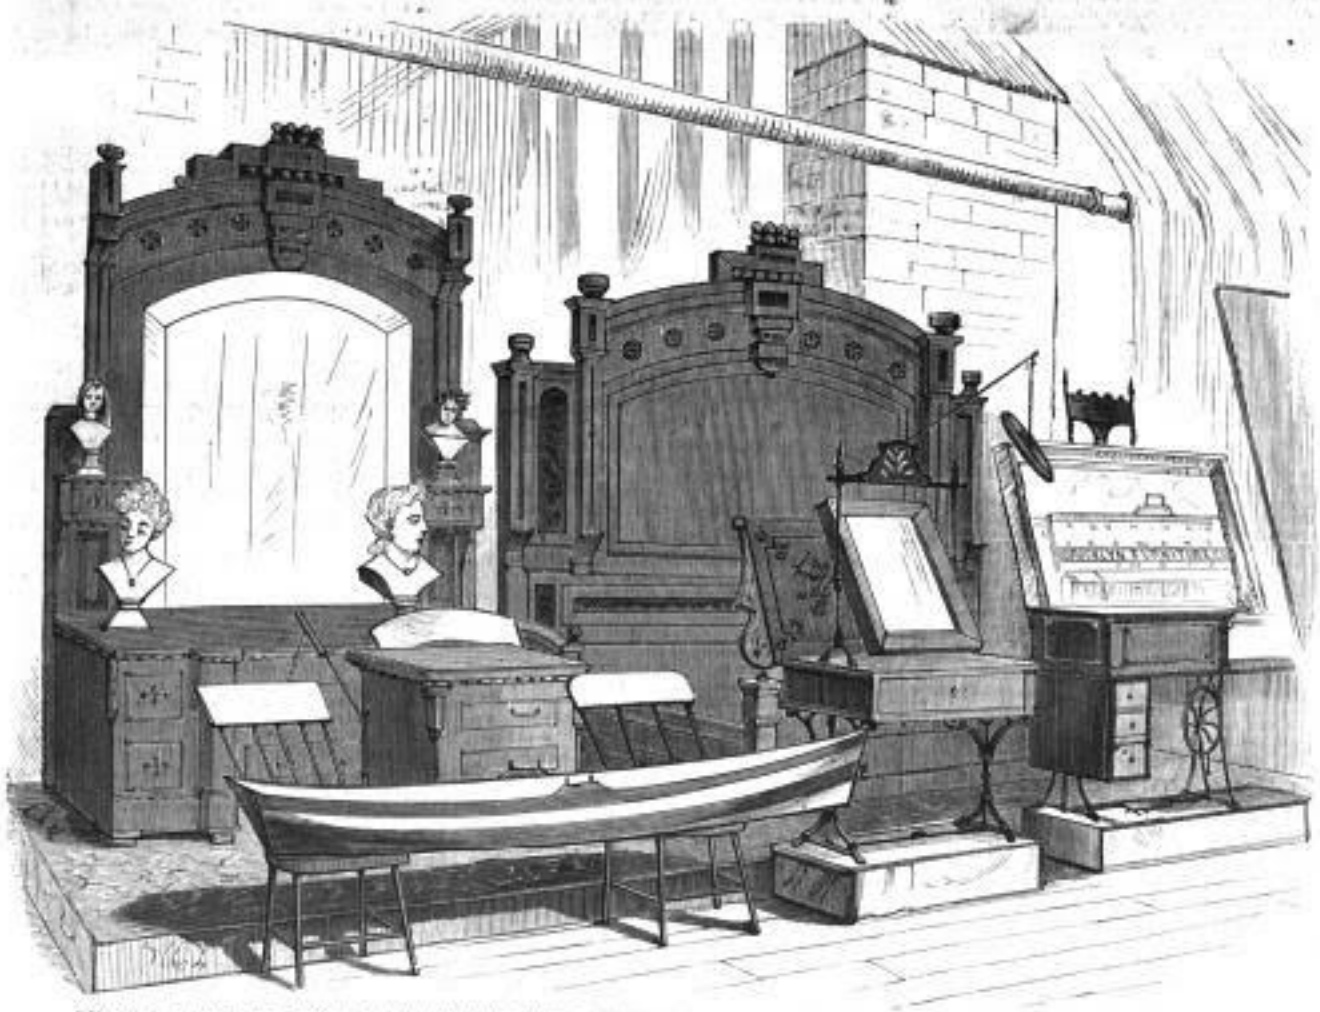
CONFEDERATE MONUMENT AT MACON, GEORGIA.

ON Friday, April 26th, 1878, the "Decoration Day" of the Southern States, the corner-stone of a monument to the Confederate dead was laid at the intersection of Mulberry and Second Streets, Macon, Ga. Governor Colquitt delivered the formal address, and a letter from Jefferson Davis, which excited much comment at the North, was read. The work was in charge of the Ladies' Memorial Association, who pushed it so thoroughly that the monument was in place ready for the services of dedication on the day assigned, Wednesday, October 29th last. The monument consists of a base of Stone Mountain granite, supporting a marble shaft twenty-three feet high, which is surmounted by a figure, ten feet in stature, of a Confederate soldier in the position "rest-on-arms." The city was greatly crowded on the day of dedication, both by civil and military visitors, and Governor Colquitt had a most appreciative audience while delivering his second oration on the subject. In the evening the local militia entertained their visiting comrades, and there were salutes, illuminations, dress-parades, banquets, music, and all the concomitants of a festal season.

THE LATE REV. LOVICK PEIRCE, D.D.

THE Rev. Lovick Peirce, D.D., the Nestor of the Methodist Episcopal Church in the South, died at his home in Sparta, Ga., on November 10th, after a long illness, in the ninety-fifth year of his age. He was born in Halifax County, N. C., and when quite a boy the family settled in Barnwell County, S. C., where his early life was spent on the farm. He began his ministry as a boy-preacher, being but nineteen when he went on his first circuit. After five years of this laborious work, he went to Green County, Ga., and, the war of 1812 being declared, he took the field as chaplain. At the close of the war he studied medicine, and for some time practiced in connection with preaching at Greensboro, N. C. He it was who established, about thirty-five years ago, the Wesleyan Female College at Macon, and in the face of great opposition advocated a higher standard of education for women. In 1873 he wrote of this college as follows: "I am the only living member of the original Board of Trustees; have been present in my place at every commencement thirty-five years in succession. The ladies long ago began to call me the Nestor. To have lived to win so proud a title is the pride of my life, and, if I deserve it, it will be the crown of my earthly glory when I am dead. My son, now Bishop Peirce, was its first president, and graduated its first class, ten in number—noble specimens of well-educated women." Dr. Peirce, before the college was established, labored two years in the lecture field, to combat, as he said, the prejudices of "many lords of the land who believed in the inferiority of the female mind compared with that of the male." The college was built by private contributions, and not a dime of State funds has ever been bestowed upon it.

In his life and preaching Dr. Peirce held the old-fashioned doctrines of primitive Methodism, and enforced them with an unflinching faithfulness. He was opposed to extravagance in dress and personal adornment. The growing tendency towards these things annoyed him, and he often pointedly rebuked it from the pulpit. While he was always extremely courteous, he could be severe in dealing out what he considered merited rebuke. Theologically, he leaned somewhat towards the doctrines of the "higher-life" wing of the Methodist Church. He was outspoken in his belief that true Christians are made holy by the sufficiency of the atonement of Christ. About two months ago, while in great bodily weakness, yet with an unclouded mind he wrote a long farewell letter to his brethren in the ministry. In this he declared his assurance of salvation, and told them that, without the positive love and desire of holiness, no man could have religion. Notwithstanding his advanced age, Dr. Peirce has been a powerful and eloquent preacher up to quite a recent time. Within the last few years he has preached with all the vigor of most men of fifty. His voice would reach to the furthest seat of a camp-meeting assembly, and his eloquence would hold large congregations where younger men would fail to keep weary ones awake. No leading man ever made fewer enemies. He has been universally revered and beloved.



GEORGIA.—MONUMENT ERECTED AT MACON TO THE CONFEDERATE DEAD. FROM A PHOTOGRAPH BY BLACKSHEAR.

ILLINOIS.—RESIDENCE OF GENERAL GRANT, AT GALENA.

GENERAL GRANT'S HOUSE AT GALENA.

THE house to which General Grant was conducted at Galena, Ill., after his overland trip is situated in the eastern part of the city, on Bouthiller Street. It is a two-story brick, square built and solid in appearance. On the west side there is a veranda, and from a flagstaff on the roof the Star-spangled Banner waves in pride. On the ground floor there are but four rooms—parlor, dining-room, library and kitchen, and on the upper floor there are five bedrooms. This residence was presented

NEW YORK CITY.—ATTRACTIONS AT THE SEVENTH REGIMENT ARMORY FAIR.—CONTRIBUTION OF THE BROOKLYN FURNITURE CO., AWARDED BY POPULAR VOTES.—SEE PAGE 272.

SEVENTH REGIMENT ARMORY FAIR.—THE REMINGTON RIFLE, AWARDED TO THE MOST POPULAR OFFICER OF THE ARMY AND NAVY.

Digitized by Google

to General Grant, in 1865, on his return from the war. It was the gift of a few of his personal friends, and not of the citizens generally, as is currently believed. General Grant resided there from 1865 until a short time before his inauguration as President, and it is looked upon by the General and his family as "home." The house has been occupied for some time past by an old soldier and his wife.

The citizens of Galena made no attempt to do aught but give General Grant a hearty welcome. They reckoned that it would be more to his liking that he should be made to feel at home, and his reception was emphatically a home-coming. In every detail this point was kept in view, and in none more so than in the preparation of his home. A visitor only recognizes that this is the object of his search when he reads upon the door-plate the name, "U. S. Grant."

MISS EMMA THURSBY.

IN an apartment at the Everett House, an apartment proclaiming its *impresario* occupant at every turn, I found Mr. Maurice Strakosch.

"You want me to talk to you about Miss Emma Thursby—good," cheerily exclaimed the *impresario*. "I shall begin at the beginning. She was born in Brooklyn, November 17th, 1857, and she is the daughter, by the mother's side, of one of our old Knickerbocker families. Her father was an English manufacturer."

"Did she exhibit musical proclivities from an early age?"

"She began to sing almost before she began to talk, and the flexibility of her voice at six years of age was something marvelous. Her first instructor was Julius Meyer, and, after a little study with him, she was engaged in Dr. Porter's church as soprano. At thirteen years of age, after having had some tuition from Signor Errani, she received an engagement from the Rev. Henry Ward Beecher, of Plymouth Church. After a time she went to Italy, where she resided for several months, studying hard all the time under Lamberti and San Giovanni, and returned to America to resume her studies with Errani. She took a concert tour with Gilmore's band, and then accepted an engagement as principal soprano at the church of the Rev. Thomas Taylor in New York, at the then unusually high salary of $3,000 per annum, with her hotel expenses in New York from Saturday night to Monday morning. After studying oratorias under Madame Rudersdorf—indeed, her vocal studies ended here—she revisited Europe, where she secured brilliant and phenomenal successes at the concerts of the London Philharmonic Society, the Crystal Palace, etc., and also in Paris at the concerts of Colonne and Pasdeloup. By-the-way, the orchestra of the Colonne concerts presented her with a costly bronze. She became a *lionne* in Parisian society. It is the custom for the "Circle des Artistes" to pay a uniform fee of 3.0 francs to professional artists who assist at the concerts of the club. In Miss Thursby's case a special exception was made, and 500 francs were forwarded to her with a most flattering eulogium. Miss Thursby instantly sent back the 500 francs as a contribution to the benevolent fund of the club, and in return received a charming letter of eulogium and of thanks, signed by Gounod, Ambrose Thomas and fifty other composers and authors of renown."

"Her recent successes have been very marked, have they not, Mr. Strakosch?"

"They have been immense. At the Albert Hall, Crystal Palace and Riviere's concerts—in fact, they are so vividly scored that it is unnecessary to refer to them."

"Her voice is soprano?"

"She has been endowed by nature with a soprano of remarkable compass, purity, sweetness and sympathetic quality. Her shake is exquisite, her intonation excellent, and her voice is of equally good quality throughout its extensive compass of more than two octaves and a half."

"What are what I might term her test songs?"

"Well, the facility with which she executes florid music has been attested by her renderings of the 'Queen of Night' song from 'Die Zauberflote,' Rodi's 'Air with Variations,' and the glittering vocal waltz expressly composed for her by Louis Engel, 'My Heart has its Love.'"

"You managed for Miss Thursby when she visited this country before, Mr. Strakosch?"

"Yes. To me the concert-going public is indebted for this bright particular star. It was I who persuaded her to leave her position in the church choir and to devote herself to the profession of a concert singer."

"What are your plans for her?"

"I have arranged for fifty concerts. She will sing in all the leading cities South as far as Richmond, and West as far as San Francisco. She appeared for the first time since her return from the brilliant tour of England and France at Steinway Hall, New York, on Monday evening, December 1st, in a concert in which her share consisted of the polonaise from 'Mignon,' a duet from Boito's 'Mephistofele,' and an aria from Meyerbeer's 'Etoile du Nord.' As an *encore* to her first selection, she sang 'Home, Sweet Home,' creating the wildest enthusiasm."

"Will she sing in opera?"

"No. She doesn't like opera. She would, I have no doubt, be a great success in opera."

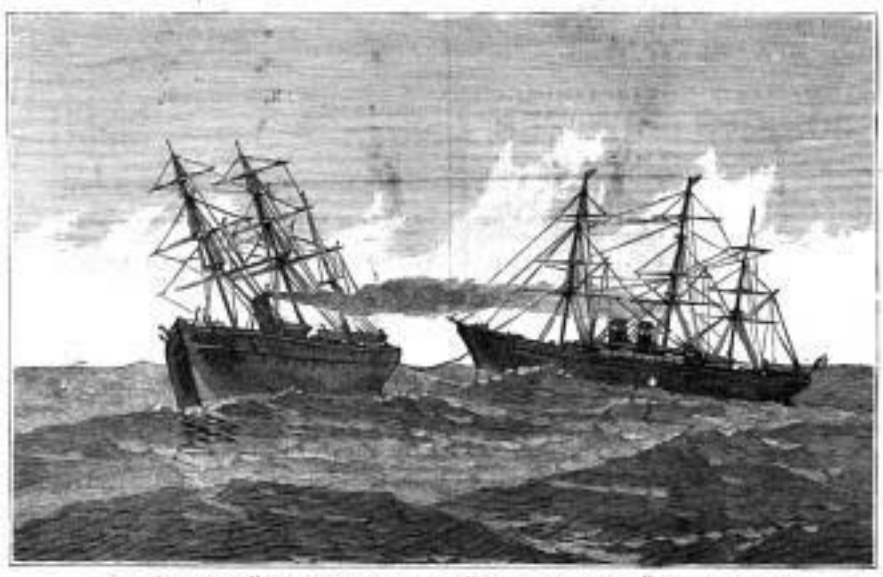
"Then she will only sing in concerts and oratorios?"

"That's all. She will sing for charity, too, for she is a noble, good and pious woman."

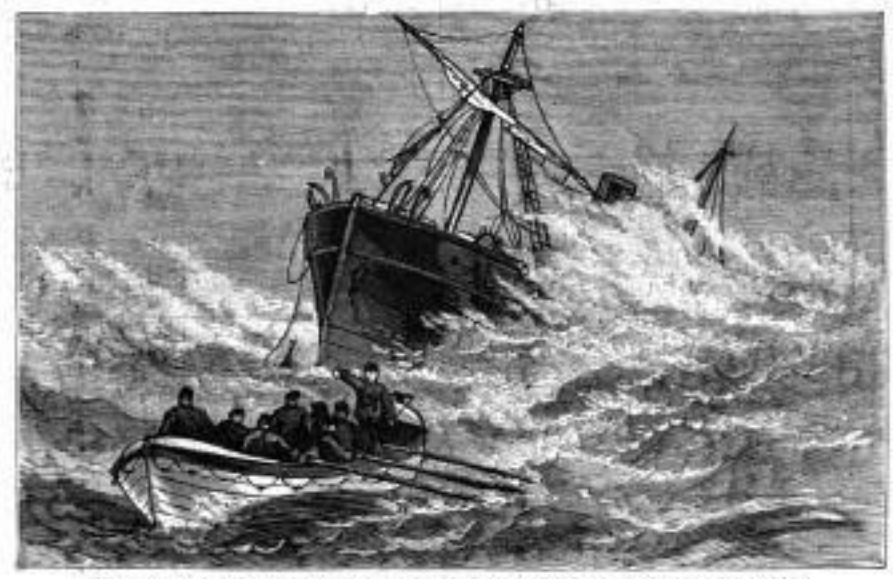
"When will she return to Europe?"

"About May; and, under my management, and during the season of 1880-1, will make a tour beginning in England, where she is an immense favorite."

I may state that Miss Thursby is as pretty and *piquante* as ever, and that her slight *embonpoint* serves but to add to her general charms. Mr. Strakosch is very enthusiastic, and deservedly so, with reference to his *protégé*, speaking of her with an earnestness begotten of thorough conviction.

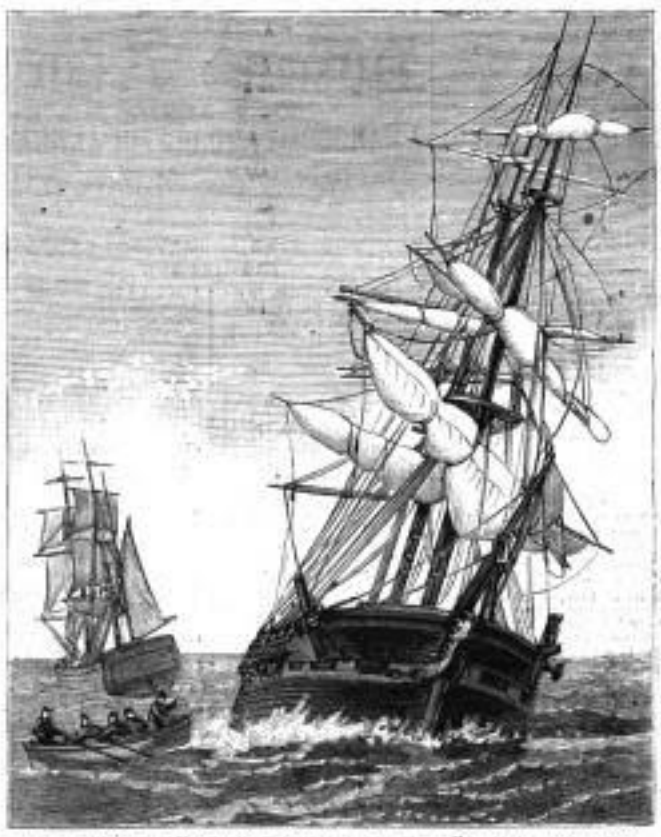


MISS EMMA THURSBY, THE DISTINGUISHED AMERICAN SINGER.—FROM A PHOTOGRAPH BY MORA.

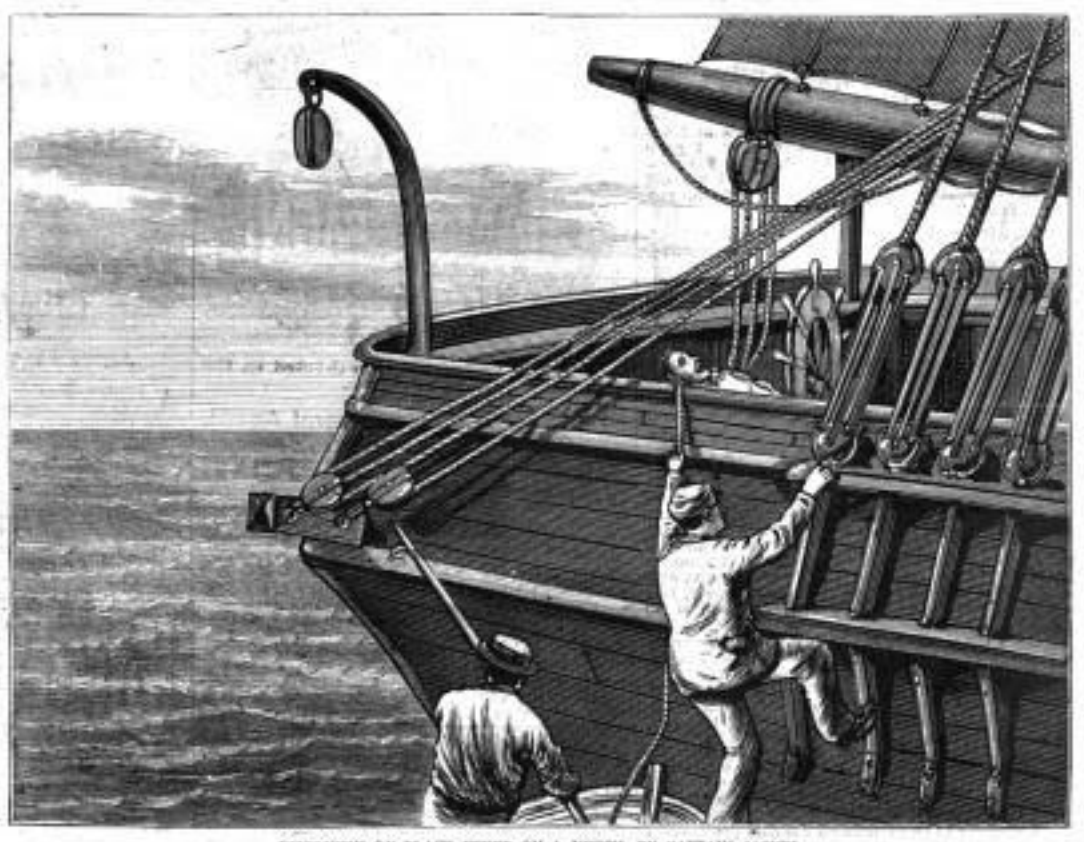


INCIDENTS AND ACCIDENTS OF OCEAN TRAVEL.

THE winds and waves have been holding their usual semi-annual revel, to the destruction of poor humanity and the wreckage of stout-ribbed ships. Every day has brought to the "watchers by the deep" ghastly tales of death and suffering, of heroism and devotion, until the awful chronicle has reached an almost abnormal condition.



We illustrate the ship *Jeanie E. Wright*, laden with the hideous freight of dead men. Boarded by Captain Jacmel, of the brig *Westmoreland*, the sight that met his gaze chilled the very marrow in his bones. In the cabin lay the dead bodies of the master and his officers in various stages of decomposition, while the forecastle berths contained the decaying remains



THE "CIRCASSIA" TOWING THE DISABLED "CITY OF RICHMOND" INTO HALIFAX.

WRECKING OF THE BRITISH MAIL STEAMER "ALBERT," ON THE MAGDALENA ISLANDS.

THE BARK "MARIA" TAKING THE "ROYAL CHARTER" INTO SOUTHAMPTON.

DISCOVERY OF BLACK FEVER ON A VESSEL BY CAPTAIN JACMEL.

DANGERS OF THE DEEP.—INCIDENTS AND ACCIDENTS OF THE PAST MONTH ON THE ATLANTIC.—FROM SKETCHES BY OUR SPECIAL ARTISTS.

Digitized by Google

of the sailors. All had been plague-stricken, and had apparently crawled together to die.

The *Royal Charter*, a twice-abandoned ship, has been safely brought into port by Captain Olsen, of the bark *Maria*, who, on November 6th, boarded and took possession of the derelict ship. The *Royal Charter* had been abandoned by her officers and crew on October 28th, and again abandoned by the captain of the bark *Glenara* on October 30th, who had, with several of his crew, boarded her with the intention of saving her if possible. They reported having found the pumps choked, and the steam from the damaged grain made it impossible for the crew to remain in the pump-well and they despaired of saving her. They returned to their vessel, intending to again board the *Royal Charter* and scuttle her to prevent her doing damage to other vessels. Six days later, during which time this valuable vessel and cargo had been drifting about the ocean, the bark *Maria*, from Cadiz for New York, discovered her. Captain Olsen sent his mate and a crew to board the abandoned ship, which they succeeded in doing by jumping into the rigging from their own boat. They found the *Royal Charter* in good order, and, after pumping her out returned to the *Maria*. Captain Olsen then went on board with five of his crew to navigate her to the nearest port (Southampton), which he has succeeded in doing.

The *City of Richmond* of the Inman line, from Queenstown to New York, having broken her shaft on the 21st of November, was taken in tow by the *Circassia* off Sable Island, 180 miles from Halifax—vide Illustration. She had on board 61 cabin and 517 steerage passengers. She is one of the finest vessels in the Atlantic service, her registered tonnage being 2,934. And yet another disaster to illustrate. The British mail steamer *Albert*, for Pictou, Nova Scotia, was totally wrecked on the Magdalena Islands. Happily, however, all on board were saved.

Mines of Soap.

A MINE of veritable soft soap was some time since discovered by a clergyman fifty miles from Prescott, Arizona, and is now being worked. California also has "rock soap," but it is not in general use. It is a capital detergent, and is superior to ordinary toilet soap in emollient effect on the skin. The objection is that it makes little lather. It is found in stratified rock formation, about the consistency of tallow. It hardens on exposure, and it has no oleaginous quality. It is a species of fuller's earth. The Arizona article, as described, is quite different. It is found in deposits, whitish and soft as dough, and what adheres to a stick shows exudation of oil. On adjacent hill land the same appears in ledge, indurated as soap, unctuous to the touch. It makes suds like soap. An old felt hat saturated with bacon grease was restored to pristine beauty. It softens the hardest water, and rough miners' hands become satiny as a child's. This unique material is being prepared for market by a process that frees it from grit and all extraneous matter, and then it is said to be highly saponaceous.

BOOK NOTICE.

A FOOL'S ERRAND. By One of the Fools. A Novel. New York: FORDS, HOWARD & HULBERT.

This is a book not to be lightly read, albeit it is as full of fun as it is of pathos, but to be carefully studied by the light of past events, and its lessons placed away in the storehouse of the memory. It is a tale of life at the South since the late war, and is full of the racy humor of the country people, the rich and laughter-provoking characteristics of negro prayer-meetings, the dashing excitement of the hunt, the oddities of up-country mass-meetings, the social lines of caste, the fiery passions of politics, the dark and bloody doings of an enraged people and their startling logic of self-justification. It is a faithful picture drawn from life, and vividly portrayed.

FUN.

ANY actress can paint, but only a few can draw.

DON'T buy thermometers now. They'll be lower after a while.

HORSE doctors are all alike. Their liniments greatly resemble each other.

FATHER (who is always trying to teach his son how to act while at table)—"Well, John, you see that when I have finished eating I always leave the table." John—Yes, sir; and that is all you do leave."

THE judge at a court in Maine recently sentenced a culprit to twenty-five years in the State Prison. The fact was communicated to the prisoner's mother, who was struck at the magnitude of the sentence. "What did they do that for?" she exclaimed. "Twenty-five years! Why, he won't be contented there three weeks!"

THE Irish remains known as Con O'Neill's Castle, Castlereagh, were ordered by their proprietor to be inclosed with a wall built around the ruins. If ever there was a real Hibernian bull, the agent of the estate perpetrated one on this occasion, for he actually pulled down the ruins themselves to obtain stone for a wall to inclose them!

ELUCIDATION.—*Rector's Wife*—"How do you do, Mr. Wiggles? We have not seen you at church lately. Have you been away?" *Mr. Wiggles*—"Yes, mum. I've been a-visitin' my old 'aunts at Manchester, mum." *Rector's Wife*—"Really! I hope you found the old ladies quite well." *Mr. Wiggles*—"I didn't say the haunts, mum—I said my old 'aunts—revisitin' the 'aunts of my youth, you know, mum."

MACREADY was once victimized in "Virginius." The *Numitorius* couldn't remember his own name. "You will remember it, sir," said the tragedian, carefully pronouncing it for him, "by the association of ideas. Think of Numbers, the Book of Numbers." The *Numitorius* did think of it all day, and at night produced, through "the association of ideas," the following effect:

Numitorius—Where is Virginia? Wherefore do you hold that maiden's hand?

Claudius—Who asks the question?

Numitorius—I! her uncle—*Numerousness*.

A STORY is told of an old coachman who appeared before his employer one day to request that his next livery great-coat should be made with a single breast and fewer buttons. The request excited some astonishment. "Bless my heart!" exclaimed the gentleman, "what can that be for, George?" "Well, sir," was the reply, "when we dines at B——" (a neighboring squire's), "we be always forced to drink a horn of beer for every button we has, and there—I could do it well enough once, and glad to; but there, I be growing old now, sir, you know, and my poor old head won't stand it no longer."

SOME PARLIAMENTARY BULLS.—Miss Edgeworth tells us of an English baronet who proposed in the preamble of a Bill that certain regulations should take place "on every Monday (Tuesday excepted)." This needless exception was equaled, however, by an Act which, Lord Palmerston assures us, provided for the possibility of Good Friday happening to fall on a Sunday. Another Bill proposed to be introduced was one to repress suicide by making it a capital offense. An Irish member is said to have moved the addition, to a Bill for restricting the liberty of the press, of a clause to compel the names of the authors to be printed on the title pages of all anonymous works.

THE SUPPER ROOM.—A WINTER EVENING.

HUSBAND.—"Well, wife, this table looks tempting to a hungry man! What a delicious piece of beef you have to-night!"

Wife.—"Yes, it is very nice, indeed: and I have never yet been disappointed in opening a can of the fresh beef put up by the BOSTON BEEF PACKING CO. They say they put only the choice pieces in their cans, and it really must be so."

Husband.—"I wonder all housekeepers do not keep it on hand."

Wife.—"It is certainly just the thing to depend on in an emergency; and then there are many ways of serving it."

Master Harry.—"It's the 'boss' thing for sandwiches, I tell you!"

Wife.—"Hush, Henry!"

Uncle George.—"Well, I think the young man's enthusiasm is shared by all of us. I certainly never enjoyed the corned beef my mother put up for school. But this is *fresh* and tender, and every way palatable. Is it expensive?"

Wife.—"No. It comes in cans of convenient size, hermetically sealed, and retails at a very low price."

Husband.—"We used it all Summer, and now Winter is come, we find we cannot give it up. Our grocer says the demand for it is constantly increasing, and his best customers order a dozen cans at a time."

Uncle George.—"I shall tell my wife of it. It is certainly a household necessity."

FOR diarrhœa, dysentery, bloody-flux, cramps in stomach and colic, whether affecting adults, children, or infants, Dr. Pierce's Compound Extract of Smartweed is a sovereign remedy. It is compounded from the best brandy, Jamaica ginger, smartweed, or water-pepper, anodyne, soothing and healing gums. For colds, rheumatism, neuralgic affections, and to break up fevers and inflammatory attacks it is invaluable and should be kept in every household. Fifty cents by druggists.

SKIN AND SCALP DISEASES

Should be treated externally with Cuticura, assisted by the Cuticura Soap, and Resolvent taken internally, until cured and for some time afterwards. Where the humors are confined to the blood and do not show themselves on the surface, the Resolvent alone will speedily drive them from the system. The Cuticura Remedies infallibly cure the most loathsome cases of Scrofulous and Skin and Scalp Humors, as is attested by hundreds of unsolicited testimonials in our possession.

HALFORD TABLESAUCE.—A genuine relish, exactly suited to all tastes and all conditions of people.

BURNETT'S COCOAINE kills dandruff, allays irritation and promotes the growth of the hair.

OTTAWA, ILL., April 8th, 1878.

Messrs. JOSEPH BURNETT & CO.:

Gentlemen:—For over two years I have suffered terribly with "scald head" in its worst form. A few weeks ago I tried a bottle of your COCOAINE. The first application gave me relief, and now the disease is effectually cured. I cheerfully recommend BURNETT'S COCOAINE to any one suffering with the above complaint. Yours respectfully,

N. C. STEVENS,
Deputy Sheriff.

FOR RELIEVING THROAT TROUBLES, "*Brown's Bronchial Troches*" have a world-wide reputation, and as they contain nothing that will injure the system, they can be used without fear of bad results.

HOP BITTERS does not exhaust and destroy, but restores, cures and makes new.

"DON'T TRAVEL MUCH?"—Then look out for icy walks, edged tools, etc., and insure in THE TRAVELERS.

LARGE numbers of the AUDIPHONE have been sold to deaf persons throughout the country, and are now in successful use. In the churches, at the concert, as well as in the home circle, the simple device is doing its work.

KIDNEY and urinary trouble is universal, and the only safe and sure cure is HOP BITTERS—rely on it.

A MOST novel business card has been issued by the ST. NICHOLAS HOTEL in the shape of beautifully engraved miniature fans, which are greatly in demand by the ladies, for albums, etc. They consist of marine and landscape views, and are exquisite in design and execution. Ladies can obtain these cards by addressing Mr. Welch, proprietor of the ST. NICHOLAS HOTEL, Broadway, New York.

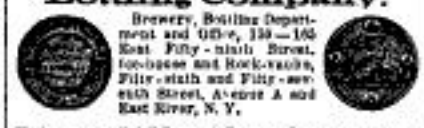
KEEP MANUFACTURING COMPANY
631, 633, 635 & 637 Broadway, New York.

A Fortune Quickly Made.

Money has been made more rapidly within the last few months in Wall Street than at any period since 1873. Immense profits have been realized from small investments. The following affidavit explains itself:



Personally appeared before me, George A. Payne, of 134 West 46th Street, New York City, to me known, and, on being duly sworn, says that on an investment of $25 placed with Thatcher, Belmont & Co., Bankers, and by them operated for a period of two weeks, I had returned to me by the said firm $972.55.

(Signed) GEO. A. PAYNE.

State of New York, } ss.
City and County of New York, }
Sworn before me this 22d September, 1879.
J. B. NOYES, Notary Public,
93 Doane Street, New York.

Thatcher, Belmont & Co. accept subscribers on their 1 per cent. margin or in their concentration of capital, whereby a number of small sums, from $10 upwards, are aggregated and stocks operated. Latest Wall Street information sent free upon application by Messrs. Thatcher, Belmont & Co., Bankers, P. O. Box 1367, or 48 Broad St., New York.

SCHMITT & KOEHNE.

FRANK LESLIE'S
ILLUSTRATED NEWSPAPER,
53, 55 & 57 PARK PLACE, NEW YORK.
FRANK LESLIE, EDITOR AND PUBLISHER.

NEW YORK, DECEMBER 27, 1879.

OUR HOLIDAY DOUBLE NUMBER.

With our next issue will appear a Holiday Double Number which, from its artistic and literary merit, as well as from the care bestowed upon its compilation, is destined to prove one of the most signal of our many successes. The contents will be as varied as interesting, while the whole gamut of human passion will be rung both in song and story. Miss Ella W. Pierce contributes an intensely dramatic tale, entitled "At Christmas"; W. E. McCann, a thoroughly seasonable story, "A Deep Christmas Snow"; Amanda Douglas, an appealing narrative, "Left on a Doorstep," and N. Robinson, a ghost story, "A Ghastly Revelation." "Which of Them did He Marry?" by the author of "Don't ask Mamma," and "Uncle Charley's Christmas Party" are comical, bright and cheery, while Joaquin Miller's poem, "The Tramp of Shiloh"—written expressly for this Number—is one of the gifted poet's best efforts. The two splendid double-page engravings, "Old England in the Olden Time," and "New England in the Olden Time," so suggestive of Christmas revelry, form another special features in our Holiday Supplement. Price of double number, 32 pages, 15 cents.

In this paper, the Interview—being the ninth of the series—with General Joseph E. Johnston will be found vividly interesting, recalling, as it does, "daring deeds done in daring days," by one who has been so "stormed at by shot and shell."

THE Constitution of Atlanta, Ga., noticing the recent Interview with Hon. A. H. Stephens in FRANK LESLIE'S ILLUSTRATED NEWSPAPER, asserts that "the entire sketch is excellent and strikingly natural," and reports a heavy increased sale of this paper in its vicinity.

FRANK LESLIE'S CHATTERBOX.

IN a recent issue the *Plaster and Granger*, of Atlanta, Ga., speaks thus of this standard child's publication:

"This pleasant little child's magazine is upon our table, brimful of piquant reading and taking illustrations for the little folks. Somehow we have a weakness for children's literature. The simple style necessary to reach the comprehension of the little ones is our ideal of writing. And the things that amuse the children have not lost all charm for us. Subscribe for the Chatterbox for the little ones."

THE VITAL QUESTION.

THE financial problem now pending before the people perplexes the political philosopher by its speculative difficulties, the statesman by the magnitude and complexity of its relations, the business man because he sees that his practical interests are involved in its wise solution, the politician because he knows that the fate of parties is quivering in the balances held by the men who aspire to be "President makers" at Washington.

The medley of motions made in this direction serves to reveal the chaos of opinion which prevails among the men who, by virtue of their position and office, ought to guide and enlighten the public judgment. What with motions to repeal the legal-tender clause in the Greenback Act, to overthrow and cancel the greenbacks, to withdraw them gradually, to leave the existing monetary status undisturbed, and to swell the volume of greenbacks with a fresh inflation, we see that the "assembled wisdom" at Washington is only little better than "confusion worse confounded."

Yet through this muddle of blended politics and finance there runs a hard and fast line of division and differentiation. It is the line which separates those who see the necessity of doing something in a right direction, and those who resolutely close their eyes against this necessity, either because they cannot see it or because they do not wish to see it. The President proposes to eliminate the evil and peril of the financial situation by a gradual cancellation of the greenback circulation, but the query has been raised whether it can be said of him that what he wishes under this head he wishes *strongly*, so strongly as to make it a matter of Executive pressure on the party of which he is the official head. We do not doubt for ourselves the earnestness or the sincerity with which the President entertains the policy he has recommended to Congress; but that he should bring his personal and political influence to bear on the legislative minds of his political friends is alien alike to the temperament, the habits and the conscientious convictions of Mr. Hayes.

Senator Carpenter straightway filed in the Senate a resolution directly antagonizing the financial views and recommendations contained in the recent message of the President. Senator Ingalls follows in a still more formal and detailed indictment of the President's propositions. And now it is announced that the Republican caucus of the Senate has decided to adopt the resolution of Mr. Carpenter as the "sense" of the Republican minority.

The Democratic majority are equally rent and torn with dissensions on this topic. At the very threshold of the session, Mr. Bayard introduced a joint resolution proposing to declare that "from and after the passage of this resolution the Treasury notes of the United States shall be receivable for all dues to the United States excepting duties on imports, and shall not be otherwise a legal-tender, and any of said notes hereafter reissued shall bear this superscription."

It was hoped at first that this resolution would receive the support of many who have heretofore figured in the Democratic ranks as the neophytes of paper money. It offered them a convenient stepping-block whereon to dismount from the "high horse," on which the Democratic Party has been careering to its ruin even in the States where the hapless steed was first born and put out to pasture. Democratic riders, however, still are found who seem quixotic enough to bestride the spavined Rosinante of paper money. And what exit they see from the *cul-de-sac* into which they are picking their way it passes all comprehension to perceive. The Republicans justify their expectant attitude on the ground that the Supreme Court, if they wait long enough, will come to their relief by deciding, in the Butler-Crittenden case, against the reissue of the greenbacks in a time of peace when they are more of a hindrance than help in the present financial state of the country. When that decision comes, if it shall be adverse to the reissue of the greenbacks, as is assumed, the Republican leaders expect to have the courage of the Court's opinions if they have not the courage of their own. They hope then to put themselves in the van of the forward movement for honest money.

It is not a bold and manly policy which the Republican managers set before their eyes, but it is an intelligible one in point of party strategy. They hope to make themselves masters of the political situation with the least possible risk from defection and straggling in the Republican ranks. But what do the Democrats expect from a policy of inaction? With a majority in both Houses of Congress they have the affirmation of the issue on all pending questions. On this most exigent of all pending questions, they cannot hope to escape the responsibility thrust upon them by their legislative supremacy. If they aspire to the Executive leadership of the nation, it is only fair that the country should judge of their capacity under this head by the signs of their capacity as national legislators. For the pending question is rather one of legislation than of administration. Mr. Bayard has opened a path by which the wayfaring Democrat may find his way again to the Hard Money ground of the Democratic fathers, but how many prodigals will return is something which the future alone can disclose. At present the prospect does not seem to be good either for the Democracy or for the country.

OUR COMMERCE AND SHIPS.

PRIOR to our late "sectional unpleasantness" the United States possessed an ocean marine second only to that of England in point of tonnage. In those days Americans were largely interested in sea-going vessels, and the great bulk of the exports from and imports to this country was carried in American bottoms. So late as 1857 more than seventy-five per cent. of the merchandise passing between Europe and this country went and came in vessels owned by our own citizens. The war swept away our splendid fleets of merchantmen as well as all accruing benefits.

The following table covering six fiscal years, each terminating on June 30th, and exhibiting the value of exports and imports carried by American and foreign vessels, will serve to show how rapidly the commerce of the country changed hands:

Years.	Imports, Exports and Re-exports.		
	Total Trade.	American vessels.	Foreign vessels.
1859	$[illegible]	$463,741,381	$220,816,211
1860	762,286,560	507,267,737	255,040,793
1861	530,168,412	350,927,256	179,242,156
1864	669,805,094	284,661,686	385,203,548
1865	871,133,290	396,967,245	474,164,045
1866	1,093,066,748	324,181,463	768,885,285

The advantages then lost have never been regained. The total of vessels entered at the seaboard ports, as we learn from Secretary Sherman's recent report, was 11,530,527 tons during the year ending June 30th, 1878, and 13,768,137 tons during the last fiscal year, showing an increase of 2,237,610 tons, or about nineteen per cent. The American tonnage entered exhibited an increase of only 40,306 tons, or one per cent., while the foreign showed an increase of 2,197,304 tons, or nearly twenty-six per cent. The tonnage in these cases is computed on the basis of the number of vessels entered, and is restricted to seaboard ports. Of the total amount of merchandise brought in at the seaboard, lake and river ports, during the last fiscal year, an amount of the value of $143,599,353 was imported in American vessels, and $310,499,599 in foreign. Of the exports, a value of $128,425,339 was shipped in American, and $900,769,633 in foreign, vessels. Of the combined imports and exports twenty-three per cent. only of the total value was conveyed in American vessels.

Ever since the close of the war a great deal of talk has been expended upon the necessity of restoring our merchant-marine and regaining our lost power upon the high seas. The action, however, has not corresponded with the declamation. Unable to build competitive ships at home, our merchants, unlike those of continental Europe, have not been permitted to go to the Tyne or the Clyde and purchase the required vessels. Antiquated navigation laws have been kept upon the statute-book to more and more paralyze the right arm of industry, by preventing the upbuilding of a mercantile navy. Almost every article entering into the building of ships, as well as articles required for their outfit and supply, have been burdened with taxes. The course pursued, in fact, has been such as to retard, if not actually prevent, the restoration of American commerce to American hands. To our disgrace be it spoken, among the many lines of ocean steamers now running to and from the port of New York, there is not one carrying the American flag.

Of the the carrying trade it may be said that "there's millions in it," and these millions go to enrich countries other than our own. If we are to regain that trade and earn these millions, our merchants must have the privilege of obtaining ships on an equality with the foreigner. If necessary to make the purchase abroad, the statutes must be so changed as to permit foreign-built ships to secure an American register. Secretary Sherman is right in saying that "the recovery of our old position in the carrying trade will more than counterbalance any disadvantage likely to ensue from a modification of restriction upon the right to purchase"; but we are not so certain that they should not—for a time, at least—come into the country duty free.

In this connection, we are pleased to note that a Bill has been introduced in the House of Representatives by Judge Buckner, of Missouri, to authorize the purchase of foreign-built ships by United States citizens for use in foreign trade. This is a move in the right direction, one which should have been made years ago. We trust that the importance of the measure may be appreciated by Congress, and that the result will be the restoration of our old-time supremacy on the ocean.

ABOUT POLITICAL PRIMARIES.

HOW to pack a primary meeting is one of the first lessons in American politics. The local politicians in the larger cities and towns know just what voters are likely to attend, what influences it will be necessary to secure, what agencies are to be used, and how far their personal weight must be supplemented by possible combinations and the offer of pecuniary rewards. There is no occult science in the study of means for controlling a primary meeting; it has long since been reduced to an accomplished art, to be practiced, mainly, by political gamblers, and turned to the account of corrupt and worthless candidates.

The reason for this condition of affairs, long since discovered and deplored, is found, of course, in the limited attendance of voters. Our people take no real interest in politics until the battle is well under way, and they begin to hear the roar of the heavy guns. Such a trifling affair as the preliminary steps to the contest is quite unworthy the attention of men immersed in business or devoted to pleasure; and so it has come to pass that we go out to battle badly officered, and our country is more than half governed by the worst qualified members of the community. The evil, too, is being aggravated from year to year. It is easier to pack a primary meeting now than it was twenty years ago, and it will be easier twenty years hence than it is to-day, if some steps are not taken to work a reformation.

But we ought not to be helpless in this deplorable situation. True, we have tried every argument and every means of persuasion. We have appealed to the patriotism of men, to their sense of public duty, and, when the tax-collector has been permitted to legally plunder the community, even to their pecuniary interests. But those means have all failed, and we must change our devices. It will not be wise to call spirits from the vasty deep when we have every evidence that they will not come at our bidding. Some other method of securing the apparition of a few good citizens at the primary meetings must be suggested; but it must be radical. It must be one that will, perhaps, startle an extreme advocate of personal liberty; but voters should be held to their duty under the penalty of disfranchisement. No person should be permitted to absent himself from the primary meetings of the party to which he adheres save for the best of reasons; for if it be absolutely essential to the purity of the Government and the well-being and prosperity of the community that good men only shall be placed in office, then we have a right to adopt measures to give potency to the best public opinion of the community at that source of all political power, the meeting held for the selection of delegates to nominating conventions.

The construction of a law to meet the emergency is not at all difficult. We compel a registration of voters previous to an election, to prevent frauds. Why not so fashion and administer the law that it shall also show if the voter has done his whole duty in the work of selecting the candidates who are competing for responsible offices? It will require no extraordinary ingenuity to transfer the place of registration to the primary meeting. The mere act of depositing the name and address of the voter on his entrance into the room would furnish the officers of registration nearly all the means necessary for completing the lists. But if this method be thought too loose, there is still another. Many hands make light work, and the entire labor of registration in a voting precinct could be completed in a few hours, leaving ample time for the more weighty business of the occasion. Lists so made out would require a revision to enable the few who were unavoidably absent to still secure their votes. But their excuses should be very good, indeed, to enable them, afterwards, to exercise a citizen's privilege on election day.

This suggestion has peculiar significance at this time, when one great party in New York has just thrown away the State because of dissatisfaction with the act of delegates sent to its nominating convention; and some of the adherents of the other party can almost, for a like cause, find it in their hearts to regret the victory thrust upon them, and to wish that they had been equally self-sacrificing with their opponents. No more unsatisfactory canvass was ever made in any State, and upon both sides the evil sprang from the same cause—packed primary meetings.

SILVER AS MONEY.

SO far from the position and rank of silver in our currency system having been settled by the legislation of 1873, it is now apparent that the question of what is to constitute our metallic money was never more unsettled than at the present time. Prior to that legislation the Government of the United States, in the course of eighty years, had coined silver to the extent of $145,141,884, of which sum only $8,045,838, or a little more than five per cent. of the whole, was in the shape of standard dollars. Down to and including the year 1805 the total issue of such dollars only made an aggregate of $1,439,517. Thirty years then elapsed during which the coinage of this particular class of money remained suspended, and it was not until 1836 that the national mint turned out one thousand of the now much venerated "dollars of the fathers." Thence onward to 1873 the Government minted, in all, 6,606,321 silver dollars, making the foregoing mentioned total of $8,045,838. In 1872 the price of silver per standard ounce, in the London market, ranged from 59½ to 61½ pence, and American dollars, rated in gold, commanded a premium. Under the coinage Act of February 12th, 1873, the coinage of such dollars were discontinued without manifestations of opposition from any quarter. Silver had not then become cheap and the fluctuating article that it has since proved to be. In 1872 the ratio of value between gold and silver was 1 to 15.63. In 1877 the relative value of silver was quite 18 to 1 of gold. Under this state of the case, the Bland-Allison Act reviving the coinage of silver dollars of 412½ grains was passed, and became a law, February 28th, 1878. Since then, as we learn from official sources, the coinage of such dollars has amounted to $45,206,200.

Notwithstanding the efforts made by the Treasury Department to put this coinage into circulation, it is quite evident that the country does not take kindly to the use of cheap silver dollars. Secretary Sherman, in his annual report, discouragingly says: "The total amount of silver dollars coined to November 1st, 1879, under the Act of February 28th, 1878, was $45,206,200, of which $13,002,662 was in circulation, and the remainder, $32,203,538, in the Treasury at that time." The Government, according to this exhibit, has been obliged to retain almost 71½ per cent. of this cheap coinage in its own vaults, and yet Congress, in face of the fact, coupled with the President's warning protest, manifests an insane

Digitized by Google

disposition to continue the purchase of silver which, after coinage into dollars, must remain a dead weight upon the Treasury.

The simplest mind can understand that under the control of the living spirit the human body differs widely from the same body when the spirit has departed, but all men know that the living spirit does not emancipate the body from control of the physical laws pertaining to it as a body. So, too, with metal when coined into money under legislative enactment. Legislation imparts certain new attributes, but the old attributes remain unimpaired. Whether as coin or bullion it continues subject to the law of commerce, and its intrinsic value is governed by the operations of supply and demand. Although the Government stamp marks the money something more than merchandise, its character as merchandise remains indestructible in the markets of the world. A knowledge of these self-evident truths compels the opinion that Congressional legislation, as applied to metallic money, does not possess the attributes of omnipotence. It is the sheerest nonsense for our legislators to assume that they can control or suspend fixed financial laws, or that they can create values by enactment; or that they can exercise supreme jurisdiction over the realm of money. We admit that it is within the power of legislation to keep up the present nonsensical coinage of silver. We acknowledge that Congress may direct an unlimited issue of cheap silver dollars, and, as in the case of the greenbacks, make them legal-tender for all debts; but there its power ends. It can impart no value to such dollars. With standard silver selling at fifty-two pence, or thereabouts, per ounce, in London, the minted dollars of 412½ grains will have a corresponding value. The market price of silver bullion, despite the edicts of Congress, will govern the value and purchasing power of the dollars. It is scarcely necessary to add that gold, the standard of all values, measures the market value of the silver.

The silver dollar of 412½ grains was originally established under the Act of 1837, and represented silver at about fifty-nine pence per ounce. That metal is now selling in the London market at seven or eight pence less per ounce than the price of 1837, and yet the weight of the silver dollar remains unchanged. As a swindling operation it has no parallel, not even in the Credit Mobilier iniquity. And yet, within the past few days, Senator Voorhees, of Indiana, has had the effrontery to propose in the United States Senate a resolution looking to the free and unlimited coinage of these dishonest silver dollars. The plain intent of this resolution is to substitute a depreciated medium of exchange for a better money, and to enable the owners of bullion to pocket the difference between one hundred cents and whatever may be the market value of 412½ grains of standard silver. The Treasury now receives this difference, and thus far it has amounted to several millions of dollars.

We remark, by way of conclusion, that to legislatively decree that the proportion between silver and gold shall be and remain as 16 to 1, or 15½ to 1, or whatever figures Congress may choose to adopt, while the bullion value of silver in the commerce of the world is constantly fluctuating, would be like enacting a law that a river's tide should never rise above nor fall below a certain water-mark. Silver, we are free to admit, has a purpose to serve in our monetary system. It is the proper money for the small transactions of retail trade. It is, therefore, correct and judicious to use it in a subsidiary form and to make it a legal tender to a limited amount. It is not, however, the sort of money needed for the great transactions of modern commerce, nor is it the metal to serve as a standard of value in the conduct of those transactions.

EVENTS ABROAD.

THE trade depression in France is assuming the ghastly proportions of famine. The Chamber of Deputies has taken up the question, and a grant of 5,000,000 francs has been voted, to be supplemented in the event of this sum being found insufficient. Unhappily, a political hue was sought to be given to the vote by suggesting that care should be taken to prevent the money from being applied to electioneering purposes. The vote was carried by 524 to 3 in the Chamber, and unanimously by the Senate. The severity of the Winter is making itself terribly felt, and the Seine is now completely frozen over, a circumstance which has not occurred since 1863. Marshal Canrobert would seem to be extremely desirous of hunting with the hare and running with the hounds. The Bonapartists have thrown him over on account of his non-attendance at the funeral of the Prince Imperial, denouncing him as the blackest of ingrates, and he now comes forward with a statement, in explaining the circumstances of his election to the Senate, that on the 2d of December, 1851, he was ignorant that a *coup d'état* was contemplated, and that he simply obeyed orders as a soldier. What a chance for newspaper pyrotechnic display!

Who is whispering into the ear of King John of Abyssinia? for most assuredly he is being egged on to war with Egypt by some power behind the throne. Could it be possible that that arch-scamp, who is now with his harem enjoying the climatic delights of southern Italy, the ex-Khédive, is egging on his quondam foe with a view to further Egyptian complications. King John's ultimatum means $150,000 or war. The Council of War in Cairo, on receiving this information, have lost no time in preparing for the inevitable struggle, and the disposition of the expeditionary forces is already made. Eighteen thousand men will be immediately dispatched to Massuwah; another column, 18,000 strong, will be pushed forward as far as Gallabat, and a third corps of 18,000 troops will be sent up the Blue Nile. The marshaling of such strong forces against the fierce ruler of Abyssinia shows that the Egyptian Government has no intention of risking another disaster like that of January, 1876, but purposes making effective work of King John and his dominions. An Egyptian defeat might bring the ex-Khédive again to the throne of the Ptolemies.

Germany is dealing iron-handed with her iron roads. The Lower House of the Prussian Diet has passed the Railway Purchase Bill, while the Landtag has adopted the Railway Committee's resolutions prescribing the principles upon which the Government must administer the railways. The rules and regulations laid down by the Landtag will form a nut for other Governments to crack as well as that of Kaiser Wilhelm's. It is rumored that Prince Bismarck will resume the reins of the Government steeds before Christmas, and that all kicking over the traces must cease when the arch-Chancellor steps upon the box. A draft Bill, proposing certain changes in the German Constitution, has been introduced into the House—two propositions of which are likely to create fierce and fiery discussion, namely, the introduction of biennial sessions of Parliament, and the prolongation of the budget period.

Spain is agitated from Irun to the Rock of Gibraltar. Martinez Campos, the conqueror of the Carlistas and Cubans, has resigned the premiership. It was Campos who invented Alfonso, and it is not likely that the young King will throw him over, especially as the little general is a hard hitter and very popular down South. In the Basque Provinces his life wouldn't be worth one of Alfonso's bride's hairpins.

True bills having been found against the Irish prisoners, and Messrs. Davitt, Killen and Daly are to be treated to what Justice Denman termed, in O'Connell's trial, a "mockery, a delusion and a snare." It is probable that the Government will go no further with the matter, as puny martyrs don't count, and as yet Messrs. Parnell, Biggar and Coy have talked treason within their rights.

Famine and frost everywhere in Europe. Unwelcome guests at Yuletide. Nearly all the rivers and brooks in Transylvania have overflowed their banks, laying under water vast tracts of country and destroying bridges and houses, interrupting communication, and sweeping away farming utensils, cattle and grain. In some cases the inhabitants were for days on trees and roofs of houses, awaiting rescue. The overflowing of the Rivers Koros and Maros, in Hungary, has caused fearful destruction. The City of Arad, on the Maros, and several other towns, have been ruined and their inhabitants driven away. Fully 10,000 persons have been rendered homeless.—A Pesth dispatch states that six villages have been ruined by the flood near Arad. Many entire families who had found refuge in neighboring woods were frozen to death. Several hundred persons are missing.

Lord Lytton, Viceroy of India, has narrowly escaped the fate of his predecessor, Lord Mayo. One fell by the knife of the assassin; the other has just experienced the sensation of hearing the whiz of a brace of bullets from the pistol aimed for the purpose of taking his life. The would-be vice-regicide was instantly arrested, and will, we presume, be restored to Allahabad Lunatic Asylum, from whence he has been recently discharged.

THE first exercise of woman suffrage in Massachusetts had a very desirable effect; it rendered the polling-places more quiet and orderly than they ever were before.

ARRAIGNING a woman before the law on a charge of being a witch seems like a transaction in Salem in 1692; yet this was done in New York City on December 8th, 1879.

THE record of the fishing-fleet of Gloucester, Mass., for the past year is a sad one. Although the catch for the season was very satisfactory, two hundred and forty lives and thirty vessels are counted among the losses.

IRRIGATION, which has made many a sterile spot blossom as the rose, is sorely needed in countless regions of our Western prairies. The want of running water is not only a serious check to the building up of cities and towns, but a positive hindrance to the proper agricultural development of sections otherwise rich and promising. The Bill, therefore, of Senator Hill, of Colorado, to authorize the Secretary of the Interior to bore a number of artesian wells on the Western Plains, for the purpose of ascertaining whether water can be obtained by this means in sufficient quantities to irrigate the land and supply cattle, is a most timely one.

A PRACTICAL safeguard against injury and death at fires by falling walls has been adopted by the Fire Commissioners of New York, who have ordered a detail of one fireman in each company whose sole duty at a fire shall be to watch the burning building and notify the chief of battalion at the first intimation of danger from its falling.

ENGLAND'S hopes as regards iron, as well as food, would seem to be centred in this Continent. At a recent meeting at Barnsley, Mr. Hanbury, M.P., in reference to the revival of trade, stated that he knew from authentic sources that 6,000 miles of railway were to be laid in the United States, and that the Americans would have to import five-sevenths of the rails so required. The importance of this statement to England will be better estimated when it is remembered that the total mileage of the United Kingdom does not quite reach 18,000 miles. Mr. Hanbury would seem to forget that Germany has already competed for our orders; and as our foundries are driven to their highest tension, and still unable to supply the demand upon them, both England and Germany may reasonably congratulate themselves upon a pretty brisk business.

"WHAT becomes of all these immigrants?" one is tempted to ask, as the daily papers note the large arrivals at our main ports. During the month of November the number of immigrants landed at the port of New York alone amounted to 15,295, while for the year ending November 30th the arrivals reached the large total of 134,058, against a total of 81,235 for the preceding year. As it is seldom we now hear of complaints, the supposition is strong that those strangers find little difficulty in obtaining employment upon their arrival. The fact is that invitations to new settlers are sent from the West in every conceivable form. Agents of the great trunk lines of railroad are scattered over Europe inducing emigration, and, to compete with them, several of the States have sent commissioners abroad, offering greater or less advantages to artisans and tillers of the soil. And now the Grangers are at work issuing addresses, extolling the richness of this or that section, wherever in foreign lands there is any marked depression in agricultural or industrial labor. The result of these efforts is that shortly after the arrival of the desirable class of immigrants, they are dispatched to new fields of labor.

CONGRESS AT WORK.

MONDAY, *December 8th.*—SENATE—Three Bills and resolutions providing for the removal of the Ute Indians from Colorado; a Bill authorizing the appointment of a special Labor Commission; a Bill to aid the education of colored people by an investment for them of the $250,000 unclaimed money of colored troops; and a resolution opposing the recommendations of the President and Secretary of the Treasury in regard to the legal tenders were introduced. HOUSE—An adjournment was taken on account of the death of A. M. Lay, of Missouri.

TUESDAY, *December 9th.*—SENATE—Resolution touching war claims discussed and amended. Vice-President submitted communications asking appropriation to cover deficiency in the Post Office Department; reporting upon advisability of abandoning the military stations controlling the equatter immigration to the Indian Territory; asking for appropriations to pay West Point Cadets, and petitioning, in the name of the General Assembly of the Presbyterian Church, for a commission of inquiry concerning the liquor traffic. HOUSE—Two resolutions of sympathy with the Irish peasants, and a number of financial Bills and resolutions, were introduced. Mr. Cox's Immigration Bill was favorably reported, and a resolution for adjournment December 19th adopted. A joint resolution proposing an amendment to the Constitution extending the official terms of President and Vice-President to six years, making such officers ineligible for more than one term consecutively, and limiting the terms of Members of Congress to three years, was introduced and referred.

WEDNESDAY, *December 10th.*—SENATE—The House adjournment and the war claims resolutions were passed. Senator Conkling introduced a Bill to prevent the unloading of garbage in the waters about the Port of New York. HOUSE—Bill providing for the publication of the Supreme Court reports was passed, and a discussion took place on the Political Contribution Bill. A joint resolution was introduced proposing an amendment to the Constitution prohibiting polygamy in the United States and places subject to its jurisdiction.

THURSDAY, *December 11th.*—SENATE—A Bill providing for the construction of new forts on the Mexican frontier was passed, and a resolution looking to the removal of the Utes from Colorado adopted. An adjournment was taken to the 15th. HOUSE—A resolution of inquiry into the colored exodus from the Southern States during the Summer was passed; the Bill relative to the unloading of foreign vessels was recommitted, and a Bill for the relief of distillers in certain cases was passed.

FRIDAY, *December 12th.*—HOUSE—The Fortifications Appropriation Bill, after being amended by a clause giving $50,000 for Galveston Harbor, was passed; and the Pension Bill appropriating $34,404,200 was passed without debate. A number of private Bills were passed, after which the House adjourned to the 15th.

NEWS OF THE WEEK.

Domestic.

A NATIONAL Agricultural Society was organized in New York City on the 10th.

COLONEL COURTENEY, the Independent candidate, has been elected Mayor of Charleston, S. C.

A CATHEDRAL of the Protestant Episcopal Church in Chicago was consecrated December 11th.

GENERAL GRANT received popular welcomes at Louisville, Ky., on December 10th, and Cincinnati, 11th.

GOVERNOR ROBINSON has granted a reprieve to Greenfield, the convicted murderer, until January 30th.

AN International Dairy Fair was opened in the American Institute building, New York, December 8th.

ABOUT 1,000 women voted in Boston, on December 9th, for members of the school boards for the first time.

HON. GEORGE M. MCCRARY, ex-Secretary of War, has been commissioned Judge of the Eighth Judicial District.

AT its regular session in New York, the American Geographical Society discussed the Nicaraguan Canal project, December 8th.

THE total debt of Boston at the close of this year will be $42,359,816.23, being a decrease during the year of $9,120,624.

A PETITION in favor of the repeal of the legal-tender clause has received a great number of signatures of merchants and bankers in New York and Boston.

CONSIDERABLE excitement has been created in the Union League Club, of New York, by a motion to prohibit the further election of Democrats to membership.

THE United States Grand Jury at New York recommended the establishment of a National Prison and Reformatory, with graduations in the classes of convicts.

THE Readjusters of Virginia have nominated General William Mahone for United States Senator, to succeed Senator Withers, whose term expires on the 4th of March, 1881.

THE town of Red Rock, near Bradford, Pa., was set on fire, December 11th, by streams of burning oil from a 20,000 barrel tank, and all the business and private houses were destroyed.

THE hearing of the mandamus against the Secretary of State of Maine was opened at Augusta, on the 10th. On December 12th Judge Virgin dismissed the petition against the Secretary.

JEFFERSON DAVIS has been made defendant in the Equity branch of the United States Circuit Court in Louisiana to test the validity of the will of Mrs. Dorsey, who left all her property to him.

THE Committee on Technical Schools, of the State Board of Education, have appointed a sub-committee to visit similar schools in other States, and ascertain the steps to be taken in their establishment.

JUDGE HOVEY, in the Superior Court, has appointed Robert E. Day receiver of the Dime Savings Bank, of Hartford. This bank, which has been under an injunction for eighteen months, has 7,000 depositors, and holds about $600,000 of deposits.

A RULE to show cause why a mandamus should not issue to compel the Board of Assessment and Receiver of Taxes of the City of Elizabeth, N. J., to assess and levy a tax to meet the judgment obtained by the Goelet Brothers, of New York, has been granted.

THE Rev. Enoch C. Wines, D.D., founder of the National Prison Association, and delegate from the United States to the several sessions of the International Penitentiary Congress, died at Cambridge, Mass., December 16th, in the seventy-fourth year of his age.

THE Police Commissioners of Cincinnati have voted to make no more arrests for giving theatrical shows on Sunday until the pending cases are determined, and also modified the order requiring collections shows to be suppressed, so as to allow the shows to go on, and the proprietors to be arrested and dealt with according to law.

THE recommendation of the National Board of Trade, urging Congressional legislation to regulate the charges of transportation of freights by railroads, is an endorsement of the Reagan Inter-State Commerce Bill, which passed the House at the last session of the Forty-fifth Congress, but failed in the Senate.

THE joint resolution reported Dec. 12th from the Committee on Naval Affairs of the appointment of a commission to select a site for the Naval Observatory will, it is believed, enable the commission to determine upon a proper place for the location of the observatory, so that the work may be begun without delay.

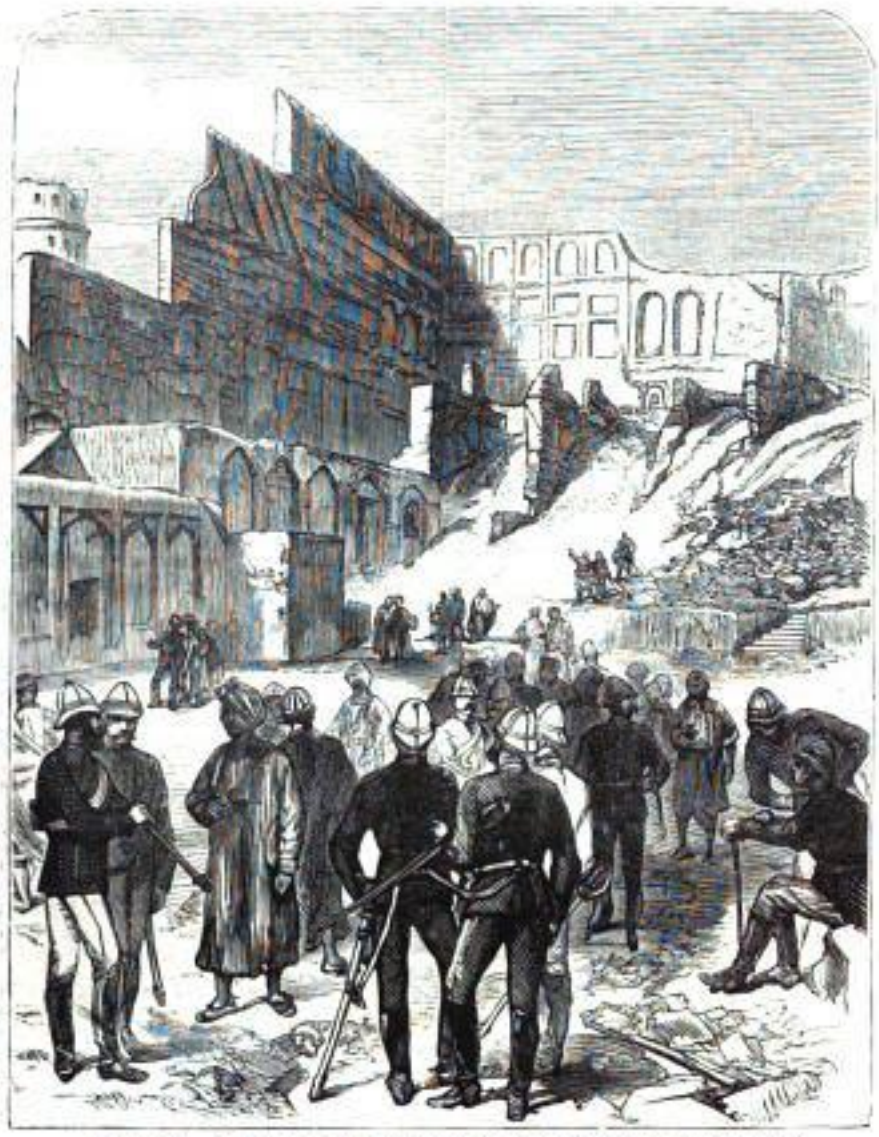
THE New York State Board of Canvassers declined, on December 12th, to go behind the returns, and at once declared the result of the late State election. A few changes only are made in the figures previously reported. Mr. Hoskins's plurality is increased to 290, General Carr's plurality is increased to 1,875, and Mr. Seymour's is reduced to 12,441.

Foreign.

FOR the first time since 1861, the river Seine, at Paris, was frozen over on December 11th.

THE German Landtag has adopted the Railroad Committee's resolutions prescribing principles on which the Government must administer the railways.

LORD LYTTON, Viceroy of India, on his arrival at Calcutta, on December 12th, from a tour in the provinces, was twice fired at by a drunken East Indian, but escaped injury. The would-be assassin has been arrested.



NEARLY all the rivers and brooks in Transylvania have overflowed their banks, laying under water vast tracts of country. In some cases the inhabitants were for days on trees and roofs of houses awaiting rescue.

IN the French Chamber of Deputies, the Minister of the Interior has received a grant of about one million of dollars to relieve the existing distress from the trade depression, and demanding the adoption of his action as an expression of confidence in the Government. It was adopted by a vote of 524 to 3.

THE official account of the engagement between General Stacy's command and the force under Mahmood Jans shows that General Macy, while attempting to intercept the enemy, was attacked by great numbers. His cavalry, before abandoning the field, overturned the guns and made repeated charges. The guns were not recovered until the arrival of General Macpherson's force. The enemy later attacked the British in the hills south of the Bala Hissar, but were beaten off with loss. General Roberts reports that the combination of the Afghan tribes against the British is considerable.

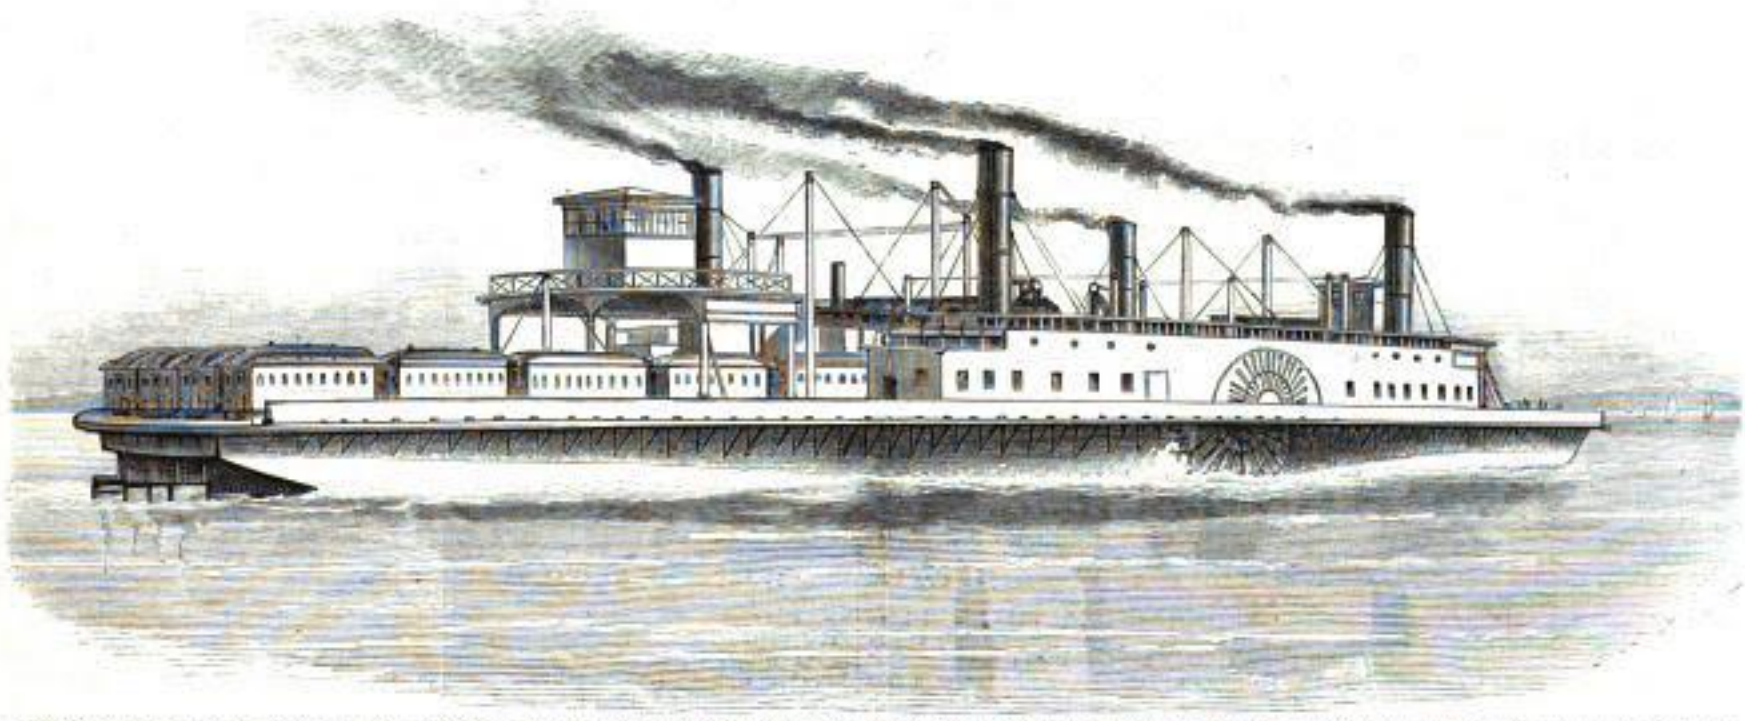
A MONSTER FERRY-BOAT.

WHAT is confidently called the largest ferry-boat in the world was given a trial on Monday, December 1st, at San Francisco, and behaved satisfactorily in every respect. The *Solano* was built for the transportation of passenger and freight cars across the Straits of Carquinez from Port Costa to Benicia. Her dimensions are: Length over all, 424 feet; length on bottom (she has no keel), 406 feet; height of sides in centre, 18 feet 5 inches; height of sides on each end, from bottom of boat, 15 feet 10 inches; molded beam, 64 feet; extreme width over guards, 116 feet; width of guards at centre of boat, 25 feet 6 inches; reverse, sheer of deck, 2½ feet. She has two vertical-beam engines of 60-inch bore and 11-inch stroke, built at Wilmington, Del. The engines have a nominal power of 1,500 horses each, but are capable of being worked up to 2,000 horse-power each. Upon the deck of the *Solano* are four tracks extending her entire length, with a capacity for carrying forty-eight loaded freight cars, or twenty-four passenger coaches of the largest class. The rudders are worked by an hydraulic steering gear, operated by an independent steam pump. The rudders are connected with the ordinary steering gear, so that, in case of any disarrangement of the hydraulic apparatus, the vessel may be guided by it. The advantage of this improvement is that the immense craft can be handled with ease by one man, whereas, if the ordinary wheel and system of steering were used, six men would be required at the wheel.



By the new route, on which she is to be run, the distance between San Francisco and Sacramento will be but 85 miles, instead of 140 miles, *via* Livermore, and 151 *via* San Pablo. It is expected upon her establishment on the ferry line the Va route will be practically abandoned, only business being done through it.

DIOGENES' TUB A WINE-JAR.

ANOTHER harmless and familiar delusion been swept away by the restless broom scientific investigation. The tub of Diogenes graphically depicted by Busch in his inimit "Bilderbogan," has been relegated to the dis limbo of discredited myths. Diogenes, so we sternly informed by German archæologists, n lived in a tub at all. The illustrious stoic resi in a jar—a sort of overgrown earthenware pit without a handle. Careless translators, who h recklessly rendered the Greek word for "wine-j by the comparatively modern substantive "tu are responsible for the error in which humai has been unwittingly plunged for over so m hundreds of years. Pliny assures his read ancient and modern, that tubs are of Gallic ori Diogenes can have known nothing about th The Greeks kept their wine in jars, freque bottomless, and thrust into the soil of their ce floors, so that the liquor poured into them m not dribble out through inequalities in the lo rim of the amphora. It was in one of these bott ...se pitchers that Diogenes took up his ab Placed upon its side, he slept in it; set upright, walked about in it. There is monumental evide extant to the fact that he chose for his dwellin cracked and chipped jar, unfit for liquor-contain

purposes, being prompted to this selection by his hatred of anything like luxury or wastefulness. In certain districts of Brazil, the aborigines formerly buried their dead in jars exactly similar to Diogenes' earthenware dwelling; and these quaint edifices are still not unfrequently found, containing mummified bodies of priests and warriors, with their ornaments and arms, under the giant trees on the banks of the Parauta, where abide the Carandes, a civilized Indian tribe.

THE STRANGE DOCTOR.

BY RICHARD B. KIMBALL, LL. D.,
AUTHOR OF "ST. LEGER," ETC., ETC.

"BY-the-way, what has become of Conant?" I asked of my college classmate, Luther Evans, the well-known in fact, celebrated, surgeon, whom I encountered by accident at the *Hôtel Bellevue du Lac*, at Zurich.

We had not met for five years, and here, on the shore of this beautiful lake, chance had thrown us together. We spent the evening in calling the roll of our classmates, and in comparing notes of information as to each one of them. Some of our companions were already in their graves; some who had started rich in promise had made shipwreck beyond any hope of recovery. There were others who had arrived at the happy haven which prosperity is supposed to afford; others still were struggling to reach it. The larger portion were married; a good many yet remained single. Sickness, misfortunes, and bad luck generally seemed constantly to have attended several; good fortune, firm health and unvaried success had been the lot of a few. It turned out, however, that the majority were recipients, in about equal proportions, of the ordinary good and ill which attend our poor humanity.

"By-the-way, what has become of Conant?"

"Ah, Conant—Prince Albert, as we used to call him. Well, he was a prince in nature and conduct. Have you heard nothing of him?" was my friend's reply

"Not for a long time. I saw him in Chicago six or eight years ago. His career appeared to be a brilliant one. Not long after, I was told he had left the place in an unexpected manner, and had gone no one knew whither. Ames spoke of a love affair, but I knew Conant too well to credit any such nonsense."

"Ames is a fool!" ejaculated Evans, with emphasis—"simply a fool; that is all."

"Then you don't know what has become of Conant?"

"I have not said that. In fact, I do know what has become of him," returned my classmate.

"Well?"

"I do know; no one else knows—no one else," muttered Evans, rapidly. "I know what has become of him. I shall tell you. It will be easier kept if you and I both know—easier kept. Your word to secrecy of course. I shall feel better satisfied after I have told you. Because, you know, I doubt sometimes the evidence of my own senses in this matter."

I confess I began to suspect some mellow wine we were drinking was having an undue effect on his senses; but I said nothing. I was soon undeceived. For Evans continued as quietly and methodically as if he were amputating a limb, quite in contrast with his nervous manner at the beginning.

"You remember, Albert Conant and I were room-mates for the whole four years. Of course you know it, and how we were called Damon and Pythias, and all that sort of thing. The only one who fully shared our friendship was yourself. How well you know that, too, else would I now be making this revelation? When we left college we still kept together. We attended one course in Philadelphia, one in New York. Then we went abroad. Conant devoted himself principally to medicine, and I to surgery. It was all the more agreeable, for we had a wide range of topics to talk about, and there were many branches which we pursued together, listening to the same lectures and walking the same hospitals. From Paris we went to Vienna; this was to please me, for there were special advantages there in my department. How enthusiastic we were! How truly ambitious of a career! I had abandoned medicine as a leading pursuit and gone over to surgery from a total lack of faith in the dispensatory. We were, all of us, so it seemed to me, groping in the dark, and, for my part, I was desirous to feel myself on firm ground. Not so Conant.

"'I admit,' he said, 'that medicine is not a science; but tell me, are we not making an advance?'

"'No doubt—no doubt,' I would say; 'but it is more experiment, after all. I am not willing to prescribe a medicine when I cannot predicate its effect upon my patient. A conscientious practice of medicine is mere expectancy, and that is no practice at all."

"'You talk nonsense,' Conant would answer. 'Progress in medicine comes as progress comes in all other things, by careful study, observation and experience, and the practical application of our experience. It shall be my ambition to do something before I die towards placing medicine in its proper position as a science.'

"Ah, he was very earnest, very sincere. I recollect, after we came back to Paris, that Magendie gave him a terrible shaking up at his opening lecture in the Autumn at the Hotel Dieu, of which Magendie was at the head. It was on the memorable occasion when that famous physician distinctly told the students not only that medicine was not a science, but almost in terms that the dispensatory was a humbug, asking derisively who could cure a headache? He went on to say that in one of his wards he divided his patients into three classes. The first he treated according to the dispensatory, to the second he gave bread pills and colored water, the third received nothing at all. The latter grumbled a good deal ('*les imbéciles*,' as the lecturer called them), but all got well. Every one in the second class also recovered. A few in the first class died. 'Nevertheless,' added Magendie, 'we are making progress, and I have hopes at the end of a hundred years that medicine will have become a science. Then, no doubt, phthisis will be cured.' I enjoyed the lecture hugely, and from time to time nudged Conant, as much as to say, 'What do you think of it?' for he was a great admirer of Magendie. As we left the lecture room after he had concluded, Conant took my arm, exclaiming: 'That is what I call a great man—a man who, with such a reputation, dares to say he does not know! What I have heard does not one whit discourage me; it does me good. I am quite content to spend all the years of my life in the attempt to advance the progress of the most interesting, most humane, and the most beneficent of studies.'

"We came home at last. I settled in New York. Conant went to Chicago, where certain advantages by way of acquaintances and introductions awaited him. It was not long before he became known. His career was rapid and brilliant. We saw each other very seldom. Twice in the course of ten years he visited New York for a day or two—he came expressly to see me—twice I was in Chicago, I may say literally for the purpose of seeing him. Those were days of the highest, truest enjoyment; memorable days never to be forgotten. I found Conant unsoiled by worldliness, selfishness or small ambition. The same lofty purpose which filled his breast when a student still inspired him. Meanwhile our correspondence never slacked, so that our friendship did not become an old memory, but was preserved fresh, increasing all the time. I had already married, and it was but natural that I should urge Conant to go and do likewise. I used even to add a bit of worldly wisdom to my suggestion, telling him how advantageous it was for a physician to be a married man. His reply would be: 'All in good time, my friend—all in good time, my friend; when the right person comes along I shall make haste to follow your excellent example: till then, *patience*, as the Spaniard says.'

"Well, a time came when Conant was engaged to be married. He announced it in his characteristic way, and instead of giving me particulars he said, 'Come and see for yourself.' This I had made up my mind to do and wrote him accordingly. His answer came without delay. It was a long letter, written in his happiest vein, with a smack of his old student habit, and brimfull of current incidents and topics: no allusion to his engagement, for that would not be like him, but I could see plainly that he was living in a paradise.

"I shall never forget that letter—it was the last I ever received from him. I answered it within ten days, and told Conant that I was going to give myself a long vacation, at least for me. I was to spend two weeks in the Adirondacks, and that he might look for me at furthest in three weeks from the date of my letter. Four days after, I left New York, disposed of the two weeks as I had planned, and was to take the train at the nearest station the next morning for my trip Westward.

"Late that afternoon our little mail arrived. Among my letters was one which struck a sudden terror into my soul. It was the letter I had addressed and mailed to Conant, returned to me with the indorsement, '*Not found*.' I felt a wretched, sickening, sinking sensation at my heart. I sat perfectly still, my eyes fixed on those two words, till the twilight began to gather about me. This brought me to my senses. 'Pshaw!' I exclaimed to myself, aloud, 'what is the matter with you? It is some odd blunder at the post-office. A mistake in reading the address,' but the superscription was painfully legible and the residence not to be mistaken. 'A blunder—a gross blunder, that is all. In forty-eight hours it will be all right. I will overhaul those post-office fellows for giving me such a start. I will make a special report of the case to the Postmaster general, that I will!'

"I started early the next morning. Notwithstanding all my reasoning, a dead weight hung at my heart the whole way. I reached Chicago on the morning of the second day, about half past seven. I drove directly to Conant's house. I ran up the steps and rang the bell nervously. I waited for a response, but none came. I rang again and again—no answer. A market-boy who was passing with his basket, stopped and looked at me.

"'There ain't no one living in that house, mister,' he said.

"'I thought Dr. Conant lived here.'

"'He's moved away.'

"'How long since?'

"'Oh, more than three weeks ago.'

"'Where has he moved to?'

"'Don't know;' and the boy trudged on.

"I felt relieved by this colloquy; there was some excuse for the return of my letter, though a flimsy one, since Conant was so well known. I was about driving to the house of a mutual friend where I might learn where he had removed to, when a gentleman, who lived in the house opposite, who evidently had been a witness of my dilemma crossed the street and addressed me.

"'You are looking for Dr. Conant, I presume?'

"'Yes.'

"'The doctor has left Chicago.'

"'Good God! you don't say that!' I exclaimed. 'How did it happen?'

"'A very sad affair, I assure you, sir. You are a friend of the doctor's?'

"'The most intimate friend he has. I have just arrived from New York expressly to pay him a visit. What does it all mean?'

"'If you will step into my house for a few moments,' said the gentleman, 'I will tell you the little there is known about it.'

"I was only too glad to accept his invitation. His narrative was brief.

"'You know,' he said, 'the doctor was soon to be married.' I assented. 'The young lady was one of the most charming in Chicago. She died, about four weeks ago, after an illness of a few hours—a most mysterious and inexplicable illness. Upon her death the doctor disposed of everything he had, including his medical library, in fact, everything to the most minute articles, and left the city. He told no one where he was going, not even his most intimate friends, and nobody knows where he has gone. No one has heard a word from him, the whole matter is enveloped in mystery from beginning to end.'

"Sadly I descended the steps, declining the worthy man's invitation to take breakfast with him, and drove to the house of the friend I have just mentioned. I really could get from him no information in addition to what I had already received. Some details were added about the rapidity with which Conant disposed of his effects. He would converse with no one, he entered into no explanations, and in this strange manner he quitted the place where his labors had been so brilliantly successful.

"That evening I took the train back to New York. I knew, after a while, I should hear from Conant. I knew it was impossible for him to abandon the friendship that existed between us. No doubt he was stunned by so swift and sudden a blow; after the first terrible shock should be over he would come and see me, or let me know where I could go to him. He never wrote, he never came, and for nearly seven years I was in ignorance of what had become of him."

Evans paused so long in his history at this point that it actually seemed as if he had brought it to a conclusion, although I had felt it had scarcely been begun. I had no disposition to break the silence, and at length he resumed.

"You must not suppose that in those seven years I made no effort to discover his whereabouts; you must not suppose I waited patiently for him to communicate with me. I employed every means which I could devise to reach him; nothing which my ingenuity could suggest was left unattempted. I visited Chicago again, hoping to gain some clew, however trifling, but I could find nothing which gave me the least assistance. I went to see his relations, but they knew less than I did. They were his cousins, for Conant's parents were dead, and he was an only child. After that, I commenced a system of advertising. I would cause notices to be inserted in the leading newspapers all over the country, and also in Europe—notices which no one would understand but Conant, but which he could not fail to understand. I kept this up year after year. I sent them to every principal city in the United States, to London, to Paris, to Amsterdam, to Berlin, to St. Petersburg, and other places. No token came from these efforts. As you will perceive, by-and-by, not one of all these notices ever reached him—could not have reached him.

"Last Summer I made an excursion into one of the most remote and unfrequented portions of our country. I had reached what seemed to me the extreme border of civilization—the last settlement in that direction. Two gentlemen, who had accompanied me, had given out about ten miles below, and were to wait for me till I had accomplished this little extra trip. I took a smart lad for a guide, and in this way comfortably reached the place I have indicated. A dozen families were scattered about in as many log-houses. They were engaged in felling timber—clearing the land, and, to some extent, cultivating the soil. A set of hardy, energetic pioneers, such as you meet on our northwestern frontier. I was made heartily welcome at the cabin of one of these, a 'shake-down' was promised me, and a seat at the table as long as I chose to stay. As to trout-fishing I could not go amiss; all the small streams which coursed from the mountains towards the river were full of trout. For game, anything from the fox-squirrel to the catamount and bear could be had without much extra search.

"I do not know why I should be going into these particulars," continued Evans, after another pause, "except that I dread to approach my subject. I tell you that Conant's disappearance had made such an impression on me that I preferred these solitary excursions to any other; they served, in a degree, to tranquilize my mind and—and—— I don't know exactly what I want to say, or, rather, how to express myself; but it always seemed to me I might meet him somewhere in some strange, out-of-the-way place. Do you understand?"

I nodded.

"The second day I was following a small mountain stream filled with stones and occasional large rocks, which guarded deep pools of water, called by boys 'Trout holes,' where I had to fight my way against the thicket of branches which almost completely secluded it. I had dropped my line into one of these holes, to reach which I was obliged to stand upon two slippery stones. A splendid fellow had seized the bait, and, to secure him I made a sudden lurch to one side, heedless of where I was standing. The result was, in endeavoring to save my foothold, my ankle turned and I fell. I feared possibly that I had strained it seriously, and I had nothing to do but to hobble back to the cabin, which was, at least, a mile distant. It was slow work, and before I reached there I was suffering a good deal of pain. The people knew nothing of my profession, and the good housewife set to work in a practical way for my relief. One of the children was sent to pluck some wormwood which grew in the inclosure. It was bruised and mixed with spirits, and my ankle speedily bound up with it. I was greatly interested in the alacrity of the woman and the practical knowledge she displayed.

"'If it is not any better by morning,' she said, 'we must have the doctor look at it.'

"'The doctor?' I exclaimed. 'Do you mean to say that you have a doctor in this little settlement?'

"'Yes, indeed. He was here before any of us.'

"There flashed through my mind a premonition; then came a sharp, sudden pain, as if a knife had pierced me. It was with difficulty I caught my breath.

"The woman noticed it.

"'I fear you are getting ill, sir,' she exclaimed.

"'Yes, I feel very ill indeed,' I said. "Can't you get the doctor here right away?'

"'He lives a mile and a half off,' she answered, 'but I will go myself. He won't come unless a person is very sick. He is a strange man.'

"'Tell him,' I said, 'that I am very, very sick, and he must hasten.' I thought since I had begun to falsify I would not make any half-way work of it.

"'Oh, I hope you are not so bad as that,' said my hostess.

"'Yes, yes; I am,' I answered. 'Be quick, I beg of you. Stop one moment,' I exclaimed. 'What is the doctor's name?'

"'He don't appear to have any name, sir. At least, nobody ever heard it. I told you he was strange. We call him the "*Strange doctor*."'

"So saying, she started on her errand.

"I threw myself upon the bed and wrapped my cloak around me in a way that completely concealed my face. I knew who was coming—knew to a certainty.

"In about three-quarters of an hour I heard footsteps approaching. I peeped through a fold in the cloak, and saw, entering the cabin with the woman, a large, stout man, dressed in the coarsest materials, with long, flowing hair and unent beard. He wore upon his head a slouched hat. From underneath the broad brim shone eyes which, once seen, could never be mistaken.

"It was Conant.

"He came up to the bed, and in a quick, decisive tone he asked, 'What is the matter with you?'

"Not a soul was present in the room; the woman had gone to attend to her regular duties—not a soul was in the room save Conant and I.

"I threw back the cloak from my face and looked at him intently. He did not appear to recognize me.

"'Albert,' I said, 'I have come a long way to see you.'

"'To torment me,' he replied, without changing a muscle.

"'Good God!' I exclaimed, 'can this be you, Conant?'

"'No; it is not I. Does that satisfy you?' was his answer.

"'It does not satisfy me,' I said. 'I will not be satisfied till I hear from your own lips what all this means. My presence here is accidental. I did not know you were in the vicinity. Had I known it I should have come, of course. I have searched for you over the world these seven years—these seven long years, by every means that I could devise. Now, that I have found you, I *will* have an explanation. I will not quit the place till I get it, if I stay here the balance of my life.

"I had risen from the bed, thrown aside my cloak and stood confronting him. His agitation was fearful to witness. Large drops of perspiration gathered on his forehead and rolled down his face. His breathing became difficult and his frame shook.

"'You are not ill?'

"He spoke at last and in a natural tone

"'A slight twist of the ankle not worth mentioning,' I said. 'Thank God, I hear your natural tone once more,' I continued. 'Conant, I will not intrude myself on you, except to hear how this has come about. That I must know.'

"'You shall have it,' he replied, after a pause. 'I cannot refuse as we stand face to face, but I would have traversed a thousand miles to have avoided it—to have avoided you.'

"'To have avoided me, Conant?' I said; 'Have you no memories of our past companionship, no thought of our old life together?'

"'Nothing, nothing whatever,' he replied, in a perfectly calm tone. If I exhibited emotion on seeing you it was not from such recollections, but—no matter. How shall we manage?' he continued, after a long pause. 'If you would hear what I have to say you must come with me; this is no place for it; but you cannot walk, and I have no means of transportation.'

"'I will walk,' I said, 'if every step is an agony.'

"I made the best preparations I could. The two hours' rest disclosed there was nothing serious after all, and taking Conant's arm we proceeded to his dwelling.

"You know there is a certain magnetism a something which produces a sense of genuine companionship, when we take the arm of a friend. Between Conant and me this was always experienced in the strongest degree. Now there was none of it, no more than if I were grasping an inanimate object for support.

"Not a word was spoken the entire distance. We reached the place at last; a plain, log cabin like those in the neighborhood, only smaller. The door was wide open and I went in. I found myself in a room which contained a small iron bedstead and bed, one chair, a small table and a chest of drawers, positively nothing else.

"'Will you lie down,' said Conant. I said that I was all right, and sat down upon the bed. Conant took a seat beside me.

"'It is a short story, and shall be quickly told.' He spoke, in a sharp, incisive manner. 'You may remember the last letter I wrote you in reply to your promise that you would soon visit me—a long letter, wasn't it? Is it not strange,' he added, abruptly, 'that we are

permitted no warning, no presentiment, no subtle, psychological premonition of what almost instantly is to happen to us, involving catastrophe and destruction. The letter, yes. I posted that letter with my own hands. It was already evening'—here Conant's voice grew hurried. 'On my way home I stopped to see Eleanor; we were to be married in three months, three months from that very day. Who Eleanor was and what she was to me—you used to know me and you may imagine.

"'I was in particularly high spirits when I entered the room. I found Eleanor quite in the same mood. She always enjoyed the perfection of health. We spent an hour together, then some friends came in, and in the course of our general badinage, one of her cousins remarked:

"'"I think it is too bad, doctor, that Eleanor has never given you an opportunity to show what a skillful physician you are. Can't you persuade her to be a little sick just for once?"

"'"No, indeed; not even for once," I said.

"'"On due consideration," exclaimed Eleanor, entering into the spirit of of the scene, "I believe I am a little ill this evening, and am sure I should feel all the better for one of your prescriptions."

"'The jest ran round, Eleanor from time to time describing imaginary symptoms of a decidedly nervous character, and insisting that for the last two nights she had not slept well at all.

"'When it came to the point, however, that I was actually pushed by the company for a prescription, I unequivocally declined to make one.

"'"Ah," said Eleanor, "you do have patients who imagine they are nervous, with whom there is nothing whatever the matter, and for whom you are forced to prescribe. I have heard you say so. Now, I insist upon such a prescription. Do you know," she added, turning to one of her friends, "I have never yet set eyes upon one of his prescriptions."

"'It seemed foolish to continue serious, so I took my tablet and wrote this.' Here Conant produced a small scrap of paper. It read:

"'R.

Tr. Humuli . . . Zi.
Sig.—One teaspoonful in a wine-glass of water on retiring. CONANT.

"This, you, of course, know," remarked Evans, interrupting his narrative, "was nothing more than the tincture of hops, utterly harmless. Neither narcotic nor anodyne, slightly sedative only.

"'"This will prove of the greatest service to you, madam," I observed, with a professional air. "In the morning I shall expect to find you entirely recovered." There was a general laugh as I made the announcement and quitted the room with solemn dignity.

"'I had several visits to make, so that I did not reach home until after eleven. The first object my eye rested on as I entered the hall was a favorite maid-servant of Eleanor's. She started up quickly on seeing me.

"'"Oh, doctor," she cried, "Miss Eleanor has been taken so sick. I have been waiting half an hour for you to come in. They said you might come in any minute."

"'Will you believe it, my first impression was that this was a ruse from the hilarious party I had left to bring me on the scene again. A second glance at the messenger undeceived me. "What is it?" I asked.

"'"I don't know, doctor. My young lady is dreadful. Won't you come right away?"

"'I was at the house in five minutes. When I went in, her mother met me.

"'"Doctor," she said, "what can be the matter with Eleanor? Almost immediately on taking your prescription she began to have the most fearful symptoms."

"'"Did Eleanor really carry out the joke and send for the medicine?"

"'"Certainly she did. Was there any harm in it?"

"'"No more harm than in a spoonful of milk; but I had no thought she would send for it."

"'"Why, immediately on taking it, her suffering commenced. After a few minutes I was alarmed; we sent for you. She grows worse every moment."

"'I went into Eleanor's chamber—her chamber. She was in bed, in agony—in a great and not to be controlled agony.'

"'"Albert," she cried, "I am so very, very ill! How long you have been in coming to me. You did not know how ill I was, did you, Albert? But you are so wise, you will relieve me; I know you will."

"'There she lay *in the thrall of death*. You will understand the symptoms: A pungent heat in the palate and fauces; a burning sensation in the stomach; a numbness over the limbs, even to the extremities. The action of the heart intermittent and weak, with violent retching, yet the head clear, and three-quarters of an hour lost. You know what that means. "Where is the medicine?" I asked. The vial was placed in my hands. It was the tincture of aconite which had been put up instead of my harmless preparation!

"'All the remedies my experience could suggest were employed. It was too late. I knew it beforehand.

"'"Eleanor," I said, "I have murdered you. A fatal liquid has been sent instead of what I ordered."

"'She essayed to put her arms about my neck and to impress a kiss on my forehead. She expired as she made the effort.

"'What more is there to tell? I rushed to the druggist's. They had sent to the first petty place which came in sight. I roused the principal and demanded the prescription. It was correct. It had been put up by a young man considered to be competent and having experience. He fled that very night. Flight was confession. I was content that the wretch escaped.

"'I saw Eleanor laid in her grave; then I quitted the accursed town and went into the wilderness, where, I scarcely know. After a season I came here. Now let me conduct you back to your house.'

"'One word, Conant,' I exclaimed. 'Have you really nothing to say to me, your old, tried, loving friend? Do you throw me off in this way without a thought?'

"'You misunderstand,' he answered. 'I do not throw you off. I have no feeling—none. No sensibility touching the past remains to me—only Eleanor. I live only with Eleanor.'

"'But,' continued I, 'you do interest yourself in something. The folks here call you "doctor," and you came to me as such, not knowing who I was.'

"Conant laughed an unnatural laugh. 'It is true I sometimes attend these innocent people. I prepare their medicines with my own hands. Bread pills and colored water from Magendie's dispensatory. It is my entire pharmacopœia—ha, ha, ha! Nobody dies.'

"'But, Conant, have you no thought of duty? You with your talents, your acquirements, the prospects that might still await you?'

"'Prospects! Talk you to me of prospects when her voice is hushed? Talk you to me of prospects who should call myself her slayer by making a jest of my profession? Prospects for me! Think you I could encourage a new ambition with that scene—a living scene—before me? Come, come!'

"He helped me back to the log-house and turned and left me."

* * * * * *

Just then a company of merry voices broke in on us—hearty, healthful, strong. These came from a party of English people who were rowing about in their boats.

I looked at my watch. It was exactly twelve o'clock.

"Evans," I said, "there is no sleep for me to-night. Let us go on the water."

"It is what I was about to say myself," he replied.

We quitted the room and engaged a sturdy fellow for the night. A full moon shone over the mountain peaks and across the green valleys and upon the smooth waters of the lake.

We talked of everything—everything except what had lately so intensely held us; chatted about trivial scenes and nonsensical matters; and, so strangely contradictory are our human attributes, we laughed and we jested over them.

In this way the night wore on—the night during which neither of us felt willing to land.

It was not till the sun had sent his first glance above the glacier, across the bosom of the lake, that we attempted to find rest in a brief slumber.

WASHINGTON MARKET.

PREPARING FOR THE HOLIDAYS.

WHAT a cheery, joyous sight is Washington Market in the holidays! How redolent of Christmas, its plenty, its revelry! How suggestive of groaning tables and aldermanic feasts! Laneways of beef, groves of mutton, skies of game! Assuredly the good old times have returned in this year of grace, and we shall find ready-roasted pigs running around the market, crying, "Who'll come and eat us?" Let us pause opposite a stall where Lucullus himself would have tarried for hours. Mr. Drohan, with his partner, Mr. Powell, so like the Lester Wallack of twenty years ago, in the "smock-frock" of trade, cheerily greet us. They are surrounded by deer, buffalo, moose, venison, wild turkey, wild geese, canvas-backs, red heads, quail, partridge, grouse, teal, pigeons, squabs, woodcock, pigs in rigging, possums, terrapin, tame fowl of all kinds, and other varieties of game too numerous to mention.

"Step in," says the lynx-eyed Drohan. "Take care of that bear," laughs Powell. "Look out for the buffalo." "Keep clear of the antlers of that buck." "Steer past those partridges." "Give the possum a wide berth." Amid friendly and timely warnings of a similar character, after having accidentally fallen foul of a grizzly, and become impaled in the antlers of a Minnesota buck; having run the gauntlet of a buffalo with a disinheriting countenance, the artist and I found ourselves in the sanctum of this the most extensive and most influential game firm in this or, indeed, any other known market.

"I never knew game so dear and so scarce," said Mr. Drohan. "We didn't send fifty pair of canvas-backs to Europe this year, and last year we forwarded 500 pair. There are no ducks at Havre de Grace, and the New Yorks are poor and uncertain. I sent twenty-five pair to an up-town hotel this morning, and I had to pick them out of two barrels, and each barrel holds thirty pair. The largest canvas-back I ever handled was seven and a half pounds. If I dumped him I could have made him eight pounds, but this I never do. Seven pounds is the average weight of a top canvas-back. The wild turkey has the flavor of a grouse and is all dark meat. It is greatly run on. We have no pigeons except what have been shot at matches—they are out of season. Quail are unusually dear. I never recollect them so dear. We get our bear from all quarters, principally from Maine. We got two last year from the Catskills; one of them wounded the man who killed him. The only venison we care to sell comes from Minnesota. The venison from this State is of no use to us. I sell it at a cent a pound, and it's only bought by the Germans. They kill venison on Long Island still. Two hundred pounds is a very fine buck, 150 pounds is a good average—225 is extra large. The heaviest turkey I ever handled was thirty-eight pounds. I had several honest turkeys at that weight last Thanksgiving."

Mr. Powell denounced the game law that precludes the selling of venison in New York State after the 1st of January.

"If I want to sell venison I have only to go over to New Jersey and get the buyer to meet me there," he indignantly exclaimed. "The Game Club have had a meeting relating to this venison question, and it was proposed to allow the season to remain open till 1st of February. All venison and game that does not come to New York goes to Europe or Massachusetts. One hundred thousand dollars' worth of game is sold between January 1st and March 1st, and another $100,000 worth would be sold if the law were amended. We must see to this in Congress, pay a good fee, and get a Bill passed that will suit the views of New York dealers in game."

How tempting are the stalls! How seductive the proprietors thereof! Was there ever such beef!—not even the loin that the Merry Monarch dubbed Sir Loin!—ever such mutton? Little Bo-Peep should be here, as the sheep have left their tails behind them. What fish, from the lordly salmon to the prickly sprat, from the gigantic halibut to the oleaginous sardine. What fruit! Oranges such as must have grown in the garden of Hesperides; apples to tempt not only Adam but St. Anthony; pears from California, grapes from everywhere, and then the bananas and plantains, and guavas and the thousand and one tropical fruits. Shall I not pay tribute to the peanut, as well as to the bumptious growth of cocoa? What dried fruit! What butter, and bacon, and cheese! What color-glory in vegetables, from the golden carrot to the primrose-hearted cabbage! What flowers, too, and trees and plants! How well-tempered and good-humored and cheery is every one. What nudging and elbowing and "By your leave there!" What bargaining and chaff and fun! There are many cheery sights at this cheery time, but the cheeriest of all is a walk through Washington Market.

GRAND RECEPTION OF GENERAL GRANT IN PHILADELPHIA.

EVEN in the season of her Centennial excitements Philadelphia was never more brilliant with decorations nor demonstrative with enthusiasm than on Tuesday, December 16th, when the first of the grand series of welcome festivities was extended to General Grant. A committee had journeyed to Harrisburg to meet him, and upon his arrival at the Broad Street intersection of the Pennsylvania Railroad, he was formally received by Mayor Stokley and the city authorities. While carriages were conveying the party from the station, the military were forming in line for the great procession. In addition to the local and State militia there were representatives of the National Guard of other States, and a good-sized division of veterans of the Grand Army of the Republic from countless cities. The parade moved from the intersection down Broad Street to Market, down Market to Fourth, down Fourth to Chestnut, up Chestnut to Thirteenth, up Thirteenth to Vine, up Vine to Broad, down Broad to Passyunk Road, and countermarched on Broad Street so as to be reviewed by General Grant, Governor Hoyt and Mayor Stokley from the Union League Building.

A triumphal arch was erected directly in front of the main entrance to Independence Hall, between Fifth and Sixth Streets, which spanned Chestnut Street entirely. It was very large and richly decorated. In front of John Wanamaker's Chestnut Street store a magnificent structure was erected, spanning the street, and being covered with bunting, evergreen and appropriate mottoes. The firm also built a platform capable of seating several thousand persons in front of their depot on Market Street. Plumer's American House, one of the ancient landmarks of Philadelphia, opposite Independence Hall, was so elaborately decorated that it attracted general attention; and the building now occupied by the New Bound Brook House, between New York and Philadelphia, was also attractively and conspicuously dressed out for the occasion. The arch in front of the State House, and that of the Grand Army of the Republic, and the Commercial Exchange, and, in fact, the greater portion of the decoration done by the city, were in the hands of Mr. J. G. Scheible, who showed much taste in his department. After the parade General Grant was driven to the residence of Mr. George W. Childs, on the corner of Twenty-second and Walnut Streets, where he was welcomed by a very distinguished company of ladies and gentlemen. The magnificent dwelling of the host was brilliant with flowers, evergreens, gas jets and lighted tapers. A princely banquet was served in the grand dining-room, at which Gessler's Blue Seal accompanied the choicest viands of the season. After the banquet, General Grant and wife received a number of personal friends; and in the evening they were honored with a serenade by the German singing societies of the city.

The programme for the remainder of his visit is a very full and interesting one. As near as the various committees have been able to decide, it embraces the following features: On Wednesday, December 17th, a reception occupying two or three hours, will be held at Independence Hall, and in the evening a reception at the residence of Mayor Stokley. Thursday, December 18th, a reception by the Grand Army of the Republic, and in the evening a Grand Army campfire at the Academy of Music, with speeches, music, etc. Friday, December 19th, a reception by the Commercial Exchange, Maritime Exchange and Board of Trade, and in the evening a reception at the residence of A. J. Drexel. Saturday, December 20th, a reception by the school-children and teachers at the Academy of Music, and in the evening a banquet and reception by the citizens at the Academy of Fine Arts. Monday, December 22d, a visit to Girard College and other public buildings. In the evening a reception at the residence of General Robert Patterson. Tuesday, the 23d, a reception by the Union League, for which extensive preparations are being made.

PICTORIAL SPIRIT OF THE FOREIGN ILLUSTRATED PRESS.

The British Residency at Cabul.

Our engraving shows the interior of the Residency buildings looking northwards, and the position where that little party of brave men, defending the Residency against five thousand armed barbarians and fanatical assassins, took refuge at the last hour of the protracted combat. The upper parapet, it will be seen, had been pierced with loopholes, hastily made by the besieged, for the purpose of firing through them upon the mob of assailants below. The walls, being constructed of dried mud or plaster laid over thin brickwork, are everywhere marked with bullet-holes, and so are the doors likewise. To the left of the view appears a small turret rising outside, which is that of the Kala Fenaghee, whence the Afghans were enabled to fire upon the roof of the Residency.

Major Chard's Sword of Honor.

On Monday, November 10th, Major Chard was presented with a sword of honor and a chronometer in recognition of his heroic defense of Rorke's Drift, Zululand, the ceremony taking place at the Plymouth Guildhall. The scabbard is ornamented with panels representing the Mission House at Rorke's Drift, the arms of Plymouth and England, Vulcan forging the arms of Achilles, a trophy of broken Zulu weapons, an allegoric device of a lion and an elephant, symbolizing the triumph of the British arms in South Africa, the Victoria Cross, the arms of Major Chard and the Royal Engineers, a trophy of Engineer's tools crowned with laurel, Britannia, and St. George and the Dragon.

A Timber-shoot in Bavaria.

The rivers in the flat parts of Bavaria are obstructed by weirs to keep the water always at a certain level, through which "shoots" are made, so that the rafts of timber which come down from the forests above may pass the barrier. The "shoot" in the present case was about 100 yards long by 7 or 8 wide, bordered at the bottom and sides, down which the water rushed from the higher to the lower level. Although considered very exciting in Bavaria, this method of timber-rafting is quite tame beside that in Nevada, of which we have given an illustration.

Return of the Deputies to Paris.

The French Chamber of Deputies took possession of the reserved quarters in the Palais-Bourbon at Paris, on November 26th, and for the first time since the eventful 4th of September, 1870, the business of the nation was transacted in Paris, the bewildering "Government of Versailles" now exists only in history.

The Fish Market, Amsterdam.

Amsterdam, the Holland parent of New York City, with its many canals and intercourse by water, has, of course, a great fish market, and travelers complain that it adds to the already excessive number of bad smells. The supply of fish is large and of good quality, and the inhabitants show that their food is good and thoroughly enjoyed in spite of a malarious country and the swarms of musquitoes. The sketch of this part of Amsterdam, though lively and humorous, is perfectly genuine, and presents actual types of the worthy citizens who would probably claim kinship with some of our Knickerbocker families.

Celebrating Oehlenschlager's Birth.

The one hundredth anniversary of the birth of Adam Oehlenschlager, the Danish poet, was observed with much ceremony at Copenhagen on November 14th last. The students of the universities were very demonstrative, and after participating in the day services, formed, with torches, an immense procession at dark, and marched through the chief streets. Our engraving shows the crowd at the Museum of Thorwaldsen.

The New Post-office at Rome.

Pope Gregory XVI., in 1839, erected a post-office on the Palazzo Colonna, a fine building with a portico of sixteen columns, after plans by Camporesi, but during the French occupancy this building became their headquarters, and the post-office was removed to the part of the Madama Palace now occupied by the Senate. It returned subsequently to quarters in the Palazzo Colonna, till the present structure was ready. The Palazzo has been sharply criticised, and it is overloaded with decoration inappropriate on a great public building.

AT HOME AND ABROAD.

—KANSAS claims an increase of 144,097 in population in the past year, its recent census showing 849,978 inhabitants.

—THE University of the South is to be endowed with three memorial professorships in honor of Bishops Elliott, Polk and Otey.

—THE well-known Wesleyan Chapel, in City Road, London, founded by John Wesley, was nearly burned down on Sunday, December 7th.

—THE French Senate has restored the original figures of the estimate for the stipends of the bishops, which the Chamber of Deputies had reduced.

—IT is estimated that there are 150,000 persons suffering from famine in Upper Silesia. They are mostly Poles. The Government is working energetically for their relief.

—THE dissolution of the Bulgarian Assembly by Prince Alexander has produced the utmost astonishment among the Opposition members, who, being in the majority, expected to come into power.

—THE news of the appointment of General Ignatieff as Russian Ambassador to Rome has created quite a scare in Government circles at Vienna. Semi-official newspapers qualify it as a provocation to Austria.

—THE Luxembourg Palace has narrowly escaped destruction. A fire, which had been smouldering for some time, broke out under the flooring of the library, but was discovered and extinguished before it had extended.

—A COMPETITION has been opened for a monument typical of the siege of Paris, to be erected at Courbevoie, in the place of the statue of Napoleon I., which was pulled down and thrown into the Seine after the fall of the Second Empire.

—THE Philadelphia Mint is coining eagles and half-eagles at an average of $200,000 worth daily. The larger proportion of this amount is in eagles. It is anticipated that the coinage of this Mint during the present month will aggregate $10,000,000.

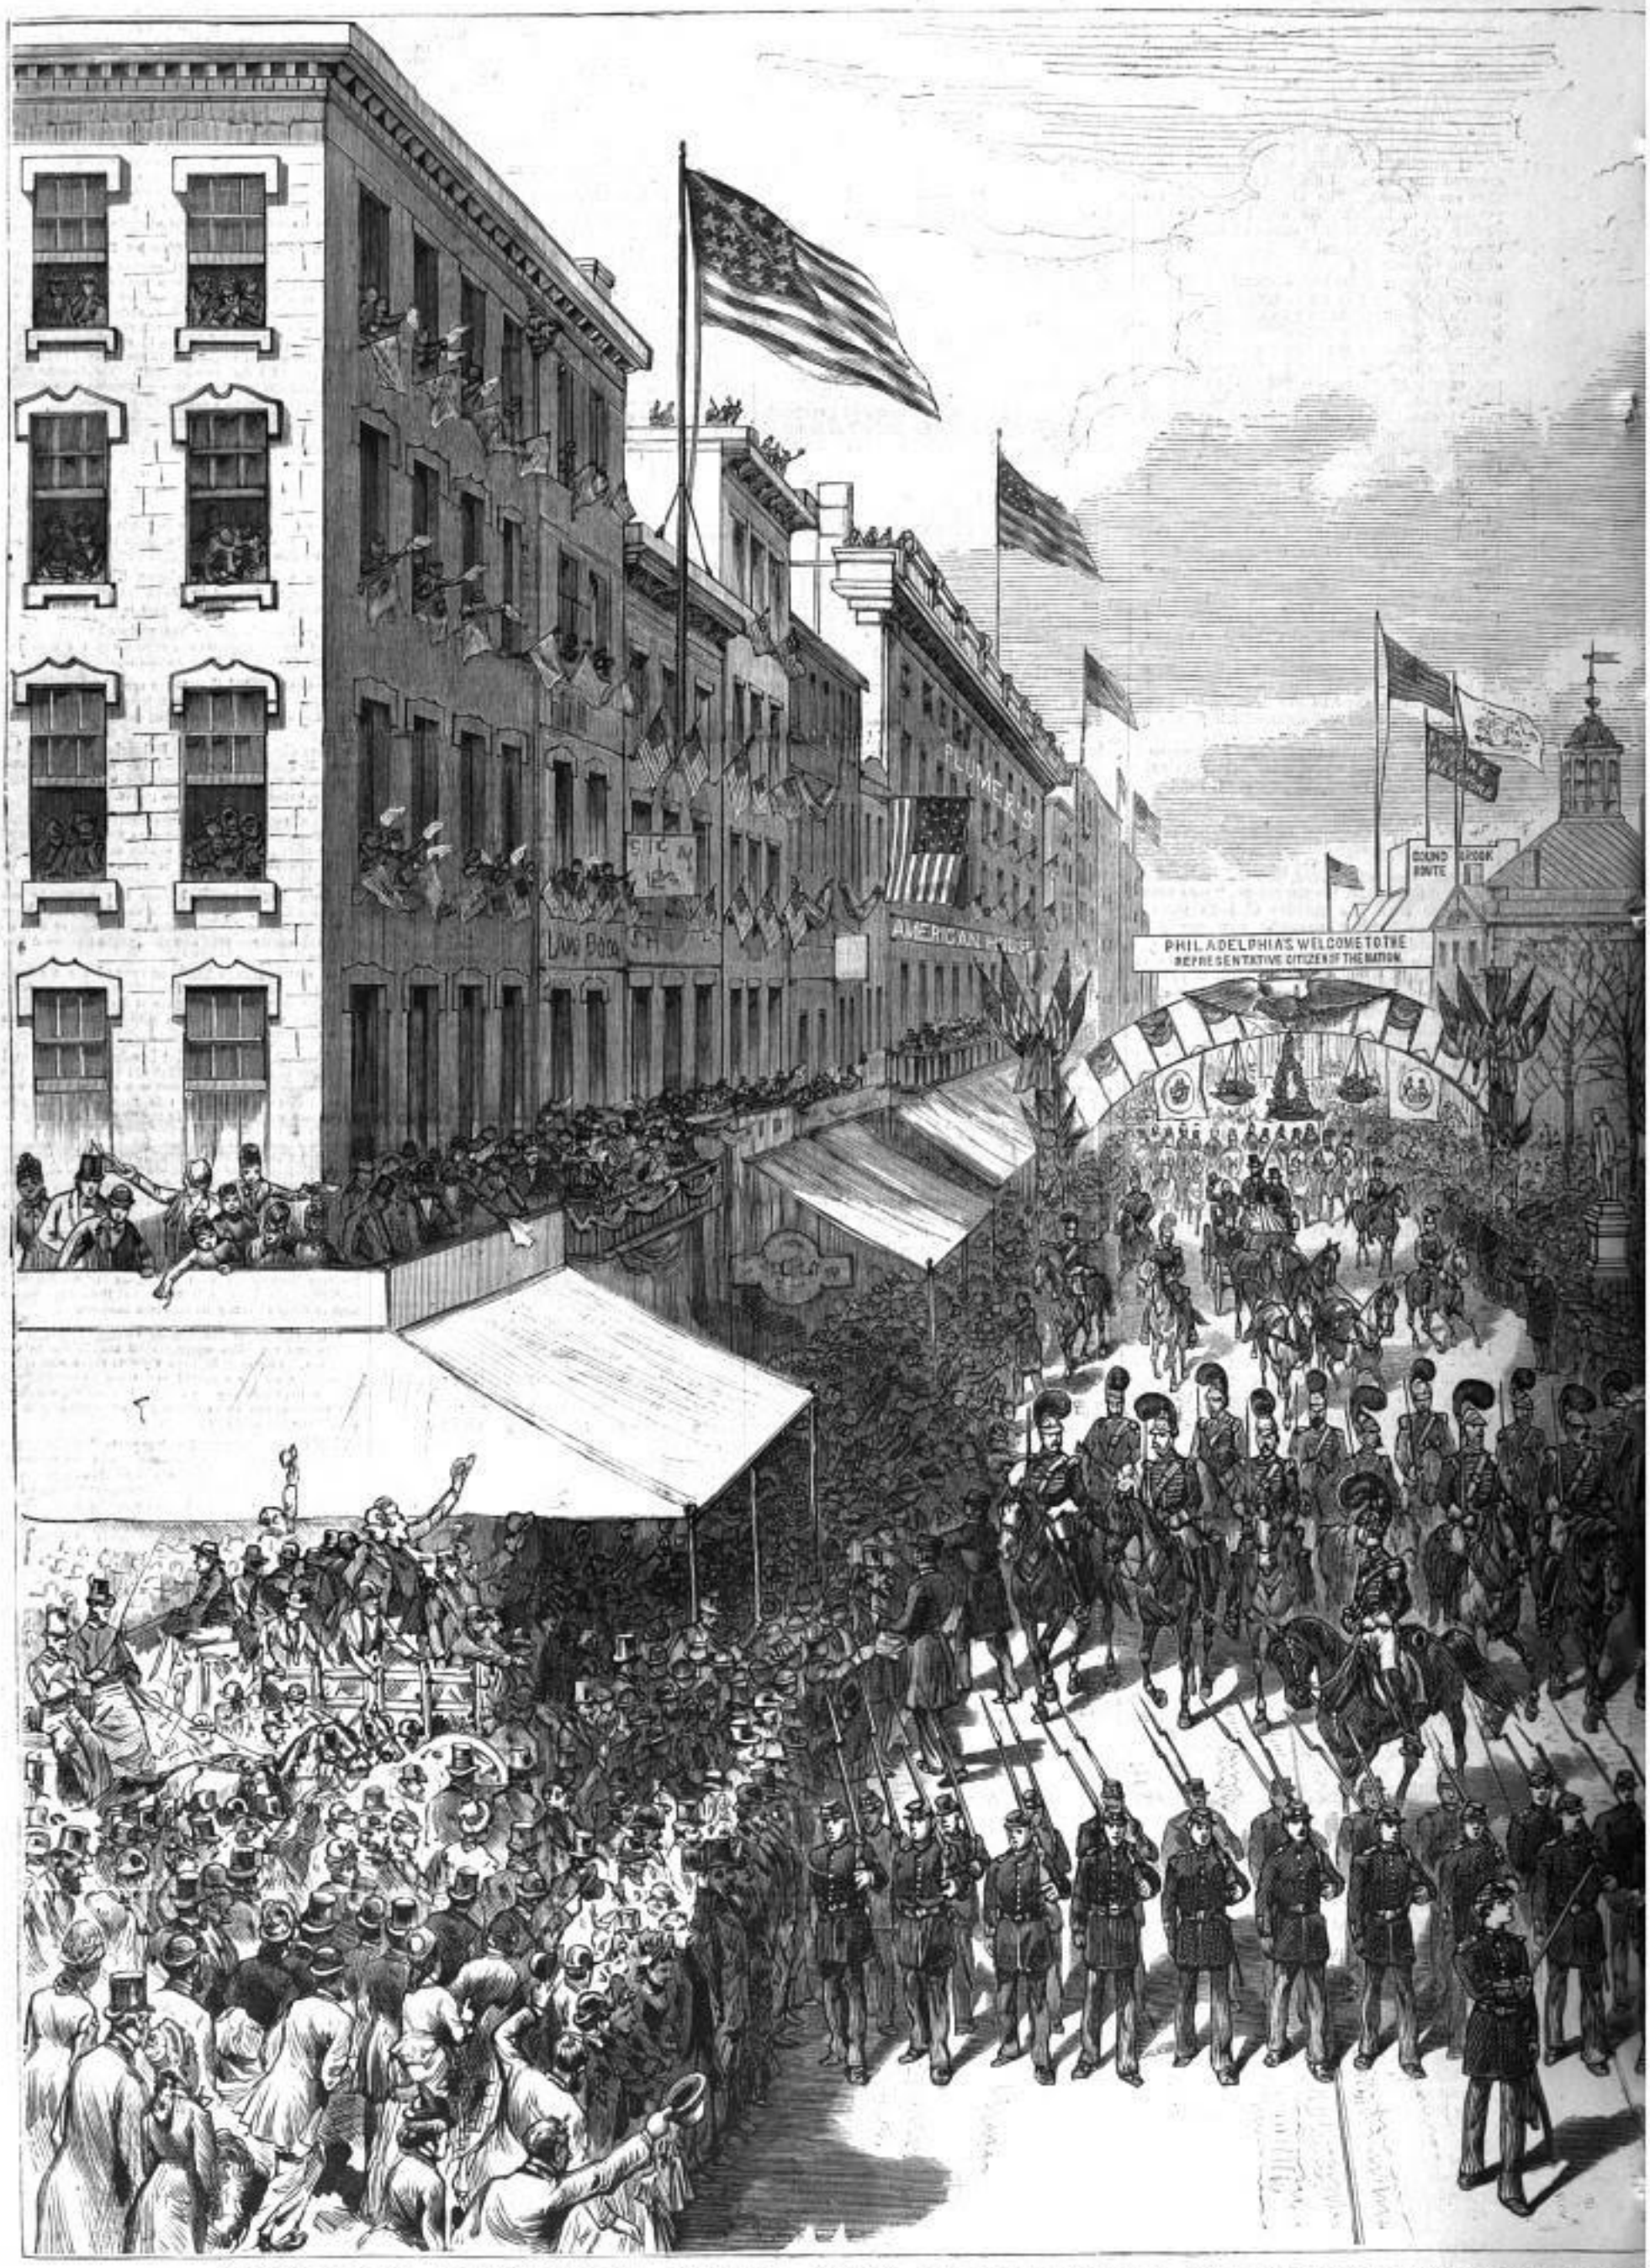
—THE Samoan Islands have been entirely Christianized. Out of a population of about 40,000, some 35,000, or seven-eighths, are connected with Christian churches. The London Missionary Society reports 26,493, the Wesleyans 4,794, the Roman Catholics 2,852, and the Mormons 126.

—SEVERAL packages containing samples of money coined and assayed at the Mint at Osaka, Japan, during the last fiscal year, have been received by the Treasury Department, with a request from Japanese authorities that the coin be assayed at the United States Mint in order to verify its standard fineness.

—ON December 8th, Queen Victoria received the officers and men who distinguished themselves in the Zulu war. She conferred the Victoria Cross and other decorations on the corporal and three privates of the Rorke's Drift garrison. Generals Newdegate, Crealock and Pearson, and other South African commanders attended the ceremony.

—A DISPATCH from Pesth reports that the Korös River has risen rapidly in consequence of severe snow-storms, and has inundated the City of Grosswardein, Hungary. Thousands of the inhabitants are fugitives, in need of shelter. Many houses have been destroyed. The neighboring villages are threatened with destruction. The general distress in Hungary is increasing rapidly.

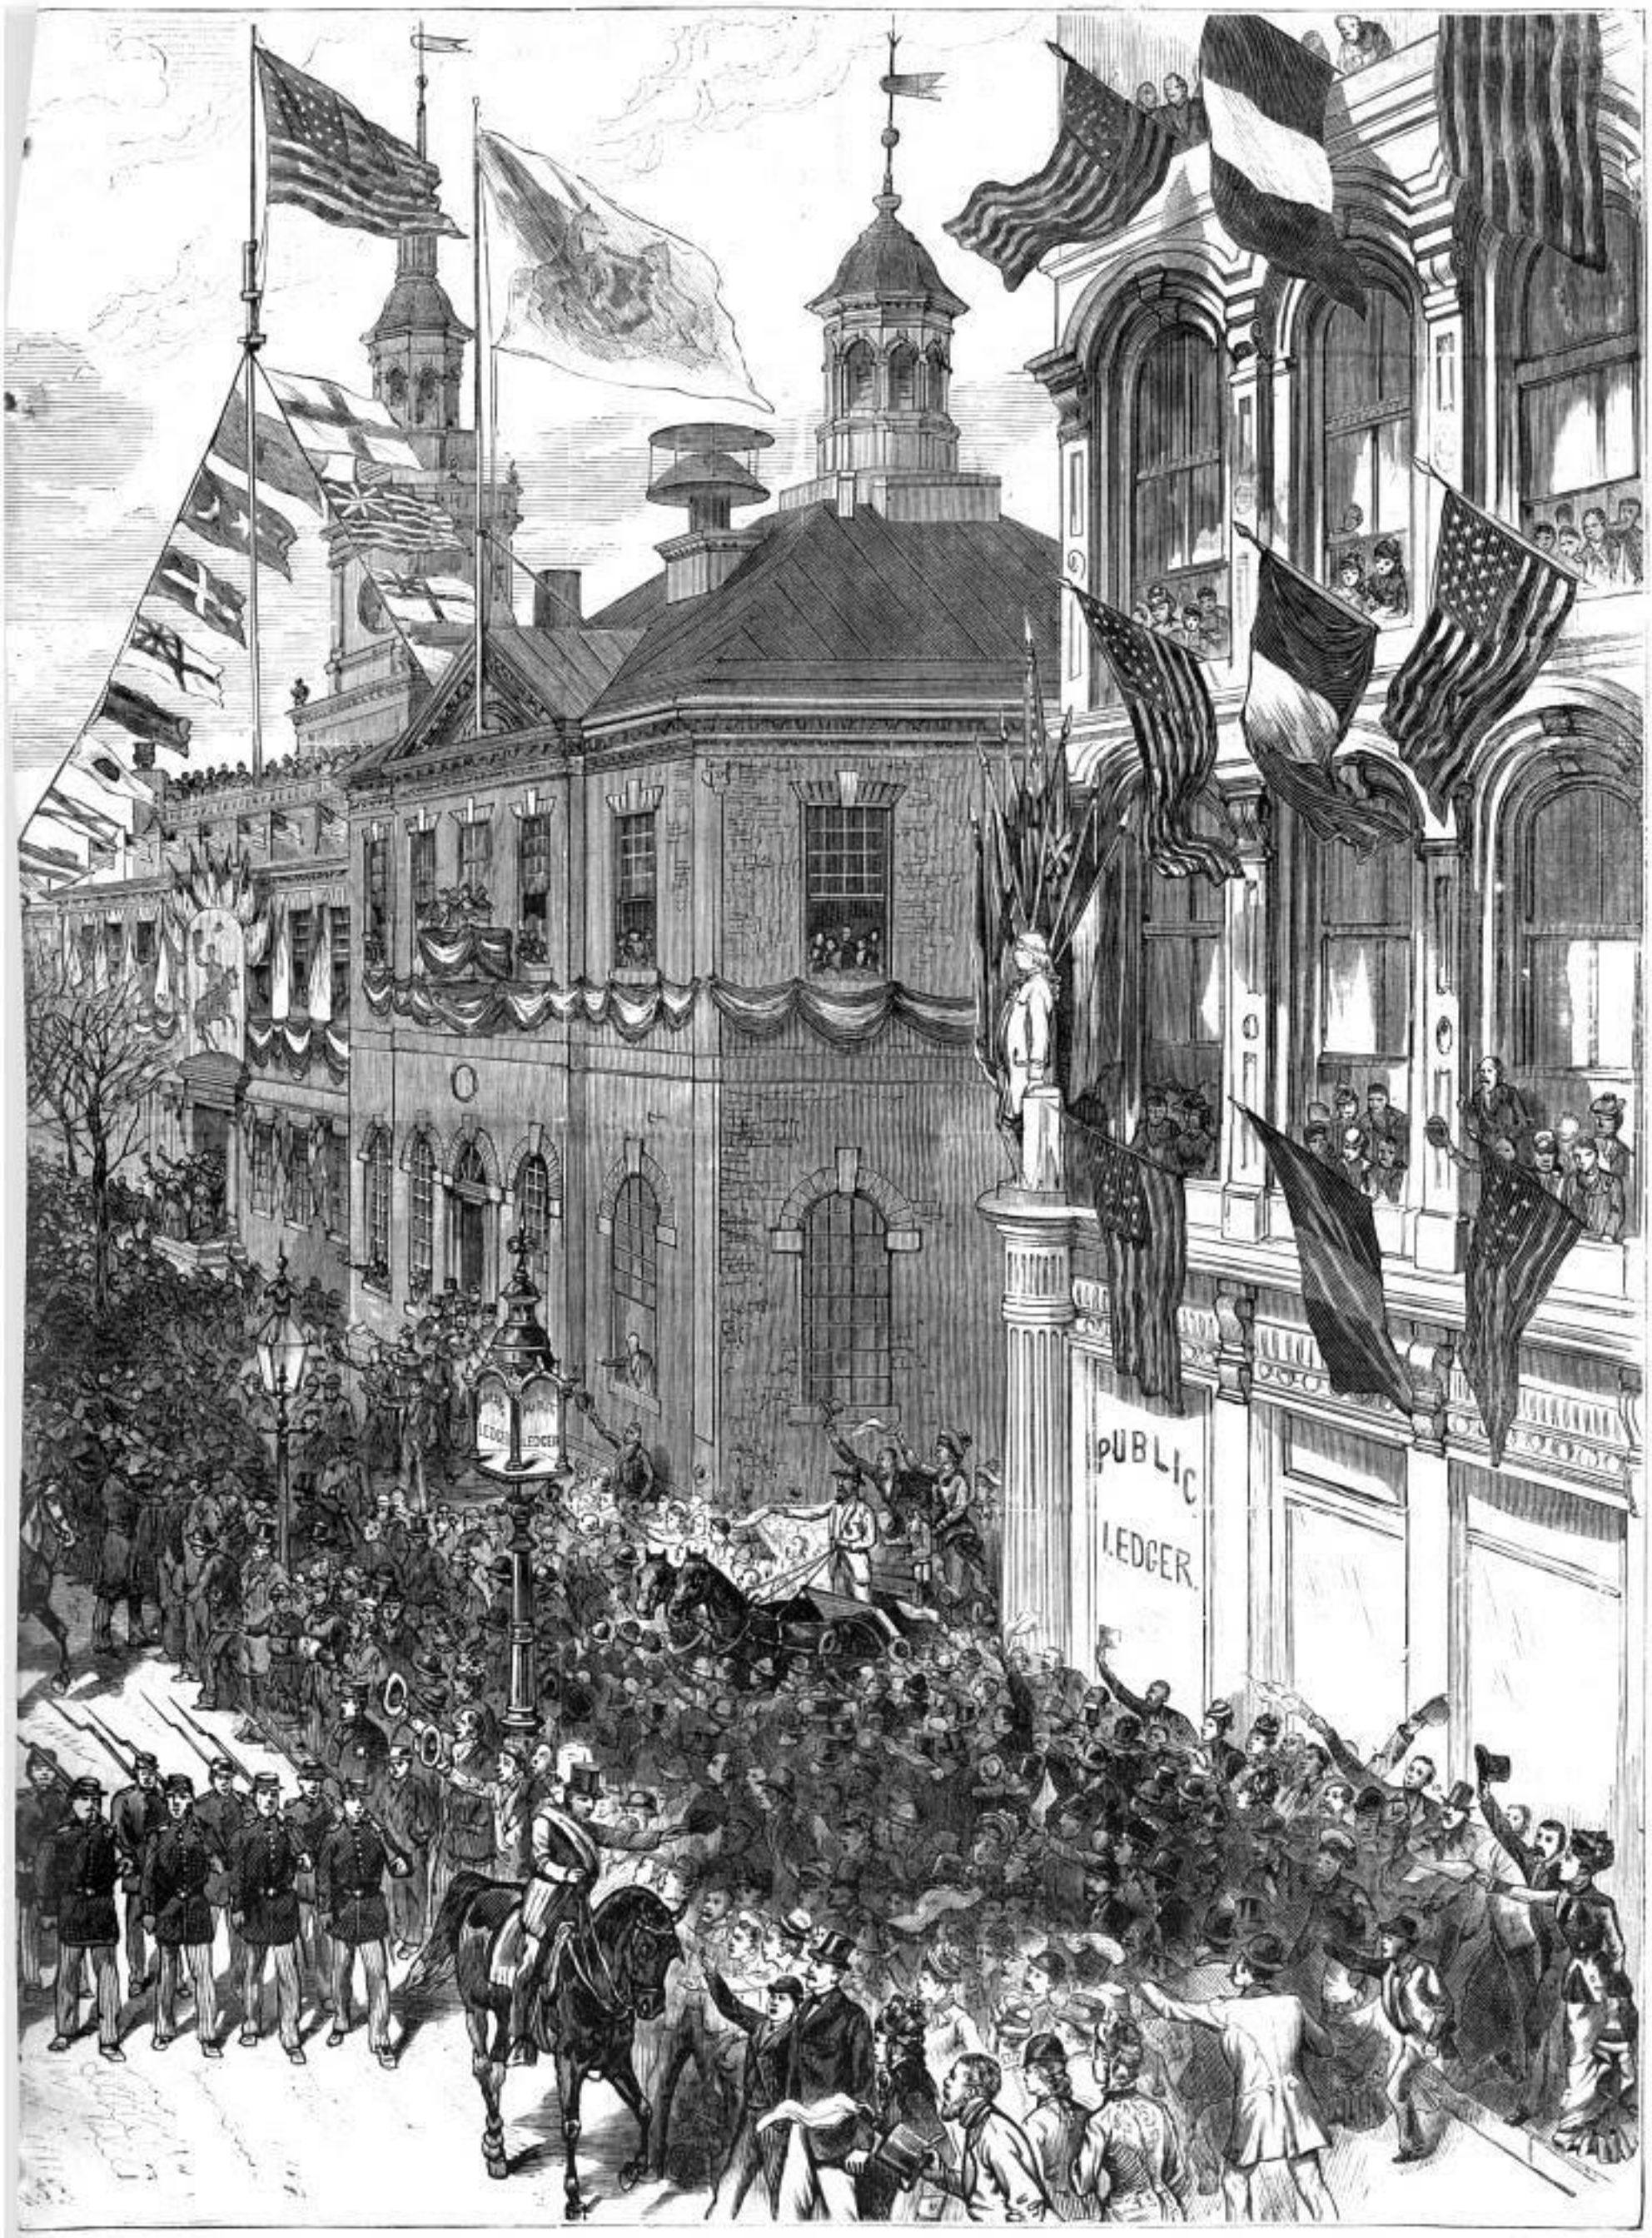
—THE Utica Cheese Board of Trade held its final meeting December 8th. According to Secretary Gilbert's report, the trade of the season of 1879 amounted to $1,488,000. The average price for the whole season was about 8¼ cents. The amount of cheese sold is only 21,000 boxes less than was sold last year, the entire amount being 301,000 boxes, or about 18,000,000 pounds.



—INFORMATION from Massowah represents that King John is marching forward with the main body of the Abyssinian Army and forty guns. It is said that he is determined to occupy the districts of Semaar and Galabat in the Blue Nile Territory. He declares that European intervention will not prevent him from enforcing his just claims, including an indemnity for past Egyptian aggression.

—AN elaborate report has been submitted to the National Board of Health by the Havana Yellow Fever Commission. "Yellow fever," the report says, "habitually prevails in every place in Cuba from which reports were received, provided these places are of any size or commercial importance, and contains any considerable number of unacclimated persons to furnish food for the wide-spread poison."

—THE Committee of School Superintendents and Commissioners, who have just reported upon the school systems of this State, declare that the Legislature of the State of New York should revise and consolidate all school supervision and administration under a State Board of Education, and that this Board of Education should appoint the State Superintendent of Public Instruction, who should serve at the pleasure of the Board, and be subject to its direction and instruction.



—MR. BINGHAM, United States Minister to Japan, in dispatches to the Department of State dated October last, says the exports to the United States now exceed those to all European states combined, and that the Japanese have introduced compulsory education. Mr. Bingham entertained the members of the Swedish expedition to the Northeast Passage. He says they have demonstrated that the Lena River, which rises in the interior of Siberia, can be reached from the Pacific, and that trade with that region may be promoted from our shores.

VANITY.

THE sun comes up and the sun goes down,
And day and night are the same as one;
The year grows green and the year grows brown;
And what is it all, when all is done?
Gen us of sombre or shining sand,
Sifting hour and out of the hand.

And men go down in ships to the sea,
And a hundred ships are the same as one;
And backward and forward blows the breeze;
And what is it all, when all is done?
A tide web never a shore in sight
Setting steadily on to the night.

The fisher droppeth his net in the stream,
And a hundred streams are the same as one;
And the maiden dreameth her love-lit dream;
And what is it all, when all is done?
The net of the fisher the burden breaks,
And always the dreaming the dreamer wakes.

THE HIDDEN WITNESS.

BY THE AUTHOR OF "THAT HUSBAND OF MINE."

CHAPTER XV.—FROM POVERTY TO LUXURY.

"SIR, may I see you in private a moment, after the play?"

The gentleman who spoke was seedy, threadbare and handsome, after a certain style. The features were small and delicately outlined. The hair was rich, abundant and silky, though much too long for the then prevailing fashion. He was a man whom women would find attractive, even in his poverty.

The scene was the auditorium of a theatre, and all the goods and splendors thereto appertaining. Romantic rocks and falls and shadows upon the stage, with a rustic bridge, and a woman in a wonderful costume, crossing it—fine dresses, dazzling jewels, and many beautiful faces congregated together, to shine, to smile and to weep over the fortunes of the heroine.

The man to whom the seedy young fellow spoke was, after his style, also a handsome man, though in the midst of his abundant locks a small circle on the crown of the head might be seen quite bald, and here and there a silvery thread made itself visible among the raven tresses. His eyes were prominent, large and well-shaped; his mouth was shaded by a heavy mustache, and his clothes were cut after a military fashion. He looked in the younger face for a full second, with a startled, perplexed air, before he answered his question.

"In need—a reporter," he said to himself; "and yet the face thrills me strangely." Then he spoke aloud.

"I will see you—anywhere—outside, as soon as the performance is over."

"Thanks," was the answer, and the young fellow leaned back satisfied. His look and manner haunted the other painfully, and he said again to himself, "I'll wager a dollar the fellow is hungry."

At last the curtain came down, and the two men moved out and gained the sidewalk.

"Do you know me?" asked the elder personage, as they paused for a moment under the gaslight.

"I have heard of you, sir. Your name is De Neale; you write the leaders for the *National*," was the answer, delivered with great modesty.

"Yes; I write the leaders for the *National*, and my name is De Neale, or supposed to be. But it is my habit to visit a restaurant after an evening at the theatre. You won't object to a few oysters, I suppose?"

The change that passed over the young man's face verified the suspicions of De Neale. Without doubt the stranger was hungry. They entered a neat saloon and sat down to one of the tables. De Neale ordered oysters, chicken, coffee and eggs. His voice had a curious burr in its tones, which most people noticed at once, and he lisped. The stranger did not take much note of these peculiarities, for, to tell the truth, he had fasted more than twelve hours, and as his host fell to with a seemingly keen appetite, so did he.

"And now to business," said De Neale, as they finished their coffee. "You have not yet told me your name."

"My name is Vintresse. I am of French extract," was the reply.

"Vintresse!" the other repeated, his face changing, and he passed his hand over his eyes twice. "And your father—was his name Emile?"

"It was, sir," replied the young man, with a look of surprise.

"Was your mother's name Eleanor?"

"My mother's name was Eleanor," said Vintresse.

De Neale leaned forward.

"Ah! that's what the likeness meant. Can it be possible that you are Eleanor's son?"

"That was my mother's name, sir—Eleanor," the other answered with some emotion.

"Was! Then she—is—dead."

"She has been dead, sir, five years."

"Dead—five—years! Young man, come to my office to-morrow—I can't talk now," said De Neale, visibly affected, "and for your present necessities—don't be squeamish," and he slipped a ten-dollar bill in his hand. "You shall find a friend in me."

On the following day De Neale was not surprised at an early call. He took young Vintresse into his box, as he called the small office where he wrote daily, and in the midst of the thunder of the press-work, and constant calls for copy, listened to his story.

Vintresse had lost both parents, his father at an early age, his mother when he was eighteen. The little patrimony that had been left him he had sunk in bad speculation, and at last he emigrated to California to try his luck as a miner. His success for a time was indifferent; but sickness overtook him, then want, and he had worked his way to the city, hoping to find some paper where he might earn his living as a reporter, having a natural aptitude for that profession.

Mr. de Neale listened patiently, scanning his features with a half pleased, half melancholy smile.

"Young man," he said, when the story was finished; "how old should you judge me to be?"

"I can scarcely decide," was the reply, "but you certainly are not yet forty."

"I am not yet fifty, but very near it. I knew your mother years before you had existence. She was then one of the loveliest creatures I ever saw. For years I worshiped her, and at one time my suit seemed likely to prosper. But your father crossed my path. If she had never seen him—well—no matter—the dream of what might have been came to an end, and the brightness of my hope went out with it. Your mother was the one love of my life, and though I married"—his lips worked—"I have never forgotten her. Judge whether I feel inclined to help her child—the son who bears her very features."

Young Vintresse was visibly affected. He stretched out his hand, it was cordially grasped; his voice trembled as he murmured his thanks.

"And now we will walk a little if you are ready," said De Neale; "there is plenty of manuscript on hand—come." The two went out together. Vintresse was ashamed of his clothes. He looked more than shabby beside the well-dressed and portly De Neale, and his undeniable beauty made the contrast more observable. He could not help lingering a little in the rear.

"In order to get such a position as you deserve, you must patronize the tailor," said De Neale, and led him into one of the most fashionable establishments in the city. Observing that an expression of pain passed over the sensitive features of Vintresse, the other said, laughingly:

"This is to be a debt, mind you. I'm not going to ruin myself for you. You can pay me whenever you please."

"Then it shall be the first money I earn," was the prompt reply.

"As you like; I will put you in the way speedily," said De Neale, and there was a pleasant meaning in the smile and glance. "You shall be my son, for Eleanor's sake." This sudden interest in a total stranger could never have been accounted for even by those who knew De Neale best. Towards his associates he was apt to be gruff and overbearing. Few people really liked him—those with whom he was thrown into business contact called him mean and narrow-minded. He had an unpleasant way of talking to himself, then suddenly starting and frowning, or looking about him like one lost. But he wrote powerful leaders, excelling in denunciation, and dealing out wrath without mercy to his political opponents. None knew his antecedents. He had made his appearance one morning in a shaggy suit of clothes, with beard and hair untrimmed, introduced himself to the editor of the *National*, a pale, nervous man, and left with him several specimens of his style in political writing. The editor had long been looking for a man of that stamp, and engaged him at once. Finding him a facile writer, he had held him by the tenure of a goodly salary, and would have given him any price within the bounds of reason sooner than have parted with his keen practical though withal bitter pen.

De Neale spent his money lavishly, but did not go much into society. He had a suite of rooms in a good hotel and lived like a prince—was very fond of the theatre and of cards, played sometimes for money and always won. Women he seemed to hold in detestation, and rarely condescended to notice them, though more than one managing mother in the hotel had sought to ingratiate herself in his good graces for the sake of some pretty daughter. The ladies called him the Bear, and the men voted him exclusive and intolerant. His rooms were large, lofty and well-furnished. He had a fancy for tables and stands and plenty of light. The stands and tables were all adorned with flowers, books or statuettes. There were plenty of lounging and reading-chairs, and an exquisite collection of paintings, which were his own property, adorned the walls. So very luxuriant were the belongings of the apartments, opening one into the other, that the curious denizens of the house sometimes bribed the chambermaids to let them have a sight, and the Bear little guessed that his private property had been properly valued and estimated, his books handled, his pictures admired, and himself docketed as a rare prize for that woman who should find favor in his eyes. When, therefore, he came to the *tête-à-tête* no longer alone, but accompanied by a young man of transcendent beauty—verdict of the ladies—glances were exchanged and a new interest felt by those to whom De Neale had become a matter-of-fact personage.

Young Vintresse thoroughly enjoyed his strange good fortune. He had been furnished a situation where the pay was good, lived on the fat of the land, occupied the rooms of his benefactor, to the manifest satisfaction of the latter, and enjoyed his confidence—or fancied he did. On his side De Neale stipulated for the sole possession of his friendship. He was to have no intimates or familiars, at least, none he would feel privileged to bring to his apartments while he remained with De Neale. When these restrictions became burdensome he was to leave and go where he thought proper. The partnership continued for two years, and the friendship of these men seemed likely to continue unbroken. It was privately rumored that Vintresse was the major's son—he allowed himself to be called by that title—and many were the guesses wasted on the subject, many the debates beginning and ending with wonder and with doubt. Vintresse bore his honors meekly, submitting to be admired passively, now and then joining the ladies in the public parlor, where he charmed them by his sweet voice, and turned the tide of prejudice, if any there were, by the delicate appreciation with which he favored the more than kind attentions of the pretty girls, who but wasted their sweetness when trying to charm him. The only fault they found with him was that he treated them all alike, whereas, had he singled out any particular one to whom to pay his devoirs, the rest would quite likely have been ready to tear her eyes out for vexation and envy. He had studied the major and knew many of his peculiarities. One of these was a fondness for light and a strange aversion to the dark. The gas never went out in his bedroom, day or night. As there was but one window in it, and that looking out into a passage of the hotel, it was sometimes quite necessary to use this precaution. Another habit of his was to rise about three in the morning, and either walk the floor or sit down to his writing. Many of his best leaders were written at this time, and Vintresse grew accustomed to the infliction, and finally slept through it.

They were enjoying the comfort and luxury of their quarters one stormy night. Each had a table and armchair of his own drawn before the large open coal fire. The windows rattled and the storm blasts beat against them, but six burners illuminated every nook and corner of the handsome parlor, and under their effulgence faces of marble beauty and groupings of rare design and finish made an alluring picture for the eye to rest upon in the pauses of reading. De Neale seemed to peruse the paper he held with interest. It was an Eastern publication. He never read his own leaders after they were published. Vintresse turned over the pictures of a very choice illustrated art volume, now and then expressing his admiration aloud.

"One wants to be rich," he said, at last, "when one looks at these things."

"Why, rich?" queried De Neale, without removing his eyes from the paper.

"Oh, one could indulge one's tastes without feeling that the expense was ruinous—that's all."

"And what would you care for such things after you got them?" queried De Neale, with a nod towards the engravings in question. "Much as some men care for a wife they have been at infinite pains and trouble to win, and after they win her," he snapped his fingers derisively.

"Still, one would like to marry some time," said Vintresse. De Neale looked over his paper at him, and a soft red color flushed the fair cheek of his *protégé*.

"Do you remember anything of your early home life?" he asked, after a pause. "Was it a happy home when your father was living?"

"I think it must have been. I remember at one time my mother was ill, and how tenderly, upon her convalescence, my father brought her down-stairs in his arms."

De Neale's dark cheek flushed deeply, and his brows knit.

"He did not live long enough to grow cold, I suspect," he said, after a longer pause.

"Pardon me—you do not seem—that is—I mean," floundered Vintresse, uncomfortably aware that he had touched upon delicate ground.

"I have queer notions of domestic bliss, perhaps you would say—well, I have, rather—if I were minded to tell you my experience you might think that I have good reasons to—and—did it ever occur to you how few women commit murder?"

Vintresse, shocked and startled and indignant all in one, laid his book upon the table, and looked at him as if he considered him a lunatic.

CHAPTER XVI.—DID HE SEE A GHOST.

"I MEAN murder *de facto*," added De Neale, quietly; "no doubt they can do the slower kind of work, without either poison or cold steel, simply by leading their husbands such a life that it becomes killing by slow torture. But we will change the subject. See here—here is something I have been reading that has interested me for years—but I am biding my time." He wheeled his chair nearer to Vintresse, and placed the paper where the latter could read an article which was outlined with black ink. Vintresse read silently.

"Forester!" he mused aloud, as he looked up, "my mother used to know a Mrs. Forester, the wife of a judge, quite an elderly man. She was young and beautiful, I remember, and there was a little boy about my own age. I wonder if this man is the son of the old judge?"

"Yes; I know he is," said the other, quietly, taking a cigar from a richly lined pearl box; "he has been at work on that case for several years."

"And he is likely to gain it?"

"Yes, in favor of the daughter of Anne de Roosevelt, who married a Lacy, and gave the property, then not considered of much value, to his daughter by will. Since then the land has been steadily increasing in value until now it is worth, as it stands, more than a hundred thousand dollars. I'm watching this thing with great interest—can you imagine why?"

"Of course I could scarcely be expected to know why," said Vintresse, smiling.

De Neale turned towards him, took the cigar from between his lips, and watched the gray-white spirals as they slowly ascended before he answered. Vintresse watched him narrowly, and, despite the love and respect he had cherished for this man, something in the expression of the eyes, nay, of the whole countenance, gave him a strange, sickening aversion which he overcame only by a strong effort of the will, so that his feelings might not betray themselves.

"I'll tell you why," said De Neale, lingering on every word, like one rolling a sweet morsel under his tongue. "I bought that land of Clare Teresa Lacy—queer fancy for odd names that family had—and I've got the conveyance of title, deed, and everything, snug and sure. More than that," he added, with slow, concentrated bitterness of word and gesture, "I *married* Clare Teresa Lacy; and if the land went by will to—our child, why, then I'm safe. It stands to reason, don't it?"

Addressing himself thus to Vintresse, he never looked round, but went on coolly smoking his cigar.

"But why haven't you moved in the affair before now? There need not have been a lawsuit," said Vintresse, much impressed by the subtle power of this man as betrayed in his speech.

"Well, circumstances controlled me; and then I'm constitutionally lazy. I thought I'd let them fight it out—the land increases in value every month, as the city stretches towards it. I bide my time. There would and will be some unpleasant things to rake up, and I don't care to stir them till the last moment, contenting myself with the knowledge that I shall not be a beggar in my old age. I was not very happy with Teresa; she was a sickly, moody creature."

The manner more than the words implying an utter lack of tenderness, chilled Vintresse. His dark eyes flashed with involuntary anger mingled with contempt.

"Then you have a child?" he said.

"Oh, yes." De Neale threw away the stump of his cigar and helped himself to another.

"Pity you don't smoke, Vintresse," he said. "It's the greatest luxury of my life. I long for dinner. Why? Because after dinner I smoke."

"Is your child a son?" asked Vintresse, nervously fingering the leaves of the book of which he had again possessed himself.

"No; a girl," was the brief answer.

"A girl!—without a mother's care. Her father——"

"Don't waste your sympathy, Vintresse," said De Neale, coolly. "I have kept track of the girl, who was put out of my hands, and most effectually," he added, with a curiously bitter laugh. "Well, no matter; she fell into good keeping, and waits for me to claim her, being in the meantime put through all the feminine paces, kept at a good school, taught good manners along with her sewing and dressing. You see, her mother and myself were always at variance. It wouldn't have been best for the child if she had lived. She died years ago—and what the deuce can a man do with a girl? No; it was the best thing that could be done—but I haven't relinquished her—no, by heaven!"

He took the cigar from his mouth, but this time the smoke went up in quick, angry puffs, while he laughed almost fiercely and at intervals to himself. "One must use diplomacy, you see, where so much money is at stake," he said, after sitting for some time in semi-silent reverie. "I shall outwit them all—ha! ha! ha! Not a soul of them knows that I am on the face of the earth."

"What! They consider you dead?" said Vintresse.

"Yes, dead as a door-nail; they'd as soon expect to hear the last trump as to hear from me. Vintresse," he turned squarely round now, and regarded his companion with a new expression of interest, "it isn't always safe to unfold one's plans, but I shall look to you for a little help by-and-by, and forewarned is forearmed. No child of mine could be so dear to me as you are. Now, this is not mere sentiment. I'm not one of the sort who make flowery speeches, and pretend that I'm chock full of love when my heart is as cold as chilled iron—passion is not my forte. What I was when I knew Eleanor, your mother, when she was a young girl, does not matter. As I said before, her marriage was almost a death-blow. Well, you are her son, and that is a sufficient passport to my affections—what there is left of them. No, I have a scheme, business and friendship combined; I don't pretend to say it is sheer disinterestedness, because if I did I should lie; but if my child, my little Sylve—another romantic name, you perceive—should fortunately have grown into a beautiful and interesting girl (let me see, she must be sixteen or more) if you could see her, and, seeing her, fall in love with her, why, the next best thing, according to novel-writers, would happen—you would fall into a fortune."

Vintresse had turned, and his face was partially in shadow. Perhaps it might not have betrayed the fact that the young man had also his secret, so the caution was quite superfluous. His thoughts could not be patent even to the keen-witted man beside him. But there are certain letters he has received, packed away in a large red-lidded book, where curious eyes cannot see them; and there are certain letters written—or have been—that are read in a humble little home, far away from this grand Pacific Coast, and wept over sometimes, and sometimes kissed, and sometimes placed on a pillow within the reach of pretty, fragrant lips. It was a great temptation to hold out before the wavering desires of a young man who had to make his way in the world. A beautiful and accomplished wife—a life of ease and luxury—and alas, luxury was becoming essential to his comfort. He had tasted the sybarite fare, and slept under her dainty coverlet, and trodden upon her rose leaves, and then, sometimes absence does not make the heart grow fonder, though I do not pretend to say that it was so in his case. Certainly there might be room for doubt. There was silence for a time, then De Neale spoke.

"What do you think of it?"

"You do me great honor; I certainly thank you—nothing could be kinder—I—I——" and there he stumbled and floundered.

"You can best tell when you see the young lady," the other said, laughing. "Well, of course, I exact no promise. That would be the act of a fool; but when the time comes that

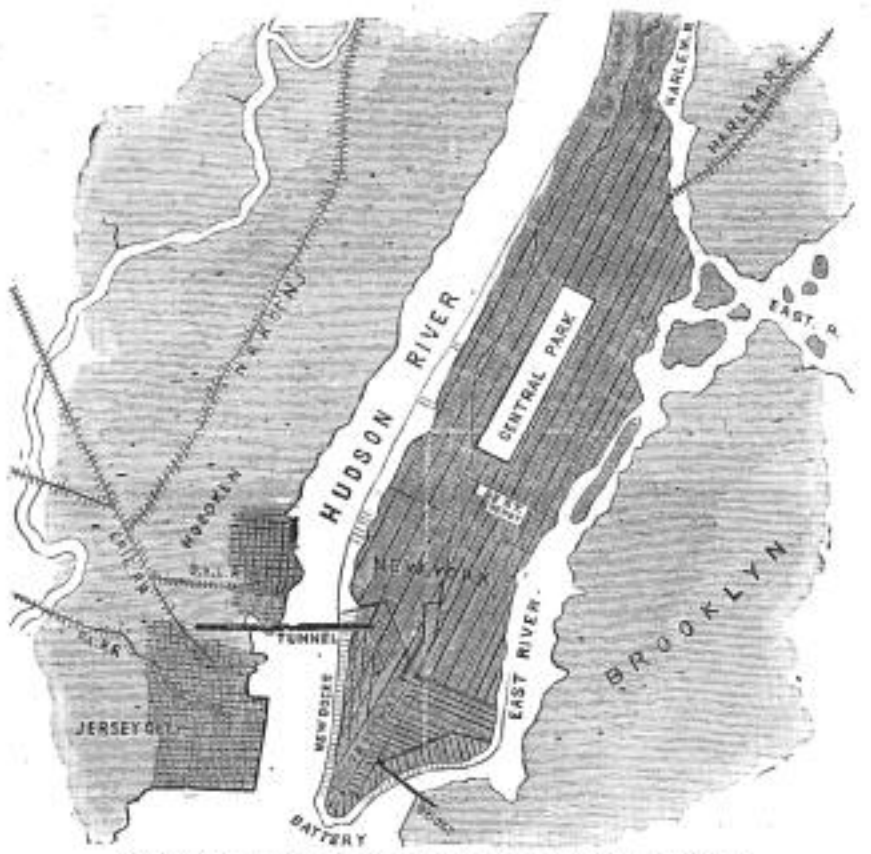
I claim my own, why, then, you shall have the first opportunity. I do not fear for her decision—let her but look in your face. And for you—yours is not a nature that thrives in poor soil—you were born to be a gentleman. Given money and position, and you could do anything, intellectually, that you should set your hand to. Given poverty—my God! I know what that is"—he passed his hand over his eyes with a gesture peculiar to him. "Yes, I know what it is to be tempted of the devil, with not a penny in my pocket to bless myself with. Oh, heaven! those torturing devils of memory!" He sprang from his seat, and took two or three turns about the room, threw open the window and thrust his head out, while the rain beat in, and a great swirl of damp air beat down the gas in all its sconces, till the room seemed filled with the darkness and the storm. Vintresse sprang to his feet, and looked anxiously towards him. He had never seen him in such a mood, and feared, he knew not why, that he would come to grief if it lasted; but the window was shut, quietly, and, as if with great care, the curtains brought into their decorous folds, and De Neale turned from the window, saying, "The storm must be hard upon the ships at sea," and resumed his seat taking a fresh cigar. Was it fancy? Vintresse thought that, in that moment of uncontrollable suffering, his hair had whitened perceptibly—that the face was paler and the mouth drawn and white.

(*To be continued.*)

ANTONIO FAENTINI GALASSI.

THE subject of this sketch was born in 1843, in the City of Loretto, the cradle of distinguished singers such as Salvatori, Capponi, Boccolini and the celebrated dramatic *prima donna* Marziali. In his early youth he showed a great disposition to become a singer, and under the able tuition of the renowned basso, Benedetto Paddei, made such progress in his musical studies that, at the age of twelve, on the occasion of the visit to Loretto of Pius the Ninth, he sang at a sacred concert in honor of the event with such marked success, that His Holiness complimented him with a gold medal and patted him on the shoulders, calling him a "Contraltuccio di primo cero." He continued his musical studies uninterruptedly, when an incident occurred which seriously threatened to mar his career. The war for Italian independence broke out and, although he was then a mere youth, patriotic zeal led him to join a volunteer corps in order to fight the battles of his country. After his term of enlistment he returned to his family, then residing in Faenza, and his means being scanty, he endeavored to commence afresh his interrupted studies under Maestro Ferroni, of Faenza, who, out of sympathy, offered his services for a mere trifle. His musical progress under this *maestro* was very marked, and, at a public concert given by the *maestro* with his pupils, he sang "La Sicilia Confidente," from Robaudi, and the air "Oh di verdi anni miei," from Verdi; his success was so decided that the following day a gentleman named Francesco Nessoli, generously offered him his influence and support by getting up a public subscription for the purpose of sending him to Bologna to complete his musical education there, under the able training of Angelo Bianchi, Professor of the Musical Lyceum. After one year's study, he made his *début* at the Municipal Theatre, of Lodi, in "La Straniera," from Bellini, and the result was a *fiasco*. His second theatrical venture was an engagement to play first and second-class *rôles* at the Imperial Theatres at Bahia and Pernambuco, Brazil. At Bahia, in the first half of the season, he played second-class *rôles*, and, at the beginning of the second half, he was given the *rôle* of Carlo Quinto in "Ernani." His success in the *rôle* was beyond all expectation, and his artistical and brilliant theatrical career can be said to date from that occasion.

At the end of the season the company went to Pernambuco, where the theatre was burned down. Such an unexpected catastrophe threw the whole company out of employment. Those members who had means returned to Italy, but the subject of this sketch was entirely penniless, and found himself at the tender mercies of the wide, wide world. In such emergency the president of a social club of Pernambuco got up a benefit concert for the purpose of providing the necessary funds to pay his passage and that of the basso to Bordeaux. On board the homeward-bound steamer Galassi narrated to the captain his misadventures while in Brazil, and the captain, taking great interest in his behalf, suggested a concert on board the ship. Many Catholic bishops from South America who were proceeding to attend the famous Ecumenical Council at Rome, together with the remainder of the passengers, contributed the amount necessary to pay the traveling expenses from Bordeaux to Italy. As soon as Galassi arrived in Milan, he called on Giuseppe Lamperti, the theatrical agent, son of the great *maestro*, and the latter having heard him, induced the son to engage his services for five years, and he was immediately sent to sing in Ancona during the carnival season of 1869-70, where he achieved great success in "Gemma di Vergy," "Puritani" and "Isabella d'Aragona." He sang in various cities of Italy and Spain until in the Spring of 1874 he was engaged by Colonel Mapleson for the term of five seasons to sing at Her Majesty's Theatre. In the carnival season of 1877-78 he sang at La Scala, and in the Spring of 1878 he sang at Her Majesty's, and in the following Fall he sang at Pisa. His engagement with Mapleson was going to expire December 31st, 1879, but it was renewed for three years longer. In the season of 1878-79 he sang at the Academy of Music in New York, and in the Spring of 1879 he sang at Her Majesty's. His varied *repertoire* consists of over forty operas. He is at home in the heroic as well as in the lyric art, and his matchless impersonations of great *rôles* stamp him at once a superb singer and a great actor.



RUSSIA'S STRANGE WAR-SHIP.

A FIRM of shipbuilders on the Clyde has received an order from the Russian Government for a monster ironclad, which is to be practically invulnerable, and the subject is attracting considerable interest in English official circles. The vessel is to be an armored deck in shape like the back of a tortoise, with sharp edges all round, on which an iron ram may expend its force only to its own injury, or, at most, cut through a mere fringe into one of numberless watertight compartments. The surfaces above and below the water being of the same shape would offer no mark for an opponent's shot, which would glance off without doing the slightest injury, and only vertical fire, which is always unreliable, or battering from above at close quarters, which the monitor's own heavy guns might repel, could be used against such a foe. The old system of boarding might avail; but, as the ship is to be 330 feet in length by 100 feet broad, she would probably carry a great number of men, and boarding might not be easy. The torpedo alone she would have to dread, and against the torpedo she would have to take her chance with the rest. Her armament, according to conjecture, will consist of four or more 100-ton guns, mounted on the disappearing principle, together with appliances for projecting torpedoes; and it is intended to make her, for attack as well as defense, at least the equal of any other ship afloat. It is calculated that a vessel of such a build, though provided with 10,000 horse-power engines, cannot be of great speed, but this is regarded as of secondary consequence in a ship which is described as unassailable. The circular ironclads which the Russians already possess are regarded as failures because their perpendicular sides offer a ready target to the enemy, and Admiral Popoff, who has designed the new cycled, is understood to have adopted the idea propounded more than ten years since by a member of the firm to whom the execution of the work is now intrusted. The *Petropavlosk*, now building for the British navy, will be somewhat similar, in having a sloped deck of iron armor, but she will be small in comparison, and fight only with her ram and torpedoes, being unprovided with guns. The construction of the floating Malakoff is regarded as a serious fact in England, and proposals are being discussed for meeting the case and maintaining the pre-eminence of the British nation upon the seas.

THE HUDSON RIVER TUNNEL.

AFTER many delays, occasioned by injunctions and lawsuits, work on the great Hudson River Tunnel, between Jersey City and New York, is now progressing finely. The entrance to the tunnel on the Jersey side of the river will be from the corner of Jersey Avenue and Fifteenth Street, to extend thence to the Hudson River about 3,400 feet, thence under the river, curving five degrees northward to the New York bulkhead line, at or near the foot of Morton Street, about 5,400 feet; thence curving slightly southward about 3,000 feet to a point to be selected by the New York Board of Aldermen. The entire length of the tunnel and its approaches will be about 12,000 feet, or about one mile under the river and about three-fourths of a mile on each shore. The tunnel walls will be constructed of the best hard brick and cement, 3 feet in thickness, circular in form, 26 feet in width and 24 feet in height. It will be painted white inside and lighted with gas, with a double-track railway of heavy steel rails upon stone ballast, five feet from the bottom. More than four hundred trains will be able to pass through the tunnel daily. Freight and market trains will have transit at night, drawn by powerful engines made expressly for that purpose, to be run by signals, without bells or whistles, consuming their own steam and smoke, or run with compressed air.

Work was begun in Jersey City in 1874 on the circular working shaft, thirty feet in diameter, which is shown in our illustration. On resuming operations at the termination of the legal troubles, this shaft was sunk to a depth of sixty-five feet. A map of the proposed tunnel shows that it will pass through silt for 3,900 feet, thence through sand and silt to the New York shore. In the sand there is about 400 feet of rock to be tunnelled. The bottom of

MAP SHOWING THE DIRECTION AND TERMINI OF THE HUDSON RIVER TUNNEL.

the tunnel is to be from 58 to 102 feet below the surface of the river, and the top is to be nowhere less than fifteen feet below the bed of the river. The greatest depth of water in the river where the tunnel is to cross is a little over sixty feet.

This scheme is being carried on by the Hudson Tunnel Railroad Company, which was incorporated under the general railroad laws of the States of New York and New Jersey, with a capital stock of $10,000,000.

THE "ORGAN," IN LURAY CAVE.

THIS formation is one of the most curious in all this wonderful cavern. It has fifty-six pipes, great and small, and is crowned with an imposing cornice. Each of the pipes is capable of sustaining vibrations without injury, and, when struck by the knuckle or a light cane, emits its peculiar tone, either sharp or grave. In many instances the sounds are clear, resembling the tones of a bell, and being sustained for several seconds. The largest and continuous stalactites are from thirty to fifty feet in length. When the pipes are struck, one after another, a succession of tones like the chiming of silver bells is produced. As a little experimenting will enable a visitor to pick out a number of familiar pieces, it is not unlikely that if the pipes were tested and marked, a musician would be able to play almost any tune upon them. Near the organ is an arrangement of stalactites called "the Chimes," which, though fewer in number, are far more powerful, their bell-like and musical sounds being heard distinctly at a considerable distance.

The Romance of a Hair.

THE romance of a hair comes from Vienna. A poor girl with beautiful hair went to a barber to sell it. He tried to make a close bargain, saying hair was plentiful this year, and declared he could only give her eight florins. The little maiden's eyes filled with tears, and she hesitated a moment while threading her fingers through her chestnut locks. Finally she threw herself into a chair and said: "Then take it quickly." The barber was about to cut off the tresses, when a gentlemen sitting in one of the chairs interrupted him, and spoke to the girl. "My child," said he, "why do you sell your beautiful hair?" "My mother has been nearly five months ill. I cannot work enough to support us. Everything has been sold or pawned, and there is not a penny in the house." "No, no, my child; if that is the case, I will buy your hair, and give you one hundred florins for it." He gave the poor girl the note, the sight of which dried her tears, and he took up the barber's shears. Taking the locks in his hand, he selected the longest hair, cut it off and put it carefully in his pocketbook, thus paying one hundred florins for a single hair. He took the poor girl's address, in case he should want to buy another at the same rate. This charitable gentleman is mentioned as the head of a large industrial establishment in Vienna.

SCIENTIFIC INTELLIGENCE.

Dr. Oscar Lenz will shortly start on a tour to Morocco by order of the German African Society.

The American Association for the Advancement of Science will hold a week's session at the Institute of Technology in Boston, beginning August 25th, 1880.

A Russian Officer has invented an ingenious system of night signals on vessels by lighting, by means of reflectors, the smoke of chimneys. A code explains the meaning of the divers colors.

After a Close and long examination of the various plans yet sent in for the Channel tunnel between England and France, the well known French engineer, M. Yerard de Sainte Anne, has declared, in the presence of many eminent engineers, that the proposal was quite possible and practicable.

Sheet-iron covered with gum of the euphorbiaceæ, common and luxuriant in tropical climates, was immersed in Chatham (England) dockyard, where everything rapidly becomes foul, and when taken out was found quite clean. The gum is intensely bitter and poisonous; hence marine animals avoid it.

The Astronomical Observatory on Mount Etna is almost completed, but the large quantity of snow which has already fallen will prevent the movable iron cupola and the telescope from being fixed till next Summer. The total cost, including a second building, capable of sheltering twenty persons, will be about £2,510. It is about 9 600 feet above the level of the sea.

A New System of cremation has been promulgated by M. Lissagarry, a Frenchman, who thinks he will be able to do away with the very intense temperatures necessary to reduce the body to ashes. The difficulty in cremation is to decompose and reduce to ashes tissues containing seventy-five per cent. of water; but M. Lissagarry overcomes this by exposing the body, first of all, to the action of superheated steam, which chars the tissues and enables them to burn easily in an ordinary simple furnace at a very much less cost of fuel and without the least unpleasantness.

On Saturday, October 25th, the five academies constituting the Institute of France had a solemn meeting to award the biennial prize granted every two years by one of the academies. The turn this year being that of the Academy of Moral and Political Sciences, the prize was taken by M. Demolombe, Dean of the Faculté de Droit of Caen, author of a voluminous work on legislation.

The Process by Condensation, invented by Mr. George Woods, of Cambridgeport, Mass., the well-known organ and piano maker, is being last utilized in other branches of business than that of lumber, for which it was originally intended. It not only dries much quicker than the old methods and prevents lumber from warping and checking, but has been found to be most useful in the working of cotton and wool, the former particularly; causing it to wind and weave better. It is also a preventive against fire in the dry-room.

Archæological Finds in Asia Minor are reported. An Austrian man-of-war recently left Smyrna with artistic spoils of inestimable value. In the ruins of Pergamus an engineer has disinterred, at the instance of the German Government, about 200 statues and sculptured pedestals belonging, for the most part, to the best period of Greek art. A beautiful figure of Eros, a colossal Laocoon, richly-ornamented friezes, and many other fine pieces of Hellenic art have been dug up and sent to the Berlin Museum.

A Royal Commission has been investigating the sanitary condition of Dublin. Dr. Cameron, the senior Public Health Officer, gave evidence, stating that the high death-rate was distinctly traceable to several causes. These were the state of the Liffey, which was an open sewer; overcrowdings in the dwellings of the poor; universally defective drainage in all classes of houses; the existence of many private abattoirs in the city, and the natural dampness of the soil, which caused so much disease of the respiratory organs, and helped largely to swell the death-rate.

PERSONAL GOSSIP.

BISHOP ELDER of Natchez will be appointed coadjutor of Archbishop Purcell.

CHIEF-JUSTICE FISHER, of Wyoming Territory, has tendered his resignation to the President.

ALEXANDER DUMAS has gone to the south of France to devote his whole time to his forthcoming work on "Divorce."

THE Marseilles Municipality has voted 20,000 francs for the erection of a statue of M. Thiers on one of the open spaces of that town.

THE Federal Assembly of Switzerland has elected Dr. E. Welti, of the Canton of Aargau, President of the Confederation for the year 1880.

THE Bishop of Peterborough, who is to preside over the next Anglican Church Congress, has appointed September 28th as the time of meeting.

THE monument to be raised to the late General Colton, of California, is to cost $40,000, and is to be a small chapel in marble and granite, exquisitely carved.

THE Board of Regents of the University at Albany have secured the services of Hon. David Murray as superintendent of advanced collegiate examinations.

AT Washington they are expecting the Sultan of Turkey will have to recall his diplomatic representatives to this country for want of money to support them.

EX-SENATOR ALEXANDER RAMSEY, of Minnesota, has been appointed and confirmed Secretary of War in place of Hon. George McCrary, appointed Circuit Judge.

THE engagement is announced of Mr. Hamilton Fish, Jr., to Miss Mann, of Troy, a sister of Mr. Francis N. Mann, Jr., who represented that city last year in the Assembly at Albany.

THE Rev. Samuel West, a local preacher of the Methodist Episcopal Church, died recently at Olive Branch, Ohio. He celebrated his hundredth anniversary February 14th, 1879.

CHIEF-JUSTICE CHARLES P. DALY, President of the American Geographical Society, has just received notice of his election as a member of the Royal Geographical Society of Berlin.

THE Presbyterian Synod of Mississippi has sustained the appeal of Rev. S. P. Linn, from the Presbytery of Louisiana, and ordered that body to restore him at once and fully to church and gospel ministry.

THE Rev. Hugh O. Pentecost, a minister of the Baptist Church in Hartford, has announced his marriage engagement to Miss Ida Gatling, the only daughter of Dr. Gatling, the inventor of the gun which bears his name.

SOME of Dr. McCosh's New York friends have added $1,000 to his annual salary as an offset to the increased expenses of his new residence, known as "Prospect," and the finest residence of any college president in America.

MR. MORI, the former Japanese Minister at Washington, is, it is said, to be accredited to England in the same capacity. He knows English very well, has good ability, and is a man of excellent presence. His charming wife will accompany him to England.

THE Commission of the Free Church of Scotland has appointed Drs. Rainy, Wilson, Somerville, Kennedy, Mitchell and Blaikie, Professors Bruce and Binnie, and the Earl of Kintore, among others, as delegates to the Presbyterian Council to meet next year in Philadelphia.

THE uniform of the late Prince Louis Napoleon is stated to have been found at a kraal near Ulundi, the whole front of it having been pierced by assegais. The Zulu who actually inflicted the death-blow is said to have been Abango, who was subsequently killed at Ulundi.

THE Queen of Italy has gone to seek for health at Bordighera. The nervous shock she received on witnessing the attempt to assassinate King Humbert is the cause of her invalided condition. She has taken with her to Bordighera the Prince of Naples, whom she does not trust out of her sight.

THE Berlin papers describe a sleigh lately presented by the Prince of Hohenzollern to his bride, a princess of the house of Turn and Saks, as a marvel of costly beauty. The body is shaped like a cockleshell, and is of polished ebony inlaid with silver, and the cushions are of the richest purple velvet adorned with silver balls.

M. LÉON CHOTTEAU has had a private interview with President Grévy, and presented a memorial from inhabitants of New Orleans in favor of the establishment of a line of steamers between Havre and New Orleans. M. Chotteau also pointed out the advantages of a French line of steamers touching at Baltimore. The memorial will be submitted to a Cabinet Council.

THERE died at Pesth, a few weeks ago, Count Dominik Zichy de Vasonkeö, formerly Bishop of Kassau and Veszprim, and one of the wealthiest and highest of Hungarian magnates. He left a fortune of $4,500,000, and was a fair representative of the time when, in France and Germany, great bishoprics and rich benefices were looked upon as the natural privileges of noble families.

EXTENSIVE preparations are already being made in St. Petersburg to celebrate the twenty-fifth anniversary of the Czar's accession to the throne, which falls on the 24 of March next. The municipal authorities, among other things, have voted a considerable sum for the presentation to His Majesty of a work of art recording the chief architectural achievements, etc., of his reign.

BEFORE his departure from Japan, Professor Nordenskjöld received from the Tokio Geographical Society a handsome gold medal in honor of his achievement. The token bears inscriptions on either side in Japanese characters. One legend gives the name of the learned body presenting the gift; the other commemorates the voyage of the Vega and the Tokio banquet in honor of the Swedish savant and his staff.

MR. THOMAS HUGHES is likely to be removed from the chairmanship of the Crystal Palace Company in London, and Prince Teck will probably be his successor. The main objection to Mr. Hughes is that the Crystal Palace has deteriorated in his hands. It is further alleged that he has too many irons in the fire. He is a lawyer, a politician, an author, a journalist, a railway chairman, a gas company's chairman, a telegraph company's chairman, a coal company's chairman, and is on the board of a milk company, an agricultural company and a bank.

ON November 2d, a Japanese mission arrived in St. Petersburg, which has been sent to Europe to study the police and prison systems of the different States. The director is M. Sava, head of the cabinet, or the chief of police in Japan. They left Japan at the end of February, and have commenced by studying the police and prisons in Holland. They purpose passing three or four weeks in St. Petersburg and going thence to Berlin, then to Vienna, Florence and Rome; thence to Switzerland, France, Spain, Portugal and England, whence they mean to return to Japan by way of America.

VIRGINIA.—THE GRANDEST OF AMERICAN CAVERNS—THE "ORGAN" IN LURAY CAVE, PAGE COUNTY.—FROM A SKETCH BY JOSEPH BECKER.—SEE PAGE 295.

THE ARCTIC EXPLORING VESSEL "RESOLUTE."

THE history of the *Resolute*, the famous Arctic exploring vessel, is full of interest and romance. Originally a merchant vessel, she was purchased by the British Government for Arctic service, and was one of the four vessels which, in May, 1854, Sir E. Belcher, who had been sent out in search of Sir John Franklin, found himself compelled to abandon off Melville Island, the ship being so completely blocked in by the ice that it was deemed impossible for her ever again to be moved. The crew reached home safely with their companions from the other vessels, but the *Resolute* was looked upon as lost until, in the Summer of the following year, it was discovered off the coast of Labrador by an American whaling vessel, the *George Henry*, whose captain, Budington, took her to New London, where, the British Government having abandoned all claims to the vessel, she was bought by order of the American Congress, and, after being thoroughly repaired and equipped, was sent across the Atlantic as a present to Queen Victoria, who went to Southampton to receive the gift in person. It is in remembrance of this graceful act of international courtesy that it is now proposed to construct out of the timbers of the old Arctic ship some article of furniture to be presented to the President of the United States. The design for a secretaire, represented in our illustration, is the work of a working-joiner employed at the Dockyard at Chatham, England, where the *Resolute* is now being broken up. The top is to be covered with morocco, bordered and embossed. The front panels will contain carved medallion portraits of Her Majesty and the President of America; the side panels, Arctic subjects, also in relief; and the space at the back of the table corresponding with the front panels will be furnished with a set of six drawers on either side, the handles of which will be formed by two hands (male and female) grasping each other, symbolic of the good will existing between the heads of the two countries. The top corniers of the eight corner pedestals will be appropriated to carved representations of the Arctic and Antarctic circles and the American and English flags crossed, and busts of celebrated Arctic explorers will support the cornices.

ORIGIN OF THE NEW MOUNT HUMBERT-MARGUERITE, IN THE CENTRE OF MOUNT ETNA.

MOUNT HUMBERT-MARGUERITE, ON ETNA.

MOUNT ETNA, after having for long years been quiescent, has, within the last decade, resumed its activity, and great changes in the neighboring parts will not excite astonishment. The old volcano has given its notes of warning in terms too clear to be misunderstood. Minor eruptions from old craters, and the formation of new escapes for fire and lava, mud eruptions at the base, have already been recorded. At the present time great changes are taking place on the summit, which it is not even yet no dangerous to approach and scrutinize. Between the former openings a summit of immense size has already been formed, and is growing daily by the accumulation of ashes and scoria, either to be welded into a solid mass by the heat or to sink down after a brief existence. To this new summit the Italians have given the name of their present sovereigns, Humbert, and his queen, Marguerite. The sketch we engrave was made carefully on the spot, and shows the present condition of the top of Mount Etna, over which hangs now perpetually the ominous cloud of menace.

THE SWIFTEST SHIP.—A new British war-steamer called the *Mercury*, built of steel, has just been completed and successfully tried at Portsmouth, Eng. The vessel is 300 feet long, 46 feet beam, 16 feet 3 inches hold; displacement 3,750 tons. On her late trial-trip the engines developed 7,395 horse-power, and the speed attained was within a trifle of 22 miles an hour. These are remarkable results for a vessel of the dimensions given above.

PENNSYLVANIA.—SCENE IN THE "COMEDY OF ERRORS," AS PRESENTED BY ROBSON AND CRANE BEFORE GENERAL GRANT AT THE ARCH STREET THEATRE, PHILADELPHIA — MUTUAL RECOGNITION OF THE "DROMIOS."

THE TWO "DROMIOS."

NOT the least attractive of all the varied sights which Ulysses S. Grant will have seen while girding "a girdle round the earth," is that of the "Comedy of Errors," as represented at the Arch Street Theatre, Philadelphia, under the management of Mrs. John Drew, with Messrs. Robson and Crane in the respective rôles of *Dromio of Ephesus* and *Dromio of Syracuse*. The quaint waggery, the exquisite foolery, and the inimitable acting of these famous artists have rendered this masterful creation of Shakespeare familiar in the mouth as household words, while the marvelous resemblance between the *Dromios* is bewildering in its exact details. There is no need for the orchestra to strike up a merry tune in order to add zest to their welcome. When they have once shown their faces, underneath the quaint, conical hats, and the red hair, with each a mark on his cheek, and clad in jerkin and hose, the screaming laughter that greets them shows that half the work is over. It would seem almost impossible to tell which was which. Mr. Crane has succeeded in imitating Stuart Robson's voice and manner to perfection. Those who have seen the two in other pieces know that Mr. Robson's figure is altogether different from Mr. Crane's, yet they have so managed their make-up in face, limbs and height as to completely baffle identity with the ordinary spectator. The arrangement of the scene outside the house of *Antipholus of Ephesus* is uproariously funny, with the wrong *Dromio* inside the door squeaking his defiance to the right *Dromio* and his outraged master outside; and the scene on the mart, where the Ephesian master and man break away from the officers, and both the *Antipholi* and *Dromios* are pursued by the mob, is equally amusing — but, better than all, is the final meeting of the twins in the last act. The effect is electrical, and the laughter-stricken audience gives full vent to an applause which fairly shakes the house. We illustrate the scene at the end of the comedy where the *Dromios* confront each other.

THE NEW LORD MAYOR OF LONDON.

SIR FRANCIS TRUSCOTT, the Lord Mayor-elect of London, who was formally inducted into office November 10th, belongs to an ancient Cornish family, and was born at Truro in 1824, educated at King's College, London, and is the head of the business firm of James Truscott & Son. In 1858, after the death of his father, he was chosen to represent the Dowgate Ward in the Common Council, and in 1871 he became Alderman of that ward, and also Sheriff of London. Sir Francis, who was knighted in February, 1872 on the occasion of the national thanksgiving at St. Paul's for the recovery of His Royal Highness the Prince of Wales, has filled many offices in connection with the administration of civic affairs, amongst others that of Chairman of the Police Committee, an appointment which he held for several years. He is a member of the Haberdashers' Company, a Warden of the Vintners', and Master of the Stationers' Company. He is Commissioner of Income Tax, and of Land and Assessed Taxes for the City of London, and represents the city at the Metropolitan Board of Works. In 1865 he was an unsuccessful candidate for Parliament, contesting Dudley in the Conservative interest. The ceremony of "swearing in" was performed at the Guildhall, November 8th, and the "show" and banquet took place on Monday, the 10th inst., being marked by the usual public demonstrations on such occasions.

THE RIGHT HON. SIR FRANCIS TRUSCOTT, LORD MAYOR OF LONDON.

BENJAMIN TALBOT BABBITT.

BORN sixty-and-eight years ago, Mr. Babbitt is an admirable illustration of a man vigorous in frame and in mind, and an example of the maxim that age is but constitutional. Westmoreland, N.Y., gave him birth, and in the very teeth of adverse circumstances, he has cleared his way to name, position and fortune. Farming was his first occupation, to be exchanged for the anvil and hammer, but his keen mechanical instincts soon sought other grooves, and threshing-machines for a time exclusively occupied his attention. From the thresher came the first mowing-machine the world ever saw. In 1843 Mr. Babbitt next turned his attention towards saleratus, and he succeeded in effecting a complete revolution in its manufacture by inventing and perfecting a method for making it from soda-ash, instead of pearl-ash, the material previously employed, at eighty per cent. less cost.

BENJAMIN TALBOT BABBITT, INVENTOR AND MANUFACTURER.

Digitized by Google

Pressure on our space precludes a detailed description of Mr. Babbitt's gigantic soap works; suffice it to say that they occupy twenty three city lots measuring twenty-five by one hundred feet each, covered by eight brick buildings, averaging six stories in height, and that the aggregate floor space devoted to manufacturing purposes is upwards of three hundred and fifty thousand square feet. Not only has Mr. Babbitt devised such mechanical appliances in connection with soap-making as have given him marked advantages over his competitors, but his inventive genius has found expression in many other directions. With a view to carrying out his ideas in mechanical invention, he found it requisite to have machine-shops of his own, both for the construction of the steam engines and boilers, as well as for the general machinery, employed in his New York establishment, and as a consequence, erected the Whitestone Iron Works in the village of that name in Oneida County, N. Y. The factory premises are situated, with a view to transit, upon the line of the Erie Canal. The principal buildings constituting the works comprise two machine-shops—one of two stories in height, built of brick, and covering an area of seventy-five by four hundred feet; the other, of wood, fifty feet in width by three hundred and fifty in length; a foundry three hundred and fifty feet long, together with a number of buildings of lesser dimensions. The cost of this building is estimated at $600,000, and probably no machine-shop in the country contains so fine an assortment of planers, lathes, gear-cutters, and other iron working machines.

One of Mr. Babbitt's many triumphs is his steam canal-boat, upon the construction of which he has spent much time, thought and labor. The great difficulty hitherto encountered in the application of steam-power to canal navigation has been the washing away of the banks by the disturbance of the water occasioned by the rotary movement of the propeller, and in the minds of many engineers and scientific experts the effect of the use of steam-power has been regarded as an inseparable obstacle to the attainment of any increase of speed. Mr. Babbitt's boat is constructed with a square box which does not break the water into foam, but glides smoothly over the surface without the creation of a ripple that could sensibly impede its progress. The boat is built with a submerged chamber, or false bottom, in which, and near the bow, is placed a rotary pump of four hundred horse-power, having a suction capacity of ninety thousand cubic feet per minute. The effect of this arrangement is to destroy resistance at the bow of the boat by the creation of a vacuum into which the water rushes, and to produce a reactionary pressure at the stern, propelling the boat easily and rapidly along without any injurious commotion in the water. Mr. Babbitt has also invented a rotary steam-engine without piston, cylinder or valves. Another very important invention of our gifted countryman is Babbitt's Combined Steam Generator, Condenser and Steam Heater. This apparatus combines the functions of a steam-boiler supplying motive power to general machinery, with arrangements for the heating and ventilation of buildings of the largest dimensions, and may be used for both purposes simultaneously, or for either one separately, as may be desired. This last invention has been patented in the United States, England, France, Belgium, Holland, Russia, etc. Without in the slightest degree relaxing the energetic promotion of business affairs—Mr. Babbitt is in his counting-house at 6.30 every morning, and opens and *reads* his own mail—he finds time to gratify the more refined tastes, and to this end has surrounded himself with all the elegancies which contribute so largely to the gratification of social life at its best. Mr. Babbitt has been the architect of his own fortune, and never once, throughout his long business career, has he ever permitted his allegiance to eventual success to waver.

CHRISTMAS SHOPPING NOTES.

ALL the city streets and stores are full this week of Christmas shoppers making the purchases which are to gladden and lighten all the homes of the land. For the benefit of the out-of-town readers of FRANK LESLIE'S ILLUSTRATED NEWSPAPER we give a few practical suggestions which may aid them in their holiday purchases, regretting only that our limited space compels us to the briefest mention of boundless and rich variety.

The attractions of A. T. STEWART & Co. were never displayed more profusely nor to greater advantage than at this season. All day long the carriages stand in columns around three sides of the block, while through the great store pour throngs of eager purchasers. Besides the vast stock of substantial and lasting goods which this house has always on hand, the present buyers find now the latest Paris and Vienna novelties, Japanese curios and antiques, and all the endless quaint and tasteful *recherche* gathered from the four quarters of world. Whether the search be for the useful or beautiful, or both combined, success will reward at STEWART'S the most exacting taste.

At LORD & TAYLOR'S, the display of fabrics of every description for personal and household use is exceedingly varied and complete. The markets and the mills of both continents have contributed to their stock, and in every department a high standard of excellence is maintained. The model catalogue which this firm issued this Fall has brought them much favor, and made many customers in all parts of the country, and for purchasers who cannot visit New York, no better substitute can be found than this, which is sent free to any address on request. With it the entire stock of the store is at the command of the purchaser, and even city customers are using the catalogue as a saving of time, labor and patience.

At MORRISON'S, 893 Broadway, may be found the finest assortment of novelties in fringes, gimps and trimmings in the city. In the line of these goods this house has long made a specialty, and its excellence is well-known and fully established.

TIFFANY'S, on Union square, now open evenings, presents an exceedingly brilliant spectacle, and one which none should omit to witness. Perhaps more of the wealth, fashion and culture of New York crosses the threshold of TIFFANY'S daily than of any other establishment. Everything made of gold, silver or precious stones, with a long catalogue of articles of *vertu*, may be found at TIFFANY'S, and purchasers need no better guarantee of the integrity of the goods than the name of the house. Many novelties are offered for the Christmas season, and those whose taste demands presents of lasting form and substantial value can there gratify it.

The stock of furs at GUNTHER'S has not diminished so rapidly as it might under a colder December; but the approach of Christmas has sent throngs of purchasers to this old and always leading house. Ranging the world for supplies, they are able to furnish any kind of fur known to trade, and to offer rare and choice goods obtainable nowhere else. Though the original owners of the furs retain the same styles from year to year, their example is not followed by the human wearers, to whom on all matters of fashion in furs the word of GUNTHER is law.

"The sense of being well-dressed gives a peace of mind which religion cannot afford," is reported to be the conclusion of a philosopher who is supposed to have tried both. Not deciding this point, it is certain that the patrons of BROOKS, PEET & Co. enjoy a rare satisfaction in their purchases. The trade of this house, covering the entire country, rests on the merits of its goods, and the fairness of its dealing. This season their new gift book, "Jack's Funny Friend," has had a great run, and thousands of youngsters in town and country will not soon forget the suit which brought them this welcome present.

Among the down-town clothiers for business men, FREEMAN & WOODRUFF have deservedly a liberal share of confidence and patronage. Removing in May last to a larger store, they are making the fullest use of their increased facilities, and getting also a large trade by mail throughout the country.

THE recent improvements in canning and packing goods enable MESSRS. THURBER to supply everything except the friends and guests for a Christmas dinner. From their bountiful store they can furnish forth everything which heart could wish, and place it on the table, no matter where that may be, in its fullest perfection. THURBER'S goods are a synonym for standard excellence.

Delicacies and the finest importations are a specialty of SMITH & VANDERBEEK. Through them, Epps' Cocoa and many other standard foreign goods have become household words in all parts of the country, and the extensive warehouse which the firm has lately opened in Chicago attests in the most effective manner, enterprise and the success which rewards it.

IN PHILADELPHIA.

THE "Grand Depot" of JOHN WANAMAKER, of Market and Thirteenth Streets, always one of the sights of Philadelphia, has been this week particularly notable for its fine decorations in honor of General Grant. An arch, forty nine feet high, spans Market Street at Thirteenth, and along the Market Street front was a gallery seating sixteen hundred persons, devoted exclusively to the accommodation of the employés of this mammoth establishment. Mr. Wanamaker's enterprises are always on the largest scale, and his patrons from every part of the country find in his stock something to gratify each individual taste.

In the beautiful store of BAILEY, BANKS & BIDDLE is one of the most complete and valuable assortments of precious stones ever collected. In diamonds, the stock is especially rich, and hundreds of persons, unable to purchase, have daily visited it for the satisfaction of the mere sight. The standing of this house has made its name a guarantee for excellence in everything which it excels.

J. B. LIPPINCOTT & Co. have lately issued one of the most valuable of books, "Great Authors of all Ages," by Dr. Allibone, whose dictionary has made him so well-known; and, in Christmas gift books their stock is especially fine and varied. Thackeray's Ballads is an elegant quarto volume, beautifully illustrated, and comprises representative productions from early Teutonic, Italian and French masters. In holiday books, the Lippincott stock is especially rich and tasteful.

PORTER & COATES, since their removal to the southwest corner of Ninth and Chestnut Streets, have largely increased their business, occupying one of the finest book stores in Philadelphia or in the country. In rare books and fine bindings this house is pre-eminent, and in the standard publications of their own they include such as the "Waverly Novels," Dickens's works, Macaulay's "England," Comte de Paris's "History of the Civil War in America," and the "Fireside Encyclopedia of Poetry"—the latter one of the best collections of its kind ever published.

The legend of JOHN WANAMAKER & CO., of 818 to 822 Chestnut Street, as "the best place to buy the finest clothing," is fully justified by their performance of this season, a statement which means much, but is within the letter of truth. Mr. Samuel Wanamaker, junior partner, manages this house with great energy and tact, to which its success and prosperity are largely due.

As a security against the future, a life insurance policy is especially desirable, and care should be taken that this investment is in a sound and well-managed concern. Such is the PENN MUTUAL of Philadelphia, which has stood the severe tests of the past few years without suspicion and comes out unstained and stronger than ever.

The Philadelphia *Times* is now one of the foremost weeklies of the country, and its "Annals of the War," written by the principal participants, North and South, is meeting with large and appreciative sales. It is one of the most valuable and interesting of contemporaneous histories.

THOUSANDS MIGHT ANNUALLY BE SAVED.

IN Consumption, the "Compound Oxygen Treatment" has been remarkably successful. How few ever recover entirely from Pneumonia, and all for the want of a revitalizing agent such as COMPOUND OXYGEN will certainly furnish. Thousands might, by its use, be saved annually *from the grasp of that great destroyer*—CONSUMPTION. Some of the most brilliant cures which have already been made by this new treatment has been in Consumption. The amplest information will be found in our "Treatise on Compound Oxygen." It is sent free. Address DRS. STARKEY & PALEN, 1112 Girard Street, Philadelphia, Pa.

THE elegant carriage in which General Grant appeared in his recent reception at Chicago was manufactured expressly for the occasion by the STUDEBAKER BROS. MANUFACTURING COMPANY of that city and attracted universal attention. The Studebaker is the largest wagon and carriage manufacturing concern in the country.

HUMORS OF THE SCALP. LOSS OF HAIR.

Loss of hair in thousands of cases is due entirely to some form of scalp disease. Seventy-five per cent. of the number of bald heads might be covered with hair by a judicious use of CUTICURA, assisted by CUTICURA SOAP. It is the most agreeable as well as the most effective hair restorer ever produced by man. It is medicinal in the truest sense of the word. All others are some oleaginous mixture or poisonous dyes. None but CUTICURA possesses the specific medical properties that enable it to cure all itching and scaly diseases that inflame and irritate the scalp and hair glands and tubes, causing premature baldness. Medium doses of the CUTICURA RESOLVENT will purify the oil and sweat glands, the virus of scrofulous humors and insure a permanent cure, when taken in connection with the outward application of CUTICURA.

PREMATURE LOSS OF THE HAIR, which is so common nowadays, may be entirely prevented by the use of BURNETT'S COCOAINE. It has been used in thousands of cases where the hair was coming out in handsful, and has never failed to arrest its decay and to promote a healthy and vigorous growth. It is at the same time unrivaled as a dressing for the hair. A single application will render it soft and glossy for several days.

BOILS, Pimples, Freckles, Rough Skin, eruptions, impure blood, HOP BITTERS cure.

THIS year's vintage in Champagne, France, was, both as regards quantity and quality, the worst on record. In some districts the grapes did not pay for gathering, and in others only red wine for the workmen can be made. On the contrary, the vintage in the Sonoma Valley, California, from which the famous "AMERICA" Extra Dry Champagne is produced, has been unusually good, and Messrs. A. WERNER & CO., of this city, who control this well-known brand, are crowded with orders for it from all parts of the country.

AGUE, biliousness, drowsiness, jaundice and rheumatism, HOP BITTERS removes easily.

EVERETT'S HOTEL AND DINING ROOMS in Barclay and Vesey Streets, advertised in this paper, fully deserve their liberal patronage and general popularity. "Why do you come so far for lunch?" said one patron to another the other day. "Because I can get more for my money here than any place in New York," was the answer, which is daily ratified by thousands of others. Personal supervision is given constantly to every department by Mr. EVERETT and his efficient superintendent, Mr. J. EVERETT SCOTT.

RELIABLE CANNED GOODS.

GREAT progress has been made within a few years in the art of Preserving Fruits, Vegetables, Fish and Meats in Tins, and in consequence the consumption has largely increased. As yet, however, canned goods are not generally thought to be "fresh," and some brands are not, perhaps, entitled to be so considered. Those packed by us, however, are Hermetically Sealed at the sources of supply, when they are in the best possible condition, by a process which preserves the much-to-be-desired fresh, natural flavors; and they are really in better condition, fresher, more palatable and wholesome than many so-called "fresh" articles which are exported for sale during considerable periods of time in city markets. All goods bearing our name are guaranteed to be of superior quality, and dealers are authorized to refund the purchase price in any case where customers have cause for dissatisfaction. It is, therefore, to the interest of both dealers and consumers to use THURBER'S BRANDS.

H. K. & F. B. THURBER & CO.,
Manufacturers of and Dealers in Food Products, New York.

GROCERS AND STOREKEEPERS

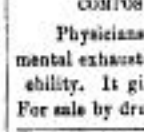
pay 3 to 5 cents a pound extra for butter made with Gilt-edge Butter Maker. It increases the production 6 to 10 per cent. Reduces labor of churning one-half. Gives a rich golden color the year round. Sold by druggists, grocers and general storekeepers. Send stamp for "Hints to Butter-Makers." Address, BUTTER IMPROVEMENT CO., Buffalo, N. Y.

"THE PITCHER that goes often to the fountain gets broken at last." Moral, Insure in THE TRAVELERS.

IN 1850 THE "BRONCHIAL TROCHES" were introduced, and from that time up to the present their success in Colds, Coughs, Asthma and Bronchitis has been unparalleled. No household should be without "*Brown's Bronchial Troches*," as by their early use most troubles of the Throat induced by cold can be overcome.

THE ST. NICHOLAS HOTEL is first in the field with a very pretty card for ladies' albums, admirably engraved by the Kendall Bank Note Company, which represents the Obelisk of Alexandria as we trust it will appear ere long when it takes its place in history as the Obelisk of New York. Ladies may obtain the cards by addressing MR. WELCH, proprietor of the ST. NICHOLAS.

HALFORD TABLE SAUCE, best relish in use. For family use preferable to all others.



THE steam pipes, and boilers, etc., in the buildings of the New York *Tribune* and New York *Herald* are protected with H. W. Johns' ASBESTOS BOILER COVERINGS, H. W. Johns' Manufacturing Co., No. 87 Maiden Lane, sole manufacturers of genuine ASBESTOS LIQUID PAINTS, ROOFING, &c.

THE VENERABLE PETER COOPER.

I cheerfully testify that I have been to the COLTON DENTAL ASSOCIATION, 19 Cooper Institute, and had two teeth extracted while under the influence of Laughing Gas. I felt no pain whatever, and the gas produced no injurious or even unpleasant effects. PETER COOPER.

Clara Louise Kellogg, Lotta, Mrs. Scott-Siddons, Fanny Davenport, and a host of others, recommend and use

J. DUFF & CO., Bankers,
42 NASSAU STREET, NEW YORK.

A Fortune Quickly Made.

Money has been made more rapidly within the last few months in Wall Street than at any period since 1873. Immense profits have been realized from small investments. The following affidavit explains itself:

Personally appeared before me, George A. Payne, of 154 West 49th Street, New York City, to me known, and, on being duly sworn, says that on an investment of $25 placed with Thatcher, Belmont & Co., Bankers, and by them operated for a period of two weeks, I had returned to me by the said firm $972 55.

(Signed) GEO A. PAYNE.

State of New York, City and County of New York, } ss.

Sworn before me this 22d September, 1879.
J. B. NORRIS, Notary Public,
91 Dunne Street, New York

Thatcher, Belmont & Co. accept subscribers on their 1 per cent. margin or in their consolidation of capital, whereby a number of small sums, from $10 upwards, are aggregated and stocks operated. Latest Wall Street information sent free upon application by Messrs. Thatcher, Belmont & Co., Bankers, P. O. Box 1307, or 48 Broad St., New York.

CATARRH

Is a Terrible Disease. Its fearful effects—corruption running down the throat, weak eyes, deafness, loss of voice, loss of smell, disgusting odors, nasal deformities, and finally consumption. From first to last it is ever aggressive. Ordinary treatments are worse than useless. If neglected while a cure is possible, it may rapidly develop into quick consumption. The most thorough, successful and pleasant treatment is

Dr. M. W. CASE'S

CARBOLATE OF TAR INHALANT

It does not require ten minutes to demonstrate the value of Carbolate of Tar, the most *healing remedial agent known to science.* Balsams and Cordials of the most healing and soothing properties are so combined with Pine Tree Tar, that the mere breathing converts them into a dense smoke or vapor. This is inhaled—taken right to the diseased parts. **No heat, no hot water,** simply inhaling or breathing it, and you feel its healing power **at once.** This treatment is endorsed by physicians everywhere, and highly commended by thousands, who have used it with perfect satisfaction. **FULL TREATMENT** sent. *SATISFACTION ALWAYS GUARANTEED.* Address,

LADIES CAN "SHOP" BY PENNY POSTAL CARD

Out of town people who cannot conveniently travel, may have samples sent them of Dry Goods and all other goods that we sell, if they will write us. No charge, and no need to order if not suited. We make it a business to attend to such letters quickly; and when orders come we send the exact article wanted, and at exactly same price as other customers pay when here buying in person. When goods are not as ordered, we take them back. Having trained and responsible clerks, who are able to use discretion in filling orders, we are enabled to give great satisfaction to the many customers *who leave the choice to us.* With a reputation of twenty years at retailing, we cannot afford to lose our good name by lack of proper service to absent customers. Write plainly, and describe fully what is wanted, and about the price desired.

Address,

John Wanamaker,

Largest Dry Goods House,

Philadelphia.

THE SUN FOR 1880

THE SUN will deal with the events of the year 1880 in its own fashion, now pretty well understood by everybody. From January 1st until December 31st it will be conducted as a newspaper, written in the English language, and printed for the people.

As a newspaper, THE SUN believes in getting all the news of the world promptly, and presenting it in the most intelligible shape—the shape that will enable its readers to keep well abreast of the age with the least unproductive expenditure of time. The greatest interest to the greatest number—that is the law controlling its daily make-up. It now has a circulation very much larger than that of any other American newspaper, and enjoys an income which it is at all times prepared to spend liberally for the benefit of its readers. People of all conditions of life and all ways of thinking buy and read THE SUN; and they all derive satisfaction of some sort from its columns, for they keep on buying and reading it.

In its comments on men and affairs, THE SUN believes that the only guide of policy should be common sense, inspired by genuine American principles and backed by honesty of purpose. For this reason it is, and will continue to be, absolutely independent of party, class, clique, organization, or interest. It is for all, but of none. It will continue to praise what is good and reprobate what is evil, taking care that its language is to the point and plain, beyond the possibility of being misunderstood. It is uninfluenced by motives that do not appear on the surface; it has no opinions to sell, save those which may be had by any purchaser for two cents. It hates injustice and rascality even more than it hates unnecessary words. It abhors frauds, pities fools, and deplores nincompoops of every species. It will continue throughout the year 1880 to chastise the first class, instruct the second, and discountenance the third. All honest men, with honest convictions, whether sound or mistaken, are its friends. And THE SUN makes no bones of telling the truth to its friends and about its friends whenever occasion arises for plain speaking.

These are the principles upon which THE SUN will be conducted during the year to come.

The year 1880 will be one in which no patriotic American can afford to close his eyes to public affairs. It is impossible to exaggerate the importance of the political events which it has in store, or the necessity of resolute vigilance on the part of every citizen who desires to preserve the Government that the founders gave us. The debates and Acts of Congress, the utterances of the press, the exciting contests of the Republican and Democratic parties, now nearly equal in strength throughout the country, the varying drift of public sentiment, will all tear directly and effectively upon the twenty-fourth Presidential election, to be held in November. Four years ago next November, the will of the nation, as expressed at the polls, was thwarted by an abominable conspiracy, the promoters and beneficiaries of which still hold the offices they stole. Will the crime of 1876 be repeated in 1880? The past decade of years opened with a corrupt, extravagant and insolent Administration intrenched at Washington. THE SUN did something towards dislodging the gang and breaking its power. The same men are now intriguing to restore their leader and themselves to places from which they were driven by the indignation of the people. Will they succeed? The coming year will bring the answers to these momentous questions. THE SUN will be on hand to chronicle the facts as they are developed, and to exhibit them clearly and fearlessly in their relations to expediency and right.

Thus, with a habit of philosophical good humor in looking at the minor affairs of life, and in great things a steadfast purpose to maintain the rights of the people and the principles of the Constitution against all aggressors, THE SUN is prepared to write a truthful, instructive, and at the same time entertaining history of 1880.

Our rates of subscription remain unchanged. For the DAILY SUN, a four-page sheet of twenty-eight columns, the price by mail, postpaid, is **55 cents a month, or $6.50 a year**; or, including the Sunday paper, an eight-page sheet of fifty-six columns, the price is **65 cents a month, or $7.70 a year**, postage paid.

The Sunday edition of THE SUN is also furnished separately at **$1.30 a year**, postage paid.

The price of the WEEKLY SUN, eight pages, fifty-six columns, is **$1 a year, postage paid.** For clubs of ten sending $10 we will send an extra copy free.

Atlanta as Impregnable as Gibraltar.

PERSONAL REMINISCENCES OF THE LATE WAR.

The Mexicans Good Fighters.

GENERAL EDWARD HATCH, COLONEL OF THE NINTH U. S. CAVALRY, PRESIDENT OF THE 17TH INVESTIGATING COMMISSION.—FROM A PHOTOGRAPH BY RICE.—SEE PAGE 304.

"I EARNESTLY exhort you to observe faithfully the terms of the pacification agreed upon, and to discharge the obligations of good and peaceful citizens as well as you have performed the duties of thorough soldiers in the field." This from General Joseph Eccleston Johnston on April 26th, 1865, at Durham's Station, North Carolina, when he surrendered the forces under his command to General Sherman. A grave, unobtrusive, elderly gentleman he to day; neat from his carefully brushed hat to his scrupulously dusted gaiter-tops; straight as a lightning-rod, with a hawk's glance, and a mouth as if cut in steel.

The people of Eastern Virginia have a creditable practice of tracing family lineages to their earliest sources, and from one of the "first" families is lineally descended the subject of our present interview. Born in 1807, he graduated at West Point in 1829, and did garrison duty up to the Seminole war, during which he served as aid to General Scott. During the war with the Florida Indians he was brevetted captain for most distinguished gallantry. At one time, while closely pressed by Indians, he took shelter behind a small tree to rally his men. A shower of bullets swept by him, mostly aimed directly at himself, but, strange to say, while many struck the tree, for some time he was unhurt. At last a ball struck him immediately above the forehead, and ranged backwards, grazing the skull the whole distance, but not fracturing it. The injury was severe, so much so as to cause him to fall, but the troops had caught his spirit and repulsed the enemy, bearing off their wounded in safety to the boats. The uniform worn by Lieutenant Johnston on this occasion was long preserved by a friend as a curiosity, being perforated by thirty bullets. He served in the Topographical Bureau as engineer, and in 1843 on the survey of the boundaries between the United States and the British Provinces. From 1844 to 1846 he was engaged on the Coast Survey. He fought all through the Mexican war, leading the forlorn hope on the castle of Chapultepec, and was wounded on two occasions, winning successively his majority, lieutenant-colonelcy and colonelcy. His numerous wounds led General Scott afterwards to say of him, "Johnston is a great soldier, but he has an unfortunate knack of getting himself shot in nearly every engagement." From 1853 to 1855 we find him in charge of Western river improvements. In 1858 he was Acting Inspector-general in the Utah Expedition. In June, 1860, he became quartermaster-general with the rank of brigadier-general of staff. While the question of his appointment was still pending, General Scott was requested by the Secretary of War to recommend for so important a position and promotion an officer distinguished for talent and prominence in the army. General Scott declined to confine himself to a single name, but recommended for selection one of the following four: Joseph E. Johnston, Robert E. Lee, Albert Sidney Johnston and P. F. Smith. Johnston received the appointment, and was engaged in the responsible duties of quartermaster-general, when his native State seceded from the Union, and imposed upon him the duty of separating himself from a service for which he felt a strong affection. He resigned his commission on April 22d, 1861, entered the Confederate service, and commanded at the battle of Bull Run, and subsequently at Yorktown and Richmond. During the battle of Fair Oaks, May 31st, 1862, he was badly wounded, and was for some months disabled for service. After Bragg's defeat at Chattanooga, he took command of his army, occupying a position at Dalton, Ga., which was turned by Sherman early in May, 1864, whereupon Johnston fell back successively to Resaca, Altoona Pass, Kenesaw Mountain and Atlanta, fighting every inch of the road. So skillfully and orderly was his retreat, that Sherman exclaimed, "I have followed Johnston for hundreds of miles, and I never got so much after him as a cart-rung." Failing to satisfy the authorities at Richmond, he was ordered to turn over the command to General Hood. Near the close of February, 1865, Sherman having marched from "Atlanta to the sea," Johnston was directed to assume the command of the Army of Tennessee, and all troops in the department of South Carolina, Georgia and Florida, and to "concentrate all available forces and drive back Sherman." The force which he could concentrate was wholly inadequate, and, although he fought part of his army at Bentonsville, N. C., he was unable to check the march of the victorious army. Having learned that Lee had surrendered the Army of Virginia to Grant, Johnston, on April 26th, surrendered to Sherman.

"I had only 17,000 men," General Johnston said to me, "against Grant's 108,000, Sherman's 100,000, and Canby's 70,000; and my object in surrendering was to spare the blood of my gallant little army, to prevent further suffering of the people by the devastation and ruin inevitable from the marches of invading armies, and to avoid the crime of waging a hopeless war."

"I have a sovereign objection to talking," observed the General, whom I had the honor of interviewing in Raleigh, N. C. "Abraham Lincoln would never allow himself to be interviewed, alleging as a reason that he did not like to make a fool of himself. I wrote a book once," he added, with a light laugh, "and have regretted it ever since."

"What is your opinion as to the condition of the South?"

"As regards the general condition of the South, many persons take different views about it. I consider that its prosperity is but a result of the general prosperity of the country. When the North suffered the South suffered; as the North recovered so did the South. Their interests travel together. The people who have suffered most in the South are the planters. The small farmers do their own work, but the planters have to hire labor. If a planter requires an advance of money, he has to pay eleven and a half per cent. for the loan, and with this terrible incubus it is not easy to make a fortune."

"Eleven and a half per cent. seems a very usurious interest."

"Is it not? If a planter requires a loan he is compelled to deposit his title deeds and negotiate through an agent. The banks will not deal with him direct. The banks have no power to deal with a planter."

The General is in favor of calling in the greenbacks, and entertains but a poor opinion of the financial ability of Congress.

"I consider Congress the worst banker in the world," he laughed. "An amusing instance of Congressional banking occurred in Savannah. The bank in that city was provided with nothing but $500 notes, and it could not pay a check for $100. It could only certify that the check was good for $100."

"Are you satisfied with the Southern representation in Congress?"

"Perfectly so."

Passing from general topics to himself, he said:

"I have been in the saddle since I was a boy—my father taking me across country like a bird. I have never known bodily fatigue."

"What a physique!" I involuntarily exclaimed. "You must have been a good deal in the saddle during the war?"

"Eighteen hours a day, and often for many successive days."

"I have heard it said, General, that you always rode at a gallop."

"Except in camp, such is my custom."

"Can you sleep on horseback?"

"Yes. Very little sleep sufficed for me. All I required was to lose consciousness, and if that were only for the space of three minutes, I awoke just as refreshed as if had slept for hours. In fact, even now, I can awake with more vitality after five minutes than I could after two hours' sleep."

"I suppose you got very little sleep during a campaign?"

"I never got any at all at night, for my scouts were not experienced enough to determine what was important and what was not, so I had always to determine for myself."

"The Confederate troops must have suffered terribly?"

"Suffered! I can only compare the war to that of the Messinians and Spartans. I have ridden into camp in the pelting rain, and I have seen the poor fellows lying with nothing but their ordinary clothing upon them, and that, too, quite ragged, and with no prospect of change; lying, sir—you know what the shape of a fence-rail is, it is triangular—lying on the sharp side of the rail with their feet towards a fire, and sleeping as soundly as if they were in beds of down."

"They must have had cast-iron constitutions, General?"

"They had, sir; and by the time the war closed I had a few thousand of the finest men in the world; but," he added, an intense melancholy succeeding the ring of pride in his tone, "the hardship killed many, and no constitution, however strong, could stand that condition of existence for any length of time."

"How were they fed, General?"

"One half-pound of meat and a pound of bread per diem—the bone counting with the meat. I managed somehow or other to let my army have three-quarters of a pound of meat per diem, and, to show you what a boon this extra quarter of bone and meat was considered, when I retook command of the army, I was cheered as I rode into camp by the cry of, 'Boys, we're sure to be well fed *now!*'"

As the General recalled this reminiscence, a pleased smile stole over his handsome face.

"You were pretty generally outnumbered, General?"

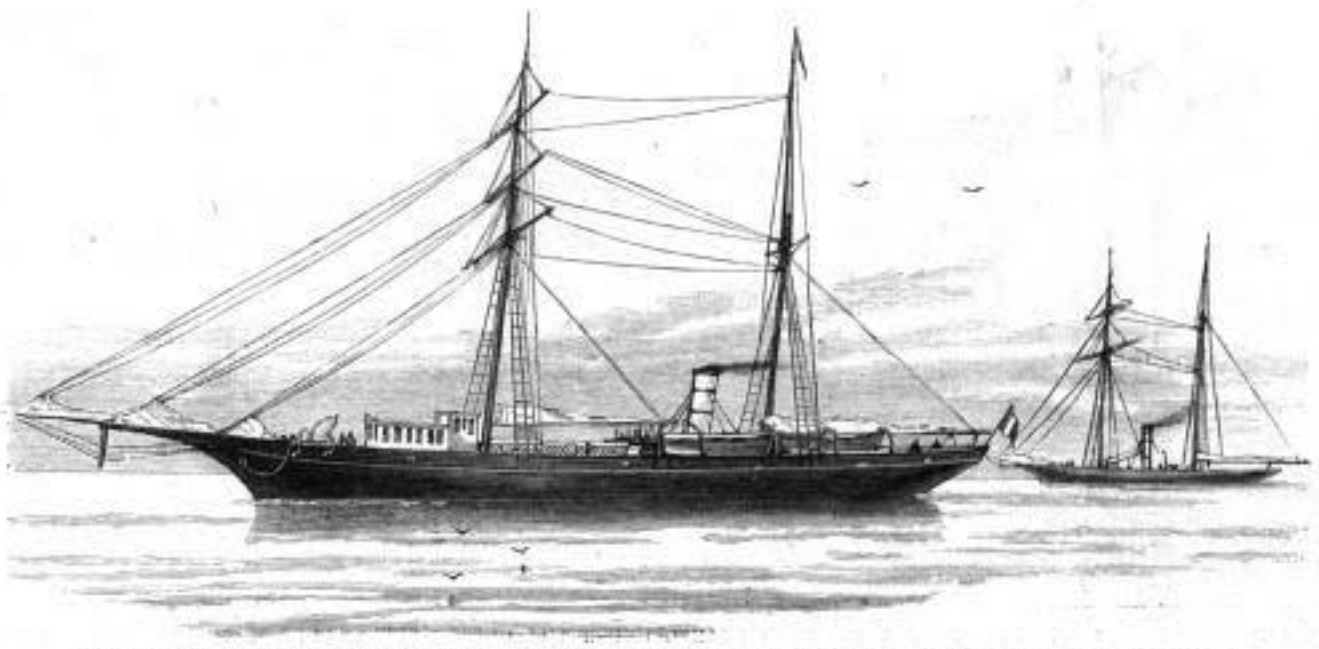
"I should say so. Three to two was a luxury seldom accorded to me."

"On what occasion did you enjoy this luxury?"

"At the Seven Pines. I beat three of McClellan's divisions, and would have beaten the fourth if I had not been struck off my horse by a shell. My ribs were broken and bent inwards, thus"—folding his hands in a sort of gothic arch. "The serrated edges did not give so much trouble as the want of bellows-power. I was choking for a week. If my orders had been carried out, that battle might have ended the war. I ordered the men to sleep on the ground when they ceased firing, and to renew the engagement next morning."

General Johnston spoke enthusiastically of Lee, also of Stonewall Jackson, whom he considered "a superb lieutenant."

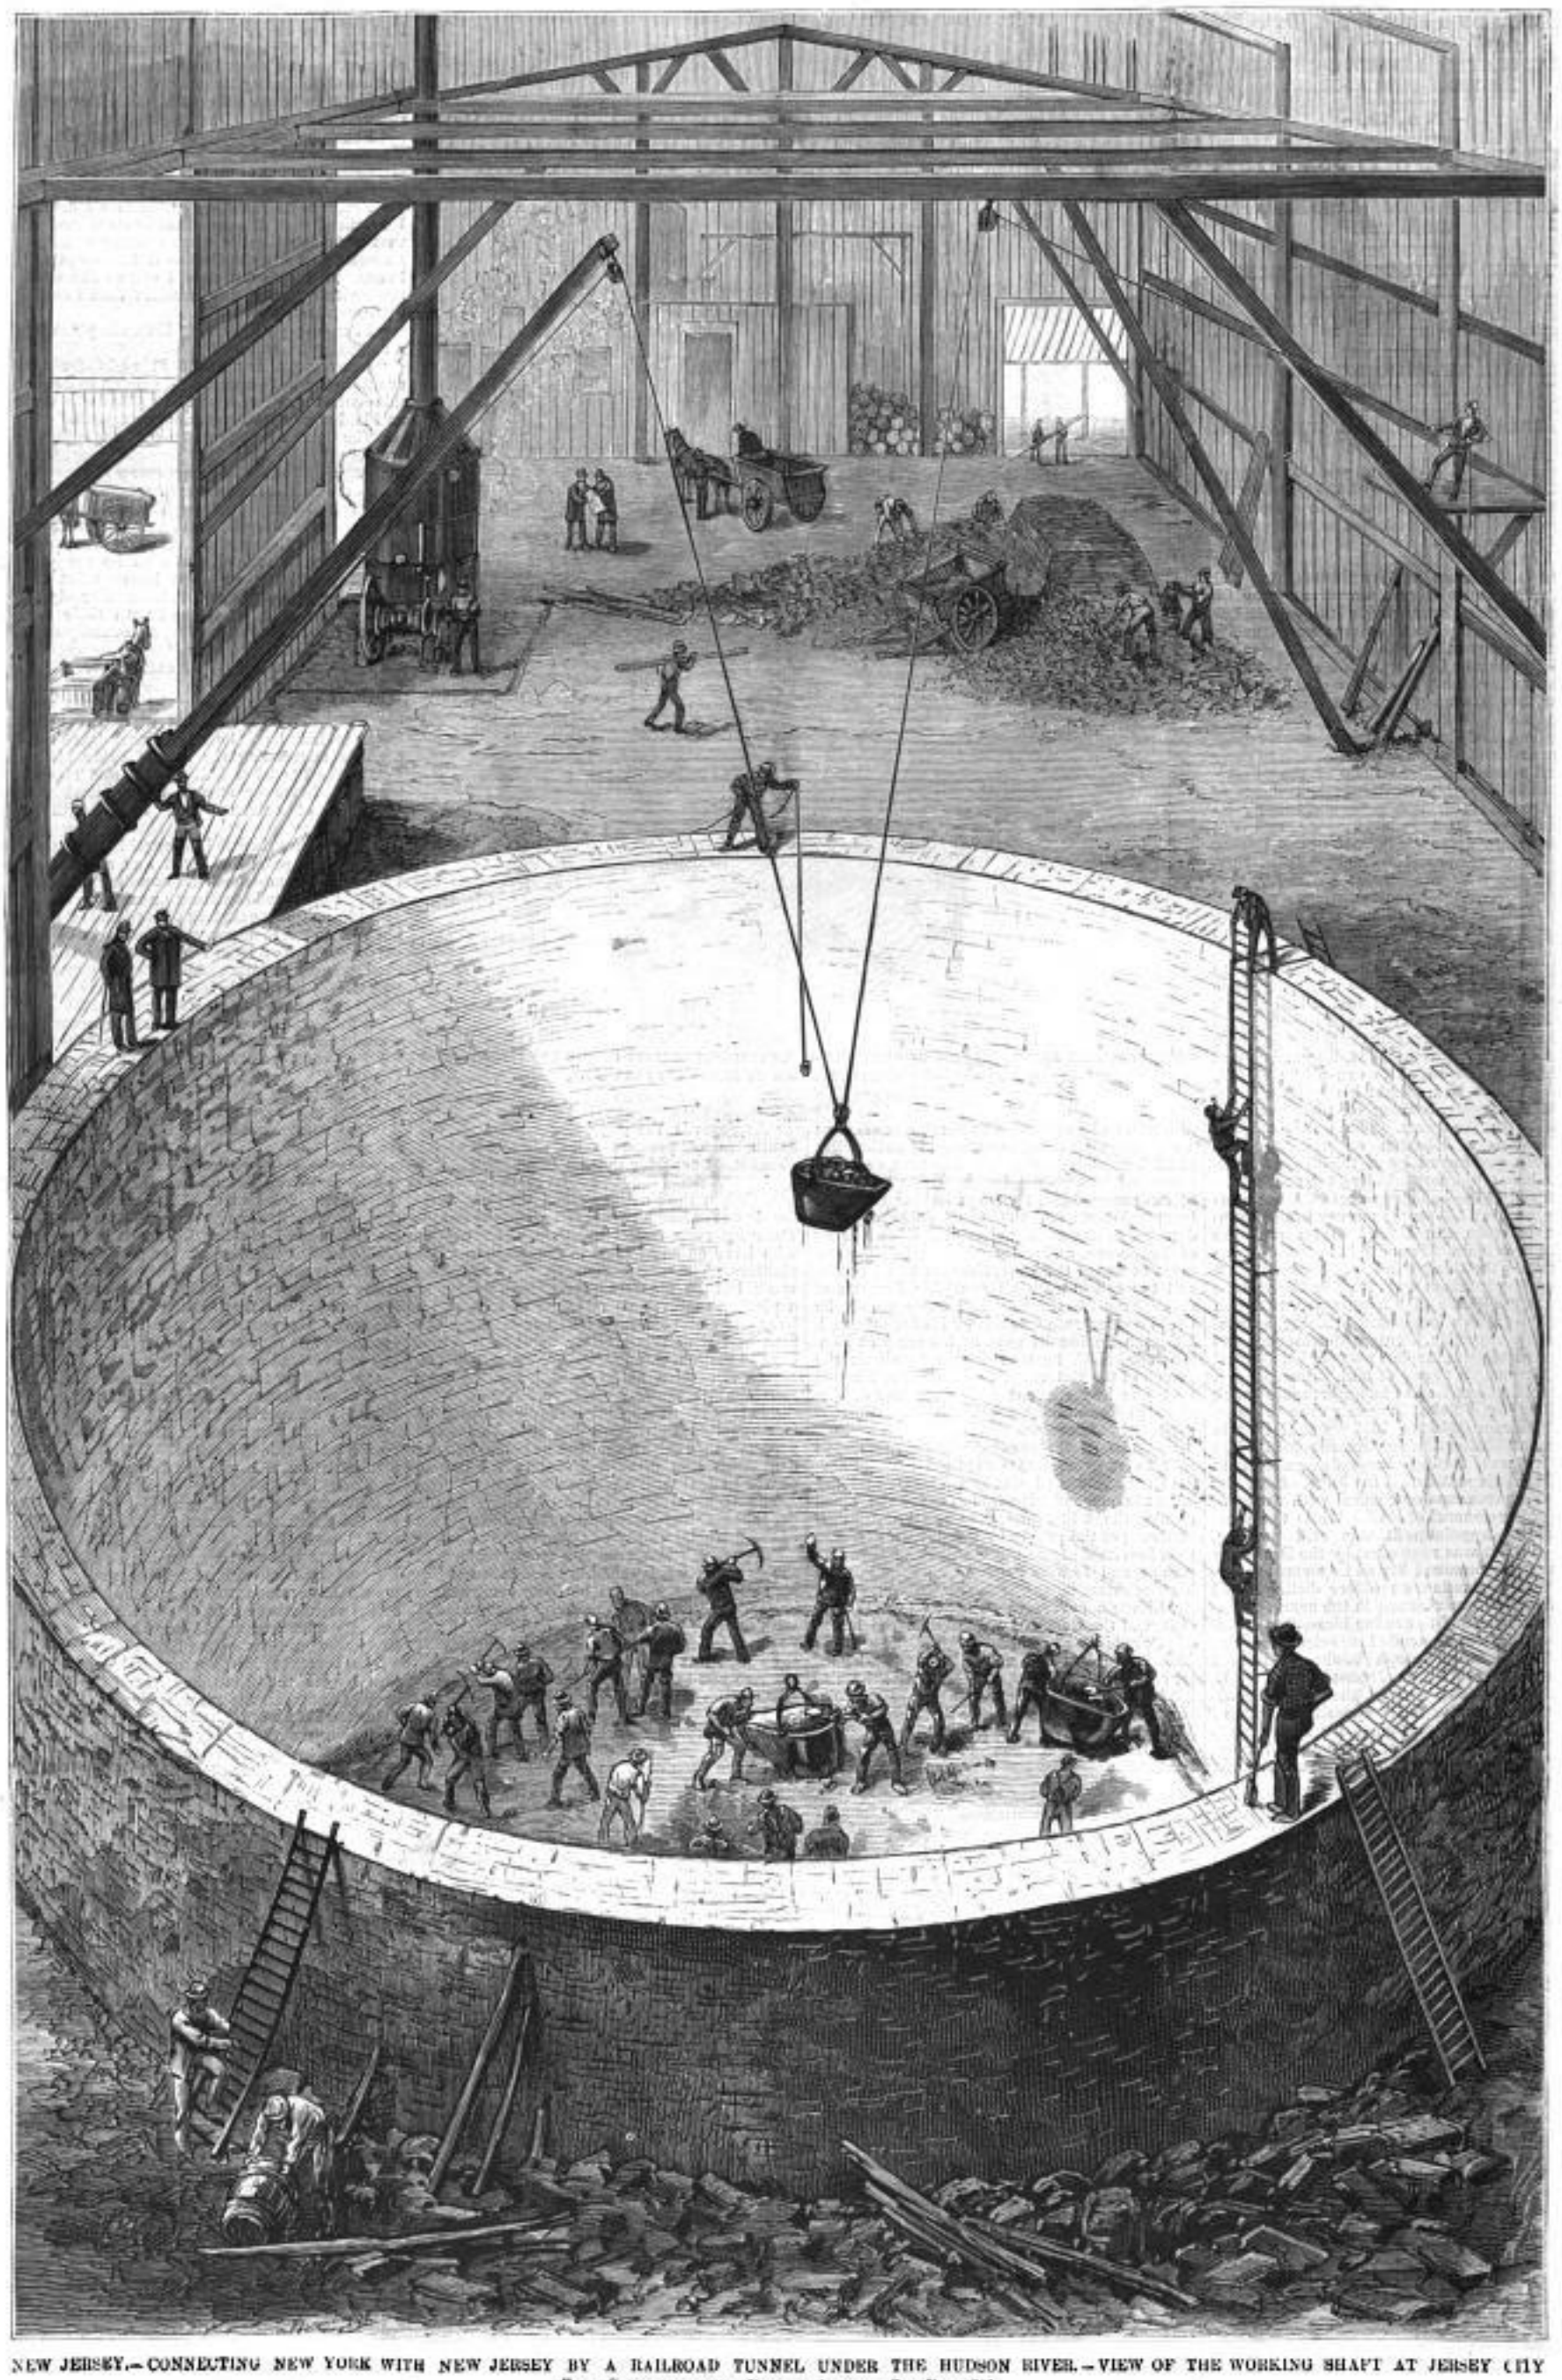
"Whom do you rank as the ablest General on the other side?" I asked.



"McClellan, if he only had more confidence in himself."

Referring to the memorable preparations for the defense of Atlanta, General Johnston said:

"Atlanta was as impregnable as Gibraltar. I relied upon checking Sherman, and a check would have amounted to a defeat, for many of his men, whose time of service was on the eve of expiration, would have become dispirited and would have gone home."



The retreat from Kenasaw and Lost Mountain across the Chattahoochee, in order to save Atlanta, is the masterpiece of General Johnston's career. He had brought along everything—every gun, every wagon, every camp-kettle. He devoted an active and laborious week to the defense of Atlanta. Seven of the heaviest rifle cannon had been obtained from Mobile and planted on the ramparts. His plan was: First, to attack the Federal army while crossing Peach-Tree Creek. If successful, great results might be hoped for, as the enemy would have both the creek and the river to intercept his retreat. Second, if unsuccessful, to keep back the enemy by intrenching, to give time for the assembling of the State troops promised by Governor Brown; to garrison Atlanta with these troops, and, when the Federal army approached the city, attack it on the most exposed flank with all the Confederate troops.

While engaged in giving instructions to his chief-engineer concerning the fortification of Atlanta

DESIGN FOR A SECRETAIRE TO BE MADE FROM THE TIMBERS OF THE BRITISH ARCTIC SHIP "RESOLUTE," FOR THE PRESIDENT OF THE UNITED STATES.—SEE PAGE 236.

General Johnston was handed the following dispatch:

RICHMOND, VA., July 17th, 1864.

TO GENERAL J. E. JOHNSTON:

Lieutenant-General J. B. Hood has been commissioned to the temporary rank of General under the late law of Congress. I am directed by the Secretary of War to inform you, that, as you have failed to arrest the advance of the enemy to the vicinity of Atlanta, far into the interior of Georgia, and express no confidence that you can defeat or repel him, you are hereby relieved from the command of the Army and Department of Tennessee, which you will immediately turn over to General Hood.

S. COOPER, A. and I. General.

General Johnston immediately called for General Hood and communicated to him the plans he had been pursuing. His removal was cautiously communicated to the generals of the higher grade. They promptly united in a request to the Government for a revocation of the order, but General Johnston took leave of them at once. His dispatch, sent upon the following day to Richmond, which closed his services in the field until recalled to "concentrate all available forces and drive back Sherman," speaks for itself:

NEAR ATLANTA, July 18th, 1864.

GENERAL S. COOPER:

Your dispatch of yesterday received and obeyed. Command of the Army and Department of Tennessee has been transferred to General Hood. As to the alleged cause of my removal, I assert that Sherman's army is much stronger, compared with that of Tennessee, than Grant's, compared with that of Northern Virginia; yet the enemy has been compelled to advance more slowly to the vicinity of Atlanta than to that of Richmond and Petersburg, and has penetrated much deeper into Virginia than into Georgia. Confident language by a military commander is not usually regarded as evidence of competency.

J. E. JOHNSTON.

As a result of General Johnston's retirement, it is asserted that Sherman no longer preserved his "extreme caution," but became bold and audacious.

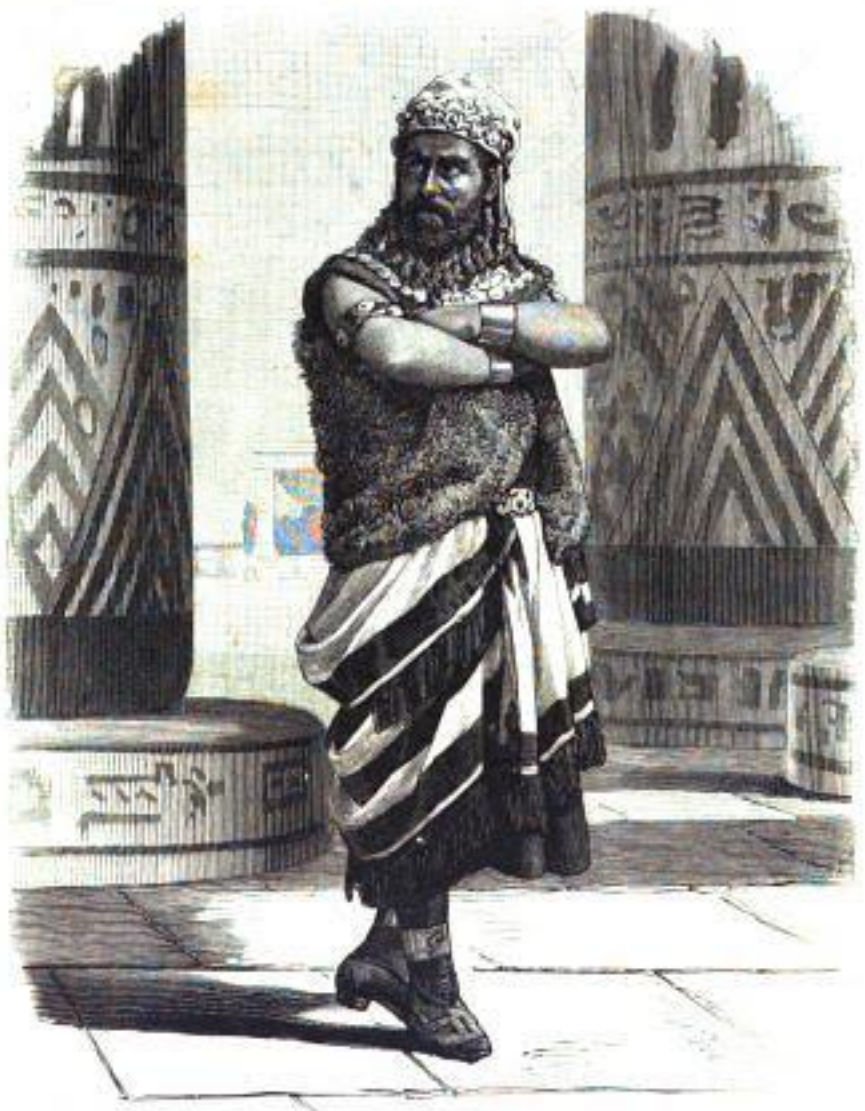
General Johnston was the last to surrender.

"We of the South," said the General, "referred the question at issue between us and the United States to the arbitrament of the sword. The decision has been made, and it is against us. We must acquiesce in that decision, accept it as final, and recognize the fact that Virginia is again one of the United States. Our duties and our interests coincide. We shall consult the one and perform the other by doing all we can to promote the welfare of our neighbors, and to restore prosperity to the country."

Mexico came upon the *tapis*.

"You led the forlorn hope at Chapultepec, General?"

"I did."



"Very few leaders of forlorn hopes live to tell the tale."

"Very few, and I escaped in this way. The Mexicans used very long cartridges, and very bumptious muskets—guns that kicked after discharge in a manner that punished those firing them rather severely, and to avoid this it was the custom of the Mexican soldiery, after biting off the end of a cartridge, to allow a quantity of the powder to drop out. During the excitement of battle they did not stop to measure their powder, and, as a consequence, their shot was sometimes harmless. Two bullets imbedded themselves in my leg, taking the cloth in with them, but by merely chucking at the cloth the bullets dropped out: they had never succeeded in cutting it."

"Are the Mexicans good fighters?"

"In line they are admirable."

General Johnston, the man who has so often stood in the imminent deadly breach, whose battle-cry caused a thousand hearts to leap, and whose presence in front ever boded trouble to the Federal Army, has laid aside the sword, and is now peacefully engaged in the insurance business. His hair is white, as are his whiskers, and closely-cropped beard. His forehead is massive and commanding. His voice is incisive, his manner sharp, and that of one accustomed to command, while a certain action of the forefinger, as though directing an aide to spur to a distant part of the field, or calling the attention of his staff to some manœuvres under execution, bespeaks the generalissimo. His language is precise and graceful. He is courteous and dignified, while his *sangfroid* and involuntarily betrays itself in every word and gesture. It has never been my good fortune to pass an hour more charmingly, or to pass it in such quiet, unostentatious and gentle companionship.

SIGNOR GALASSI, AS "AMONASRO," IN THE OPERA OF "AIDA."—FROM A PHOTO. BY MORA. SEE PAGE 235.

GENERAL HATCH, PRESIDENT OF THE UTE COMMISSION.

GENERAL EDWARD HATCH, Colonel of the Ninth United States Cavalry, and President of the Ute Commission now investigating the Ute outbreak and massacre, is a native of Maine, and received his appointment from Iowa, entering the army as captain in the Second Iowa Cavalry in September, 1861. He was promoted to major the same month, to lieutenant-colonel in December, colonel in June, 1862, brigadier-general, April, 1864, and major-general by brevet in December, the latter reward being for gallant and meritorious service in the battles before Nashville, Tenn. He was mustered out of the volunteer service in January, 1866, and in July following was commissioned Colonel of the Ninth United States Cavalry. For his services in the battle of Franklin, Tenn., he received promotion to the brevet ranks of brigadier-general, and major-general in March, 1867, and is now second on the lineal list of colonels in the regular army.

The appointment of General Hatch to the presidency of the special commission to investigate the Ute troubles was very judicious, as he is familiar with the tribe, their reservation and history.

The latest intelligence from the Commission, which is sitting at the Los Pinos Agency, is to the effect that a very stormy and threatening council was held on Saturday, December 6th, when General Hatch made his last demand for the surrender of the twelve men charged with the murder of Indian Agent Meeker and his employés. For a while it seemed as if the Indians would massacre the Commissioners. Each Indian laid hand on his knife or pistol. The whites did the same, and the two parties stood fronting and defying each other for some moments, each waiting for the other to make the forward move. There were but six white men, while there were twenty-five Indians in the room. Fifteen soldiers were in an adjoining room. Finally Ouray spoke: "We cannot deliver up to you these Indians, unless they are tried in Washington; they must not be tried in Colorado. Colorado people are all our enemies, and to give them up to be tried in this State would be to surrender them to be hanged. We will bring these twelve men here for you to see, and those whom you decide guilty shall be taken to Washington, and the President shall determine their guilt or innocence. Douglass will have to go. We know he was in the White River troubles, and you shall decide who else. Upon this condition, and not otherwise, will we surrender the guilty Indians."

General Hatch told him he would accept the proposition so far as bringing the participants in the massacre in, but as far as taking them to Washington, he had to telegraph for permission to Secretary Schurz.

Colorow and Jack were immediately dispatched to bring in the twelve named, including Douglass and Persune, saying, "Be back in five days."

In reply to the telegram, Mr. Schurz answered as follows:

"Receive the surrender of the Indians designated by your Commission, with the understanding that they will be guaranteed a fair trial by a military commission outside of Colorado and New Mexico. Inform Ouray that he will be received here with four or five Uncompahgre and three Southern Utes and three White River Utes. Take care that good and influential men be selected, especially from the White River Utes. It will probably be desirable to have Jack here. Take possession of the prisoners with a military guard and convey them in the first place to Fort Leavenworth."

One of the prisoners was surrendered by Ouray on December 9th, who promised to bring in the others as soon as captured.

THE STEAM-YACHT "HENRIETTE."

WITH the voyage of the *Sunbeam* in their eyes, and possibly a book, M. Henri Say, with Madame, his wife, his child, and a brave and sturdy crew, from skipper to pantry-boy, have started from New York on a little trip round the world. Their good ship is a steam-yacht, brigantine rigged, called the *Henriette*. She registers 581 tons, is 164 feet in length, 26 feet across her beam, and 12 feet deep. There are on board fresh provisions for two months, and a large bunker full of coal. She carries a supply of 30 tons of coal. Like Mr. Brassey, of the *Sunbeam*, M. Say—who, by the way, is a nephew of M. Leon Say, the French Minister of Finance—is passionately devoted to yachting, and can handle a boat in a ground-swell or a hurricane with equal *sangfroid*. The *Henriette* is palatially fitted up, the "dainty hand of woman" being noticeable almost everywhere in *objets de luxe*, as well as in comfort. A steam launch, the *Follette*, accompanies the *Henriette* as a tender. She is 114 feet long, and commanded by Le Capitaine Frequer, of the French Navy. The yacht will touch at Philadelphia, Washington, Charleston, New Orleans, Havana, Kingston, St. Thomas, Trinidad, Martinique, Rio Janeiro, Buenos Ayres, Valparaiso, Callao, Panama, San Francisco and the Sandwich Islands; will visit Japan, China and India, and will go by the Suez Canal and the Mediterranean to Cherbourg. We wish Monsieur and Madame Say a hearty "*Bon voyage.*"
